This board, as its report shows, does not agree with the Federal commission that in controlling and directing the relations of railroad corporations with their operating forces "complete reciprocal obligations can not be imposed upon labor." It believes that such obligations can be imposed upon labor, and that this imposition is the key to the whole situation - the solution of the whole problem, and, further, that labor, once rightly understanding the imposition and realizing its benefit to the operating forces, will be perfectly satisfied with it. \* \* \* The difference between the plan of the Federal commission and the plan heretofore suggested by this board is that the former assumes a disagreement between railroad corporations and their forces which must be settled by decree of governmental power, while the latter provides for a system of entry of the forces into the employment of railroad corporations that would obviate disagreement. \* \* \* Below are suggestions of points for legislation made in the annual report of this board to the legislature of 1891.

1. Declare the service of railroad corporations created by the State a public service.
  2. Entrance into such service to be by agreement for a definite period, upon satisfactory examination as to mental and physical qualifications, with oath of fidelity to the people and to the corporation.
  3. Resignation or dismissal from such service to be permitted for cause, to be stated in writing and filed with some designated authority, to take effect after the lapse of a reasonable and fixed period.
  4. Wages to be established at the time of entry, and changed only by mutual agreement or decision by arbitration of a board chosen by the company and employees, or by a State board, or through the action of both, the latter serving as an appellate body. Other differences that may arise to be settled in like manner.
  5. Promotions to be made upon a system that may be devised and agreed upon by both parties, with the aid of a State board, if necessary.
  6. Any combination of two or more persons to embarrass or prevent the operation of a railroad in the service of the people a misdemeanor, and any obstruction of or violence toward a railroad serving the people, endangering the safety of life and property, a felony, with punishment of adequate severity.
  7. Establishment of a beneficiary fund for the relief of employees disabled by sickness or accident, and for the relief of their families in the case of death, as is done upon the lines of a number of railroad corporations in other States.
- All to the end of a discharge of mutual obligations of railroad corporations and employees, the enjoyment of mutual benefits, and the securing of a permanent and satisfactory service to the people, who have a right to it and a right to use every power necessary to obtain it.

## COMPULSORY ARBITRATION.

### Opinion of INDIANA LABOR COMMISSION.<sup>1</sup>

Another evil growing out of strikes is the continuing effects of the resultant estrangement. This estrangement not infrequently lingers long after the unfortunate events which produced it have grown dim with age in the mind of the public. It retards future negotiations, chills the feeling of mutual friendliness that may have existed, creates a lack of confidence, and lessens the prospects for a continuance of the friendly relations between employer and employee, the existence of which is so essential to profitable cooperation and mutual prosperity.

The public has an interest in the peaceable settlement of industrial disputes that has not always received the consideration its importance demands. Commercial and industrial affairs are becoming more closely interwoven and interdependent day by day. By reason of this there are, in most instances, three mutually interested parties to each lockout or strike, namely, the workmen involved,

<sup>1</sup>Report of 1899-1900, p. 11.

## 700 THE INDUSTRIAL COMMISSION:—ARBITRATION, ETC.

the employer, and the public. So long as the conflict is confined within the narrow sphere of the first and second parties in interest, the rest of the community may remain passive spectators. Some times, however, the evil done is too far-reaching to be contemplated with complacency. The zone of influence is largely measured by the character of the industry involved. A strike in a factory would not jeopardize the public's interest to the same extent that one would on a street-car line of a populous city or on a railway system. Strikes and lockouts involving or largely affecting freight and passenger traffic cause inconveniences and losses of the gravest consequence, and that frequently entailed in a necessity for repression by force. The instrumentality usually employed has been the constabulary or militia.

Vesting in some State agency the power to enforce arbitration when the public welfare is paramount to all other considerations is a crying need of the times. The mere power to act when so petitioned would not fully meet the necessities which sometimes arise. Frequently the injuries sustained by the public are greatly more grievous than those of either contestant, or both combined for that matter. Several times this situation has existed in Indiana and disastrous consequences have followed which would have been averted if enforced arbitration had been provided for. Those with experience and observation know that often labor troubles progress with an ever-increasing intensity, both sides become deaf to reason, refuse to yield, compromise, or arbitrate in the absence of State intervention. Meantime the helpless public must drift defenselessly along, suffering from evils for which it is in no wise responsible, and from which there is no relief until the combatants are either coerced by force or have expended their ill-directed strength and by their exhaustion are forced to quit the fight. Thus upon innocent persons are entailed pecuniary losses. This fact forces us to confront the proposition: Is it not the duty of the State to reduce these disturbances to a minimum by appropriate legislation?

It will be noticed on examination that our law does not provide for enforced arbitration. It seems reasonable to conclude, however, that the time is rapidly approaching, if indeed it is not already here, when this further step must be taken to complete the essential process for settling differences between capital and labor under extremely aggravated and dangerous conditions.

In the opinion of your labor commission, the law providing for arbitration should be amended in two particulars:

First. In all cases where disputes arise from any cause it should be made unlawful for a lockout or strike to be resorted to without first attempting conciliation, the offense to be punishable as a misdemeanor.

Secondly. Whenever, during the process of a lockout or strike, human life is jeopardized, security to property is threatened, public order is overthrown, or the law is willfully defied or violated, both parties to such lockout or strike should be required to obey a mandatory order to submit their contention to arbitration in some manner mutually agreeable.

Such laws, justly enforced, would prove in some degree repressive to domineering and avaricious employers who sometimes precipitate strikes by attempts at unreasonable exactions, or by refusal to pay living wages, and, as well, to those groups of workmen who delegate the management of their material interests to unwise leaders, or allow themselves to be influenced by professional agitators. Such a law would largely eliminate from our industrial system the lockout and strike, with a long train of demoralizing influences, and substitute therefor a means of settlement rational in method, just in its results, and give security to capital, and permanency of employment to labor, as well as the better wages which this security and permanency will bring.

### COMPULSORY ARBITRATION.

#### Opinion of OHIO BOARD OF ARBITRATION.<sup>1</sup>

It is not our purpose to advocate compulsory arbitration. But labor controversies, according to our experience and conviction, occasionally reach a point where a constrained resumption of working relations between the parties, for a limited time pending settlement, arbitration, or other disposition, and the better assurance of the public peace and safety, would be of incalculable benefit both to the parties involved and the public.

We are satisfied after a thorough examination of the question, which official obligation commanded, in view of developments forced upon our attention in the line of duty, that legislation to accomplish such an end is within the competence of the general assembly. The police power of the State is adequate to such emergency enactment—a power which, says Mr. Justice Gray, in *Leisy v. Hardin* (135 U. S. R., 128), referred to approvingly in *Cincinnati v. Stenkamp* (54 O. S. R., 284), "includes all measures for the protection of the life, the health, the property, and the welfare of the inhabitants, and for the promotion of good order and the public morals." Our supreme court, quoting from that opinion, refers to the power as "that inherent and necessary power essential to the very existence of civil society, and the safeguard of the inhabitants of the State against disorder, disease, poverty, and crime, and necessarily extends to the protection, health, comfort, and quiet of all persons and all property within the State," and says (p. 292), "the power of the general assembly to authorize injunction at the action of the proper authorities to prevent the continuance of that which is detrimental to the public safety, is too well established in this State to need indication." Under the principles recognized in these cases, and the authorities cited in them, no difficulty on the score of power to enact the legislation suggested is apprehended.

The principal difficulty—and that will not be found formidable—is so to circumscribe the authority conferred as not to exceed the limits of the power. We are confident the aid of the judicial department can be so invoked, under suitable provisions, as fully to guard and protect private rights and guarantee security against abuse of authority, and at the same time to assure the public safety and the protection of life and property in cases of such threatening strikes and lockouts.

An amendment to the act carefully and guardedly drawn covering this subject would not only be beneficial to all interests, but would in some cases at least, if one may judge from the past, be welcomed by both employers and employees.

In the recent street railroad strike at Cleveland, detailed in the secretary's report, both the officers of the company and the representatives of the men more than once expressed the wish that the board, on its own initiative, under the law had power to settle the controversy. They were near an agreement several times, and a settlement either way, if lawfully imposed, we doubt not, would have proved satisfactory and final.

<sup>1</sup> Report of 1899, p. 5.

At one time very early in the strike there was but a single thing that prevented a settlement by arbitration and an immediate resumption of work, namely, "the recognition of the union." The men demanded and the company refused this recognition. Neither could be induced to yield on this question, and both were willing to arbitrate every other. But this one irreconcilable difference— which we refrain from characterizing—resulted in the long train of evils which followed. Naturally, as the strike proceeded differences grew, difficulties increased, and the relations of the parties became more and more strained, so that after a time there was absolute refusal either to negotiate or arbitrate. Had a temporary adjustment been imposed by lawful authority as soon as danger to life and property became manifest, the evils recounted by the secretary, including daily riots, great loss of property and earnings, an outlay by the State of \$28,500, bloodshed and loss of life would without any question have been averted. There is no doubt such temporary arrangement, fairly approximating what was right, would have been made permanent by the parties, or at least would have formed the basis for final settlement, for to have abandoned it, after passion had subsided and danger had been averted, would have been to invite their recurrence anew.

Our experience at Cleveland in this regard was not exceptional. On several occasions since the organization of the board, parties to strikes of threatening character, while refusing to submit matters in dispute to arbitration, have expressed the wish that the board could of its own motion, for the time being at least, require a resumption of operations pending settlement. In such instances, had authority existed to bring about a temporary resumption of work pending adjustment, much loss and suffering would have been prevented and great public good done.

We therefore respectfully suggest that the law be amended so as to authorize under proper guards and qualifications a constrained temporary resumption of labor relations between employers and employees pending adjustment, arbitration, or other disposition of differences, or the better assurance of the public tranquillity, in cases where the destruction of property or life is imminent and the public peace endangered.

As a result of our experience in arbitration and an examination of this subject we venture to propose for consideration the following as an amendment to the law, covering the matter, to wit:

"Whenever in the unanimous judgment of the State board a strike or lockout is not within reach of present adjustment and seriously menaces the public peace and endangers life or property, or if the situation caused by such strike or lockout be such, in the opinion of the governor, as to justify the calling out of the militia, or a part thereof, or if the same has been called out because of such strike or lockout, the board shall cause the facts to be entered upon its minutes, and thereupon, on notice and hearing, make and enter therein such recommendation to the parties to such strike or lockout, looking to the suspension thereof for a period not exceeding ——— days following adjustment or arbitration and the better assurance of the public tranquillity and protection of life and property as it may deem practicable and wise. A copy of such minutes embodying such recommendation, which shall be subject to modification and renewal, shall thereupon, without delay, be served upon each party personally, or through his agent or attorney. And it shall be the duty of said parties to comply with the same. On failure of compliance, the board shall communicate the fact to the prosecuting attorney of the county where such strike or lockout exists, or to the attorney general, who shall forthwith make an application to the court of common pleas of such county, if in session, or judge thereof, if not in session, for an order to enforce such recommendation, and shall cause a summary notice to be served as aforesaid upon each party to appear forthwith before such court or judge and show cause why such order should not be made. Said court or judge shall immediately hear such application and make an order for carrying out of such recommendation with such modification thereof, if any, as may appear to be just and proper, and promotive of the public peace and safety. Such order shall be subject to modification on notice as aforesaid to the parties, and any disobedience thereof or interference with its execution shall be summarily dealt with and punished as for contempt, provided, said board, through any of its members, may make or join in any such application. All costs incurred in the hearing on such application shall be paid by the county or counties affected, as the court may direct."

## COMPULSORY ARBITRATION.

### Opinion of ILLINOIS STATE BOARD OF ARBITRATION

The Illinois State board of arbitration takes occasion in its report for 1899 to express somewhat fully its opinion against compulsory arbitration. It recognizes the obligation between employers and employees and the obligation of both to the general public, and believes in using the strongest influence to induce them to adjust their differences by arbitration, but it considers compulsory arbitration unconstitutional and unwise. The system, the board believes, has never been put to a practical test in any country in which the conditions, governmental and industrial, are similar to those in the United States. The chief example of compulsory arbitration is found in New Zealand, a country chiefly agricultural, in which accordingly only a small proportion of the population and property can be affected by the working of the law. In the United States, where millions of men are engaged in mining, manufacturing, transportation, and other pursuits, which make the relation of employer and employee of the first importance, and where competition is so keen that a variation of a few cents in the wage scale may bring disaster, the system would be ill adapted.

The Illinois board especially points out that compulsory arbitration would necessitate involuntary work on the part of the employees. If employers could be compelled to arbitrate and to abide by the decision of arbitrators, a similar compulsion would have to exist regarding employees and they might be forced to work for one employer, although they could find better opportunities for employment elsewhere. Moreover, it might easily occur that a board of arbitration should be so constituted as to be notoriously prejudiced on one side or the other, or so incompetent as to commit grave errors in judgment. The Federal and State constitutions provide that no person shall be deprived of life, liberty, or property without due process of law. The right to choose whom one will employ or for whom one will work is one of the chief liberties of men, which a legislative enactment can not properly take away.

The Illinois board, on the other hand, thinks it is legitimate to enforce the decisions of arbitrators in cases where both parties have agreed to submit their controversy. In that case the parties are supposed to know something of the character of the men composing the arbitrating body and to repose in them sufficient confidence to be willing to trust to their judgment. (Report Illinois State Board of Arbitration, 1899, pp. 16-19.)

## COMPULSORY ARBITRATION.

Paper by Hon. HUGH H. LUSK, formerly a member of Parliament, New Zealand.<sup>1</sup>

## PAPER NO. 1—WHAT IT MEANS IN NEW ZEALAND

There are few words more familiar to-day with men who take an intelligent interest in the world's progress and welfare than "arbitration." During the last quarter of the century just ended the idea for which the word stands has steadily made its way, commanding itself more and more to the minds of thoughtful and intelligent men in every part of the civilized world. It has entered the arena of international politics. It has invaded the domain of the courts of law, it has offered itself as the only ultimate and satisfactory remedy for industrial disputes. There is no single respect in which the starting point of the twentieth century is so greatly in advance of that of the nineteenth in relation to social and political questions as in this, and there is none so important to the well-being of society. It indicates the high-water mark of the humanizing progress of the world's thought in the most remarkable century of the world's development.

The new century has entered on the inheritance of its predecessor, but it has yet to show how far it may prove itself worthy of its advantages in this respect. Will it carry out the great humanitarian ideals of arbitration to such a point, and in such a manner, as will discourage strife and put an end to violence, both in the intercourse of nations and in the relations of the various parts of the social body with each other? Or will it fall back upon the ideals of more barbarous ages, and set up once more the appeal to brute force and superior endurance as the chosen arbiters of human destiny? The question is not so easily answered as the optimist would gladly believe. It is easy to say that progress will go on and that, with advancing education, both nations and classes will as certainly see their true interests, and pursue them more unselfishly. It is easy to look forward to a time when wars shall all be matters of past history, and industrial disputes shall either cease to occur at all, or shall be settled amicably between the parties immediately interested, but it is more difficult to suggest the methods by which this entire change in the attitude of nations and of classes shall be brought about. What has to be reckoned with in all cases is the universal element of selfishness, and its amount and influence is difficult to estimate.

In the disputes of nations it is admitted that the only consideration which can be relied on to induce them to substitute peaceable arbitration for warlike violence is the purely selfish one that, on the whole, it will cost much less and, therefore, will pay much better. If a nation can be relied on to appreciate this fact it may fairly be expected to be ready, in most cases, to refer national disputes to arbitration, if not, it will continue to prefer, as it has hitherto done, the cost of the standing army and the chances of war. In the disputes of the industrial classes the same rule will prevail. If the employer and labor think the losses—immediate and prospective—of submission likely to prove greater than the cost of resistance to the demands of the workers, they will accept war and defy the strike, if they are of the contrary opinion they will lean to arbitration. Precisely the same is now true and, as far as experience is a guide, will continue to be so in the case of associated workers. And it should not be lost sight of that its application to industrial disputes is in practice far more important than to international quarrels. Industrial war—the civil war of class against class—is many times more deadly in its effects and a hundred times more frequent in its occurrence than any ordinary war between nations.

The title of this article may seem to some people to carry its own condemnation. Compulsion, though it is the everyday experience in some form of every man, is an idea which no man likes. The law to which the name has been applied has naturally suffered from the fact in the estimation of some, who have hastily supposed it formed some new attack on human freedom. Capitalists have thought it was designed to injure them, and workers have supposed it to be a capitalist conspiracy to fling away from them their liberty of action and substitute a kind of legal servitude in its place. Fortunately it could not well be both, but the fact that it has been misrepresented and looked on with suspicion by both of the parties intended to be most immediately affected by its operation shows that it requires to be more clearly understood.

It is not necessary to go into the history of the law which bears the name of compulsory arbitration, as that is already known to the readers of this journal, but it may be necessary to make its object and incidence a little more clear. Compulsory arbitration, then, on the New Zealand plan, is exactly what its name implies and nothing more. It is a law to compel resort, in all industrial disputes which can not be settled in a friendly way between the parties directly interested, to the arbitration of an independent and competent tribunal. It is this, but it is nothing more than this. It is not a law to compel employers to ruin themselves by paying their workmen higher wages than they can pay without losing money, it is not a law to oblige men to work for wages which they consider so insufficient that they would rather cease to work at the trade than accept them. It is neither of these things—each of which would be a tyrannical use of power to destroy men's reasonable liberty of action in their own affairs—but it is the expression of the determination of the people of New Zealand as a whole that all questions of fact, on which differences likely to affect the peace and well-being of the community have arisen, shall be decided by a competent court of unprejudiced men, and not by the threats or violence of angry and interested partisans. When the question has been decided, it is for the persons affected by the decision to consider on their part what they will elect to do. That they shall obey the law and conform to the decision of the court is as certain as the power of the nation to enforce laws can make it, but whether they shall go on with their business—in case they are employers of labor—or shall go on working at their trade and yet remain in the country is a matter which is entirely for themselves to consider. If the employer wishes to keep his factory open, he can only do so by complying with the order of the arbitration court and paying the wages to his workmen the court has declared fair and reasonable, if the worker wishes to go on working at his trade in the country at all, he must do so at the wages that have been fixed. Further than this there is no compulsion. No employer needs to pay wages he can not pay without loss; no workman need work for wages he can not live on.

The law was enacted, not in favor of capital, nor for the advantage of labor, considered as a class, but for the defense of the community at large, and in the interests of the people as a whole. With this in view it does interfere, to a limited extent, with the free exercise of individual liberty exactly in the same way that every other public statute interferes with it. It deliberately places the well-being of the whole people first, and the exercise of free will by the members of a class—whether of capitalists or workmen—second. It claims that every dispute which reaches the stage of a quarrel between employers and employed is the business of the whole community, because the peace and the prosperity of the people at large is involved, and it declares emphatically that, come what may, there shall be no civil war between classes of the community in New Zealand. The only excuse for such a war would be some manifest and flagrant injustice done by one class to another, and this it is

<sup>1</sup> Bricklayer and Mason, May and June, 1901.

the object of the compulsory arbitration law to render impossible. To do this it is necessary that on each occasion on which a grievance is alleged, on the part either of the worker or the employer, it shall be inquired into, and the right or wrong of the matter settled as far as an impartial court can settle it fairly. Until this has been done, nobody—not even the parties to the dispute, as a rule—can judge of the position correctly and with a knowledge of all the facts, and therefore, until it is done, the law provides that neither party to the dispute shall take any steps to compel the other side to give way.

In this way the New Zealand law wrests from the hands of organized bodies of men the implements of civil war which are known by the names of the "lockout" and the "strike," just as the laws of all other civilized nations have long ago at least attempted to wrest the more ordinary weapons of individual war from the hands of individuals. It has said, in effect, that the nation has provided a method by which a fair decision can be arrived at in all industrial quarrels, and in the interest of the whole people—and therefore of yourselves—you shall not try any other method on your own account. This is the ground on which the law provides that from the moment when a dispute between employers and workers in any trade has been referred by either party to the decision of the arbitration courts, both parties shall await the settlement of the question, the employer shall not, in the meantime, lock out or dismiss his workmen, the workers shall not, in the meantime, refuse to go on working for the employer. The compulsion thus exercised is not a serious one, because the law also provides for the case being heard, and the decision given within a very short time, but that it is a compulsion there is no attempt to conceal. It is the same kind of compulsion in principle as that which forbids two men who claim a right to the same house to elect to fight for its possession with clubs, instead of referring the question to a court, and abiding by its judgment whether they think it correct or not.

To the common assertion that the cases are not parallel, as it is the undoubted right of every free man to leave off working if he chooses for any cause which seems to him sufficient, or to cease operations at any factory if he does not find he can make it pay, the people of New Zealand reply at once that they decline to be fooled by mere words. They say that no strike was ever yet declared because the men wished to give up working, and no lockout was ever enforced because the employers had decided to abandon the business. In every case the strike or the lockout were but the clubs by means of which those who used them hoped to compel the other party to the quarrel to give in. It may be called "ceasing work" on the one side, or "stopping business" on the other, but it is really an act of war, and its purpose is to compel the other side to confess itself beaten, and to make the conquered party accept the terms of the conquerors. It is a method intended to bring about compulsory raising or lowering of wages to suit the wishes of the class that gets the wages, or of the class which has to pay them, and the distinction between it and compulsory arbitration is that it is set in motion for the supposed benefit of a class and not for the advantage of the whole people, whose true interest is always to enforce justice and fair play.

So far we have spoken of the purpose and intention of compulsory arbitration as these are understood by the people who practice it. It may most reasonably be asked what has experience to say as to its working? More than 6 years have now elapsed since it came into full operation in New Zealand—a long enough time to determine whether it provides a real cure for the evils it was meant to remedy, and to show whether in doing so it has brought in other evils which may prove as hurtful to the people as those it was intended to remedy.

It must be remembered that the compulsory arbitration law of New Zealand had scarcely a friend in that country outside the band of men in its Parliament who felt that something must be done to avert private wars in the country, and thought the new experiment worthy of a trial. The law was denounced by the employers as oppressive and tyrannical, absolutely certain to drive capital out of the country, and to discourage industry within it. It was also denounced by the leaders of the labor organizations as a cunning scheme to take from labor its best and indeed, the only weapon by which it could hope to improve this position. For months nobody even qualified in the legal way, by registration as an organized body, with a view to taking advantage of its provisions, and its enemies were ready to laugh at its hopeless failure. Experience alone—at first on a very small scale indeed—on the part of those for whose benefit it was primarily intended brought the law into prominence, and gradually into universal operation throughout the country. A special feature of the law was that it offered itself to but did not force itself upon the people most nearly affected by its provisions, and the fact that year by year it has been appealed to more universally may be taken as the highest possible tribute to its usefulness.

At first—indeed for several years—it was appealed to only by the workers, but during the last 2 years it has been appealed to again and again by the employers also, until to-day it may fairly be said that association under the provisions of the law has become all but universal, so that each worker and each employer in the country may almost be regarded as a member of a trades union. A union, it is to be noted, not to support strikes, nor to render lockouts effective, but to see that every important question that arises in the industrial world is properly examined and impartially decided by a court of equity.

Since the compulsory arbitration law was enacted there has been no important strike or lockout in New Zealand, and since the benefits of the law began to be appreciated there has not even been anything of the kind attempted either by the workers or employers of the country. The threats of the cessation of industry and the withdrawal of capital from the country have been utterly contradicted by experience. Capital has never been so plentiful, industrial enterprise has never been so active as it has been during the last 5 years. The workers have known the rates of wages they could rely on getting, and the employers have known exactly what they would be called on to pay and have made their contracts accordingly, and both classes have thus been prosperous. The exports of the country have steadily increased year by year until last year they amounted to about \$82 for every inhabitant, having increased more than \$20 per head in a period of 5 years. In the same period the savings-bank deposits increased from \$33 for each inhabitant to fully \$42, and the number of depositors by more than one-fourth part. These facts would seem to show that the introduction of the new industrial law has neither discouraged production nor in any way interfered with the prosperity of the country or its people. They have ceased to enjoy the privilege of engaging in civil war, indeed, when they choose, they have ceased to indulge in the strikes and lockouts that upset the industry of the country, and brought suffering and poverty on those dependent on their exertions, but they feel that instead of these things they have got all the freedom which reasonable men ought anywhere to ask—the liberty to manage their own business as they choose, so long as they do not use that liberty to coerce or injure their neighbors.

Foolish hints have been thrown out that all this arises from the workmen of Australia and New Zealand being rather a poor-spirited and unintelligent lot of people who hardly know their own interests, and are slow to take their own part. It may be well that the reader should be reminded that it would be hard to make a more ignorant blunder than this. In New Zealand perhaps alone among self-governing nations, the minister for labor has been himself a skilled mechanic, and the representatives of labor in the Parliament absolutely hold the balance of political power in the country. Among the larger populations of the states of Australia organized labor has everywhere

great political power, and returns many representatives to the parliaments, nominated by itself to safeguard its special interests. Yet such has been the effect of the object lesson conveyed by the experience of New Zealand that in two of the state parliaments compulsory arbitration acts have been brought forward by the government, at the request of the party of labor, and there is little doubt that such an act will form part of the policy of the federal government of the newly formed Commonwealth of Australia. Organized labor has nowhere else obtained so great a political influence as it has in Australasia, and nowhere else has used it so successfully; it may not be wholly unwise to consider whether organized labor in America has not something to learn from its vigorous young sister in the South Pacific.

#### PAPER NO. 2.—WHAT IT MEANS FOR AMERICA.

I attempted in a former article to give some idea of what the system known as compulsory arbitration has meant in the country and for the people among whom it was first established. I have tried to make American readers understand the New Zealand standpoint on social questions which unfortunately places the welfare of the whole community before that of any single part, be it that of employers or employed, and regards lawlessness as the most dangerous of crimes, and anything having the attributes of private warfare as the worst of all possible attacks on the liberty of the people. I also endeavored to point out that the law had in the course of a 63 years' trial vindicated itself in the light of experience, so that not only the classes of workmen and employers most directly affected, but the people at large had learned to look on it as an almost unqualified success, while other communities, with special facilities for observing its operation, have become anxious to apply it to their own circumstances. Finally, I have shown that the period of its operation in New Zealand has also been that of the country's greatest prosperity, that foreign capital has been attracted there as it never was before, that industry has flourished, and production of nearly every kind increased to an extent which, in proportion to the inhabitants, is without a parallel elsewhere, and that the wealth, not of a few capitalists alone, but of the people at large, has also increased as rapidly as the production of the country and the expansion of its trade.

I now wish to say something as to the possible lessons which these facts may have for the people of America, who, like most of the world, find themselves to-day face to face with great and as yet unsolved problems in the domain of social and industrial development. In doing this I am aware of the great difficulty which necessarily exists in comparing conditions which differ in some respects so widely as those of a country of less than 1,000,000 inhabitants with another which already contains more than 75,000,000. Nor do I lose sight of the fact—which is perhaps even more important than that of size and population—that in America social and economic developments have been advancing with giant strides during the last 40 or 50 years, and that they have now reached a stage in which they have grown almost stereotyped in the experience and even in the thought of the people, while in New Zealand it was otherwise. Such considerations, I am fully aware, render the task I have set myself a difficult one. It is not, I think, possible for any one man to deal with the problem on all sides, or to consider all its aspects, and it would be rash for any man to attempt to lay down a program of industrial reform, even if he were capable of doing so, in the compass of so short an article as this must necessarily be. All that I can hope to do under the circumstances is to glance at the principal points in existing conditions which appear to demand a remedy not wholly dissimilar to that applied in New Zealand, and to make one or two suggestions as to the possible application of the New Zealand remedy, at least in principle to American conditions.

The development of industry in America during the last 35 years has been phenomenal. A glance at the statistics of the world is enough to show that no other nation has even approached it in volume, while only a very few and those very young and kindred peoples, have rivaled or excelled it in proportion to population. Until the last quarter of the century which has just closed, this development was mainly in the direction of agricultural production. This was caused by the fact that in the first place the immigration to the country was one which looked chiefly to the possession of land by the classes of European workers whose experience and traditions attached them to agricultural occupations. During the last quarter of the century the proportions of the classes have changed, and within America itself the attractions of town life and the pursuits of the skilled mechanic have asserted themselves in comparison with those of the farmer and agricultural laborer. This has led to an enormous increase in the numbers of persons engaged in the pursuit of branches of industry which may be called concentrative, to distinguish them from ordinary agriculture, which is, at least usually, distributive in its tendencies. Towns have sprung up by hundreds; cities have multiplied their populations by hundreds of thousands, men and women, boys and girls, have flocked into these hives of mechanical industry, where the capital of the great employers is the essential moving spring of the existence of the community.

It is beside my present purpose to go into the causes that have led to the change, or even to discuss the advantages or disadvantages to the national life and well-being that have resulted from it, it is the fact that is important, and of the fact there can be no doubt. From a great community, for the most part dependent on the land for their support, and therefore for the most part widely distributed, and little dependent directly upon the initiative of the capitalist, the nation is year by year becoming more and more a nation of manufacturers, concentrated in dense masses, and wholly dependent for its daily bread on its relations with capital. Anything which disturbs those relations is now, and is certain to be in an increasing degree hereafter, fatal to the well-being, not only of the portion of the community most immediately affected, but of the whole nation. Anything which seriously disturbs industrial relations will not only take the bread out of the mouths of thousands of workers, but will paralyze a hundred other industries, impoverish millions of people already poor, and deprive even capital of its value and money of its earning power. The difference, then, between this community and a country like New Zealand in these respects is that the dangers to be guarded against, and the interests to be conserved by some effectual system which shall prevent industrial conflicts, are, even in proportion to the numbers of the people, not less but manifold greater here than there. In New Zealand the mechanic could, if dissatisfied with his position as an associated worker, go upon the land without very seriously disturbing the prosperity or upsetting the commercial and economic relations of the rest of the people, here it would even now be impossible, and it will become still more impossible year by year. In New Zealand land is plentiful, it is accessible, and its occupation is rendered easy for every man, here it is practically no one of these things. There the main part of the exports are agricultural, and but a small percentage consists of manufactured goods; here the greater part of the exports are already manufactured, and while the export of natural products in their natural state has probably nearly reached its highest point, the increase of the manufactured product has only reached the threshold of its expansion.

It may be asserted that, in spite of what can be said against it, the existing industrial system of America has justified itself by its success. It may be urged—indeed, it has been urged by some of the exceedingly well-meaning optimists of the ostrich breed with which the country is abundantly supplied—that the expansion of trade and the increase of manufactures supply an overwhelming answer

to any criticism that may be directed against present methods. They fail to see that no answer at all is contained in these things unless it can be shown that no greater progress could have been made under other methods, and that the system adopted is one which not only increases the volume of trade and the riches of a class, but improves the condition of all classes of the people. Can anyone say that it has done, or is doing, this? That 75,000,000 of people must, if they work at all, produce a great deal more than 50,000,000 goes without saying, and if we add the auxiliary forces brought into play in the last 30 years, the wonder is not that America produces so much more goods, in excess of what her own people require, but that the surplus has not been largely multiplied. The people of New Zealand supply their own wants for the most part, and last year they had a surplus to send away worth more than \$80 for every man, woman, and child in the country. The people of America largely supplied their own wants, and their statisticians and political economists point proudly to the record that they had a surplus worth no less than \$16 per head of the population. Not is this by any means all, the workers of New Zealand—whether in the open air, in factories and work-shops, or in mines—work shorter hours in each day, have more holidays, on the whole live far better, and save money much more easily than the workers of America. Why, it may be asked, is this? New Zealand is not a richer country than America, its people are neither a cleverer nor a more industrious people than the average American—the secret is that its methods are different.

The main difference in methods lies in the fact that the well-being of the people as a whole is the object of all legislation in New Zealand, while the interests of classes—as a rule of a single class, that of the capitalists—is the object of legislation in America. Another, but a closely allied distinction in the methods is that in the one country law, and its impartial enforcement, is regarded as the foundation of all real liberty, and the great bulwark of the people's freedom, while in the other a profound suspicion of law and disbelief in its impartial administration is common to nearly every class of the community. Thus in America the right to strike, for the purpose of compelling justice or what one party to a dispute supposes to be justice, is passionately claimed as the only safeguard to liberty for the worker—just as in some states the right to publicly murder persons accused of particular crimes is upheld as the bulwark of public morality. It may be confidently asserted—and the assertion would hardly be disputed by any unprejudiced observer—that liberty vindicated by the methods of the lockout or the strike is as spurious an article and conduces as little to the well-being of any people in the long run as justice which takes the form of lawless lynch law.

There are one or two facts of the industrial position, and probably no more than that, which are admitted on all hands to constitute a danger to American industry, and of these the most universally admitted is the ever-recurring difficulty of adjusting the share which capital and enterprise on the one hand, and labor and mechanical skill on the other, are entitled to out of the earnings of any manufacturing, or, indeed, of any industry. The capitalist class asserts, or at least assumes, that capital is entitled to all it can get out of any industrial enterprise after paying the very least wages. It can induce or compel the workers to accept for their labor and skill. The class of the workers, as a rule, hold exactly the same view reversed. They would give capital, as its share, the smallest percentage which they could compel capital to accept. As long as this view is held, it can be readily seen that war, either actual or impending, must be the normal attitude of the industrial world, for the simple reason that force lies at the root of the matter. What the worker can be forced to accept on the one side, against what the employer can be forced to give on the other—it is war, a chronic civil war, and of all the miserable conditions known to poor humanity this has long been acknowledged to be the very worst. Success—that is to say, absolute success—for either party is probably impossible, at any rate for more than a very short time, for it would mean either slavery for the worker or the destruction of the employer, and, therefore, under existing conditions, the civil war would be perennial and the misery perpetual.

There must be some better way than this. Two have been suggested as suited to the conditions of America by those who agree in thinking that the New Zealand system, or the principal which underlies it, is wholly inapplicable to American circumstances and ideas. On the one hand, there are those who say that trade agreements may be relied upon to afford a sufficiently good working basis, on the other, there are those who put their faith in voluntary arbitration as the coming method that will give relief from strikes and lockouts with all the losses to the country and the sufferings to large classes of the community which they entail. In both cases the work point is the want of finality. If the workers and the employers in any trade are fair and reasonable men, it is quite conceivable they may enter on a just trade agreement and may keep it, if the employers generally are public-spirited enough, and the workers generally are moderate and reasonable enough, it is very conceivable they may in all cases of disputes that are not capable of friendly adjustment be ready to accept arbitration and loyally abide by the award. The real question is, How, if they will not? These, after all, are but expedients based upon a calculation of enlightened selfishness, which all experience tells us can never be relied upon. That all men are selfish is, indeed, true, but that all are enlightened, or even if enlightened, that they are so at all times, is very much the reverse. It is, after all, but a conflict between mutual fear and overmastering selfishness, and experience has shown that in a majority of cases selfishness is the prevailing sentiment. By all means let the experiment be tried, but it is well there should be some reminder, such as the case of New Zealand affords, that when it fails there is still something else to fall back upon.

When that point is reached it will dawn on the minds of the American people that they have been needlessly untrue to themselves. They will remember that as they have retained the power—if only they choose to insist upon it—of making their own laws, so they have also the power to see that they are enforced. They will abandon the unworthy habit of talking and acting as if the laws necessary for the safety of the people at large must be useless if opposed by a combination of a few very rich men on the one side, or of a large mob of poor but sufficiently lawless men on the other. They will see that neither in theory nor in practice is there any insuperable difficulty in the way of enacting or enforcing laws, containing the principle of the case of New Zealand, for securing fair play for both the workers and the employers, and for that far larger part of the nation which does not directly belong to either class. They will abandon the foolish habit of fancying that liberty means, either for 1 man or 10,000 men, the right to do as they please to the injury of their neighbors, because they imagine that it is for their own advantage, and they will cease to think so poorly of their own people and their own institutions as to conclude that there are no men honest enough to judge fairly between them, and no means effective enough to put down bribery and corruption among them.

It is a fallacy, indeed, and a very weak one after all, which declares the large majority of any nation powerless to enforce such a law as that of New Zealand. The elements are simple, and a very little ingenuity, indeed, will find a way to embody them in a law that can be enforced on capitalists and workers alike. It might, and it probably would, be necessary to make the question one of Federal and not of State control, as has already been done in the new Commonwealth of Australia, and there can be little doubt that such a change would be in all respects an improvement. This once done, however, and the majority of the people once convinced that all other methods of settling industrial disputes were ineffectual in extreme cases, the remedy would not be a difficult one even

here. It has been said "you can not coerce a hundred thousand workers by imprisonment," and it may be true; but there is no need in any case to do so. Capital is always under control and could always be reached, and necessity is even more effectual to compel the obedience of multitudes than imprisonment or fines. If American capitalists refused to carry on their works pending the decision of the court, they would be as easily punished here as in New Zealand; and if the workers insisted on striking in spite of the order of the court, it might be enacted that the punishment should be not imprisonment but exclusion from appearing in their own case in court and thus securing a favorable hearing. As a matter of fact, it would not be needed. In the present stage of industrial development such a law is, and must be, the true friend of the worker. It would probably be necessary to lay it down as a basis for the action of the court under conditions like those of America that in all wage disputes the principle of a reasonable living wage must be recognized by the court as the inalienable right of the worker. If any industry could pay such a wage it requires no argument to prove that it is an industry which should not be carried on in the country, and its suppression could injure nobody. It is needless, however, to go further at present. Once taken from the strike and the lockout their character as weapons by which compliance with demands on either side can be enforced, while the public and the law stand helplessly looking on, and nobody would care to indulge in one or the other. A few months, or a few years at the very most, would see the men of America, as it has seen those of New Zealand, ready to give the thing a trial. When that step had once been taken, all the others would follow.

I freely admit, however, that the time has not yet come. As yet American capitalists feel—and probably correctly—that they can, on the whole, make more money on the present system with no law to control and no court to enforce fair play. Labor leaders and labor organizations still believe that, if let alone, they can force capital step by step in the direction they hope to make it go, till it becomes their servant rather than their master. Both parties are afraid that any court of equity would prove a check on their freedom of action to an extent which they can not foresee and hardly care to risk. The people at large, the thousands of helpless ones directly dependent on the workers, and the millions who are only indirectly, though very really affected, as yet stand helplessly aside, imagining that nothing can be done. Time and experience alone can work the cure for this, but they may be trusted to do so. When the evils have increased, as with a rapidly increasing population they will and must, when the remedies at present relied on have ended in disappointment, then, but it may be feared not till then, America will be willing to profit by the experience of other people, even though they constitute but a small community.

#### ORGANIZATION OF THE EMPLOYER CLASS AS A PREREQUISITE OF CONCILIATION AND ARBITRATION.

Extracts from paper read at the conference on industrial arbitration, held under the auspices of the National Civic Federation, 1900, by HERMAN JUSTI, commissioner Illinois Coal Operators' Association.

To me it seems that all efforts to permanently prevent strikes are almost certain to fail, unless labor and capital are both thoroughly organized, the strength of the respective organizations being so nearly equal that neither side can presume upon the weakness or unpreparedness of the other. The peace of nations, as we well know, is preserved by the fear which each nation has of "waking a sleeping lion," and a prudent dread of the consequences. The great powers of the world have approximately accurate information of each others' resources, strength, and preparedness, and hence wars in our day usually occur only between a giant on the one hand and an infant or decrepit nation on the other, differences between equally strong nations being left for settlement to diplomacy. The same is in a certain sense true of conflicts in the industrial world. Labor, while not perfectly organized and not so rich in resources as capital, and therefore unequal to a protracted industrial war, is so much better organized than capital that in short decisive conflicts, in continuous skirmishes, it usually comes out the victor. This statement, I well know, has been discredited in some quarters by labor leaders, but it can be proven. In fact, it is no exaggeration of the truth to say that the difference in favor of the organization of labor, as compared with the organization of capital for the purposes I have indicated, is as great as the difference in the discipline and power of the Regular Army and of a hastily improvised home guard.

Combinations, trusts, and corporations are spoken of as "organized" capital. This is misleading. All these are consolidated or aggregated capital, consolidated or combined to reduce the expense of doing business, to otherwise cheapen production, or to control or regulate the markets of the world, but they are not organized in the same sense or for the same purpose for which labor is organized. Our great need is 2 well-organized forces, both established for the same purpose, viz, to determine and regulate the wages and the conditions of labor. How is this to be done? Certainly capital needs to take lessons from labor in the art and virtue of self-denial and sacrifice. Labor organizations are sustained by the sacrifices willingly made by their members. No great victory over self, or over an enemy, or over great difficulties, is made without self-denial and sacrifice, and while all laborers are not inspired by high motives in doing this, the example is very striking just the same. By way of illustration, let me cite an example of what laboring men are willing to do for a cause they have at heart, be the motive one of revenge, as some persons assert, or of mutual helpfulness, as others claim.

The 30,000 or 40,000 coal miners in Illinois contribute to the cause of their union about \$360,000 annually, while the capital engaged in coal mining contributes, let us say, less than 5 per cent of this sum for the support of its organization, and what labor actually contributes in the form of dues is by no means equal to what it sacrifices by strikes. Still, employers of labor are heard to complain that strikes and lockouts have continued to occur periodically despite all that they have expended to prevent them. Witness the odds even where conditions have been greatly improved. Failure is easily explained. But this is not because wise efforts have not been put forth to prevent them, but rather because we have never persisted or persevered in them long enough, the sinews of war giving out long before any experiment has had a fair trial. We have expected immediate results on a trifling outlay of such commanding importance, and these results failing to materialize, their promoters abandoned their efforts, not because they had lost heart, but because capital discontinued the substantial support necessary to carry on the work. Individuals here and there have been most generous with their time, their money, and their experience, but there are too many in the ranks of the employers who are content to allow their neighbors to do all these things, while they boastfully proclaim their ability to obtain the same results without giving either money or time. It is natural to

conclude that men with such small ideas, who will resort to such expedients or subterfuges to gain their object, refusing to bear their share of the burdens, will not hesitate to take advantage of labor, to betray a colleague, or to rob a client. To correct this evil and to bring such employers as these to terms and of making them honest, even if it be true that they will be honest only because it is the best policy, is one of the many reforms which well-organized capital may accomplish.

Disputes, differences, and strikes will, therefore, continue to occur until organized capital can meet upon common ground and treat upon equal terms with organized labor. If it will do this it will banish awful dreams, it will live in peace with labor, it will help labor greatly and itself enormously. After all, it is this lack of public spirit that is indirectly responsible for many of our labor troubles. Rich and well-to-do men usually advise young men to live by something for a rainy day, and yet they themselves ignore the maxim, "in times of peace prepare for war." Too many of them reluctantly support intelligent and thoroughly organized effort at the right time, and yet when a crisis is upon them they are ready to squander in an immature plan of resistance 10 or a 100 times what a wise and humane plan of conciliation or arbitration would cost.

I take the broad ground, therefore, that strikes will continue until capital organizes, until it establishes collectively a department of labor, just as individually or in corporate capacity it provides for its executive and construction departments, its financial and its sales departments. If strikes are to become obsolete in America every department of industry must be organized. Since labor is the one element with which it must deal intelligently and fairly, since it is the one element able to help it to improve the conditions of trade, it is that one element without whose cooperation it is usually crippled. With labor it can not deal successfully unless it is strong where labor is strong, meeting it in the open field on an equal footing and represented by men intelligent, honest, and thoroughly versed in trade conditions and in every phase of the labor problem. \* \* \* It is alike true of capital and labor—of consolidated capital and of organized labor—that they need protection against their own rashness or folly. Intoxicated by success, they are apt to presume upon their strength. We too often see examples where employers of labor, puffed up by what they call their success, blind to the rights of labor, fancying the laborer is entitled to no rights unless in their bounty and condescension they choose to dispense them. On the other hand, we find the laborer, unused to the exercise of power, usurping the rightful prerogative of employers and undertaking to run their business for them. The corrective for these unfortunate conditions is equal power on both sides and the exercise of equal fairness and intelligence on the part of their representatives, for it can not be successfully disputed that employer and employee are equally selfish, and that the former will generally pay labor the very least that the laborer will accept, and on the other hand, that the laborer will exact every penny that the employer can be induced to pay. \* \* \*

The fact is that in this busy land of ours the average business man has too many other things to look after in connection with his business to admit of his giving that attention to the labor problem which the subject deserves, and since it is the most important department of every industry, no expense should be spared to secure the right men capable of making it equal to any other in efficiency.

This is an age of specialization, in industrial as well as in all scientific pursuits, and realizing as we must that the daily press is a record of disturbances in the industrial world on account of labor differences, it would seem that specialists are nowhere so much needed as in that field which the members of this conference are now endeavoring to explore. \* \* \*

REPORT  
ON  
RAILWAY LABOR IN THE UNITED STATES.

---

PREPARED UNDER THE DIRECTION OF THE INDUSTRIAL COMMISSION

BY

SAMUEL McCUNE LINDSAY, Ph. D.

## LETTER OF TRANSMITTAL

### *To the Industrial Commission*

I have the honor to transmit herewith a report on the subject of railway labor in the United States, prepared in accordance with your resolution adopted September 23, 1899, authorizing the same, and in compliance with your subsequent resolution of December 15, 1899, directing me to report to the secretary of the Commission.

In the introduction to the report I have indicated its scope, general plan, and purpose, and also have given a brief summary of its results. I desire, however, to record my personal appreciation of the cordial cooperation in the preparation of this report accorded me by railway officials in different parts of the country, who, through correspondence and personal interviews, have been most courteous and willing to give information. They are too numerous to mention by name, but I feel particularly indebted to President William H. Baldwin, Jr., of the Long Island Railroad, Mr. Theodore N. Ely, chief of motive power of the Pennsylvania Railroad, and to Mr. M. Riebenack, assistant comptroller of the Pennsylvania Railroad, through whose kindness I have been permitted to submit as Exhibit 3 to this report an exhaustive digest of the pension systems of foreign railway corporations, prepared and submitted by him originally to the directors of the Pennsylvania Railroad, but not heretofore published. I must also acknowledge with considerable pleasure the no less willing and efficient cooperation accorded me by the chiefs of many of the brotherhoods. I desire to acknowledge the able assistance rendered me in the preparation of sections 15 and 16 by Dr. C. W. A. Veditz and Samuel M. Israeli, esq., respectively. I am also especially indebted to my friend and colleague, Prof. Emory R. Johnson, of the University of Pennsylvania and a member of the Isthmian Canal Commission, for his constant encouragement and for the many helpful suggestions and invaluable criticisms emanating from his thorough and special knowledge of the questions here treated.

SAMUEL McCUNE LINDSAY.

# RAILWAY LABOR IN THE UNITED STATES.

## INTRODUCTION.

### § 1. SCOPE AND PURPOSE OF THE REPORT.

The scope of the report is to present the condition of railway labor in its leading features and to discuss the chief topics of interest concerning the condition of railway employment in the United States. The plan originally adopted, in accordance with the scope as just stated, proved too comprehensive for thorough treatment within the limits of time and space allotted to this report, and necessitated that the emphasis be laid on a few general problems. One of the chief aims of the report is to present in a connected way some account of many topics relating to railway employment that have been touched upon in the testimony on transportation topics already considered by the Industrial Commission. At the same time it is not desirable to duplicate to any appreciable extent the material already collected and so ably summarized in the digest to the transportation volume of the Industrial Commission's reports.<sup>1</sup>

Therefore the first duty of your expert agent was to collect, directly for himself, data relating to the chief topics to be treated. There are in the United States 189,294 miles of railroad, owned by upward of 2,000 corporations. Many of these companies are consolidated or their roads leased to other companies, which operate them. Many of these corporations of course own only a few miles of line. It was therefore possible to select 63 railroads which actually operated 146,005 miles of line, or over 77 per cent of the total mileage of the country. To these roads the following set of questions was sent asking for replies and statistics covering leased lines or total number of miles operated, and also asking for printed copies of reports of the corporations relating to any of the topics specified:

#### QUESTION SHEET FOR INFORMATION ON RAILROAD LABOR.

1. Name of road.
2. Miles operated.
3. Total number of employees.
4. Requirements for admission to various grades of service.
5. Rules for discharging and promoting employees.
6. Is technical education furnished by the railroad to its employees? If so, to what extent and for what grades of service?
7. Do you have a blacklist for employees discharged for serious offenses?
8. What is the average length of the working-day for the various grades of service, the average daily wages, and the annual income of the same?
9. Are the men paid for extra time? If so, how much?
10. What percentage of the employees in the various grades of service are required to work on Sunday?

---

<sup>1</sup> Vol. IV, Transportation, Industrial Commission Reports, Washington, 1900.

11. What forms of company relief and insurance or beneficial associations are supported in part or in whole by the company?

12. Do you make any objection to employees being members of railway brotherhoods or orders or other labor organizations?

13. What percentage of the men in various grades of service belong to such organizations?

14. What methods do you pursue in the settlement of strikes and disputes among your employees? Have you had recourse to either State or national arbitration boards; and if so, with what result?

Replies to this question sheet were received from all of the larger railroad companies to which it was sent, and from a total of 40 companies operating 112,353 miles of road, or 59.3 per cent of the total mileage of the United States, and employing 633,023 men, or 68.1 per cent of the total number of railway employees in the United States. The information thus obtained was supplemented through correspondence and personal interviews with the leading railroad officials and the leading representatives of railway labor in different parts of the country. The literature of the subject is too extensive, covering so wide a range of topics, for any one to say that he has exhaustively examined it; frequent references will be found throughout the footnotes in the following pages to the more important publications relating to the several topics discussed. The reports and publications of the Interstate Commerce Commission and of the United States Department of Labor are, of course, the chief sources of information and the most generally available ones. The experience and practice of foreign railroads and some comparisons of the conditions of employment are considered. Throughout the following pages your agent has attempted so far as possible to supplement the material brought out in the testimony before the Industrial Commission and for this reason has treated some topics more comprehensively and others less so than would probably have been the case had this report been prepared without any reference to the work the Industrial Commission has already done. The same thing is also true to a lesser degree of the relation of this report to other governmental publications, such as those of the Department of Labor and the Interstate Commerce Commission. References are frequently given to such reports and their contents briefly noted where an entirely independent discussion of the topic in hand would have required a more extensive use of these materials. Perhaps their ready accessibility to the general public is a further justification of this method.

It is hardly necessary to state that the chief aim or purpose of the report has been to gather and present information rather than to argue a case. Many of the topics treated are extremely controversial, and great care has been exercised merely to present the facts and to avoid the expression of opinion. There are a few judgments expressed concerning the advisability of legislation on the subject of railway labor, but for the most part, even where the material selected clearly suggests legislative remedies, the inferences to be drawn have been left to the judgment of the Industrial Commission in framing its final report.

## § 2. SUMMARY OF RESULTS.

The report is divided into four parts, the first of which treats of the general conditions of railway employment under which is discussed the number of railway employees, their geographical distribution, the intensity of railway employment as measured in the number of employees per mile, a few comparisons of the number of employees per mile of line in the United States with that of the leading countries of Europe, and finally the relations which railway employment bears to other occupations. It will be noted that railway employees in the United States constitute an army of nearly 1,000,000 people and this means that probably nearly

5,000,000 people are dependent upon the wages paid by railroads for their support. The intensity of employment, however, is nowhere so great in the United States as in England and Belgium. With the growth of population, therefore, even without greatly increased mileage, it is altogether probable that for years to come the railroads will absorb an increasing number of wage-earners. In the second place, the daily wages and annual income of railway employees are tabulated for a series of years and for different sections of the country and also for the various grades in the service. In the third place, the hours of labor for men in the leading departments of railway service and the conditions and rules under which men work, the amount of Sunday labor, and the rates of pay, or the absence of pay, for overtime are discussed on the basis of information collected from many sources. It will be noted here that while there is no standard wage and no standard labor day that holds for all sections of the country, nevertheless in general the wages in the best-organized grades of the service compare very favorably with those paid for similar skill and labor in other departments of industry, and that the 10-hour working day is about the average, as it is in industrial enterprises at the present time. The conditions with respect to Sunday labor and with respect to pay for overtime are probably relatively less advantageous for railway workmen than for the rank and file of employees in other occupations.

Part II is devoted to the general topic. The requirements of railway service. Under this heading the qualifications for admission to the service, the age, the degree of skill, and previous education required for the various departments of work, the departments to which new men are usually admitted, and the order in which they usually pass from one grade to another, and, finally, the departments to which new men are rarely admitted are discussed and described. Similarly the conditions relating to the same questions on foreign railways are briefly summarized. In the next place both the general and technical education of railway employees, both as regards that which is expected of them before they enter the service, as well as that to which they have access, or are required to take after entering the service, is discussed at considerable length for the United States and reviewed briefly for the leading European countries. Thirdly, difficult problems of railway discipline and the rules in actual practice on American railroads for the discharge and promotion of railway employees are presented. It will be noted that the majority of the roads are developing a system of discipline by which they avoid suspensions and encourage loyal personal service, and thus promote better relations between employer and employed. Lastly, the law with respect to blacklisting, the feelings of distress and despair on this subject to be found among all railroad employees, the claims and practices of the railroads themselves, and the decisions of the courts on this subject are considered, and in this connection also the legal rights (under both the common law and the statute law) of men to strike and to quit work are discussed.

Part III treats of the organizations of railway employees. Under this heading for the first time there is brought together a historical sketch of nearly all the railroad brotherhoods and the railroad orders. Their methods of organization, their plan of work, their beneficial departments, their protective features, their financial management, and their educational value are the topics around which this discussion is grouped. Each brotherhood is treated separately, but the same general method of presentation is followed, so that the reader can easily trace out any single topic through the several brotherhoods. In the next place the fraternal and beneficial associations are briefly referred to, and then the educational and religious associations in connection with which the work of the railroad branch of the Young Men's Christian Association is described. The various attempts at federation of the railroad brotherhoods and in general the relation which these organizations have sustained in the past to other labor organizations

and the attitude of railway corporations toward labor organizations and toward the question of arbitration of labor disputes are important questions which are briefly treated in this part of the report.

Part IV is devoted to a discussion of the relations of railway corporations and their employees. The general tendency manifest on the part of the roads to excise greater care in the maintenance of their labor force and in its improvement is clearly seen in the growth of the railway relief and insurance departments, and very recently in the establishment of superannuation and pension funds. The plan and working of these features of railway management is presented in detail and the statistical results discussed. For the most part only the experience of American railroads is taken into account, but on the subject of railroad pensions, the able report of Mr. Riebenack, presented in Exhibit 3, gives a survey of the practice of foreign roads as well as presenting an authoritative account of the pension fund plan adopted by the Pennsylvania Railroad and the results of its first year of operation. This plan is already being studied and imitated by other large corporations. A brief summary is presented of the leading points relating to employer's liability, a vexed question over which so much railway litigation takes place and on which the rank and file of railway employees are almost a unit in demanding greater legal protection than they have at present. It is a subject to be considered not merely in its relation to railway employees, as has been done in this report, but also in its larger aspects in its bearing on the legal relations of employer and employed in all departments of industry. The legislation of England and that of almost all European countries places them far in advance of the United States in dealing with these questions. A careful examination of the numerous cases which have come up in the last 5 years affecting only one class of employees, namely those in the railway service, seems to be convincing evidence that some limitation of the fellow-servant principle or doctrine of common employment should be embodied in legislation. Lastly the subject to which considerable attention has already been paid by Congress and on which there has been some legislation, namely, that of safety appliances, is briefly reviewed. It will be seen that the corporations have gladly cooperated in the execution of this legislation as soon as they collectively faced the problem and began to realize the economic advantages of uniformity of requirements on this subject. The results of the safety-appliance legislation may well encourage us to go further in social legislation affecting railway employees even where, at the outset, railway corporations individually find it difficult to adjust themselves to it. In the long run they will find that uniformity of control may work out to their economic advantage as well as to that of their employees.

The exhibits of the report explain themselves, and have so direct a relation to matters discussed in the text that no additional word of explanation and no summary of their content is necessary.

## PART I. —GENERAL CONDITIONS OF RAILWAY EMPLOYMENT.

### § 3. NUMBER OF RAILWAY EMPLOYEES IN THE UNITED STATES, BY CLASSES.

From the statistics published by the Interstate Commerce Commission it is estimated that the number of persons employed by the railways of the United States for the year 1900 was 1,017,653, or an average of 529 employees per 100 miles of line. This was an increase of 88,729, or 34 per 100 miles of line, as compared with the year ending June 30, 1899. The following table gives a classification of these employees and the totals by classes for each year of the period of 11 years ending June 30, 1900.

#### *Classification of railway employees*

Class	1900	1899	1898	1897	1896	1895
General officers . . . .	1,916	1,832	1,956	1,800	5,372	5,407
Other officers . . . .	1,669	1,291	3,925	3,837	2,718	2,534
General office clerks . . . .	32,265	29,571	26,815	26,837	26,328	26,583
Station agents . . . .	31,610	30,557	30,699	30,019	29,723	29,014
Other station men . . . .	89,851	83,910	78,663	71,569	75,919	73,569
Enginemen . . . .	12,847	39,970	37,939	35,667	35,851	34,718
Firemen . . . .	11,130	11,152	38,925	36,735	36,762	35,516
Conductors . . . .	29,957	28,232	26,876	25,122	25,157	24,776

Machinists . . . .	32,831	30,377	28,832	28,229	29,272	27,710
Carpenters . . . .	6,666	12,501	10,371	37,710	38,816	35,564
Other shopmen . . . .	111,773	103,937	99,717	91,115	95,613	88,661
Section foremen . . . .	33,085	31,690	30,771	30,111	30,372	29,809
Other trackmen . . . .	226,779	201,708	181,191	171,732	169,664	155,116
Switchmen, flagmen, and watchmen . . . .	50,789	48,686	47,121	45,768	44,266	43,158
Telegraph operators and dispatchers . . . .	25,218	23,911	22,188	21,152	21,682	20,984
Employees—account floating equipment . . . .	7,597	6,775	6,319	6,109	5,502	5,779
All other employees and laborers . . . .	125,186	107,261	98,673	90,725	88,167	83,355
Total . . . .	1,017,653	928,921	871,558	823,176	826,620	785,041

Class	1894	1893	1892	1891	1890
General officers . . . .	5,257				
Other officers . . . .	1,778	6,640	6,164	5,271	5,160
General office clerks . . . .	21,779	27,584	25,169	23,879	22,239
Station agents . . . .	28,199	28,019	26,829	26,192	25,665
Other station men . . . .	71,150	75,181	69,511	67,812	66,431
Enginemen . . . .	35,166	38,781	36,739	31,801	33,354
Firemen . . . .	36,327	10,359	37,717	36,277	34,634
Conductors . . . .	21,823	27,537	26,012	21,523	23,513
Other trainmen . . . .	63,117	72,959	68,732	61,537	61,734
Machinists . . . .	29,215	30,869	28,783	27,388	27,601
Carpenters . . . .	36,328	11,878	10,080	37,718	37,536
Other shopmen . . . .	81,359	93,709	87,615	83,865	80,733
Section foremen . . . .	29,660	29,699	28,753	27,890	27,129
Other trackmen . . . .	150,711	180,154	171,810	163,913	157,036
Switchmen, flagmen, and watchmen . . . .	43,219	16,048	42,892	40,457	37,669
Telegraph operators and dispatchers . . . .	22,115	22,619	20,970	20,308	18,968
Employees—account floating equipment . . . .	7,169	6,146	5,332	5,911	6,199
All other employees and laborers . . . .	83,276	105,150	98,007	93,513	83,360
Total . . . .	779,608	873,602	821,115	781,285	719,301

On the basis of special returns made to the secretary of the Interstate Commerce Commission it is stated that the number of switchmen, flagmen, and watchmen, included in the aggregate given above under that head for the year 1899, could fairly be assigned in the proportion of 6, 3, and 2, respectively.

The geographical distribution of railroad employees and the relative intensity of railroad operation, as indicated by the number of employees per 100 miles of line, is indicated by the statistics for the 10 territorial groups of States and Territories adopted by the Interstate Commerce Commission in all its statistical reports,<sup>1</sup> as follows:

*Classification of employees, by groups, and per 100 miles of line, on June 30, 1900.*

<sup>1</sup> Less than 1

It should also be noted that for all classes the number of employees is determined from the pay rolls for June 30 of each year, and that the railroads are not supposed to include laborers engaged in the construction of new lines. Also, in making comparisons with European statistics, it should be remembered that these figures give the number of employees upon a specified day of the year, while the figures for most foreign countries give the average number of men employed during the year. Bearing this limitation in mind, it is interesting to note that the railways of the United Kingdom (Great Britain and Ireland) employed in 1895, 465,112 men, or about 5 times as many per mile of line as the American railways at the same time. Dr. Walter E. Weyl, in his report on the Condition of Railway Labor in Europe<sup>1</sup> (from which these figures for the United Kingdom are taken), assigns two causes for this difference.

"In the first place, the British railways do a great deal of work that in America is delegated to subsidiary corporations, and many men are employed in the express business, or in collecting and delivering goods, or even in the manufacture of railway materials, a portion of whom would not be considered in America as railway employees. The chief cause of the difference, however, is to be found in the character of the British roadbed, rolling stock, and general equipment, and in the intensity of British railway traffic. In the United States we find similar differences corresponding to the variations in the intensity of traffic. Thus, while there are 454 men (1896) employed per 100 miles of line for the whole of the United States, the proportion amounts to 1,048 per 100 miles in the Middle States, 833 in the New England States, and sinks as low as 248 in the Pacific States. The employment for the whole of the United Kingdom, however, is considerably denser than for any group in the United States, and in fact for any country in the world, in 1895 there being 2,197 men employed per 100 miles of British railways."

From the same report the figures for France for the year 1896 show 251,971 persons employed on French railways (excluding those of Algiers and Tunis), about 11 per mile, as compared with 22 per mile in 1895 in the United Kingdom, and 4½ per mile in 1896 in the United States. About one-tenth of the employees on

<sup>1</sup> Published in Bulletin of Department of Labor, No. 20, January, 1899, Washington, D. C.

French railways were women, and over one-third workmen employed by the day. The statistics for Belgian railways for 1896 show that 48,415 persons were employed on state railways, or 23.3 men per mile of line—a greater density than for any other country in the world. In Prussia the statistics for the state railways for the year 1896-97 show 109,304 employees, or 6.4 per mile; but this includes only a portion of the labor force, there being, besides this number, 188,262 persons classed as workmen who were employed in operation and maintenance and in the workshops. The term "workman" includes railway servants whose work consists of manual labor requiring no previous training except that of a skilled trade, persons engaged as helpers to minor officials, and persons temporarily employed for special work, and all female employees. They are paid by the day or piece, and are subject to dismissal without notice.<sup>1</sup> Statistics of railway employees in Saxony and Switzerland, where conditions of comparison are still more difficult, may be found in Dr. Weyl's report.

While the density of railway employment, as measured in the number of employees per mile of line, varies considerably in the United States—ranging from 11.4 in the Middle States for the year 1900 to 3 in the Northwestern States—the magnitude of the railway industry as a source of employment for the American people may be measured by the percentage which the total number of railway employees bears to the total population. In 1890 the population of the United States, according to the Eleventh Census, was 62,622,250, and the number of railway employees on the 30th of June, 1890—the day on which the census was taken—was 749,301, which is 1.2 per cent, or 12 per 1,000 inhabitants, which tallies with the number of railway employees per 1,000 inhabitants in the United Kingdom in 1895, and is about double that in France in 1896. The Twelfth Census gives the total population of the United States on June 30, 1900, as 71,610,523. The ratio therefore, of railway employees to the total population, taking the total number on June 30, 1899, as 928,921, gives us exactly the same relative proportion as the figures for 1890 gave, namely, 1.2 per cent, or 12 per 1,000 inhabitants.

A fairer estimate, however, of the importance of the railway industry, so far as the employment of labor is concerned, is to be found in the ratio which the total number of railway employees bears to the total number of persons engaged in gainful occupations. The census of 1890 records the total number of persons 10 years of age and over engaged in gainful occupations as 22,735,661; the number of railway employees in the year 1890 being 749,301, gives 3.3 per cent, or 33 per 1,000 persons, engaged in gainful occupations. Probably, next to the single occupation of agriculture, more people in the United States were engaged in some branch of railway employment than in that of any other well-defined pursuit.

The Interstate Commerce Commission calls attention in its Thirteenth Annual Report on the Statistics of Railways to the fact that, while the number of men employed on the railways of the country per 100 miles of line was greater for the year ending June 30, 1900, than it was in 1893, the last year of the previous period of prosperity, this is true for the first time since 1893, and the increase in passenger and freight traffic shows that notwithstanding this marked increase, employment has increased at a less rapid rate than the increase in traffic. The ton mileage accomplished per engineman in 1893 was 2,413,246 miles, while that for 1900 was 3,305,534 miles, thus indicating that the necessary economies of hard times have resulted in permanently greater intensity and efficiency of labor and therefore in permanent advantages to the railways and to the public.

#### § 4. AVERAGE DAILY WAGES AND ANNUAL INCOME OF RAILWAY EMPLOYEES.

The average daily compensation of each of the following groups of employees for each of the 9 calendar years from 1892-1900, based upon the returns made to the Interstate Commerce Commission for the whole of the United States and covering 99 per cent of all railroad employees, is given in the following table:

<sup>1</sup>See article by Dr. Walter E. Weyl on "The condition of railway labor in Europe" Bulletin of the Department of Labor, January, 1899, p. 88.

*Comparative summary of average daily compensation of railway employees for the years ending June 30, 1900 to 1892.*

Class	1900	1899	1898	1897	1896	1895	1894	1893	1892

It is possible also from other statistical tables furnished in the reports of the Interstate Commerce Commission to make a comparison of the average daily wages for each of these classes of railroad employees in the different sections of the country.

Inasmuch as the factors determining wages and the cost of living vary so greatly over so large an area of territory, it is all the more necessary to analyze these figures. For this purpose all the statistics in the reports of the Interstate Commerce Commission are classified for 10 territorial areas, made up of groups of States and parts of States. A map showing the exact boundaries of these areas and a comparative summary of the average daily wages of each class of railroad employees in each group are given in Exhibit I of this report.

An average wage where there are so many grades of service within each class must not be expected to serve as other than a very rough estimate of general improvement or general decline in the class, as changes in the averages are noted from year to year. In no case do these average wages serve as a fair index or basis for a scale of wages for the several classes. For example, it would be quite misleading to suppose that the average as quoted in the above table for enginemen in 1899 as \$3.72 could be adopted by a trade union as a fixed or minimum wage to be guaranteed by the union to all its members. To classify wages so as to separate out all of the services which are really separate occupations would require about 400 grades in place of the 18 general classes enumerated in the tables of the Interstate Commerce Commission. Even if all the distinct classes of service could be itemized, an average would still be misleading if it were used as the basis of a wage scale. Thus an engineer on a fast express train between New York and Philadelphia may make a return trip within 5 hours and be paid nearly \$6 and may choose to work only alternate days, which would make his average \$3; or, again, he may choose to do more than the one run in a day and put the average up.

Wages are of course affected by anything that affects the earning power of the corporations, as in other industries, and usually vary with rates paid in other occupations in the same locality. The lack of anything like uniformity in pay for same grade of service in different parts of the country is plainly evident, and will probably never be attained. On this point Mr. Wm. H. Baldwin, jr., president of the Long Island Railroad, and an officer who has had large experience in railroad management in 27 States, says,<sup>1</sup>

"The great railroad systems of the present day in performing their government function must so administer their property that the wages paid will be the standard railroad wage, the standard wage being the average wage paid by lines similarly situated, with similar traffic conditions. There is no standard wage for any class of railroad labor for the whole country. Any attempt to make a standard wage would prove futile. The difference in opportunity for steady work,

<sup>1</sup> Paper on "Railroad relief and beneficiary associations." Publications of American Economic Association. Third series, vol. 1, No. 1, p. 226, February, 1900.

the comfort of surroundings, the cost of living, the advantages offered by schools, churches, etc.; in short, the conditions controlling demand and supply, would make any absolute standard wage unfair to some roads.

"A large number of railroads by reason of adverse traffic conditions, financial conditions, etc., are unable to pay even the standard wages in their section of the country. Generally speaking, such roads make a fair statement to the employees or to their representatives, and, with a fair spirit on both sides, a reasonable conclusion may be reached. The important element in this method of meeting the question is publicity. A statement to the employees and the public explaining fully the wages actually earned by the employees who make the request; analyses showing cost of living compared with other sections commanding higher wages; comparison of wages earned by railroad employees with the wages earned in other service (comparable with it) in the same locality; in short, a straightforward statement of the case is made with the expectation of meeting an honest response from the employees and from the public. This method puts the case squarely before the public as the jury, and the opinion of the public is oftentimes the controlling factor. This method may prove to be of the utmost importance in the future. The extreme prosperity of this country has permitted the railroads to pay the highest wages known in railroad service. With constantly decreasing rates forced upon the railroads by unbridled competition, the general problem of railroad wages may present itself. The operations of the enormous railroad systems of the future can not be stopped by reason of wage discussions. In the last analysis the wage question must go to the public as the jury. Entire publicity alone can give the proper foundation for the settlement of any serious question affecting labor in public service; publicity of the facts regardless of the questions of recognition or nonrecognition of labor unions. The same spirit which now demands reasonable direction and control of industrial pursuits will demand reasonable protection of the public as well as of the employees in any wage question in public or quasi-public service. The service of the railroad employee will be recognized more and more as a public service."

The nearest approach to uniformity is in those classes of employees who are well organized and whose organizations are conservatively managed. The brotherhood chiefs declared before the Industrial Commission that in most cases (as high as 90 per cent of engineers) the wages were fixed by joint agreement or contract between the railroads and the employees' organizations.<sup>1</sup>

This really means that in most cases the roads adopt the usual wage in classes of employment best organized, but often only make agreements in the form of public announcements to their own men, subject to specified notice of change.

Most of the Western railroads print a pamphlet or handbook giving detailed information concerning the schedule of pay for train and yardmen, stating also the number of miles allowed for specified runs where pay is by the run, and also in some cases indicating the general rules governing pay for overtime and regulating promotion, and stating causes for discharge. The Eastern roads, as a rule, do not put this information in print, but simply notify foremen and superior officers of any changes in the schedules of wages or hours of employment. Extracts from the printed regulations of a few typical roads throw much light upon the question of wages as well as that of the hours of labor of railway employees.<sup>2</sup>

It will be seen that for trainmen the pay is usually based on mileage, while for clerks, station men, and most other classes, it is based on a monthly rate of compensation.

Extracts from 4 roads, selected because of geographical considerations and exceptional conditions affecting wages, are presented in Exhibit II of this report. These roads are: (a) The Union Pacific Railroad, (b) the Southern Railway, (c) the Baltimore and Ohio Railroad, and (d) the Louisville and Nashville Railroad.

On the schedule of questions on railway labor sent out by your expert agent to the chief executive officers of the leading railroads of the United States the following question was asked:

<sup>1</sup> See Industrial Commission Reports, Transportation, Vol. IV, p. 138, and also the historical sketches of the brotherhoods, p. — of this report.

<sup>2</sup> See "Rates of pay and regulations governing employees in train and yard service on the principal railroads of the United States, Canada, and Mexico." Collected and compiled by E. E. Clark, G. C. C., O. R. C., and P. H. Morrissey, G. M., B. R. T., 1900, Cedar Rapids, Iowa.

WHAT IS THE AVERAGE LENGTH OF THE WORKING DAY FOR THE VARIOUS GRADES OF SERVICE, THE AVERAGE DAILY WAGES, AND THE ANNUAL INCOME OF THE SAME?

The replies received from 33 corporations operating 93,515 miles of road and employing 540,712 men are as follows:

1.

Eight to 12 hours.

2.

Ten hours per day for shop and track hands

3.

	Average length of working day	Average daily wage	Average annual income of all employees
	<i>Hours</i>		
Car department	9½	\$1.82	\$541.65
Transportation department	10½	1.93	608.56
Motive power department	10½	2.26	707.38

Total number of employees, 22,336

4.

Eight to 10 hours in all departments except train-service departments, whose average length of working day can not be computed

5.

Classification	Average working hours per day	Average pay per day
Clerks	10	\$1.81
Agents	10	1.54
Other station men	10	1.56
Enginemen	at 6 to 12	3.83
Firemen	at 6 to 12	2.15
Conductors	at 6 to 12	3.30
Other train men	at 6 to 12	2.07
Machinists	10	2.28
Carpenters	10	2.03
Other shopmen	10	1.80
Section foremen	10	1.46
Other track men	10	1.00
Switchmen, flagmen, etc.	12	1.22
Operators and dispatchers	12	1.62

a Varies

6.

Average length of working day, 10 hours per day; average daily wages, \$1.84 per day; average annual income, \$574.06.

7.

The amount paid in wages for the year ending June 30, 1900, was \$19,576,183.22.

8.

Average length of working day, 10 hours; average daily wages, \$1.96; annual income of same, \$715.

9.

Average length of working day, 9 hours, average daily wages, \$1.95; average annual income, \$610.35.

## ENGINEMEN.

Other freight trains and work trains . . . . . do ..	.03	.02

## SWITCHMEN

	Night foremen	Day foremen	Night helpers	Day helpers
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
Chicago, St. Paul, Minneapolis, St. Joseph, Kansas City, per hour . . . . .	29	27	27	25
Oelwein, Dubuque . . . . . per hour..	27	25	25	23
Des Moines . . . . . do....	27	25	23	23

Men paid by the mile will be allowed actual mileage made, and if the actual mileage made before they are relieved from duty is less than 25 miles they will be allowed sufficient overtime to make 25 miles.

Men paid by the hour will be allowed the actual time from the time they are required to report for duty until they are relieved, and if the actual time is less than 2½ hours, they will be allowed sufficient overtime to make 2½ hours.

Freight and work train engineers and train men will be allowed overtime at the rate of 10 miles per hour for all time on duty in excess of 1 hour for each 10 miles run.

Engineers and train men deadheading under orders will be allowed actual mileage made, at the following rates: Engineers, 1.85 cents per mile; firemen, 1.10 cents per mile; freight conductors, 1.50 cents per mile; freight brakemen, 1 cent per mile.

No mileage will be allowed for learning road or being examined on foreign lines, except when a man is transferred for the benefit of the company alone, in which case deadhead mileage will be allowed.

Men acting as witnesses or attending court under instructions from the company will be paid at the following rates per day, this to include the time during which they are required to hold themselves in readiness for such service or are away from home: Engineers, \$3.70; firemen, \$3.15; conductors, \$3; brakemen, \$2; switch foremen, \$2.70; helpers, \$2.50.

Train men paid by the month may be used for extra service without extra compensation, providing they do not exceed the mileage made by crews of daily passenger trains. When such mileage is exceeded, extra compensation will be paid pro rata.

No train will be laid up for rest between terminals except by permission of train dispatcher, and in such cases the time laid up will not be allowed, except to the man or men required to take care of or watch engine, who will be allowed their regular rates.

Men engaged as pilots will be allowed 3 cents per mile.

## 10.

The length of the working day varies from 8 to 12 hours and will probably average for all branches of work about 10 hours per day. For the last fiscal year the average of all employees was \$654.84 per annum, or slightly in excess of \$2.09 per day. Average number of men employed during last fiscal year was 11,732.

## 11.

In the clerical branch of the service the wages of course vary, the office boy receiving from \$10 to \$15 per month, to the chief clerks and heads of departments at greater rates of pay. Time of service, 8 hours per day. In the maintenance of way or engineering department the working day is 10 hours per day, and the wages of day laborers is \$1.25 per day. In the mechanical department the average working day is from 9 to 10 hours, and their daily wages average \$1.65. In the train service, trainmen, locomotive engineers, and firemen are paid by the mile run, and average from \$55 to \$60 per month for brakemen, \$75 to \$140 per month for conductors, \$65 to \$100 per month for firemen, and \$90 to \$175 per month for engineers.

## 12.

Eight to 12 hours, according to the kind of work on which employed. Average wages per day as follows. Conductors \$3.50, other trainmen \$2.25, station men \$1.60.

## 13.

About 10 hours per day. The average daily wages for the several classes of employees is shown in statement annexed hereto. An estimate of the annual income of employees other than those who are regularly employed would be mere guesswork and not of practical value:

Class.	Number.	Total number of days worked	Total yearly compensation	Average daily compensation.
General officers.....	62	28,253	\$327,152 77	\$11 58

22.

Track labor, 10 hours per day. Trackmen receive on an average \$1.25 per day, or about \$360 per year.

Station labor, 10 to 12 hours per day. The pay of station labor varies in small towns from \$1.25 per day to New York City, at \$1.70 per day. The average annual income is about \$360, and in New York City about \$540.

Train employees' hours of duty vary with the runs. These employees are paid by the mile at various rates, passenger trainmen averaging about \$600; freight brakemen, about \$700; passenger conductors, about \$1,200; freight conductors, about \$900; firemen, about \$840, and enginemen, about \$1,500.

In our shops machinists receive from 13½ to 28 cents per hour, and average about \$720 per year.

Machinists' helpers receive from 12 to 18 cents per hour, and average about \$480 per year.

Lathemen receive from 17 to 25 cents per hour, and average about \$700 per year.

Boilermakers receive from 15 to 30 cents per hour, and average about \$750 per year.

Boiler helpers average from 11 to 18 cents per hour, and average about \$480 per year.

Blacksmiths receive from 14 to 30 cents per hour, and average about \$740 per year.

Tinsmiths receive from 20 to 23 cents per hour, and average about \$750 per year.

Plumbers receive 23 cents per hour, and average about \$745 per year.

Gasfitters receive 18 to 25 cents per hour, and average about \$700 per year.

Carpenters receive 20 to 23 cents per hour, and average about \$725 per year.

Painters receive 19 to 24 cents per hour, and average about \$700 per year.

Pattern makers receive 23 to 25 cents per hour, and average about \$750 per year.

Their hours vary with the amount of work to be done. Overtime is allowed after 10 hours, and is paid for at time and one-half.

23.

The length of working days for trainmen, 12 hours; maintenance of way and equipment, 10 hours.

24.

Working hours in shops vary with conditions of equipment; usually 9 hours constitutes a day. In engine and train service, 10 hours, general office force, 9 hours.

The average daily wages of employees, \$1.96 (exclusive of officers); the annual income (including officers), \$10,640,792.

25.

Ten hours; average daily wages, \$2.10; annual income about \$766.50.

26.

Class	Average hours	Average wages	Annual income	Work Sunday	Extra time.
Stationing M.S.	12	\$2.51	\$875.00	All	None
Chief station men	12	1.98	600.00	10 per cent	10 per cent rate per day per hour.
Engineers .....	10	4.10	1,375.00	All	30, 39, and 40 cents per hour
Firemen .....	10	2.80	925.00	do	25 and 26 cents per hour
Conductors	11	3.78	1,250.00	do	35 cents per hour
Other trainmen	11	2.83	825.00	do	25 cents per hour
Machinists	10	3.16	875.00	1 per cent	15 per cent rate per day per hour
Carpenters	10	2.75	700.00	do	Do
Other shopmen	10	2.15	600.00	do	Do
Section foremen	10	2.04	675.00	None	None
Other trackmen	10	1.51	480.00	do	10 per cent rate per day per hour
Switchmen and flagmen	10	2.61	850.00	All	25, 27, and 29 cents per hour.
Operators and dispatchers	12 and 8	2.52	900.00	do	None
Other employees .....	10	2.36	600.00	2 per cent	10 per cent rate per day per hour

27.

Office forces and shop forces, 9 hours; train hands, 10 hours.

28.

The average length of working day for train dispatchers and trainmen is 8 hours; other employees, 10 hours; average daily wages of all classes, \$1.55; average annual income, \$460.

29.

Transportation department:

Stationmen—

	Average wages
Agents .....	per month.. \$75.00
Clerks and operators .....	do..... 55.00
Laborers .....	per day.. 1.33

## Transportation department—Continued.

Yardmen—	Average wages.
Yardmasters.....	per day.. 3.55
Foremen.....	per hour.. .28
Switchmen.....	do..... .26
Trainmen—	
Conductors (passenger).....	per month.. 125.00
Brakemen (passenger).....	do..... 60.00
Porters (passenger).....	do..... 40.00
Conductors (freight).....	per mile.. .03
Brakemen (freight).....	do..... .02

All employees contribute 50 cents per month to the hospital fund.

The only deduction from salaries of agents, aside from hospital dues, is for premiums on indemnity bonds. Clerks, operators, and laborers have no deductions from their salaries other than hospital dues.

About 75 per cent of yardmen have deductions from their salaries for account of board and accident insurance. Passenger and freight conductors have no deductions from their salaries other than hospital dues. Passenger brakemen, porters, and freight brakemen have deductions from their salaries for board and accident insurance.

All stationmen perform 10 hours' labor per day. If any overtime, extra compensation is allowed in proportion to regular wages. No Sunday labor is performed by stationmen more than is absolutely necessary to carry on traffic incident to railway service.

Most of the yardmen work by the hour, hence overtime would not apply to that class of employees. However, those who do not work by the hour are allowed compensation for overtime in proportion to their regular wages. Yard and train men perform Sunday labor the same as on other days of the week. No extra compensation is paid for this service.

Trainmen are paid overtime when delayed over 2 hours—conductors at the rate of 30 cents per hour, brakemen at the rate of 20 cents per hour; when delays exceed 2 hours, the first 2 hours to be included. In computing delayed time the time of regular trains is taken from current time-table. The time of irregular trains is computed on a basis of 12 miles per hour.

As nearly as can be ascertained, about 50 per cent of the operators and 90 per cent of the yard and train men belong to labor organizations. The purpose and object of these organizations are protective and benevolent.

*Maintenance-of-way department.*

Class.	Number	Average wages.
Clerks.....	16	\$75.00

Engineers (stationary).....	10	3.04
Pile drivers.....	18	2.30
Stone masons.....	11	4.34
Miscellaneous.....	86	2.00

All employees who have worked 3 days or more contribute 50 cents each per month for hospital funds.

All employees in this department perform 10 hours' labor per day. Overtime in proportion to regular wages. When required to perform service at night or on Sundays they are allowed time and one-half.

NOTE.—Clerks do not work Sundays nor perform any extra labor, hence they are not allowed any pay for overtime.

About 90 per cent of the employees in this department have deductions made from their wages for board and accident insurance.

None of the employees in this department belong to labor organizations.

*Motive-power department.*

Miscellaneous.....	136	2 00

All employees who have worked 3 days or more contribute 50 cents each per month for hospital funds.

Four and one-half per cent of shopmen have deductions from their salaries, which are for board and accident insurance.

Thirty-four per cent of engineers have deductions from their wages, which are for board, accident insurance, books, and clothing.

Fifty-one per cent of the firemen have deductions from their salaries, which are for board, accident insurance, books, and clothing.

For shop and other men, paid by the day, 10 hours is a usual day's work in summer, and 9 hours during the winter months. Enginemen work by the trip. The average length of a trip is about 8 hours. Enginemen work overtime when they are delayed on the road and are paid for same by the hour. The usual allowance made for overtime of shopmen is time and one-half, at their regular rate of compensation.

No work is performed on Sundays that can be avoided. Enginemen necessarily have to work on Sundays, as also do car inspectors, watchmen, engine hostlers, wipers, and other roundhouse employees. Where the nature of their duties requires men to work regularly Sundays, no extra time allowance is made. Employees who do not regularly perform Sunday labor, when called upon in cases of emergency, are allowed extra compensation for such service at the rate of time and one-half.

As nearly as can be ascertained, about 65 per cent of the enginemen and about 35 per cent of shopmen belong to labor organizations. The enginemen's organizations are protective and benevolent. The shopmen's organizations are of a benevolent and social nature. The enginemen's organizations exercise considerable control over their members, but the shopmen's organizations do not show any evidence of such control, so far as the relations of the men with the company are concerned. The effects of the organizations on employees who are not members is not noticeable.

*General officers.*

Class	Number	Average wages (per month).
Clerks.....	246	\$69

All contribute 50 cents per month to the hospital funds. No deductions are made from salaries except for hospital dues.

No Sunday labor is performed; no overtime. In general, it may be said that our scale of wages is perhaps higher than elsewhere in the country, the average daily wages paid for all classes of employees on our Pacific System last year being \$2.60 per day. The length of the working-day is about 8 hours in the shops and in the train service, and from 10 to 11 hours at stations and in the maintenance of way department.

30.

Average length of workday, 10 hours; average daily wages, \$2; average annual income, \$626.

31.

Hours of service in the different classes of employment: Shop employees, maintenance-of-way forces, etc., generally work 10 hours per day. The number of hours which trainmen work daily vary, and depend upon the length and character of their runs. Shifting and yard crews work 12 hours daily, with an allowance of 1 hour for meals. The number of hours of daily employment of clerical forces vary to considerable extent, being governed in a greater or less measure by the particular class of work or existing condition of business in the various offices, stations, etc., in which they are employed.

32.

Average length of working-day, 10 hours; average daily wages, \$2.74 per day; average annual income of the same, \$891.86.

33.

Trainmen, 10 hours; telegraph service, 10 hours; trackmen and bridgemen, 10 hours; mechanics, 10 hours; laborers, 10 hours; stationmen, 11 hours; engineers and firemen, 8½ hours.

35.

In train service, 12 hours; in yard service, 11 hours; in shops, 10 hours.

The 35 replies just quoted relate to hours of labor as well as to wages, and in some cases to other topics as well. They are numbered consecutively merely for convenience and the numbers and order of sequence have no relation whatever to geographical location, nor reference to order of importance of the respective roads, nor reference to similar numbers in the replies to other questions as quoted in subsequent pages. Only 9 replies give detailed information concerning daily wages of the several classes of employees. These 9, numbered 5, 9, 13, 21, 22, 26, 29, 33, and 34, respectively, cover nearly 32,000 miles of road, employing over 135,000 men. Eighteen additional replies give average daily wage for a few departments of service, or for the total number of employees on the system, without classification. One reply gives only the total annual wage bill of the corporation, and the remaining replies refer only to hours of labor. All 35 replies cover 97,030 miles of road and relate to 563,953 employees.

The question of wages is always a debatable one between employer and employed. It is a matter so dependent upon local conditions to determine what is a fair wage from the point of view of the most just corporation, and what is a living wage from the point of view of the employees as well as of the general public, that periodical readjustment of rates of pay in any industry becomes necessary. Congress may have power under its regulation of interstate commerce to establish a minimum wage for a specified labor day in the various departments of transportation, but in view of the fact that the standard wage can only be standard for relatively small territory and for comparatively brief periods of time, it would seem that the regulation of wages would be better left entirely to private contract. Yet on no point do the replies to the Industrial Commission's Topical Circular filed by railroad employees call more vigorously for legislative recommendations than on the question of wages and hours of labor. To note a few of these demands attention may be called to the following:

(1) A section foreman on the Southern Railway says he is required to work 14 hours in summer, and in cases of accident and emergency also at night and on Sunday, without extra pay, for wages varying from \$30 to \$35 per month.

(2) Another section foreman in Florida makes the same complaint; says wages are \$40 per month and tenure of employment very uncertain.

(3) A secretary of a division of the Brotherhood of Railway Trackmen in Tennessee appeals for a 10-hour day, regular employment, and better wages.

(4) A track foreman in Georgia says that track foremen are compelled to live in houses furnished by the company, often poorly located with respect to school and church facilities; wages \$30 to \$45 per month, with deductions for sickness and absence from duty, and no cause given for discharge and no pay for overtime on Sundays, and the length of the working day from sunrise to sunset, with from 30 minutes to 2 hours intermission at noon, day laborers receiving from 50 to 80 cents per day for track work.

(5) A section foreman in Tennessee makes same complaint as above; says wages are from \$36 to \$55 per month and laborers receive from 70 cents to \$1 per day.

(6) A section foreman on New Orleans and Northeastern Railway asked for legislation providing that all overtime be paid for, and that conductors in the absence of superior officers be authorized to approve time checks for overtime.

(7) Section foremen in Georgia, Colorado, Kansas, Florida, and Missouri state that hours are longer than in other occupations, employment more irregular, and wages lower for trackmen.

(8) Officer of the Order of Railroad Telegraphers complained of low wages and long hours in this department of the service, especially for those telegraphers that were not thoroughly organized.

(9) A section foreman in Kansas makes same complaint as other trackmen, and calls attention to a Texas law which requires as a measure of public safety one track walker per mile of track, as a partial remedy for the severe duties of this class of railroad labor.

(10) A secretary and treasurer of a Trackmen's Brotherhood division in Florida says that on all roads in that State trackmen work from sunrise to sunset, with no pay for extra or Sunday work, laborers getting 75 cents per day and receiving 1½ time allowance for night and Sunday work.

(11) A secretary of a Trackmen's Brotherhood division in Tennessee reports that foremen receive \$50 per month, but frequently have to work as many as 8 nights and 2 Sundays in the month without extra pay.

(12) A secretary of a Trackmen's Brotherhood division in Georgia reports that foremen receive \$35 per month (in city yards, \$40 to \$50), working from sunrise to sunset, longest day being 14 hours, get no pay for overtime, and have no beneficial associations, their wages being too low to join such; carmen work 12 hours and shopmen 10 hours.

(13) An officer of the Brotherhood of Engineers in Alabama suggests legislative remedy for long hours, and says that they have had men on duty 36 to 40 hours without intermission for meals or rest; engineers and firemen are paid for overtime after 12 hours.

(14) An officer of the telegraphers' order, speaking of conditions in western New York and Pennsylvania, says that telegraph operators average \$40 per month, wages ranging from \$25 to \$60; that their hours vary from 10 to 16, averaging between 12 and 13; that Sunday work is frequent with no extra pay, the Lake Shore and Michigan Southern Railway being the only road to allow extra Sunday pay, and that only to day men.

(15) An officer of the Order of Railway Conductors in Kansas says that conductors and brakemen are allowed overtime after 10 hours, on the basis of 26 working days per month, and that 10 hours is a standard day, passenger conductors get from \$100 to \$125 per month; freight conductors, \$90; passenger brakemen, \$55 to \$60; freight brakemen, \$60.

(16) The reply from a division in Tennessee of the Order of Railway Conductors says that wages are fair but hours long, being, on the average, 13; in Georgia a few Sunday trains, but in Tennessee and Alabama about the same as other days, overtime paid for.

(17) An officer of Trackmen's Brotherhood Lodge in New York says that standard wages are paid, but age limit of employees is put at 45, and that tram-service men are on duty from 12 to 24 hours, averaging  $11\frac{1}{2}$  per hundred miles, for which they are paid as follows: Firemen, 2 cents per mile; passenger engineers,  $3\frac{1}{2}$  cents; freight engineers, 3½ cents; freight brakemen, 2 cents, freight conductors,  $2\frac{1}{2}$  cents; Sunday labor excessive in freight service. Some track repair gangs worked 45 Sundays in 1898.

Notwithstanding these numerous complaints, and many more which could be reproduced which doubtless would prove upon investigation that in many quarters, especially the lower grades of labor—for example, track laborers and foremen, who perform nevertheless a very responsible service from the point of view of the safety of the traveling public, are underpaid—it seems to your expert agent that any attempt to secure uniformity, even to the extent of a uniform minimum wage, would work more harm than good. The remedy seems to lie rather in the direction of strengthening the hands of labor organizations, which can organize these men along conservative lines, and by wise business management within the sphere of their legal rights secure for them in those localities where they are underpaid greater consideration. With respect to legislation affecting the hours of labor, perhaps more could be done, but of this we will speak later.

With respect to the general level of wages in railway employment perhaps no class of employees is more closely affected by the general changes in the industrial prosperity of the country. The depression of 1893 made itself felt instantly upon the transportation business and brought about sweeping reductions in wages and the cutting down of the force in all departments of railroad employment. It is, perhaps, true that wage reductions were not made except as a last resort, and that many of the leading railroad systems of the country maintained the old rate of pay throughout the period of depression. But the force was cut down, the work per man increased, and oftentimes the hours, so that relatively, if not absolutely, there was a reduction in compensation per unit of effort. Increasing prosperity in the last few years brought these wages up again even in cases where roads were not paying dividends. The Louisville and Nashville Railroad, the Southern Railway, and the Missouri Pacific Company, covering 10 per cent of the total mileage of the United States, announced an increase of wages on January 1, 1899, although the first two roads have paid no dividend since 1893, and the latter none since 1891. The Louisville and Nashville's original cut was 20 per cent of salaries over \$4,000 and 10 per cent on salaries less than \$4,000. On July 1, 1898, the improved conditions enabled the managers to restore part of the cut, and now on January 1, 1899, the balance was restored, affecting 18,000 men and putting them back to where they were prior to 1893, although the stockholders are not in as good position as they were at that time.

Railroad employees are beginning to realize that extreme hostile legislation affecting railroads may very quickly affect wages, and through their better-managed organizations they are beginning to exert the strong political power possessed by this army of men to see that only well-considered legislation is attempted.

A comparison of railroad employment with that in other departments of industry and an examination of the total outlay for wages on the part of railway corporations will show the importance of guarding railroad prosperity. Probably more persons are dependent, directly and indirectly, for their living upon the employment offered by railways than upon any other single occupation in the United States except agriculture. From the reports of the Interstate Commerce Commission it is estimated that the compensation of railway employees for 1899 represented 60 per cent of the operating expenses and over 40 per cent of the gross earnings of all the railroads in the country.

The following table, taken from the Interstate Commerce Commission's Report on Statistics of Railways,<sup>1</sup> gives the total yearly compensation of 99 per cent of all the railway employees in the United States during the last 5 years as follows:

Class.	Total yearly compensation—United States					
	1900	1899	1898	1897	1896	1895.
General officers . . . . .	\$13,157,120	\$12,964,112	\$12,642,221	\$12,304,161	\$12,197,957	\$12,231,686

## § 5. HOURS OF LABOR—SUNDAY LABOR—OVERTIME.

The replies to the question regarding wages, income, and hours of labor received from 35 railroads, as quoted above, furnish considerable data as to the actual number of hours railroad men in the various grades of service are required to work.

In his testimony before the Industrial Commission, Mr. Sargent, chief of the Brotherhood of Locomotive Firemen, said that trainmen had little occasion for complaint as to hours and that 10 hours constituted the usual day for trainmen. In many cases firemen paid by the 100-mile run have been able to earn 10 days' pay in a week. Emergencies frequently arise, due to accidents or conditions of weather, when men may be required to work continuously for 36 hours or more, but such conditions are of course exceptional and not to the interest of the roads any more than to the interest of the men if they can be avoided. The hours of firemen have been reduced from about 12 on the average to about 10 largely as a result of better organization being able to bring the complaints of the men as to hours before the managers in a reasonable way. Telegraphers and yardmen have to work usually 12 hours per day and frequently are not paid for overtime. Conductors' hours have also been reduced as a result of their organization, and they are shorter than they were a few years ago. The rules of many companies require that even in cases of emergency conductors who have been on duty for 16 hours shall have 8 hours rest before being called upon for further duty. The complaint of trackmen seems to be the most serious, as will be noted from the replies from track foremen as just quoted above in section 4 of this report and from the testimony of the chief of the Brotherhood of Railway Trackmen.<sup>2</sup> In the South and West rules require trackmen to work from sunrise to sunset and in most other places 10 or 11 hours are required. The position of track foreman is an arduous one; the responsibility is great, as he is held accountable for the condition of the

<sup>1</sup> Advance sheets of Thirteenth Annual Report, Washington, 1901.

<sup>2</sup> Report of Industrial Commission, vol. 4 Transportation, pp. 50, 51.

track and must be specially watchful in stormy weather when there is danger of a washout. Track laborers are usually paid for overtime, night work, and Sunday work, but the foremen are not. It is very generally felt that some relief might be afforded to this class of men by assigning them shorter sections of track and by adding to the total number of employees per mile of line operated. The testimony of railroad presidents before the Industrial Commission seems to indicate that labor conditions with respect to hours were exceptionally good. The fixing of wages by a mileage rate and the usual rule of the larger roads make possible a labor day from 8 to 10 hours for most classes except in cases of emergency. The joint reply of the chief officers of the railway brotherhoods<sup>1</sup> to the questions relating to hours states that, "The necessity of changing train and engine crews at established points where terminal facilities are provided renders it impractical to arbitrarily fix the hours of labor of train and engine men. We think the hours of labor of yard and office men should be shortened, and we think they could reasonably be fixed by law. For train dispatchers and yard employees in large or busy yards, 8 hours should constitute a day. In all other classes of service 10 hours should be recognized as a day's work, and all time on duty in excess of 10 hours for a day's pay should be paid for as extra or over time. We should suggest an act specifying the legal workday as above and legalizing claims for extra pay for extra hours worked."

Some of the representatives of organized railway labor argue for an 8-hour day and also urge the desirability of legislation regulating the hours of labor as a measure to promote public safety, it being admitted by nearly all parties concerned that many accidents occur because of overstrain or fatigue on the part of men who have been kept on duty long hours. The representatives of the roads, however, maintain that under existing conditions uniform legislation on this subject would be very disastrous in its result, especially in the train service, where delayed trains could not be tied up at a stated hour. They state, moreover, that the tendency toward shorter hours generally and reasonable pay for overtime is so marked that legislation is unnecessary, and, furthermore, that the cases where employees are overworked are very exceptional.

Many of the States have already legislated on the subject of hours of labor for railway employees. Ten hours is a legal day's work for all classes of railroad employees in New York, Ohio, and Minnesota. References to these laws may be found, and quotations from the text of the same, in the report of the Industrial Commission (vol. 5, Labor Legislation, p. 27 ff.), and also references to all such laws and court decisions based upon them for the period since 1895 in the Bulletins of the United States Department of Labor. Several of the States have passed statutes providing that railroad employees can not be compelled to work more than a certain number of continuous hours without a prescribed period of rest, 8 hours, 10 hours, etc. In Georgia 13 hours is the maximum, after which 10 hours rest must be given, except when trains are delayed by casualty; Florida, 13 hours and 8 hours rest; Ohio, 15 hours and 8 hours rest; Colorado, 18 hours and 8 hours rest; Minnesota, 18 hours out of 24, and 20 hours, except in case of casualty, is the maximum without 8 hours rest; New York, 24 hours and 8 hours rest; Michigan, same as New York. In all these cases exception is made in cases of casualty and accident, which may require longer continuous service. Nebraska passed a similar law in 1899, making it unlawful for trainmen to be required to work more than 18 consecutive hours without 8 hours for rest.

At a union meeting of the representatives of 5 railway organizations, at which 2,300 railway men were assembled, at Carnegie, Pa., on or about July 4, 1899, the following resolutions relating to hours of labor and legislation fixing a maximum period for continuous labor without opportunity for rest were adopted:

"Whereas the great innovations of modern railroading have brought with them an increase in the physical and mental strain upon employees in the transportation departments, and as there is a disposition on the part of our railroad companies to lengthen instead of shorten the runs of trainmen and enginemen as their duties become more arduous, thereby making the strain twofold: Therefore, be it

*Resolved*, That we, members of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railroad Conductors, Brotherhood of Railroad Trainmen, and Order of Railway Telegraphers, in joint meeting assembled at Carnegie, Pa., this 16th day of July, 1899, urge Congress to pass a law restricting the hours of labor of employees in the transportation departments of interstate railroads to 8 out of 24. Be it further

<sup>1</sup> Report of Industrial Commission, vol. 4, Transportation, p. 761.

"Resolved, That a copy of this resolution be sent to the President of the United States, the United States Senate, the House of Representatives, and the United States Industrial Commission.

"JAMES T. SMITH, *Chairman*.

"J. D. RAUTH, *Secretary*."

There is from the very nature of the occupation the greatest variation in the hours of labor in the different grades of service. On fast express trains there are many cases where trainmen do not work more than 5 or 6 hours a day, including their lay over, and receive a full day's wages; while for telegraph operators, train dispatchers, station agents, and trackmen the conditions at present are such that they are apt to be required on the average to exceed a 10-hour day, which it is certainly the intention of the majority of the roads and of all of the labor organizations to enforce under existing conditions and existing rates of pay. It seems only fair, as a measure of equalization of hours so far as possible among the different grades of service, as well as to provide for the emergency demands of the business at different seasons of the year, to provide for the payment of overtime. This should be done on the basis of a standard day, and allowances made for those not paid by the day when emergencies over which the employee has no control and for which he is not responsible require him to be on duty longer hours than the number making a standard day. Whether the economic conditions and the intensity of service in all sections of the country would justify 8 hours being considered the standard day at the present time it is impossible to say without a more minute investigation than that authorized in this report. Probably 10 hours would be a fair standard day at the present time if any general or Federal legislation was contemplated, and such legislation would probably inure to the disadvantage of many employees working under existing contracts without materially helping the mass of the poorer paid and harder worked laborers in certain grades of service.

The actual practice of railroad corporations with respect to payment for overtime, and the rates for such payment, may be studied more minutely in the replies of railroad corporations to the question with reference to hours and wages as already quoted in section 1 of this report; also in Exhibit 2, which gives the rules, regulations, and rates of pay for employees in train and yard service on 4 of the larger roads; also in the subjoined replies to the question: Are the men paid for extra time; if so, how much? to which answers were received from 37 railroad corporations operating 107,284 miles of line and employing 599,120 men. From these replies it will be seen that in general extra time is paid for pro rata, but that this rule does not apply to all departments of the service. Telegraph operators and trackmen seem to be the worst off with respect to the demands made upon them for overtime without extra pay, station agents, who most frequently are telegraph operators, also suffer the same inconvenience. It will be noted also that only in a few cases do roads pay for overtime at a higher rate than is paid for the same service during regular working hours. This practice seems to be rarer than in other departments of industry, where it is the usual custom to pay night work and extra work at higher rates. Men who are paid by the mile run or unit of work are usually paid for overtime by the hour rate.

ANSWERS TO QUESTION. ARE THE MEN PAID FOR EXTRA TIME; IF SO, HOW MUCH?

1

Yes; in certain branches of the service, chiefly operating department. At proportionate rates, as a rule.

2.

Overtime is paid.

3.

Car department (1), no; (2), 25 per cent extra for wrecks only.  
Transportation department (1), yes; (2), proportionate rate.  
Motive-power department (1), yes; (2), proportionate rate

4

Men, outside general office force, are paid regular time for all overtime.

5.

Yes; pro rata proportion of regular hourly or daily wages.

6

Do not pay overtime to monthly men. Day men are paid overtime at regular rates.

7.

In nearly all grades of railway service the men are paid for extra time. The amount paid for extra time varies with the amount of pay which the employee receives.

8

Employees are paid for stated services and are usually paid extra for additional time.

9

Only trammien and men paid by the hour are required to work overtime. For the former, overtime is paid for on the basis of a 10-hour day and at proportionate rates.

10

Yes; men in transportation service at daily rate, shop and road men, time and one-half, except this latter does not, of course, apply to piecework.

11

Yes; amount varies.

12

In nearly all departments of the service they are. In some departments at the same ratio as their regular pay, in others on a higher basis.

13

Extra time is paid for in nearly all grades, the amount varying according to rate of pay.

14

Yes; at proportionate rate.

15

Officers, clerks, station agents, operators, are not, other employees are paid for overtime at a proportion of the rate per day or month.

16

Men in train and yard service are allowed extra time at the same rate as regular time.

17

In the transportation and machinery departments nearly all classes of men are paid for extra time, usually at the same rate per hour as their regular pay, except that in shops it is customary to pay time and one-half for extra time worked between the hours of 6 p. m. and 7 a. m. and on Sundays.

In the road department regular section men are paid extra time for all labor performed over 10 hours per day. They are paid at the rate of time and one-half for overtime and for Sunday labor.

18.

Employees are paid for extra time at pro rata of stated salary, except agents, whose pay is adjusted so as to cover extra time.

19

Men are paid pro rata of regular wages for extra time, except for special classes of service, where time and one-half is allowed

20

In the operating department overtime is paid for at the pro rata rate of wages. In the mechanical department shopmen are paid extra time for all over 10 hours at the rate of time and one-half received by them for the regular working day. Enginemen are paid for overtime as per special schedule, based on 10 hours' service, overtime for engineers being 35 cents per hour and for firemen 25 cents per hour.

21

As a general practice all employees are paid for overtime at the same rate per hour as for regular service

22

As a general practice all employees are paid for overtime at the same rate per hour as for regular service

23

Men are paid pro rata of regular wages for extra time, except for special classes of service, where time and one-half is allowed

24

Paid extra at same rate

25

Operators, tram men and yard men, and all daily employees are paid for extra time in some cases in excess of 10 hours per day. A few work 11 or 12 hours per day. Office labor is on a basis of an 8-hour day, and if occasionally they may be required to work a little overtime no additional compensation is given them. It is exceptional, however, for an office man to work overtime

26

Employees are nearly all paid by the hour or mile, and if extra time is allowed it is paid for at the rate allowed per hour or per mile

27

Schedules establish rates for extra or over time of employees engaged in train and engine service, their compensation for such service being for a fraction of an hour one-tenth of their daily rate. In shops, time and a half over 10 hours. In all other classes of service there is no allowance

28

Yes, time and a half

29.

Employees are required to work overtime as follows, with the rates of pay specified for each class as follows:

Station agents, none; other station men, 10 per cent at the usual rate per day per hour; engineers, 30, 39, 40 cents per hour; firemen 25, 26½ cents per hour; conductors, 35 cents per hour; other train men, 25 cents per hour; machinists, carpenters, and other shopmen, 15 per cent at the usual rate per day per hour; section foremen, none; other track men, 10 per cent at the usual rate per day per hour; switchmen and flagmen, 25, 27, 29 cents per hour; operators and dispatchers, none; other employees, 10 per cent at the usual rate per day per hour

30.

Mechanical forces paid 1½ time from 6 to 8 p. m. and 1½ time beyond 8 p. m.

31.

Employees are paid pro rata of day's pay for extra time.

32.

Yes; at about the same rates as for regular time, except that employees in shops are paid rates one-fourth higher for extra time.

33.

Men are paid for extra time at proportional rate; in cases of emergency, are allowed time and a half.

34

Overtime and extra work generally paid for by the hour, based on the regular compensation received by the employee, whether paid by the month, day, hour, or trip.

35.

Engine, tram men, yard crews, station men, operators are paid for extra time at the regular rate of pay per hour

36

Employees are paid for extra service generally pro rata.

37

Yes, generally pro rata for any substantial period

38

Engineers, 35 cents per hour; firemen (white), 17½ cents per hour; conductors and trainmen (white), a rate per hour based on pay for day of 10 hours; operators, section foremen, and stationmen are not required to work overtime or paid for overtime; shopmen and laborers, a rate per hour based on pay for a day of 10 hours, and yardmen the same based on pay for 12-hours day.

39.

Trainmen are paid extra time after 12 hours at the rate of one-tenth of a day for each additional hour; yardmen extra time at the same rate after 11 hours; shopmen are paid extra time for all time over 10 hours.

Compulsory Sunday labor is a more frequent source of complaint and dissatisfaction among railroad employees than even the question of the length of the working-day and the payment for overtime.

Attempts to regulate by law the running of trains on Sunday have not been conspicuously successful. Most States have statutes relating to the observance of Sunday, in which the rights of laborers to rest one day in the week are guaranteed. In the testimony of certain railroad presidents before the Industrial Commission it was plainly intimated, as has been frequently stated by representatives of railroad employees, that there is a tendency to increase Sunday traffic on most railroads, by reason of the increased mobility of population demanding regular passenger service, and sometimes additional passenger service to provide for excursions, etc., on that day, and by reason of the increased shipment of perishable freight.

Besides this, freight that is not perishable is hauled sometimes in violation of the spirit of the law, as in cases where a single car of perishable freight would be put in a train in order to legalize traffic, on the ground that it is economically more advantageous to operate the road and the plant 7 days in the week than 6. This view of the case leaves out of consideration, in all probability, that which in the last analysis must be for any railroad corporation the most valuable part of its plant, namely, the men it employs. Wholly apart from any religious question concerning the observance of Sunday, 1 day's rest in 7 has been proven very gener-

ally to be highly desirable and essential to the maintenance of normal, healthy, vigorous service.

In this connection it is interesting to note the results of a practical test made by Mr. William Bender Wilson, the author of "The History of the Pennsylvania Railroad Company," and a prominent official in its employ. Mr. Wilson is now superintendent of the Mantua Transfer, and has had under his direction a large force of men engaged in the handling of freight. He has measured in tons the amount of freight handled on successive days after the seventh day of continued service by specified groups of men and then the number of tons handled by the same groups of men in successive days after 6 days of continued service and 1 day of rest. On the basis of this test and the impressions of years of careful observation, he says,

"I am led to say that whenever labor has been employed on Sunday after 6 days previous employment, its productive value on the following Monday decreases not less than 10 per cent, and as day was added to day, the reduction of capacity continued to increase. There is no doubt that if Sunday was divested of its Sabbath garments and clad in secular raiment, and its hours devoted to labor and not to rest, within one year's time man's productive and consequently his earning capacity would shrink one-fourth. The shrinkage in production would not affect quantity alone, but would also reduce quality, because no one seeing his ability to earn a full living constantly diminishing can have the ambition so necessary to excel or to do well."

It is altogether probable that the necessity for running both freight and passenger trains on Sunday will increase rather than diminish, and that the older laws attempting to prohibit Sunday traffic altogether will become increasingly a dead letter; therefore any legislation on this subject should rather prescribe 1 day of rest after 6 days of continuous service than to attempt to prevent labor on any specified day. The same principle which has been applied in the regulation of the maximum number of hours per day after which a specified rest period is required may be advantageously adopted in a law regulating the maximum number of days per week which an employee may be required to work, and after which a specified period of rest must be allowed. Such a law would simply require the railroads to add to their force sufficient men to provide for such traffic as they might consider profitable to take on Sunday. If combined with a law requiring pay for all Sunday service for all grades of employees it would probably be the most effective method of restricting Sunday traffic to a minimum.

In Prussia a recent law has been promulgated relating to hours of labor and of rest for railway employees. The following report was made to the Department of State by Hon. Richard Guenther, United States consul-general at Frankfurt, A. M.:

"The minister of public works of Prussia has made new rules and regulations concerning the hours of labor and of rest of railroad employees. If the duties require unremitting exertion and strict attention, the daily average of the hours of labor of station agents, assistant station agents, telegraphers, switching foremen, overseers of stopping places, and switchmen shall not exceed 8 hours, and the duration of a single task shall not exceed 10 hours. The daily work of railway guards shall not exceed 14 hours. They can, however, be extended to 16 hours on branch lines with little traffic.

"The daily hours of labor of the train employees shall, on the average per month not exceed 11 hours daily; a single task shall not be over 16 hours. Long hours shall only be required if they are succeeded by proportionately long terms of rest. The rest shall be taken at home, and as far as possible shall be during the night. The daily hours of work for the locomotive employees, taken by the average per month, shall not exceed 10 hours, and shall under no circumstances exceed 11 consecutive hours. The same provisions as to rest apply to them as to the train employees.

"If the work of the switchman requires uninterrupted hard work, the average per day shall not exceed 8 hours.

"Every person steadily employed in the train service shall have at least 2 days of rest per month. The period of rest of the train and locomotive employees at their respective homes shall not be less than 10 consecutive hours."

In the replies received in answer to the question, "What percentage of the employees in the various grades of service are required to work on Sunday?" the general practice of the leading roads may be studied.

<sup>1</sup> See United States Labor Bulletin, July, 1900.

Forty corporations, operating 112,353 miles of road, and employing 633,023 men, answered this question as follows:

WHAT PERCENTAGE OF THE EMPLOYEES IN THE VARIOUS GRADES OF SERVICE ARE REQUIRED TO WORK ON SUNDAY?

1.

Impossible to make exact answer. Sunday service is not required except where requirements of the company make necessary.

2.

No employees, except telegraph operators, train hands, engine and roundhouse men, are required to work on Sunday.

3.

Car department, 10 per cent; transportation department, 25 per cent, motive-power department, 20 per cent.

4.

A very small per cent in train service are required to work Sundays.

5.

Enginemen, 20 per cent; firemen, 20 per cent; conductors, 20 per cent; brakemen, 20 per cent; station agents, 50 per cent; clerks, 10 per cent; operators, 95 per cent; mechanics (machinists, carpenters, etc.), none.

6.

No employees, except in rare cases, are expected to work on Sunday, except those in the passenger service, and the necessary operators to handle the trains.

7.

Sunday work is eliminated to the greatest extent possible; but in the train service the demands of the public require Sunday service, and the employees in this department and those closely connected with it are compelled to perform Sunday work; the Sunday service being reduced to the greatest possible extent.

8.

The only employees required to work on Sunday are those necessary to the movement of trains, which can not conveniently be suspended on that day.

9.

Station agents, operators, dispatchers, and trainmen, or about 35 per cent of the total number of employees.

10.

Thirty per cent.

11.

Small percentage; those that run Sunday trains.

12.

Probably less than 20 per cent.

13.

Demands of public require Sunday work by employees in train service and in departments closely connected with it, but it is reduced to greatest possible extent.

14.

In the maintenance of way and engineering department about 20 per cent; in the mechanical department about 28 per cent, which includes inspectors, repairers, car cleaners, and roundhousemen; in the train-service department about 25 per cent.

15.

About 10 per cent of trainmen, 15 per cent of operators, and about 10 per cent of flagmen and watchmen.

16.

No fixed rule. Sunday work reduced to a minimum and dependent upon amount of freight and passenger traffic to be handled; varies in different seasons.

17.

In the transportation and machinery departments all stations, warehouses, and places for receipt or delivery of freight are closed on Sunday and practically none of the employees in these grades are required to be on duty. In engine, train, and yard service the requirements vary according to the volume of business. In busy seasons it is customary to move many trains; at other times but a small number. It is probable that in engine, train, and yard service one-half the employees are sometimes required to work on Sunday, the proportion being greater in a heavy season and less in a light season.

In the road department, probably 10 per cent.

18.

General officers, 100 per cent; general office clerks, 5 per cent; station agents, 50 per cent; other station men, 5 per cent; enginemen, 80 per cent; firemen, 80 per cent; machinists, 5 per cent; carpenters, none; other shopmen, 5 per cent; section foremen, none; other trackmen, none; switchmen, flagmen, and watchmen, 100 per cent; telegraph operators and dispatchers, 90 per cent; other employees and laborers, none.

19.

Sunday work is required of a very small percentage of our employees in train and engine service.

20.

In the operating department 20 per cent of all employees work on Sundays.

In the mechanical department shop employees do not work Sundays except for necessary running repairs to such trains as are operated on Sundays. Probably not to exceed 15 per cent of employees in the mechanical department work Sundays.

21.

Twenty per cent.

22.

About 15 per cent.

23.

Sunday work is required of a very small percentage of our employees in train and engine service.

24.

Some in mechanical and train service departments.

25.

Outside of employees actually engaged in the running of trains, which would include trainmen, enginemen, and a few operators and train dispatchers, other employees are not required to work Sundays, except watchmen and others engaged in the protection of the company's property.

26.

About 20 per cent.

27.

I can not answer this question accurately, but would estimate not exceeding 10 to 15 per cent.

28.

But a small percentage of all employees are required to work on Sunday, practically only those in train and engine service, amounting to about 3 per cent of the whole number.

29.

About 50 per cent.

30.

Station agents, all; other station men, 10 per cent; engineers, firemen, conductors, and other trainmen, all; machinists, carpenters, and other shopmen, 1 per cent; section foremen and other trackmen, none; switchmen and flagmen, operators, and dispatchers, all; other employees, 2 per cent.

31.

None, except employees of the operating department.

32.

About 10 per cent of our employees are required to work on Sunday.

33.

The only employees usually working on Sundays are those in train and yard service, yardmen, employees of floating equipment, train dispatchers, enginemen, and roundhousemen, and such stationmen and telegraph operators as required for the movement of trains. They comprise, in all, between one-fourth and one-third of the total number of employees.

34.

About 20 per cent

35.

Sunday work is dispensed with in all grades of service wherever it is possible to do so, the principal work of this character being performed in connection with the movement of passenger trains and the perishable freight trains.

36.

Eighteen per cent.

37.

Very few of the employees, excepting train and station service, are required to work on Sunday. Probably 50 per cent of those departments work on Sunday.

38.

Trainmen, 25 per cent; stationmen, 55 per cent; trackmen, 16 per cent; telegraph service, 60 per cent; motive-power department (all classes of labor), 25 per cent.

39.

Engineers, firemen (white), conductors and trainmen (white), 50 per cent; operators, stationmen and yardmen, 100 per cent; shopmen, 10 per cent; laborers and section foremen, none.

40.

Conditions vary at different seasons of the year. As a rule no work is done on Sunday other than the movement of passenger trains, fast freights, and sufficient other freights to keep yards clear and to economically move power.

It is impossible from these replies to form any estimate of the exact number of men required to work on Sunday. It will be readily seen that regular Sunday work, to any extent, is mainly confined to certain departments of railroad service, namely, to trainmen, station agents, operators, telegraphers, and engineers, firemen, and conductors, required to handle Sunday passenger traffic and perishable freight. The percentage of this class of men required on the different roads for Sunday work seems to vary from about 15 to 50 per cent. In a few cases all the operators, stationmen, and yardmen have Sunday work. Telegraphers average rather higher than any other class, taking a large number of roads into consideration, probably 60 to 90 per cent being required for Sunday work.

The constitutionality of legislation prohibiting Sunday labor has been decided in the courts and such legislation has been sustained. One recent decision of interest was rendered by the supreme court of North Carolina in the *State v. Southern Railway Company* (35 Southeastern Reporter, p. 862.) The case was brought up in a superior court of Guilford County, North Carolina, and the Southern Railway Company convicted of the violation of the statute prohibiting the running of trains on Sunday. The company appealed to the supreme court of the State, which rendered a decision on December 10, 1896, confirming the judgment of the superior court. The question of issue was whether the statute (Code Section 1973) was in violation of regulations affecting interstate commerce. The court held that the legislature, in the exercise of its police power, had the right of prescribing a rule of civilized conduct for persons within her jurisdiction, and that such a law was valid unless Congress shall have passed some statute which supercedes that act by prescribing regulations for the running of trains on the Sabbath on all railway lines engaged in interstate commerce. The decision also stated that Congress is unquestionably empowered, whenever it may see fit to do so, to supercede by express enactment on this subject all conflicting State legislation.

## PART II.—THE REQUIREMENTS OF RAILWAY SERVICE.

### § 6. GENERAL REQUIREMENTS AND REGULATIONS FOR ADMISSION TO SERVICE.

A large proportion of the grand total of nearly a million of railway employees in the United States, probably at least 25 per cent and perhaps as much as one-third, are unskilled laborers. For these the conditions of employment are naturally the same as in all other industries—physical health and willingness and ability to perform manual labor. When one speaks of the qualifications of the railroad service he usually refers to the skilled employees in the shops, train service, or stations and offices. For these places railroad corporations in this country are anxious to secure men having, first of all, a good general common-school education, who are willing to begin at the bottom or with the lowest-paid work in one of the several general groups, and work their way into that department of service and that relative position for which experience and native ability combined may best fit them. The better general training and education a man has, the more likely he is to advance rapidly, but it is none the less necessary, from the point of view of the railroad corporation, that he begin at the bottom in order that he may become familiar with every detail of a complex industrial enterprise. It is therefore not unusual for college graduates to start as railroad firemen or to begin in the shops.

The conditions for admission for some highly specialized work, such as that of engineers on fast express trains, demand severe physical examinations to test eyesight, hearing, etc.; and for all the departments of service, except unskilled laborers, some technical examinations are required. Thus, for example, an applicant must pass an examination upon the rules in the department of service for which he applies, and after being admitted to the service all employees must pass frequent tests of their familiarity with the rules. Classes are held from time to time by superior officers charged with the duty of examining employees, at which test cases are submitted and discussed for the purpose of illustrating the application of rules in various emergencies that may arise.

The following replies, received from 40 railroads, covering 112,353 miles of road, or over 59 per cent of the total mileage of the country, and affecting in their operation 633,023 employees, fairly illustrate the existing conditions throughout the country with respect to the question of requirements of railway service:

#### REQUIREMENTS FOR ADMISSION TO VARIOUS GRADES OF SERVICE.

1.

Examinations—technical, intellectual, and physical.

2.

Good health and knowledge of requirements of the service which is entered

3

Fitness, age, habits, past record, etc., as per application blank as follows.

#### *Application for employment*

[All applications for employment on the ——— Railroad must be made on this blank and in ink, and when the applicant enters the service, heads of departments will retain the application, properly indorsed, on file.]

1. Name in full (no initials)
2. Present address.
3. For what position?
4. Nationality.

## 717

- [Applicant must here give his (or her) history for the last 5 years, beginning with his (or her) position of 5 years ago, and giving each year in regular order down to date in following blank]

I hereby certify that I can read and write the English language, and that I personally filled out this application, and declare that the foregoing answers made by me are true.

(Applicant's signature) \_\_\_\_\_

The following certificates must be signed by respectable citizens, and the applicant is cautioned that inasmuch as the references on this paper will be called upon for such detailed (written) information as to ability, industry, character, habits, etc., as they can give, he should be careful to secure those who know him well, especially in his occupation, and who will be willing to furnish such information in greater detail when asked.

*continue Next*

I, \_\_\_\_\_, of \_\_\_\_\_, \_\_\_\_\_ have been personally acquainted with \_\_\_\_\_, the foregoing applicant for \_\_\_\_\_ years, and believe him to be of good moral character, honest, of temperate and industrious habits, and in all respects fit for the position he describes in his application, and I do hereby consent that this certificate may be published for public information whenever necessity or expediency requires.

4

Perfect physical health in train-service department, and capability for doing the work required in all other departments.

2

*Enginemen.*—Promote from firemen. (Do not employ.)

**Firemen—Requirements.**—Not under 21 or over 27 years of age; physically robust; physical proportion, normal; health, good; eyesight, perfect; hearing, perfect; character, good; habits, free from dissipation; education, at least common school.

*Conductors.*—Promote from brakemen. (Do not employ.)

*Brakemen*—Requirements.—Same as for firemen.

*Mechanics (machinists, carpenters, masons, blacksmiths, etc.)*—Requirements.—Competent (demonstrated by trial); not over 35 years of age; physically, robust; physical proportion, normal; health, good; eyesight, good; hearing, good; character, good; habits, free from dissipation; education sufficient.

*Station agents.*—Promote from telegraph operators, clerks, etc. (Do not employ).

*Clerks*—Requirements.—Competent (demonstrated by trial); health, good; eyesight, good; hearing, good; character, good; habits, free from dissipation; education, sufficient.

*Telegraph operators*—Requirements.—Competent (demonstrated by trial); health, good; eyesight, good; hearing, good; character, good; habits, free from dissipation; education, sufficient.

6.

Good moral character.

7.

The requirements vary according to the branch of service into which the applicant is to enter; he must come within certain age limitations, be of sober habits, of good character, and fit physically and mentally for the particular service he is to render. Applicants for position in the train service are required to pass a physical examination, particularly as to eyesight, hearing, and general capacity for the work in view and freedom from the use of intoxicating liquors.

8.

Employees are received into the service, discharged from it, or promoted in accordance with their adaptability and fitness for the service required, as determined by the employing officer.

9.

In general no further requirements for admission to the service than applicants should be of good character, in good health, and suited for the position they are to fill in age and acquirements. Trainmen are required to pass an examination as to their sight and hearing, ability to read, write, and cipher readily, and particularly as to their acquaintance with the rules governing the movement of trains. Enginemen are also examined on machinery. Men of over a certain age are not employed, the limit being 40 years for engineers, 32 years for experienced firemen, and 24 years for inexperienced men.

10.

No person is permitted to enter the service of this company until proven by examination by the head of the department that he is qualified for the position.

11.

Examination as to fitness

12.

For persons first entering railway service, evident ability to readily master the requirements to become reasonably proficient in the branch of the service in which they seek employment. For certain branches of the operating department a physical examination is required. All must have a good moral character and be of temperate habits.

13.

Varies in different branches of service. Applicants must be of good character, sober habits, come within certain age limitations, and be in good physical and mental condition; and in engine, train, station, and yard service, must also pass a physical examination as to eyesight, hearing, etc.

14.

In the departments requiring clerical help, a common-school education, fair penmanship, and where stenography and typewriting is necessary they must also be educated in that line. In train service they must be able to read and write the English language, see and hear to meet the requirements of the law, be sound in body and limb, and of good moral character. In the mechanical department, a common-school education is required. Apprentices entering the service, should

they be under age, a release signed by the parents absolving the company from responsibility in case of personal injury is required. Experienced applicants for positions are required to state how long an apprenticeship they have served, where and how long they had previously worked and cause for leaving last employment. In the engineering department a technical education is required. In the roadway and track department, sobriety and ability to perform the labors assigned are required.

15.

Applicants for train service are required to pass test as to hearing and eyesight, and to have a fairly good common-school education; they, and all other applicants, are required to be of good moral habits and physically able to perform the service required of them.

16.

For positions above that of laborer, fair education; satisfactory references from former employers; and in case of employees connected with train services, general examination on train rules, color perception, visual power, and hearing.

17.

In the transportation and machinery departments:

As specified on blank form of application for employment; also as described in the rules of the transportation department governing matter of employment, as follows: "Applicants for employment must be of sound health, free from physical, mental, or moral infirmities, and produce satisfactory evidence of previous record, character, and ability. Employees will be selected from applicants whose character, intelligence, physical capacity, and general appearance indicate that their services will be efficient and satisfactory, and who are likely to develop ability sufficient to merit advancement in the service. For positions above that of laborer, no person will be employed who can not read and write the English language, or who does not possess a knowledge of the rudiments of arithmetic. Persons deficient in hearing, visual power, or color perception, shall not be employed in any branch of the service involving the use of signals, or the movement of engines or trains. Minors shall not be employed in train, yard, or engine service. Employees dismissed from the service will not be reemployed without the consent of the head of the department or division from which dismissed, and the approval of the assistant general superintendent. Applicants for reemployment or reinstatement must undergo the same examinations as applicants for employment." And as covered by the rules of the surgical department relative to physical examinations.

In the road department: The majority of the employees in this department are common laborers, and there are no special requirements for admission to the service other than physical ability to perform the labor required, and being of the age of 21. In selecting men for the higher grades of service we select those who have a technical education to fit them for the requirements of the position, and they are also usually required to come up through the lower ranks, which, of course, gives them the necessary experience.

#### APPLICATION FOR EMPLOYMENT.

Applicants for employment in the following grades of service with this company are required to undergo a thorough examination to determine their visual power, color perception, hearing, and physical qualifications generally, to perform the duties of the position which they seek to obtain:

Station agents, telegraph operators, station baggagemen, enginemen, firemen, hostlers, conductors, collectors, train baggagemen, brakemen, train porters, yard masters, switchmen, towermen, switch tenders, and such other grades as may be required.

All applications for employment must be made in duplicate on Form —, two copies of which will be furnished to such applicants as superintendents or other employing officers may select; the blanks must be carefully and correctly filled, and all questions must be answered; all answers must be in ink, the application in the handwriting of the applicant, and each voucher in the handwriting of the signer thereof; applications executed or dated, or the vouchers of which are executed or dated, more than 30 days before the date of filing, will not be accepted.

When both copies of the application blank are filled out, they shall be delivered to the employing officer from whom received, by whom they shall be examined; if both copies are in correct form, they shall be returned to the applicant, together

with an order on Form —, addressed to a company's examining surgeon, directing that a physical examination be made; the applicant will deliver both copies of the application blank, together with the order, to the surgeon designated, who will conduct the examination and certify to the result in the place provided upon the blanks therefor, sending one copy to the employing officer signing the order for examination, and the other copy to the chief surgeon direct.

If the report of the examination be satisfactory to the chief surgeon, he will forward his copy of the application to the chief claim agent for file; if he does not approve the findings he will advise the superintendent of the division immediately of his exceptions, and communicate with the examining surgeon.

An examination fee of \$1 is paid by the company in all cases to the surgeon conducting the examination. Employing officers in charge of pay rolls are instructed to deduct \$1, examination fee, upon the pay rolls in favor of the company, from the first month's wages of all applicants accepted and assigned to service. The examination fee of rejected applicants, or those who may not be given employment, will be borne by the company.

Persons of the various grades named may be allowed to enter the service on probation after they have passed a satisfactory physical examination; but no applicant will be considered an accepted employee until the superintendent has affixed his written approval to the application, of which notice will be given to the applicant.

Questions	Answers	
1 For what position do you apply?		
2 What is your name in full? [Give your first name in full, your middle initial or initials, if you have any, and your surname in full]		
3 (a) Where were you born?	(a)	
(b) What was the month, day, and year of your birth?	(b)	
(c) What was your age on your last birthday?	(c)	
4 What is your actual residence?	State of	City of
	Street and No	
5 (a) Are you married or single? [If married, give your wife's first name and her residence.]	(a)	
	State of	City of
	Street and No	
(b) If you are not married, give the residence of your parents or other nearest living relative, specifying relationship	(b)	
	State of	City of
	Street and No	
6 Are any persons dependent upon you for support, or do you contribute to the support of any persons? [If you answer yes, give their names, relationship, and address]	State of	City of

## SURGEON'S CERTIFICATE OF EXAMINATION.

To be filled out after a personal examination of the applicant, and signed by the company's examining surgeon at any of the following points [here follow the names of 26 of the main stations on the company's lines].

Report of the result of personal examination by me of Mr.

[The applicant must sign his name above in presence of surgeon.]

Applicant for position of ———

1. When placed at a distance of 20 feet from the test types, the last five letters read carefully by the applicant are.

Left eye ———.

Right eye ———.

2. (a) The applicant selects skeins numbered as follows, as being the same color as test skein (A): ———.

(b) The following as being the same color as test skein (B): ———.

(c) The following as being the same color as test skein (C): ———.

3. The applicant hears the tick of the watch with the right ear at ——— inches; with the left ear at ——— inches. For ordinary conversation at a distance of 20 feet, the hearing is ——— (expressed in fractions.)

I hereby certify, that having examined the visual power, color perception, and sense of hearing of the applicant herein, and his physical condition in general, I find him  $\left\{ \begin{array}{l} \text{qualified} \\ \text{disqualified} \end{array} \right\}$  to fill the position of ———. I certify further that there is evidence of his having been successfully vaccinated, and that he is not suffering from any disease or disability, nor does he manifest any evidence of an abuse of intoxicating liquors.

Disqualifying defects ———.

Defects that do not disqualify ———.

(Signature of surgeon making examination) ———.

Surgeon at ———.

Date of examination, ———, 190

18.

Proof of honesty, good character, sobriety, capability, and good physical condition.

19.

Ability to read and write the English language, and physically in good condition.

## 20.

In the operating department it is required that the applicant be of age, sound in body and mind, possessing the ability to read and write, and with some experience in the line of service in which he is seeking employment.

In the mechanical department engineers must be under 45 years of age at the time of entering the service; must possess good eyesight and hearing; must have a fair knowledge of time-table rules and signals; must pass the examination of a trainmaster, and also a mechanical examination relating to locomotives. Firemen must not be over 30 years of age when entering the service, and preferably between the ages of 21 and 26; they must be of good strong physique, have good eyesight and hearing, be able to read and write, and have a fundamental knowledge of arithmetic; they must also be familiar with train and engine signals and pass the examination of a trainmaster. Shopmen, consisting of mechanics and laborers, are not required to pass an examination, and, unless employed for temporary service, must not be over 45 years of age.

## 21.

A candidate as engineman, fireman, conductor, brakeman, switchman, laborer, etc., must be able to read and write, and be generally intelligent, free from all bodily complaint, and of strong constitution. The candidate must produce testimonials of character from some person of responsibility and position, by whom he is personally known; these, with the nomination, will be submitted on the candidate's appearing for examination, and it will be decided whether he is a proper person to be appointed.

Appointments are made on the distinct understanding that the parties hold themselves in readiness to proceed to duty immediately on being summoned, their pay being allowed from the date of employment and that they reside wherever required.

If the bodily health of the applicant is not known to the party to whom the application is made, a physician's certificate must accompany the application. These conditions are subscribed to by all persons entering the service.

## 22.

All enginemen, train and yard conductors and brakemen, switch tenders, etc., must be able to read and write; must be in good physical condition, and temperate in their habits. Unless the applicant is personally known to the officer authorized to examine and pass, upon him he must bring letters of recommendation from some responsible party.

## 23.

Ability to read and write the English language and physically in good condition.

## 24.

Physical and educational examination.

## 25.

This depends absolutely upon the department in which the service is wanted. All employees are required to be of good, moral character, good habits, temperate, and to be able to read and write the English language.

For train and engine service they are also required to be physically sound, and their vision and hearing to come up to a certain standard.

## 26.

Examination as to their duties.

## 27.

In the case of new men entering the service, or those advanced therein for promotion, they are subjected to a rigid examination on the rules and regulations of the company, sight, hearing, and color perception.

## 28.

Enginemen and trainmen: Men are required to pass a physical examination, including eye and ear, and must pass a satisfactory examination on the company's transportation rules. Each employee is furnished with a book of rules,

**Operators:** In addition to being competent, telegraphers are required to pass satisfactory examination upon the book of transportation rules so far as it affects the duties of their positions.

Employees in all other departments are not required to pass examinations, their duties being largely clerical, general efficiency governing.

29.

General understanding in different branches of the service as to intelligence, physical condition, and moral habits

30.

This is a broad question, there being so many different branches of service, and the answer can only be capability, good character, and applicants having desirable references as to ability in the specific branch of the service in which they seek employment

31

Educational and physical.

32.

Our only requirements for admission to the service are good moral character and sufficient education to fill the position in the grade in which employment is desired, the latter being determined by examination

33

In train and station service, all applicants for employment are examined and good physical condition is exacted. In other branches of the service, persons manifestly suffering from any ailment are not employed. Only those less than 50 years of age are employed. In employing men we give full consideration to their qualifications for filling positions to be assigned them.

34

Certificates as to character, habits, and proficiency.

35.

Applicants in order to obtain positions in the employ of the company are required to be under 35 years of age, and the qualifications and requirements necessary to enable them to secure employment vary in the different departments according to the nature of the work or service to be performed. Applicants for clerkships, etc., are generally required to pass a satisfactory examination in arithmetic, penmanship, composition, etc.

Applicants for positions in the train service must have certain physical qualifications, and also have good eyesight, "color sense," hearing, intelligence, etc. Appointments to mechanical positions in shops, etc., are selected from mechanics who are skilled in their respective trades, and have thorough knowledge of the machinery or work upon which they will be employed. Maintenance of way forces, etc., and lower grades of manual laborers are not required to have any special qualifications, other than to be physically able to perform the work assigned to them.

36.

These requirements vary according to service, from mere physical ability to perform certain manual labor to ability to pass a close examination as to physical and mental fitness for the work to be performed.

37.

Requirements for admission to various grades of service. With the exception of train service, simply make application and present any letters of recommendation they may have. In the train service there are regular printed blanks to be filled out, showing age, former experience in train service; blank also provides for a medical examination.

38.

Train, station, telegraph, and motive-power service—requirements: Must not be less than 21 years of age; physical and mental fitness; satisfactory evidence as to character, habits, and previous training; pass satisfactory examination as to "color sense," vision, and hearing; knowledge of time-table, rules, and regulations.

Track and bridge service—requirements. Temperate habits; physical and mental fitness; manual skill.

Electrical service—requirements: In electric service only 2 classes where anything except experience and general ability is required. These are engineers in the State of Massachusetts, who are required under the laws of that State to have first-class engineers' licenses, and motemen, who are required to pass examination as to their knowledge of electrical apparatus, train rules, air brake, sight, and hearing.

39.

For enginemen, trainmen, dispatchers, operators, section foremen, and others whose duties are connected with the operation of trains—requirements: A thorough examination on rules for the position applied for, also a physical examination; for other employees, fitness as to capability and character and a physical examination.

40.

Examination in accordance with blanks as follows:

(1) In the operating department questions asked for examination chiefly for promotion in the service upon the locomotive and air brake are the following:

1. At what age and where did you first enter the service of a railroad company, and in what capacity? State character of service since then.

2. When did you enter the service of this company, and in what capacity have you been employed since?

3. What are your duties as an engineman when you come to take charge of an engine?

4. With what tools and signals should an engine be equipped?

5. What are your duties as an engineman after the engine is coupled to the train?

6. What is the proper position of reverse lever when starting a train?

7. What is the proper position of reverse lever when train is well under way?

8. What is the proper position of reverse lever when steam is shut off and engine in motion?

9. What is the position for reverse lever when engine is at rest?

10. After starting, how can an engine be run most economically?

11. Why should the throttle valve be kept well open?

12. How should steam be admitted to cylinders in starting a train?

13. Why?

14. How should a boiler be fed?

15. When is the time most favorable for working pumps or injectors?

16. On grades and approaching a summit, how should water in a boiler be carried?

17. If it is necessary, after passing over a summit, to pump up a gauge or more of water, what should be the condition of the fire, and why?

18. If there is an ample supply of water after passing over a summit, what should be the condition of the fire?

19. If the water in a boiler became disturbed or foamed, what would you do, and how would you ascertain whether it was foaming or being overpumped?

20. What usually causes foaming?

21. Would you examine for the cause of foaming? If so, where?

22. If the water in the boiler became so low that none came through the bottom gauge cock, what would you do?

23. Would you depend on the sound of the gauge cock for the location of water in the boiler? If not, how would you locate the water in the boiler?

24. How should an injector be started and worked?

25. How should an injector be stopped?

26. If both injector and pump failed on the road, what would you do?

27. If the water in the boiler was too low to allow time for this examination, what would you do?

28. If an engine had a pump on one side and an injector on the other, and the pump-side became disabled so that you had to take down main rod, in case the injector failed how would you get water into the boiler?

29. How can an injector be converted into a heater?

30. If both tank valves become disconnected, what should be done?

31. With what make of cylinder lubricator is the engine equipped that you have been firing, and what kind of oil should be used in the lubricator?

32. Explain how you fill this lubricator with oil and how you start it to work.

33. Explain how you shut off the lubricator so as to stop its feeding oil to the steam chests.

34. If one of the feed glasses should break, what would you do?

35. If the gauge glass should break, what would you do?

36. At the end of the trip how would you leave the different valves on the lubricator?

37. Give general description of the valve motion on engine which you have fired.

38. What is lead?

39. What is the effect of inside lap?

40. What determines the amount of lead?

41. What is accomplished when the reverse lever is hooked toward center of rack?

42. Explain how steam passes from the boiler into the cylinder.

43. If main valve should break, what would you do?

- 44 If a valve yoke should break, how could you determine which side was disabled?
- 45 Why should engine be placed at half-stroke on the side you wish to test?
- 46 After broken yoke is located, what should be done?
- 47 If upper rocker arm should break, what would you do?
- 48 If lower rocker arm should break, what would you do?
- 49 If an eccentric strap or rod should break, what would you do?
- 50 If the right back-motion eccentric should slip, how would you reset it?
- 51 Explain how the mark made on valve rod while engine is in forward gear aids you in setting the slipped eccentric
- 52 If both eccentrics on one side should slip, how would you reset them?
- 53 If a link saddle or lifter should break, what would you do?
- 54 With a broken saddle or lifter, in what way would you lose control of the engine?
- 55 If the reverse shaft should break, what would you do?
- 56 If reach rod should break, what would you do?
- 57 If reverse lever should break, what would you do?
- 58 If valve seat should break, what would you do?
- 59 If steam chest should break, what would you do?
- 60 If a steam pipe should break, what would you do?
- 61 How can a leak in the main valve be distinguished from one in the piston?
- 62 In a crosshead should break, what would you do?
- 63 If the blow-off cock should blow out or break off, what would you do?
- 64 If a hole was knocked in the boiler in any way, what would you do?
- 65 If a safety valve or whistle should blow out, what would you do?
- 66 If a flue should burst, what would you do?
- 67 If you had no wooden flue plugs, what would you do?
- 68 If a bolt or rivet should blow out, what would you do?
- 69 If a balanced throttle valve becomes disconnected inside and chokes, what should be done?
- 70 If the throttle valve become disconnected inside and could not be closed, what would you do?
- 71 In very cold weather, what would you do to prevent feed pipes from freezing?
- 72 If the fire was to be drawn in cold weather, what would you do to prevent engine freezing up?
- 73 Why are driving-box shoes and wedges used?
- 74 How should wedges be set up?
- 75 If a cylinder head should break or blow out, what parts would you disconnect?
- 76 If the cylinder packing should drop and blow badly, how would you determine which side was down?
- 77 If an engine-truck wheel or axle under a forewheel connected engine should break, what would you do?
- 78 If an engine-truck wheel or axle under a consolidation engine should break, what would you do?
- 79 If a tender-truck wheel should break, what would you do?
- 80 If a tender-truck axle should break, what would you do?
- 81 If the front tire on a consolidation engine should break, what would you do?
- 82 If the main tire should break, what would you do?
- 83 If the rear tire should break, what would you do?
- 84 If front driving axle should break between wheel and driving box, what would you do?
- 85 If front driving axle should break between boxes, what would you do?
- 86 If main driving axle should break between wheel and driving box, what would you do?
- 87 If main driving axle should break between boxes, what would you do?
- 88 If third driving axle should break between wheel and driving box, what would you do?
- 89 If third driving axle should break between the boxes, what would you do?
- 90 If back driving axle should break between wheel and driving box, what would you do?
- 91 If a back driving axle should break between boxes, what would you do?
- 92 If a rear crank pin should break, what would you do?
- 93 If main crank pin should break, what would you do?
- 94 If a driving spring, equalizer, or hanger should break, what would you do?
- 95 How should the side rods on a 10-wheel engine be keyed up?
- 96 Why is engine placed on dead center, and why is center brass keyed first?
- 97 Can the side rods be keyed too long or too short when engine is not on a dead center?
- 98 If too long or too short, at what part of the stroke will the strain be?
- 99 If back side rod on a mogul engine should break, what would you do, the knuckle joint being between front and main drivers?
- 100 If front side rod should break on a mogul engine under the same conditions, what would you do?
- 101 If back side rod on a consolidation engine should break, what would you do?
- 102 If front side rod on consolidation engine should break, what would you do?
- 103 If a center side rod on a consolidation engine should break, what would you do?
- 104 If a main rod should break, what would you do?
- 105 If the back spade-handle strap on a consolidation engine should break, what would you do?
- 106 If one side rod is removed, why is it necessary to take down its mate?
- 107 If an engine runs off the track in such a way that portions of the fire box or flues are not covered by water, what would you do?
- 108 If the fire has to be drawn, or the train given up for any reason, what must be done at once?
- 109 In what condition should an engine be left with steam ready for service?
- 110 What are the essential parts of the Westinghouse automatic brake?
- 111 Give a description of the triple valve, and state how it operates. Explain why it is called a triple valve.
- 112 What is the principle of the engineer's equalizing discharge brake valve? How does it work? Name the different positions of this valve. In making a service stop, why must the brake-valve handle not be moved past the position for service application?
- 113 How should the air pump be started? What kind of oil should be used in the air end of pump? What kind of oil should never be used in the air end of pump? What kind of oil should be used in steam end of pump?
- 114 How many pointers are there on air-pressure gauge, and what does each one represent?
- 115 Give a description of the pressure-reducing valve, and state how it should be used.
- 116 What is the maximum air pressure allowed on this road? What pressure should you have before coupling on train? What controls the air pressure in train line? Is pump governor always connected to train line?
- 117 How is the Westinghouse automatic brake applied and released?
- 118 Where does the compressed air come from that enters the brake cylinder when the automatic brake is applied in service stop? Where does the air come from that enters the brake cylinder when emergency stop is made?

119. If there is a leak in the train pipe or any of its connections, what effect will that have on the brake?
120. When should the emergency application of the brakes be made?
121. Why is it necessary to have excess pressure, and what amount should be carried? In what position should the handle of the engineer's equalizing valve be placed in order to get excess pressure?
122. Why is it dangerous to apply and release the brake repeatedly in making a service stop?
123. In making a service stop with a passenger train, except on heavy grades, should the brake be kept on until the train comes to a dead stop? With freight and coal trains should the brake be kept on until the train comes to a dead stop?
124. With freight or coal trains which are only partially equipped with air brake, how should the brake be applied in order to prevent shocks?
125. Why do we have leakage grooves in brake cylinders, and as a rule how much air is it necessary to discharge from train pipe to force piston by the leakage groove?
126. What is meant by piston travel, and what is the proper piston travel for tender brake? What is the proper piston travel for driver brake?
127. How is the slack taken up to secure this adjustment, and what is necessary in order to have the brake on all the cars and tender work alike?
128. In what way should the air brake be tested after engine has been coupled to the train, and before starting out?
129. If after making this test you felt that some of the brakes were not released, what would you do?
130. If it is found that the train is dragging at any time, without a rapid fall of the black pointer, what would you do?
131. If the brakes should go on suddenly, and not operated by the engineer, what would you do, and to what cause would you assign this?
132. What should be borne in mind when a car is picked up and in switching with an air-brake train, and picking up uncoupled cars, how would you proceed?
133. Before uncoupling any cars in an air-brake train, or before cutting the engine off from such a train, why must the brake be released? What must be done with a hose coupling that is not coupled to another hose, such as the rear hose on tender or cars?
134. If a train breaks in two, how must the brake be handled on the cars attached to the engine, and how must the brake be handled after the different portions of the train have been coupled together?
135. In cold weather, if the brake on tender would not work, what would you do?
136. If the air pump become disabled, what would you do?
137. If the driver brake or tender brake should be damaged so that it could not be used, how would you cut it out?
138. When two or more engines are coupled together, which one should do the braking?
139. How would you proceed to give the engineer on the first engine complete control of the train brake?
140. Is it good policy to reverse an engine with the driver brake applied?
141. If you know that the trainmen are operating the brakes of the air-brake cars by hand, should you use the air brake?
142. When an engine is left standing alone, and the pump running, why must the brake valve not be left on lap, and what is its proper position at that time?
143. Can you, under any circumstances, have an accident chargeable to the Westinghouse automatic brake?
144. What are the essential parts of the Westinghouse train signaling apparatus, and how is it operated?
145. If a train equipped with the signaling apparatus should break in two, would the train signal give you warning of the fact, and if so, in what way?
146. If there should be a leak in any of the piping or hose connected with the train signal, in what way would that be indicated?
147. If the signal whistle in the cab should fail to operate when a trainman opens the discharge valve in one of the cars, where would you first look for the trouble?
148. Having passed this examination, are you satisfied in your own mind that you are fully competent to take charge of a locomotive as engineer?
- Examined and ——— recommended for promotion

M. M. ——— Division.

(2) Questions asked operators in regard to book of rules.

- Name?  
Age?  
Height?  
Color hair?  
Color eyes?  
Weight?  
Consecutive years in this company's service?  
Number of years in the telegraph business?  
1. Does a new time-table cancel or supersede all special rules of the old time-table?  
2. What do full-faced figures on the time-table indicate?  
3. When two sets of figures are shown at a station, what do they indicate?  
4. When only one set of figures at a station is shown, what does that indicate?  
5. If a train arrives ahead of its schedule arriving time, would you report it arriving on time or would you give the actual figures?  
6. If a train leaves your station ahead of time, would you report it on time or give the actual time in figures?  
7. Do you keep a record of all trains passing your station, is it made with pencil or pen and ink?  
8. What color is a danger signal?  
9. What color is a caution signal?  
10. What combination of signals is used to stop trains at flag station?  
11. What does the explosion of one torpedo mean?  
12. What does the explosion of two torpedoes in quick succession, say 200 feet apart, mean?  
13. When placing torpedoes on the track, would you place them near a public road crossing or building?  
14. What does one long blast of an engine whistle mean?  
15. One short blast?  
16. Two long blasts?  
17. Two short blasts?

18. Three long blasts?
19. Three short blasts when train is standing?
20. Four long blasts?
21. Four long and 1 short blasts?
22. Four short blasts?
23. Five short blasts?
24. One long and two short blasts?
25. What does a lamp, flag, or bat swing across the track indicate?
26. What does a lamp or hand raised and lowered indicate?
27. What does a lamp, flag, or bat swing vertically in a circle indicate to a train that is in motion?
28. When trains are run in sections, what kind of signals do they carry?
29. What kind of signals represent an extra train?
30. How do you tell when the hind end of a train has passed you?
  1. What color are markers?
  2. Is a light engine classed as a train?
  3. Is an engine with freight cars necessarily a second-class train?
  4. Is an engine with passenger coaches necessarily a first-class train?
  5. On what part of an engine are classification signals carried?
  6. When an engine is running backward without a train, where are the markers carried?
  37. In blocking trains, how far apart do you hold first-class trains?
  38. How far apart do you hold second-class trains?
  39. How long do you hold a second-class train behind a first-class train?
  40. If a train dispatcher should tell you or send you a message to let trains go closer than the book of rules or time-table permits, would you do so?
  41. If you received a 31 or 19 order made complete to you, reading "Let 1 and second No. 77 go five minutes apart," would you slow second 77 a copy of the order?
  42. Is it your duty to deliver a clearance card to a train held for a time block?
  43. At terminal starting points, where trains are required to have orders or a clearance card, do you get authority from the train dispatcher to issue the card?
  44. If the wires are down, what do you do?
  45. When you have train orders for any train whatsoever, do you change the train-order signal from red to white on account of the approach of any other train?
  46. If you are working at an intermediate station on a single track, or a double track where one track is being used as a single track, and the conductor of a first-class train notified you that they carried green signals to your station and had taken them down, what would you do?
  47. If the wires were down, what would you do?
  48. Would you report a train by your station before the markers had passed your train-order signal?
  49. If a train passed your station without markers, what would you do?
  50. If you could not raise the train dispatcher, what would you do?
  51. Having received a 31 order, what is required of you?
  52. After repeating the order and having received and acknowledged H O K, how is the order to be treated?
    1. When the train to whom the order is addressed arrives you find that you have lost all the wires to the train dispatcher's office and you can not get complete to the signatures, what would you do?
    54. The train you are holding we will, for example call No. 2, is overtaken by a following train, while we will call No. 1. If you have no orders for No. 4, what would you do?
    55. If No. 4 had time-table rights to go, could No. 2 fling away on No. 4's rights, and against your red signal?
    56. When you recovered communication with the train dispatcher's office, would you notify him what had been done and require order for No. 2 to be annulled?
    57. Having given H O K to a 31 order, would you file, destroy, or otherwise cancel the order if told to do so by the train dispatcher?
    58. If you receive an order annulling an order, how do you mark the annulled order?
    59. If the line fails before you have received and acknowledged H complete to a 19 order, how would you treat it?
    60. For an order to be delivered to a train at a non-telegraph station by the conductor of another train in whose care it is addressed, what would be your duty and that of the conductor delivering it?
    61. What is required of the operator to whom the conductor delivers the copy containing the signatures taken by him?
    62. What do you do with your office file of train-order copies?
    63. Should train orders be sent to a train which has right of track over other trains to a non-telegraph office in care of another conductor?
    64. Should a single line be made between two given points without first obtaining the signatures of all trains on all tracks between such points?
    65. Would you file or destroy a 19 order after acknowledging H complete, if told to do so by the train dispatcher?
    66. Do you take the signatures of conductors to a 19 order?
    67. When you have an order to hold a certain train for orders, does the receipt of an order to that train which has been made complete to it release your hold order and the train?
    68. What is necessary to release a train after a holding order is in effect?
    69. If you have an order to hold all trains westward bound or eastward bound, or in both directions, is it necessary to have the holding order annulled for each and every train before they are allowed to proceed?
    70. How long is a 31 and 19 order in effect?
    71. Would you issue an order restricting a train's time-table rights on a 19 order blank?
    72. Would you allow a train of inferior right to use an order before getting O K to the order for the train of superior right?
    73. In addition to your train-order signal, what other signals are necessary for additional safety?
    74. Do you make a written transfer of all unfinished business to your relief? Do you require your relief to read and sign your transfer to him before leaving office?
    75. If you have an order addressed to No. 70 and No. 70 carried signals, would you deliver it to all sections of that train?
    76. On single track we will take for an example three stations which we will call A, B, and C are telegraph stations, B is a passing siding without a telegraph office. Trains from A to C have right of track.
      1. At B there is a second-class train on the siding waiting to be passed by a first-class train following leaving "A." The first-class train breaks down at "A" and asks for wreck train, which is at "C." Can you move the wreck train by telegraph C to A?

## (3) Questions on machinery asked from a for promotion.

1. What is the first thing you do in taking the engine out of house to make a trip?
2. What is the last thing you do after making your trip on leaving your engine?
3. Locate steam when you open throttle until the time it passes to the atmosphere.
4. What is the first thing to do while out on the road if stopped unexpectedly?
5. If your engine is blowing either in valve or cylinder, how can you locate it?
6. If your engine gets lame and you will find eccentrics, links, and valve-stem connections all in proper shape, where will you locate the trouble, and how?
7. If you break a back spring hanger on a four or six wheel connected engine, which box carries the most weight on box after breaking the spring hanger?
8. Suppose you slip a back or forward eccentric, how can you set it?
9. Suppose you break a valve yoke or valve, how can you locate it, if yoke or valve, without taking off steam cover, and if it is front lip or back lip, or if valve is broken crosswise, and how will you block engine in either case?
10. What will you do if you break a valve seat?
11. Supposing you were running on close time of a Black Diamond train and came within 1 mile of side track ten minutes ahead of the Black Diamond and broke a rocker arm, what would you do to clear the Diamond?
12. Supposing you were making a similar circumstance to question No. 11, distance and time, and broke link block pin?
13. Suppose you broke side rod on right side?
14. Suppose you burst back driving-wheel tire on right side, back side, and had to bring engine to shop backward with tire off, how would you get engine around curves, the high side on off tire? Suppose you burst front tire on four-wheel connected engine, what would you do to bring engine to shop?
15. Supposing you ran off track and bent both engine truck axles so as not to stay on track and be 20 miles from shop, how will you bring engine home?
16. Suppose you had broken flange on front engine truck wheel or tank truck wheel, what would you do?
17. Suppose you start out with two good injectors and break one, then use next one, and after going some distance, for some unknown cause, the second one will give out, what would be the first thing you would do?
18. Suppose you are running a four-wheel connected, a narrow fire-box engine in passenger service at a rate of 60 miles per hour, with engine hooked up very close, and break front hanger on back spring, so that spring will jam reach rod, after stopping at station, how will you be able to start?
19. In case you break a reverse lever, what will you do?
20. In case you break a reach rod, what will you do?
21. In case you break a link hanger or link hanger pin, what would you do?
22. Suppose you knock out front cylinder head and do no damage to cylinder, what would you do?
23. What is the proper position to put engine to key and set up wedges?
24. How can you locate a loose follower?
25. How can you locate a loose piston?
26. If engine gets to knocking and gets lame, what is the trouble, and what must be done in this case?
27. Supposing you broke a frame between boxes.
28. What damage will it do to an engine when working water?
29. How can you run in with a broken smoke-head?
30. In case you lost main key in main rod on main pin and had none to replace it, nor had wood to make one, what would you do?
31. Is it good to let an engine slip while working water, and is it good to have only one sand pipe open?
32. Suppose you lose bolts on forward motion eccentric blade at eccentric strip and had no bolts on engine to replace them, what would you do?

## (4) Questions for examination—Book of rules

1. Where do you find the general rules governing employees?
2. Where do you look for further special instructions?
3. What employees must have copies of these rules?
4. Would ignorance excuse violation of rules? If in doubt as to the meaning of any rule, what would you do?
5. Under whose authority are employees while on duty in the train service?
6. What persons not employees are subject to the rules of this company while on duty?
7. Where are the standard clocks on this division located?
8. From what clocks only must trainmen and engineers take time?
9. When your duties are such as to prevent you from access to standard clocks, how are you to procure standard time?
10. When a new time-table takes effect, what does it supersede?
11. How shall all regular trains on the road, running according to the preceding time-table, be governed?
12. If, according to the new time-table, a train is behind time, what should be done?
13. If ahead of time?
14. If a new train is shown, when can it be run?
15. How many sets of figures may be shown upon the time-table for a train at any station?
16. How are regular meeting and passing points and time indicated on the time-table?
17. When there are two times (or sets of figures) given at a station, what is each?
18. When there are more trains than one to be met or passed at a given point, how is attention called to it?
19. When both the arriving and leaving time are shown in full-faced type, what does it signify?
20. If but one time is shown in ordinary type?
21. If but one time is shown in full-faced type?
22. How are the days upon which trains are to be run indicated upon the time-table?
23. What do the signs "s," "f," "c," and "q" indicate?
24. How are the trains designated on the time-table?
25. If a train is scheduled to run daily except Sunday, can it start Saturday and run Sunday in order to complete its trip?
26. What is required of all employees whose duty it may be to give signals?

27. What signals are to be used by day and what by night and in foggy weather?
28. What does red signify?
29. What does green signify?
30. What does white signify?
31. For what is green and white combined used?
32. For what is blue used?
33. In addition to red and green signals, what other signals are used to signify danger and caution?
34. What does the explosion of 1 torpedo signify?
35. Of 2? How far apart should they be placed on the rail?
36. How far must a train proceed with caution after running over two torpedoes?
37. What is a fuse, and how is it to be used?
38. When burning on the track, how is it to be respected?
39. A flag or lamp swung across the track, or any object waved violently on the track, indicates what?
40. What are the markers?
41. Where are they displayed?
42. What do they indicate?
43. If, while on a side track, a train meets or passes you without displaying markers, how would you act?
44. Are there any trains or engines that need not display markers? If so, what?
45. What signals must be carried on the front and rear of each train on the road after sunset or in fog?
46. What signals are yard engines to display after sunset or in fog?
47. Do rules require that each car in a passenger train shall be in communication with the engine?
48. How is this done?
49. What are classification signals?
50. What trains do not carry classification signals?
51. What signals are used on a train to denote that it is followed by another on the same time and having the same rights?
52. What classification signals are carried by extra trains?
53. Are yard engines required to display these signals?
54. What does a blue flag by day and a blue light by night indicate when placed at the end of a car?
55. If necessary to remove car so protected, what will be your first duty?
56. What is your duty when it becomes necessary for you to place cars on a siding in front of cars so protected by a blue signal?
57. What is a signal for approaching stations, railroad crossings, and junctions?
58. What is the signal to apply brakes?
59. To throw off brakes?
60. What is the signal in answer to any signal except train parted?
61. What is the signal that train has parted? Should this signal be repeated and how often?
62. What are three short blasts of the whistle when train is standing?
63. What is the signal to call in the flagman from the west or north? From the east or south?
64. What are four short blasts of the whistle?
65. What are five short blasts of the whistle?
66. What is 1 long followed by 2 short blasts of the whistle?
67. What is the signal for road crossings?
68. What is a succession of short blasts of the whistle?
69. What is 1 tap of the signal bell or blast of air whistle when the train is standing?
70. What are 2 taps of the signal bell or 2 blasts of an whistle when the train is running?
71. When the train is standing?
72. What are three taps of the signal bell or three blasts of air whistle when the train is running?
73. When the train is standing?
74. What is the signal to reduce speed?
75. When one tap of the signal bell is heard while the train is running, what must the engineer do?
76. What significance will signals of the same number of sounds have when given by other appliances than bell cords and signal bells?
77. What is the signal to stop when given by flag or lamp?
78. What is the signal to move ahead?
79. What is the signal to move back?
80. What is the signal that the train has parted, and how should it be given?
81. May these signals be given by any other means than the lamp or flag? If so, by what means?
82. What is meant by a fixed signal? On this division, where are fixed signals located?
83. How should a signal imperfectly displayed, or the absence of a customary stationary signal, be regarded, and what is your duty in regard to it?
84. State fully what the requirements are in regard to the unnecessary use of the whistle?
85. In what cases may the whistle be sounded while passing a passenger train?
86. How should a danger signal be acknowledged by the engineer?
87. Should a fixed signal be acknowledged by the engineer?
88. Where and when must the engine bell be rung?
89. At what points must the whistle be sounded?
90. When two or more engines are coupled to the head of the train, on which engine should the classification signals be displayed?
91. If only one flag or light be displayed as a classification signal, how must it be regarded?
92. Who are responsible for the proper display of all train signals?
93. When a train is being pushed by an engine at night, or when the train is obscured by fog or other causes, what signals must be displayed, and where?
94. Is there any exception to this rule? If so, where is it to be found?
95. When a train turns out to meet or be passed by another, what change must be made in the signals, and when?
96. When must the signals be again displayed?
97. When should headlights on engines be covered?
98. What signals must be used to stop a train at the flag station designated for such a train?
99. What signal must be used to stop a train at a point not a flag station?
100. What signal should be used by watchmen at street crossings to prevent persons and teams crossing?
101. What signals should be used when necessary to stop a train at such points?
102. At what points are torpedoes not to be placed?
103. What is your duty with reference to looking out for signals?
104. How are all trains designated?

105. What is a regular train?
106. What is a section?
107. What is an extra?
108. Is an engine in service on the road considered to be a train?
109. How are trains classified as to priority or right of track?
110. State the relative rights of each class?
111. Is a passenger train necessarily a first-class train?
112. Is a freight train necessarily a second-class train?
113. How are extra trains distinguished?
114. Extra trains are of what class compared with regular trains?
115. What is required of a train of inferior class with respect to a train of superior class?
116. On a single track in what direction have trains the right of track over opposing trains of the same class on this division and time-table?
117. Where is this authority to be found?
118. When trains of the same class meet on a single track, what is the duty of the train not having the right of track?
119. If you were obliged to run by a siding and back in, how would you proceed?
120. Can a first-class train arrive at a station in advance of time where only the leaving time is shown, and if so, how much?
121. How long must a train clear a train of superior class at a meeting or passing point?
122. How long must a train wait at a station before starting, after the departure of a passenger train in the same direction, when no form of block signal is used?
123. How is this done at telegraph offices under time block system?
124. How many minutes apart should passenger trains running in the same direction be kept, when no form of block signal is used?
125. How far apart should freight trains keep when going in the same direction, when no form of block signal is used?
126. How much time should a train have, leaving a station, expecting to meet or be passed at the next station by the train having the right of track?
127. What are the required clearances in such cases?
128. In case you fail to get your train entirely clear of the main track by the time required to clear a train of superior right, what must be done?
129. May a train arrive at a station in advance of its schedule arriving time, when shown? If so, under what circumstances?
130. May a train leave a station in advance of its schedule leaving time?
131. When are trains of the same class required to stop at schedule meeting or passing points?
132. At what point should the train be stopped?
133. In case the train that should be met or passed is not at the schedule meeting or passing point, how would you be governed?
134. How should all trains approach the end of a double track, junctions, railroad crossings at grade, and drawbridges?
135. Are there any grade crossings located on this division where you are required to stop?
136. What must be ascertained before leaving a junction, terminal, other starting point, or passing from double to single track?
137. How would you ascertain this?
138. When a train stops or is delayed, how should it be protected?
139. Who should protect the rear of the train?
140. Who should protect the front of the train when necessary?
141. When flagman is recalled, what should he do?
142. When a flagman of a freight train goes back to protect the rear of his train, who must take his place?
143. When the flagman of a passenger train goes back to protect the rear of his train, who must take his place?
144. When recalled by the whistle of his engine and a passenger train is due, what would you do?
145. On double track, under what circumstances may trains having work to do on the opposite track cross over?
146. When a freight train on double track crosses over to allow a passenger train to pass in the same direction, and a passenger train in the opposite direction arrives, what should be done?
147. When it is necessary for a freight train to turn out on the opposite track to allow a passenger train running in the same direction to pass, and a passenger train in the opposite direction is due, what precaution should be observed?
148. What train should be given the preference?
149. State in detail what you would do in case your train parted?
150. How must this matter be handled in case the train parts between air cars?
151. Can the detached portion be passed or moved by a following train?
152. When a train is being pushed by an engine, what precaution must be taken to insure safety?
153. May a train start from a station or leave a junction point on the time of an overdue train of the same class?
154. In case a leading section had passed such a point, would another train of the same class have a right to go ahead of following section of such overdue train?
155. How if the delayed train has arrived?
156. If both are delayed and both are ready to leave which goes first?
157. Does a delayed train that falls back on the time of another train of the same class lose its rights?
158. When do regular trains lose all their rights?
159. In case you overtake a train of the same or superior class that is disabled so that it can not move, how would you proceed?
160. If you were running the disabled train, what rights would you assume if other trains had passed you?
161. How must all messages in regard to the movement of trains or the condition of track or bridges be given?
162. By whose authority shall trains display signals for a following train?
163. What authority is required for running an extra train on double track?
164. Can an extra train be run on single track without orders?
165. Would you run extra on double track without orders in case you lost your rights on a regular train?
166. When signals displayed for a following train on single track are taken down at any point before the following train arrives, how should the conductor be governed under the following conditions?
167. Where there is an operator or switchman, and
168. Where there is no operator or switchman or other provision for the purpose?

169. If a train for which signals have been displayed leaves the line at a point where there is no operator or switch tender or other provision for the purpose, what arrangements must be made to notify opposing trains of its arrival?
170. What precautions are necessary when approaching a station where a train is receiving or discharging passengers?
171. What is the duty of enginemen and trainmen with respect to trains running on the opposite track?
172. What signal should be given in such cases?
173. What persons are permitted to ride on the engines?
174. Who is responsible for the switches when there is no switch tender?
175. May you leave a switch open for a train or section that is following you?
176. After opening a switch, can you leave it open?
177. How must all accidents, detentions to trains, failures in the supply of water and fuel, and defects in track and bridges be reported?
178. May a train leave a station without a signal from its conductor?
179. Are conductors and enginemen equally responsible for the safety of their train and for an observance of the rules relating thereto, and are they responsible for failure to protect their trains, even if not provided for by the rules?
180. What course should be pursued in case of doubt or uncertainty?
181. What do the terms "superior right" and "inferior right" in the rules refer to?
182. By whose authority and over whose signature are telegraphic orders issued?
183. Would you accept and act upon an order in which there are erasures, alterations, or interlineations?
184. Who must have copies?
185. How must they be addressed?
186. How should operators receiving orders write them?
187. May they trace copies?
188. Would you run on an order which you had seen the operator copy in any other way than from the wire or by tracing?
189. When a train is stopped for orders at a station, describe in detail what must be done by the conductor and engineman before leaving.
190. What must conductors do with orders which they have used?
191. What must enginemen do with orders until executed?
192. How shall orders be delivered addressed to persons in charge of work requiring use of tracks?
193. What is the rule for delivering orders to a train which can not be reached by telegraph?
194. What is meant when a train is named in an order and no particular section or sections specified?
195. What section must have copies of the order?
196. May a train be governed by orders not addressed to it?
197. When you receive train orders may you assume rights not conferred on you by such orders?
198. Orders once in effect continue so how long?
199. Orders held by or issued for a train which has lost its rights have what effect?
200. Suppose you should receive an order giving you rights against an opposing train, and before meeting that train and executing the order you should become over 12 hours late, what would you do?
201. What signals are provided at each train-order office and for what are they used?
202. If red is displayed at a train order office, what must trains do?
203. What is the proper place for trains to stop?
204. Who will authorize a train thus stopped to pass the red signal?
205. If a signal is not displayed at a night office and you have not been previously notified of the fact, what must you do?
206. When a semaphore is used, what position of the arm means red?
207. What white?
208. How are these positions indicated at night?
209. Do these signals in any way relieve trainmen from the duty of properly protecting their trains?
210. As conductor or engineman of No. 2 holding an order reading "No. 2 and No. 1 will meet at Rockdale," what would you do if No. 1 displayed classification signals?
211. As conductor or engineman of No. 2 holding an order reading "No. 2 and second section of No. 1 will meet at Rockdale," what would you do if second section of No. 1 displayed classification signals?
212. As conductor or engineman of No. 1 holding an order reading "No. 1 will pass No. 3 at Rockdale," how would you be governed?
213. As conductor or engineman of No. 3 holding an order reading "No. 1 will pass No. 3 at Rockdale," how would you be governed?
214. As conductor or engineman of No. 6 holding an order reading "No. 542 will run ahead of No. 6 from Mahoning to Slatington," how would you be governed?
215. As conductor or engineman of No. 2 holding an order reading "No. 1 has right of track over No. 2, Laurys to Slatington," would you go beyond Slatington before the arrival of train No. 1, and if so, under what circumstances and how far?
216. As conductor or engineman of No. 1 if you met No. 2 at Slatington, which train should take the siding?
217. If you met No. 2 at some point between Slatington and Laurys, which train should take the siding?
218. As conductor or engineman of No. 542 holding an order reading "No. 542 has right of track over No. 3, Slatington to Laurys," how would you be governed?
219. Supposing No. 3 to be first class and No. 542 second class, how must No. 3 clear No. 542 at any intermediate point under this order?
220. As conductor or engineman of No. 3 holding an order reading "Extra 37 east has right of track over No. 3, Slatington to Laurys," would you go beyond Laurys before the arrival of Extra 37, and if so, under what circumstances and how far?
221. As conductor or engineman of Extra 37, how would you be governed?
222. If your order to run extra extends beyond Laurys, and No. 3 has not reached there on your arrival, would you go beyond Laurys against No. 3, and if so, under what circumstances?
223. As conductor or engineman of No. 2 holding an order reading "All regular trains have right of track over No. 2 between Slatington and Laurys," how would you be governed with respect to all regular trains?
224. As conductor or engineman of a train of inferior right holding an order reading "No. 1 will run one hour late from Easton to Mauch Chunk," how would you be governed?
225. As conductor or engineman of No. 1 holding an order reading "No. 1 will wait at Allentown until 11 a. m. for train No. 542," how would you be governed?
226. As conductor or engineman of No. 542, how would you be governed?
227. Failing to reach Allentown at 11 a. m., at what time would you clear main track for No. 1 at other stations?

228. As conductor or engineman of Engine 80 or 85 holding an order reading "Engines 80, 85, and 90 will run as first, second, and third sections No. 2, Mauch Chunk to Easton," would you display signals?

229. Engines 80, 85, and 90, running as first, second, and third No. 2, holding an order reading "Engine 85 is annulled as second section of No. 2 from Allentown, following sections will change numbers accordingly." How would you be governed as conductor or engineman of Engine 85? Of Engine 90?

230. Questions of light engines running as first section of passenger schedule or following a passenger train as second section.

231. Questions in regard to flagging out when train is tied up by an uncompleted 31 order.

232. How must Extra 400 be governed under a form of order reading "Work Train Extra 400 will keep clear of Extra 200 east between Slatington and Laurys after 2.10 p. m."

233. Under the above how must Extra 200 be governed?

234. What do you understand by "protecting yourself against all trains" in an order reading "Engine 400 will work as an extra from 7 a. m. until 6 p. m. between Slatington and Laurys, protecting itself against all trains?"

235. How must a train receiving an order reading "Engine 200 will run extra from Mauch Chunk to Easton; Engine 400 is working as an extra between Slatington and Laurys," be governed?

236. How is an order reading "Hold No. 2" to be respected by conductors and enginemen?

237. Also an order reading "Hold all trains?"

238. When a train has been so held, what is necessary to let it go?

239. When is each of the following forms to be used "No. 1 of February 29 is annulled" "No. 3, due to leave Easton Saturday, February 29, is annulled?"

240. What is the effect of this order and what does it authorize train or person receiving it to do?

241. If a train is annulled to a given point, how are its rights beyond that point affected?

The 40 answers just quoted throw considerable light upon the requirements for railway service as enforced at the present time by the leading railroads of the country. Answers 3, 5, 17, and 40 are all from large and important roads, and are exceedingly full and explicit; from them may be obtained the application blank which is typical for all roads and the general rules governing examination tests, and also from answer 40 a very considerable insight into the nature of technical examinations.

Most railroad companies print books of rules for the various departments of the service, which give minute details as to the specific duties of each class of employees. They state, moreover, to whom each employee must report for further orders and instructions, and usually contain specific instructions governing action in the most frequent cases of emergency that may arise. Thus, for example, the rules of the Pennsylvania Railroad Company for the government of the transportation department contain 37 printed pages relating to such general questions as standard time, time-tables, signals, train signals, whistle signals, whistle-cord signals, block signals, lamp signals, fixed signals, the general use of signals, classification of trains, movement of trains, etc., and 20-odd pages devoted to the instructions for the movement of trains and telegraphic orders. Thirty printed pages of this handbook are also devoted to specific instructions to each class of employees. Thus, for example, rule 220, for passenger conductors, is as follows:

"220. Passenger conductors report to and receive their instructions from the train master. They must obey the orders of station masters, and conform to instructions issued by the accounting and passenger departments and the treasurer. The conductor is responsible for the movement, safety, and proper care of his train, and for the vigilance and conduct of the men employed thereon, and must report any misconduct or neglect of duty.

"It is his duty to ascertain that passengers are provided with tickets, collect fare from those who are not, and put off at a convenient station any who refuse to pay fare; attend courteously to the comfort and wants of passengers, and see that his trainmen do the same; see that passengers are properly seated, and not allow them to ride on the platforms or in the baggage or mail cars, or violate in any respect the regulations provided for their safety; and maintain good order, and not allow drunken or disorderly persons to get on the train.

"He must have a reliable watch and a copy of the time-table, examine the bulletin board before and at the end of each trip, and compare time with the engine-man before starting, and see that he has a copy of the time-table.

"He must report for duty at the appointed time with his trainmen, assist in making up his train when necessary, see that the engine and train are supplied with full sets of signals, and ascertain that the cars have been cleaned and inspected and properly equipped, and that the brakes and other appliances are in proper order."

The following rule relating to enginemen may serve as another example or illustration of the general character of the book of rules:

"232. Enginemen report to and receive their instructions from the road foreman of engines. They must obey the orders of the train master. They must obey the orders of station masters and yard masters as to shifting and making up trains, and those of conductors as to starting, stopping, and general management

of trains, unless they endanger the safety of the train or require violation of rules. When at the engine house they are under the direction of the engine-house foreman.

"The engineman must have a reliable watch, a copy of the time-table, and a full set of signals, examine the bulletin board before starting on, and at the end of each trip, and compare time with the conductor of his train before starting.

"He must report for duty at the appointed time; see that the engine is in good working order and furnished with the necessary supplies; give checks for fuel and stores received; assist in shifting and making up the train when required.

"He must exercise caution and good judgment in starting and stopping the train, and in moving and coupling cars, so as to avoid disturbance to passengers and injury to persons or property; keep a constant lookout on the track for signals and obstructions; stop and inquire respecting any signal not understood, and report any neglect of duty observed; use every precaution against fire, and not permit burning waste, hot cinders, or any other thing to be thrown or dropped from the engine; clean the ash pan only at points specially designated; report the condition of the engine at the end of each trip, and assist in making repairs when called upon.

"He must not leave the engine during a trip except in case of necessity, and must then leave the fireman in charge."

Such rules are pretty generally uniform and are now largely based upon the standard codes adopted by the American Railway Association, made up of the representatives of nearly all the leading roads. The standard codes for the various departments of service are at least taken as a basis, though sometimes modified in unimportant details to suit the special needs or experience of different roads. The gradual extension of standard codes will undoubtedly be a benefit to railroad employees, perhaps to a greater extent than to the corporations, in that it will facilitate the transfer of men from one system to another as better opportunities for employment may present themselves, and will tend to unify the conditions of railroad employment.

The question of physical examinations is one that has given rise to some discussion. The physical fitness of railway employees was the topic discussed at the ninth annual meeting of the New York State Association of Railway Surgeons at New York City, 1899. Mr. R. C. Richards, general claim agent, Chicago and Northwestern Railway, presented a somewhat radical paper in which he maintained that the same care was not exercised in the inspection of the men who operated the road as was exercised in the inspection of materials for construction and maintenance. He said that in adjusting claims he had discovered that a high percentage of accidents could be traced to physical defects, bad eyesight, or bad hearing on the part of men who should never have been admitted to service. Four years' experience on the Northwestern Railway, after the introduction by the management of a system of physical examinations for all applicants in the engine, train, switching, signal, and station service, as well as of all employees that came up for promotion in those departments, and the adoption of a rule establishing an age limit by which no inexperienced men over the age of 27 years, or no experienced men over the age of 30 years, were employed as brakemen or firemen, and no inexperienced men over 30 years of age or experienced men over 40 years are employed as switchmen, showed that during that period out of 8,397 men examined 526 or 6¼ per cent were rejected for defective vision, four-tenths of 1 per cent for defective hearing, 3¼ per cent for color-blindness, 2¼ per cent for other physical defects, making a total of 1,061, about 1 in 8, or about 14 per cent, rejected of the total number examined. The relation of physical defects to the frequency of accidents is such that legislation requiring rigid examination for the railroad service by State officers granting something in the nature of a license to engage in railroad service may be quite as desirable as safety-appliance legislation.

There is a general tendency to employ only young men in the first instance. It can be said that at the present time it is extremely difficult for anyone over the age of 35 to start in railway employment; this age limit will hold for all departments of service; some roads prescribe even lower limits for special departments. Old men and men who have been injured in the service are often assigned duties for which they are not physically fit as the cheapest way of meeting the general obligation which the company can not, out of respect to public opinion, evade, and for which the larger roads are now trying to make some provisions in a system of pensions. This is certainly a more reasonable method of providing for the just claims of faithful employees after a long period of service, and one that will not jeopardize the public interest.

The care with which physical examinations are conducted by roads which do not rely upon the judgment of the employing officer nor upon any general certificate

of health may be seen from the following circular of instructions issued from the office of the chief surgeon on one railroad system which adopts a high standard with respect to physical examination. This circular shows also the classes of men covered by such physical examination. It was sent out to all the surgeons in the employ of the company, located at the principal points on the system:

INSTRUCTIONS GOVERNING SURGEONS IN CONDUCTING PHYSICAL EXAMINATION OF APPLICANTS FOR EMPLOYMENT IN THE SERVICE OF THE COMPANY.

When making application for service, station agents, telegraph operators, station baggagemen, enginemen, firemen, hostlers, conductors, collectors, brakemen, train baggagemen, train porters, yardmasters, switchmen, towermen, switch tenders, crossing flagmen, bridge foremen, and section foremen must be examined in visual power, color perception, and hearing, and for physical defects in general.

Examining surgeons are requested to select a time and place at which they will conduct examinations, and to notify the proper officer.

Examinations are to be conducted in a well-lighted room at least 22 feet in length. In testing visual acuteness, only one applicant should be present in the room at a time. In testing color perception and hearing, any number of applicants may be present, but must maintain silence.

Examining surgeons are provided with the following articles to be used in making examinations:

1. Two cards of Snellen's test types (one for illiterates).

2. A set of wools for color testing perception. (Do not expose to light longer than absolutely necessary.)

Applicants will bring with them application forms in duplicate, on which will be found a blank certificate to be filled out and signed by examining surgeon.

Examining surgeons must require the applicant, in all cases, to sign his name in the blank space provided in the certificate of examination before beginning the examination.

After concluding the tests of vision, color perception, and hearing, and the examination for physical defects in general, the examining surgeon will fill out and sign in duplicate the blank certificate found on the application blanks, and forward one to the officer signing the order for examination and one to the chief surgeon.

*Examination of visual acuteness.*—The card of test types should be fastened in a good light to a wall, the bottom of the card being about 5 feet from the floor.

The applicant should be placed 20 feet from the card and instructed to read such letters as may be indicated. Each eye should be tested separately. The last 5 letters read correctly are to be recorded in the report and also the degree of visual power expressed in fractions.

Examiners are reminded that the normal eyed should read at 20 feet the line marked 6 m. or 20 feet. Such being the case, the visual power would be expressed by the fraction  $\frac{20}{20}$ . Should the applicant at the distance of 20 feet be unable to read this line, but be able to read the next line above (30 feet or 10 m.), the result would be indicated by the fraction  $\frac{30}{20}$ . If he can at 20 feet only read the letters marked 40 feet or 12 m., the record should be  $\frac{40}{20}$ .

*Hearing.*—The applicant should be able to hear conversation conducted in an ordinary tone at the distance of 20 feet, in which case the hearing power would be expressed by the fraction  $\frac{20}{20}$ . Should the applicant fail to hear ordinary conversation at the distance of 20 feet, but be able to hear such conversation at the distance of 10 feet, for instance, the hearing power should be expressed by the fraction  $\frac{10}{20}$ , etc.

*Examination of color perception.*—Examiners are furnished with a set of colored wools, lettered A, B, and C, and numbered from 1 to 40. These wools are divided into three groups, distinguished as follows:

Group A, containing the light-green skein A, the green shades numbered 2, 4, 6, 8, 10, 12, 14, 16, 18, and 20, and the gray confusion colors numbered 1, 3, 5, 7, 9, 11, 13, 15, 17, and 19.

Group B, containing the pink or purple skein B, the pink or purple shades numbered 22, 24, 26, 28, and 30, and the blue confusion colors numbered 21, 23, 25, 27, and 29.

Group C, containing the red skein C, the red shades numbered 32, 34, 36, 38, and 40, and the brown confusion colors numbered 31, 33, 35, 37, 39.

*Manner of using wools.*—Mix the 40 skeins thoroughly and throw them on a table in a good light. Place skein A about 2 feet from the pile of worsteds and instruct the applicant to pick out the shades of that color.

The examiner having satisfied himself of the ability or inability of the applicant to select the proper skeins, should record the numbers of skeins selected and return them to the pile. The examiner should then place skeins B and C successively, to be treated in the same manner.

In testing for defects in color perception, examining surgeons may be guided by the following brief suggestions:

1. Keep the tag number invariably covered by the movable slip during examinations. Any number of applicants may watch the test in operation, provided they maintain silence. In case an applicant fails to comprehend the test, he may be directed to step aside and watch another applicant select the skeins, or in the absence of another applicant, the surgeon may himself go through the test. This method is valuable in the case of color-blindness, as the applicant is convinced against his will that the test is a fair one.

2. Do not under any circumstances reveal the color of a skein. All tests in which the applicant is requested to name colors or shades are incorrect. The object of the test is to discover whether the applicant can properly classify shades or primary colors, and it is important after he thoroughly understands what is expected of him not to render him any assistance.

3. It is well, if necessary, to explain the difference between colors and shades. For example: Blue, green, red, are colors; light blue, dark blue, pea green, venetian red, are shades of these colors. The applicant, however, should remain uninformed of the names of the colors of any of the skeins.

The examiner should watch the applicant closely and note any hesitancy in selecting the skeins, especially when he appears undecided whether or not to select a confusion color. Should he evince a strong tendency to select any confusion color, even if he does not actually select it, the number of the color should be recorded.

4. Recollect, however, that blue is not a confusion color for green, but only for pink (purple). It must be borne in mind that many men, not particularly ignorant in other matters, find it difficult to distinguish between light shades of blue and green, or between red and orange. This defect is one merely of education, is not color-blindness, and should not reject a candidate. In case such ignorance is manifested, it may be well to call the applicant's attention to the fact that he is not well posted in colors.

5. In case of color-blindness the applicant usually adopts one of two courses. He may boldly and rapidly select a number of skeins at random, throwing them down with a great show of confidence, or he will laboriously study over the skeins, carefully selecting a few of the correct colors, and a few—often not more than one—of the confusion colors, always hesitating and usually selecting shades of nearly the same intensity in color and confusion colors. For example: Light green, light gray, light purple, light blue. The infirmity of applicants adopting the first course is usually easy to detect, but it is often difficult to distinguish between a man who is hesitating and vacillating on account of lack of purpose or of color education and one who is so on account of actual deficiency in color perception. In these latter cases it is well to instruct the applicant not to handle the wool until he has determined what skeins he wishes to select. Such applicants may also be permitted to watch another while making the test.

*Diagnosis*—1. He who places beside skein A one of the "colors of confusion" (odd numbers 1 to 19)—that is to say, finds that it resembles the "test color"—is color-blind. He who, without being quite guilty of this confusion, evinces a manifest disposition to do so, has a feeble chromatic sense.

2. He who is color-blind by the first test and who, upon the test with skein B, selects only the correct skeins, is incompletely color-blind.

3. He who, in the second test, selects with purple the blue and violet confusion colors, or one of them, is completely red blind.

4. He who, in the second test, selects with purple the green and gray shades also, or one of them, is completely green blind.

5. The test with skein C, which is applied only to those completely green or red blind, should be continued until the person examined has placed beside the specimen all or the greater part of the skeins belonging to this color or else one or several "colors of confusion" (odd skeins 31-39). In this test the red-blind individual chooses, besides the red shades, olive green and dark brown shades of a darker quality than the red-test skein. On the other hand, the green-blind individual selects similar confusion colors, but of a quality lighter than the red-test skein.

6. In case more than one applicant is present during the examination, the wools should be frequently mixed, and other applicants should stand some distance from the table.

7. Recollect that from 2 to 4 per cent of all whites are color-blind. If the average of rejections for this cause does not reach 2 per cent, there is something wrong in the method of examining.

*Classes.*—In Class I, or those of whom normal hearing, color sense, and visual power are required, are included the following: Enginemen, firemen, hostlers, conductors, collectors, brakemen, train baggagemen, train porters, yardmasters, switchmen, towermen, switch tenders, bridge foremen, and section foremen.

In Class II, which includes station agents, telegraph operators, station baggagemen, and crossing flagmen, normal color sense and normal hearing are demanded; but applicants in this class may be accepted with  $\frac{2}{3}$  visual power in one eye, provided that of the other eye be normal, or with  $\frac{3}{8}$  visual power in each eye.

*Other physical defects.*—1. Applicants with trachoma or other inflammatory conditions of the eyes or appendages, or with chronic discharges from the ear, are disqualified.

2. Hernia, varicose veins of both legs, or very marked varicosity of one leg, phlebitis, skin diseases—especially eczema, or even a strong tendency to it—loss of entire thumb or loss of 2 fingers from one hand disqualify Class I and station baggagemen in Class II, while station agents, telegraph agents, and crossing flagmen may be accepted with hernia and also with loss of the thumb or loss of 2 or more fingers from one hand.

3. Unmistakable evidence of chronic alcoholism disqualifies both classes.

4. Acute gonorrhea and the primary and secondary manifestations of syphilis, traumatic and pathological bubo, disqualify all applicants as long as the symptoms are apparent.

5. Orchitis, epididymitis, malignant tumors, recurring appendicitis, old depressed fractures of the skull, or any fracture followed by head symptoms, spinal injuries, epilepsy, antero-posterior curvature, severe injuries of the back, tuberculosis, marked scrofula cachexia, aneurism, necrosis, acute and chronic periostitis, acute and chronic cystitis, undescended testicle, disqualify all applicants. Station agents, telegraph operators, and crossing flagmen may be accepted with antero-posterior spinal curvature without symptoms.

6. While synovitis, arthritis, floating cartilage, and impaired mobility of joints disqualify Class I and station baggagemen in Class II, impaired mobility of joints need not exclude station agents, telegraph operators, and crossing flagmen, provided inflammation has long since subsided and the affected joints be free from pain.

7. From a medical standpoint, diabetes, chronic rheumatism, and gout, chronic diarrhea, chronic hepatic disorders attended with jaundice, or those that are disabling in their nature, hepatic, cardiac or renal dropsies, asthma, hæmoptysis, tuberculosis, valvular disease of the heart, angina pectoris, evidences of organic disease of brain or spinal cord, insolation, inveterate neuralgia of the larger nerves, disqualify all applicants. Crossing flagmen may be accepted with a moderate amount of chronic rheumatism.

8. Under the head of disqualifying defects, surgeons will be careful to note any physical defects that would impair the usefulness of the applicant; that would be more or less aggravated by the service, or that would contribute to the prolongation of disability in case of injury.

9. In order to prevent fraud in subsequent claims for personal injury, a careful record must be made, in the proper place, of physical defects which do not impair the usefulness of the applicant, or such as would not be aggravated by the service or contribute to the prolongation of disability in case of injury.

10. In case the applicant does not show evidence of having been successfully vaccinated during the previous 3 years, he should be vaccinated.

**Conditions of entering service on European railroads.**—In order to give an opportunity of comparison between American and European railroads with respect to their methods of employment and the conditions of admission to the same, it is necessary to review briefly the requirements of the leading roads of the different European countries. Considerable information on this subject was brought together in answer to question 34 at the sixth session of the International Railway Congress held at Paris, 1900. The following is a summary for the leading countries:

1. **SWITZERLAND.**—The Swiss Railway Union had drawn up a uniform series of regulations on the conditions of engagement. These were put into force on October 1, 1890, and are described in detail by Dr. H. Dietler in the Report on Question XXXIV to the International Railway Congress, Paris, 1900. In most cases an apprenticeship from 1 to 2 years is required before candidates are admitted to examination for any grade of service. Further periodical examinations are required as a condition of retaining employment and as a basis for promotion. Uniform rules for the periodical examination of employees were adopted May 1,

1895, by the Swiss Railway Union. In the traffic department each employee must be examined at least once in every 4 years. Failure to pass an examination means that said employee must go up a second time for examination within 4 weeks, and then if he fails he must be transferred to a post for which his knowledge is adequate or be dismissed.

Age limits are prescribed as follows:

At least 16½, before admission as apprentice at a station; between 20 and 35 for pointsmen, shunters and yardmen, guards, assistant guards, brakemen, and firemen; at least 23 in case of drivers; at least 20 in case of carriage inspectors and outdoor repair hands. The usual order of recruiting is that a man passes an examination for admission to the shops, upon a second examination is taken on as provisional fireman. If he passes these satisfactorily and also a third examination, after a suitable length of time, he gets a certificate entitling him to be appointed definitely as fireman; two additional examinations are then required before he can become an engineer. For employment at stations and ticket offices one must be 16½ years old to be admitted as apprentice, must possess perfect health, particularly good hearing and sight, for which medical certificate is required; must have good elementary education. After 1 to 2 years apprenticeship he is examined on (1) principles of organization of railway management; (2) the railway system of Switzerland, steamship and stage lines and chief foreign railways connecting with Swiss roads; (3) rules and regulations of station service; (4) regulations and tariffs relating to tickets, baggage, and methods of accounting for same. Signalmen must be able to write clear report of any events that may happen in connection with their duties, and must have good elementary education and be familiar with rules and regulations of their department of the service.

Shunters must have regular primary education and have been apprentice 12 months, and pass examination on regulations about signaling, composition of trains and their weight, and about shunting and sorting. Applicants for the goods service (freight department) must have regular primary education and be able to write clear legible report, and have an intimate knowledge about transport, use of wagons and trucks, loading and unloading goods, detection of irregularities and reports made about them, papers accompanying goods, both for railway and customs purposes, and the sealing of wagons.

*Employment on trains—(a) Guards, assistant guards.*—The applicant who wishes to become an apprentice must have the following qualifications:

He must have at least the regular primary education. He must be able to give a fluent and clear description in his mother tongue, either verbally or in writing, of any ordinary event; he must also be able to speak and understand one of the more important foreign languages. The applicant has to hand in an application drawn up and written by himself, together with his school and other certificates.

Brakemen are not required to serve an apprenticeship.

The apprentice, or the brakeman, who is applying for the post of assistant guard must pass an examination, in order to show his familiarity with the following subjects: The ticket regulations; the general signaling regulations, and the arrangement of signals; the general traffic regulations and the regulations about the composition of trains and their weight; the special rules of the Swiss railways relating to transport; the lighting, heating, and braking arrangements on the carriages and the rules concerning them; the lines he is going to be on; the time-tables and time sheets; also the connections with neighboring lines. The applicant must be able to understand the graphic time-table with accuracy and read it with rapidity.

(b) *Brakemen.*—A brakeman must have received the regular primary education and must be able to give a fluent and clear description in his mother tongue, either verbally or in writing, of any ordinary event. The applicant must hand in an application drawn up and written by himself, together with his school and other certificates. A brakeman has to have the same qualifications as an assistant guard, except in the following branches: (1) The ticket regulations; (2) the special rules of the Swiss railways relating to transport; (3) the connections with neighboring lines; (4) knowledge of graphic time-tables.

The brakeman is not definitely appointed until he has passed an examination in the subjects required. He must pass that examination within a period of not more than 6 months after being provisionally appointed.

*Employment on locomotives—Firemen and drivers.*—An applicant must have received the regular primary education. He must be able to read in his mother tongue printed and written matter; to write legibly; to do vulgar and decimal fractions; and to understand the ordinary and also the graphic time-tables.

2. DENMARK.—To obtain employment on the Danish state railways a candidate must generally satisfy the following conditions:

He must be of Danish nationality; prove that he has led an irreproachable life; be in possession of good health; of suitable age, the limits varying considerably according to the work required; must at least have had a primary school education, and be further qualified in accordance with demands of the several departments of service. These further requirements are, for the higher post of the general management, very severe; as a rule, a candidate must have passed the final examinations of a polytechnic academy or be a licentiate of law, and as a rule also he must have come up through the service. Office clerks may be either men or women of minimum age of 18.

In the locomotive staff, stokers must be between 20 and 30 years of age, and, in addition to the general requirements, must have satisfied the state law with respect to military service. They must also have worked 1 year at least, in the shops, before being placed upon an engine, and finally, must pass a stoker's examination, showing ability to read and write, make daily reports; understand the mechanism of an engine; understand the time-table, and be familiar with the general rules concerning signaling, brakes, etc. A stoker passes from a position as ordinary stoker to that of first-class stoker after a certain period of service and after having passed the periodical examinations; he then may take an examination for engine driver, in which he must show that he is familiar with all types of engines; understands their constructions; knows exact position of all station signals and box signals; can draw up suitable reports and written demands for repairs, and in general is familiar with the "collection of orders" concerning the locomotive service prepared by the chief locomotive and rolling stock engineer.

Station masters and heads of freight departments are chosen from station employees according to their ability, age, and seniority. To be appointed an employee of the railway-traffic service the applicant must have gone through an elementary course of instruction in railway working; must be at least 18 years of age; must have served as railway-traffic pupil on the State railways for at least 18 months, and must have passed examinations proving that he has the necessary knowledge and experience to be able, if necessary, to discharge the duties of a station master. He must be familiar with telegraphy and with the ordinary routine of booking passengers and freight. Promotion depends upon record in service and marks received in the periodical written examinations. A minute system of marks governs in the examinations, and candidates must make so many points to get a "pass" certificate. No one under 16 or over 20 years of age is admitted as railway-traffic pupil. He must, furthermore, prove that he possesses the amount of knowledge acquired in a lycée college, or about an equivalent of a good high-school course in the United States. To be admitted into the "inferior station staff" (porters, pointsmen, etc.) a candidate must show (1) that he has a healthy and strong constitution, without any pronounced bodily defects, or such as would be prejudicial to the performance of his duties; (2) that he has normal sight and hearing and is not color-blind; (3) that he has led an irreproachable life and is not in debt; (4) that he is of Danish nationality. He must, furthermore, be not under 20 or over 25 years of age, able to write legibly, and have performed the required military service creditably. Before being definitely accepted as porter or pointsman the applicant must have served 1 year, at least, on the railways, and have shown himself able, sober, and of good conduct. After this term of probation he must pass an examination to show (1) that he is a good reckoner in the four rules of arithmetic for whole, concrete, and abstract numbers; (2) that he can write from dictation without too many orthographic mistakes; (3) that he knows the geography of Denmark. He must also know the general duties of a porter: (a) The safety service, with use of signals, the switch mechanism, the signaling apparatus, turntables, traversers, etc., and the mode of use; (b) the treatment of rolling stock (carriages); (c) the dispatch of stamped parcels and luggage, loading and unloading and dispatch of goods and cattle; (d) the general regulations and directions concerning the conduct of the State railway staff on and off duty, and with regard to the public; (e) the lines of every railway in the country and the position of all the stations of the State railways.

Requirements for admission to the train staff are:

1. Guard (brakeman): (1) Age from 23 to 33 at most; (2) one year at least of satisfactory service as porter (shunter); (3) a statement from the competent traffic inspector that the candidate is practiced and qualified, and that as regards his person and manners he is suitable for the train service; (4) a certificate from a railway doctor attesting that he does not suffer from organic defects or chronic illness; (5) that he has passed the examination for admission as a guard.

II. Chief luggage guard: (1) Age at least 25; (2) one year at least of satisfactory service as a guard; (3) a certificate from a railway doctor attesting that the candidate is trained and practiced in rendering first aid to the sick and wounded. Generally this instruction is given at the end of about 6 months' service as guard; (4) that he had passed the examination for promotion to the post of chief luggage guard. This condition is not required, however, when the candidate has passed, not more than two years before, the examination for promotion to the post of guard, and has obtained in that examination the mark "mg" (5 marks) at least, in each of the branches 1-4, and the mark "g" (2 marks) at least, in branches 5-8.

III. Train conductor: (1) One year at least of satisfactory service as chief luggage guard; (2) a certificate from the competent traffic manager attesting that as regards his person and manners the applicant is suitable for the post of conductor; (3) must have passed the examination for promotion to the rank of train conductor.

3. NORWAY.—On the Norwegian state railways the following rules obtain with reference to appointment and order of promotion:

As a general rule, every new hand is taken on experimentally for a period that may be as long as 6 months before being definitely engaged. No individual is appointed unless he can fulfill the conditions enumerated concerning the entrance to the telegraph courses. In order to be employed as telegraphist, or station clerk, and to be capable of fulfilling the duties, a man must have passed the examination for those who have gone through the telegraph courses.<sup>1</sup> In order to be engaged as a telegraphist of the first grade a man must, as a rule, be fully 22 years of age. This age is the minimum on entry as clerk.

As regards train service, before being employed as conductor, a man must have been through all station departments, in their collection and delivery, in rates, in looking after points and signals, etc.; he must further have been on probation continuously for a period of usually not less than 6 months as a conductor, or have been temporarily employed as acting in that capacity for a corresponding period.

In order to be engaged as a driver (engineer) a man must have first acted as fireman, and, moreover, prove that he knows thoroughly how an engine is put together and driven, and that he is accustomed and sufficiently skilled to do such repairs as have most often to be effected while running. Firemen are chosen from among the greasers and cleaners. Firemen are kept on probation for the same time as drivers.

While the stipulation, in the case of ordinary servants, is that a probationary period of as much as 6 months may be required, it is enacted, in the case of drivers, that they must undergo a probationary period of at least 6 months before they receive any definite appointment.

Before being engaged as foreman a man must not only have the necessary experience and the requisite ability to perform properly the duties that will be assigned to him, but he must also prove that he is thoroughly conversant with all the precautionary measures he may have to take in all cases that may arise.

4. SPAIN, PORTUGAL, and other countries using the same language.—With the exception of an actually rather limited number of candidates, who are supplied by the families of active, retired, and deceased employees, and who (other conditions being equal) always have the preference, the servants of the company (apart from laborers and other low-grade ones) are selected from candidates who apply directly to the company, and who satisfy the previous given conditions as to age, health, and education. Of these, a few pass through special schools organized by certain companies; the majority receive their instruction at offices and stations to which they are admitted under specified conditions. The recruiting of candidates from the country is only made possible by such instruction being available at many points of the system, as families can not, as a rule, afford to send their children to the towns where the special schools are situated. The lower grade of employees (such as station laborers, shop laborers, porters, plate layers) are appointed without having to pass any special examinations. Employees of the next grade (brakemen, pointsmen, firemen, gangers) are selected from the laborers or workmen, who have to show that they are sufficiently educated, and that they are perfectly acquainted with the various duties that they will have to carry out. No definite rules have been laid down as to the selection and appointment of high-grade employees.

Promotion usually takes place according to seniority, although there are no definite rules, and certain appointments are made only after special examinations are passed.

<sup>1</sup> See comments on education of employees in Norway, p. 775.

The regulations of the Spanish Northern Railway divide the employees of the company into two classes—(1) salaried officers, and (2) wages men.

1. *Salaried officers* are appointed by the committee of management or by the general manager. Each employee receives a commission on which the date of his appointment and the amount of his salary is fixed. The salary is paid monthly. Only employees not less than 18 and not more than 35 years old can receive commissions. An exception is, however, made in the case of men who have entered the service of the company before they were 35 years old as wages men. The latter may receive commissions if they satisfy the conditions required and are less than 50 years of age.

Every candidate for a salaried post must send in a written application, inclosing (1) a statement showing how he has been employed from the age of 18 up to the date of the application. If he has served in the army he must inclose his discharge and his papers. (2) If he has not served in the army, or if he has been out of work more than 6 months, he has to inclose testimonials from officials, firms, or private persons as to honesty and character. (3) His baptismal certificate. (4) A good-conduct certificate from the alcade of the district in which he dwells. (5) A certificate by one of the medical men attached to the company stating that he suffers from no complaint which would interfere with his duties. (6) A written undertaking to deposit the necessary security, if such is required in the case of the post he is applying for. (7) A written undertaking to join the superannuation fund. These documents, together with certificate of examination, covering writing, spelling, arithmetic, and the metric system, are handed to the general manager. No new employees are admitted to the service except through the lower grades.

2. *Wages men*.—These include men appointed temporarily at central offices or in stations; men admitted as pupils, and laborers forming part of a plate-layers' gang, laborers loading and unloading trucks, shunters, carriage cleaners, fitters, and other workmen employed at shops, depots and stores, plate layers, and miners. Such candidates must produce a work book or certificate from the last master, certificate of domicile, and discharge from the army.

The Royal Portuguese Railway Company provides the following regulations for the appointment of the operating staff: (1) In order to become a second-class brakeman it is necessary to be an employee capable of undertaking the duties of brakeman, and to have followed the course of instruction required or to have been auxiliary brakemen for at least 1 year. (2) Auxiliary brakemen are selected from employees appointed to undertake the work of brakeman who, through want of vacancy in the actual staff, have not been nominated. (3) In order that a regular porter may be appointed auxiliary brakeman it is necessary that he can read and write with ease, that he is acquainted with the four elementary rules of arithmetic, and that he is sufficiently acquainted with the rules regarding traffic, signals, brakemen, and guard. Other things being equal, the following determine the order of precedence: (a) Men who have acted for the greatest length of time as temporary deputy brakemen; (b) those who have been longest in the company's service; (c) those who have the best character; (d) those who are the younger. (4) As reserve to the regular and auxiliary brakemen, in case of absence, a certain number of regular porters are appointed in a definite order to take their places, and it is not permitted that other men shall undertake these duties unless there are too few reserve men and the urgency of the case is such as to justify it. (5) The staff of second-class brakemen will be filled in the ratio of 3 to 1 by employees appointed to act as brakemen and by auxiliary brakemen. (6) Other regulations affecting the employment of men in the operating department are laid down in the regulations and rules of the school for employees and relate chiefly to the question of admission to the schools of the companies and to the order of study in these schools. Some account of them is given in the answer to question 34, reports of the sixth session of the International Railway Congress, Paris, 1900, pages 49 to 63.

5. FRANCE AND BELGIUM.—On the larger systems, especially on the Belgium state railways and the main line of the French railways, which are covered by Mr. Jourde, engineer to the Western of France Railway, in his exhaustive report to the last International Railway Congress, which attracted considerable attention, the rules governing admission to the service may be summarized as follows: (1) For the central administration, not including, of course, government officials, executive committees, boards of directors, general officers, such as general managers and chiefs of departments, the Belgium railways have recourse to competition, while the French systems adopt examination. In Belgium candidates

<sup>1</sup> Appendixes to Mr. Jourde's report which were not translated in the preliminary reports of the congress, but will appear in the final English report, give full details concerning all requirements for the various grades of service.

make application to the minister of railways and then undergo a competitive examination, which is passed upon by a jury composed of general officers, and in some cases of professors. Candidates who pass a successful examination are taken on provisionally as vacancies occur, but are not appointed definitely until a year has elapsed. On French railways appointments are made to the central administration from among employees of other departments after examination as to general education and certificate of good health, good conduct, and military discharge. A special rule gives some advantages to sons and relatives of old employees. (2) For the department of way and works, which corresponds to the maintenance of way department and construction department of American railways, the same general rules apply for the head office staff and the staff of district officers as in the case of the central administration. Workmen connected with the permanent way of course are required to show ability to read and write and to have robust health and good character and to serve a probationary period. Employees in the traffic department are divided into four groups: First, the head office staff, for which examination similar to those for admission to the central administration are required; second, the inspectors and district staff, to which only men who have passed through the lower grades are appointed after examination as to technical training; third, station staff, for which one must have commenced at the lowest grade either in the yard or in the office, and for which on the Belgium railways a competitive examination is necessary, and for both Belgium and France a probationary period must have been passed; fourth, train staff, to which men are appointed who have served some time at the station, generally as foremen. Here again the Belgium railways have recourse to competitive examination, while the French railways appoint men who have served a military term directly after they have passed an examination, and in the case of the Northern of France Railway candidates from outside are admitted by examination if there are not suitable men among the station staff. French railways never appoint men directly from the station staff simply on the strength of their qualifications when they first entered the service in some other department and upon their record in such department; the greatest care is exercised in the selection of the train staff. In the operating department great care is exercised in the appointment of the head office staff and the inspectors, under similar regulations to those which obtain in the departments already referred to. For drivers and firemen the French minister of public works has issued an order dated May 3, 1892, in which are stipulated the conditions to be fulfilled by candidates for these posts. They must have good eyesight and good hearing, and in addition they must pass both technical and practical examinations, first, on the locomotive and the regulations, and, secondly, on the different operations connected with driving. The examinations for drivers are more difficult than for firemen, and if passed satisfactorily the candidate receives a certificate of competency which entitles him to an appointment whenever there is a vacancy. In Belgium the competitive examinations for firemen and drivers are also fixed by ministerial decree as to the ground they cover. A man must have worked 4 years as fireman before he is eligible to post as driver or may take the examination for such. In France firemen are almost always selected from among shopmen or workmen in the running sheds for which workmen undergo a purely practical examination, which consists in the execution of some piece of manual work. As regards the general health of a candidate, the general rule is to subject him to a very careful medical examination. It will be correctly inferred from this brief résumé that promotion depends much more upon the examination test than upon the past record of the candidate. In this respect French and Belgian roads seem to differ considerably from the practice on the American roads.

6. ITALY.—On the 3 main railway systems of Italy the following general conditions as to admission to the system obtain: Apart from day laborers, who are engaged and discharged as occasion arises, the employees of each class are chosen from candidates of Italian nationality under 30 years of age (or 35 years of age in the case of soldiers who have just completed military service) on passing a physical examination. According to the register, candidates who have done military service for a period of 8 years and upward, or warrant officers who have done 12 years' service and upward, or employees accustomed to constructional work are preferred. Engineers, assistant engineers, and higher officials generally are selected according to the diplomas they hold and after a competitive examination. Station and office clerks are admitted on certificate from technical or lower classical schools where the record shows that they have passed examinations on the Italian language, arithmetic, geometry, and geography. Employees of a lower grade are merely required to be able to read and write. All employees must serve a probationary period of from 12 to 18 months on the Mediterranean

Railway. On the Adriatic company's road employees are appointed on approval, which amounts to the same thing as being a probationer, only the period of approval is much longer, a certain number of years being required before permanent employment is given. Promotions are usually from the ranks, length of service being a secondary consideration, and proficiency, in the opinion of the superior officers, being the chief test. Promotions from fireman to engine driver, from clerk to assistant station master, and from station master to freight agent are usually preceded by examinations; likewise promotions from the lower grades of ordinary workmen.

7. HUNGARY.—A very careful report on the conditions of admission and promotion on the Hungarian State railways was made by Mr. Kiss and is published in the reports of the sixth session of the International Railway Congress. In Hungary the conditions of admission are practically established by the conditions of admission to the schools, from which the major part of railway employees are recruited. Much use is also made of the apprentice system in the workshops of the Hungarian State railways. All employees must be Hungarian citizens and familiar with the Magyar language; they must at least be 18 years of age and their antecedents must be beyond all reproach. Promotions take place from the ranks almost exclusively and new recruits are admitted only to the lower grades of service.

### § 7. TECHNICAL EDUCATION FOR RAILWAY EMPLOYEES.

All railroads appreciate the value of a high standard of elementary education among their employees in all grades of the service. This is quite apart from the assistance they render in some cases to the children of employees, and especially to those whose parents have been killed or injured in service of the railroads, which is given as an act of charity or philanthropy. Many railroads, both in the United States and abroad, have established or financially assisted common schools in districts where public schools were inadequate or weak. In some special railroad schools a little technical training has been introduced in the upper grades. In general, however, it may be said that the American railroads have done very little for the training of their employees along technical lines for the special departments of service in which they were engaged. European railroads have done much more in this direction. The American roads usually prefer to take only employees who have a good preparation by way of a general education in reading, writing, arithmetic, and such subjects as are taught in the common schools, and then to have such employees learn by practical experience and from directions given them in the specified duties of their employment by responsible officials of the road. In Europe, on the other hand, many railroads encourage their employees to get a part of such technical training in schools either provided by the company or officially assisted by the company for that purpose, and in order to do this they frequently grant employees a leave of absence, on part or full pay, to attend the higher technical schools, or grant them special privileges by way of leave of absence during certain hours of the day or night to pursue courses in local schools. They sometimes pay the tuition fees for such of their employees as take these courses.

A fairly good survey of the work being done throughout Europe and some account of what little work of this character has been started in America will be found in the report of the International Railway Congress (sixth session, Paris, 1900) in answer to question 34 on technical education, appointment, and promotion, on which reports were submitted from the railway officials of nearly all companies. Perhaps it may be well to review, first of all, the European regulations on this subject:

I. Technical education of railway employees in Europe.—1. SWEDEN.—No special schools for subordinate classes of railway men, such as conductors, firemen, etc., have as yet been established in Sweden, but night schools for the more advanced education for the staff of Swedish railways is recognized, and a plan has been drawn up by the Swedish Railway Employees Association and has been approved by the administration of State railways. This plan will be put into practice in connection with the Sunday and night schools, of which there are some 30, forming a part of the public-school system in the chief towns of Sweden. The course will cover 7 months, 2 hours a day and 2 hours in the evening on week days and 3 hours in the morning on Sunday. Instruction will cover such subjects as writing, arithmetic, geometry, drawing, physics, and chemistry and in addition to these subjects, 3 hours a week devoted to railway science. The instruction in railway science will cover the principles of motive power and their application to hauling railway vehicles, the object of the tender, the different kinds of vehicles,

and the arrangement of couplings and brakes; also, general ideas about permanent way, signals and telegraphing, the make-up of trains, railway time tables, elementary facts about the conveyance of passengers and goods, and the geography of Swedish railways.

It is proposed that regulation and service instructions shall be taught in the second course to be organized by the railway administration, with the railway officials as professors. This second course will give 6 hours' lectures per week in the evening for 9 months for the permanent way and traffic staff and 12 hours of evening lectures for the locomotive department. For the permanent way staff it includes instruction in writing, bookkeeping, algebra, geometry, drawing, physics, and railway science. Under the latter topic is included here a discussion of "the simplest methods of constructing permanent way and bridges, stations with the arrangement of the lines, signals and safety appliances, mileage, and characteristics of the lines of the country." For those in the locomotive department instruction is given in writing and bookkeeping, algebra and geometry, drawing, physics, and chemistry, the theory of steam engines—"steam boilers, their object and different methods of construction; the various kinds of steam engines; the locomotive and its parts; the locomotive's working and motive power, etc."—and railway science, comprehending "the effect the construction of the permanent way has upon the motive power of the locomotive; the principles upon which the different engines and vehicles used upon the State lines—the brakes, signals, and safety apparatus—are constructed; the mileage and characteristics of the lines in the country." For those in the traffic department instruction is offered in writing, bookkeeping, arithmetic, and railway science, covering "stations, station buildings and plant, signals and safety apparatus, the various kinds of carriages and brakes, telegraphy, the postal service, the geography of the Swedish railways, the geography of the Norwegian, Danish, and German railways so far as is required by the traffic with these countries; the booking of passengers, luggage, and goods in accordance with the rates; the different kinds of gauge. Furthermore, one conductor of express trains must, as at present, attend a course in French, German, or English, so as to be in a position to give foreigners any information they may desire."

2. **NORWAY.** The Norwegian State railways provide no schools for the higher grades of service, although the Government does grant funds for traveling scholarships. For the lower grades, however, there is a school for instruction in telegraphy belonging to the railway department and intended for employees who are telegraphists at stations. This instruction is under the direction of the inspector of telegraphs, who is an official of the State railway administration. The teachers belong to the railway telegraph staff and receive extra pay for this service. Candidates must pass an examination in arithmetic, reading, and writing, and they are taught, in addition to theoretical and practical telegraphy, the elements of railway accounting and the methods of issuing circular tickets. There are two technical schools of higher grade, namely, the Elementary Technical School of Christiania and the Engineering School of the same city. The railway administration grants sums of money or leave of absence to enable railway employees to attend these schools. The Christiania Elementary Technical School is under the direction of the minister of public works. A course lasts six months, and the instruction given amounts to 6 hours per day, and includes such subjects as arithmetic, elementary mathematics, Norwegian language, bookkeeping, physics, mechanics, free-hand and geometrical drawing, theory of construction, including drawing and practical work, and electrical engineering.

3. **SWITZERLAND.**—The railway companies, as a rule, only attempt to promote the education of employees by indirect means, such as grants to technical schools. There is no federal railway school, although the cantons and communes, which are the administrative bodies for public education, have begun to devote attention to this branch of education. There are two excellent technical schools open to railway men.

(a) The railway school at Biel opened August 1, 1891. It is suited for the training of the middle and lower grades of railway servants, but the methods of training provided by actual practice in the service, which obtained prior to the organization of this school, are still the more common practice. The Swiss roads rely upon the apprentice system, which is exclusively under their own control. The methods of the old apprentice system required a period of from 1 to 2 years of station service and 6 to 12 months for brakemen and shunters, and varying periods for other grades. In connection with the apprentice system of the Swiss railways they encourage their apprentices to attend public schools, night schools, and special schools wherever and whenever feasible. The Biel railway school received a grant of 4,000 francs from the Jura-Simplon Railway Company, which helped to found the school. Other companies contribute to its

work. The school is expressly intended to take the theoretical and practical training of station officials, station masters, telegraphists, clerks, and station inspectors; also guards and conductors, and also for the office clerks in the various departments. It has a regular 2 years' course, occupying from 35 to 40 hours per week, of which 12 hours per week in the first year and 24 hours per week in the second year are devoted to special railway topics, such as railway law, tariffs, telegraphy, signaling, permanent way and rolling stock, and first aid to the injured.

The remaining hours are devoted to language work, four modern languages being taught, and to general subjects. Three of the chief teachers are retired railway officials, and the faculty numbers 11. The regular attendance at the school was 118 at the beginning of the session for 1898-99. Thirty-nine pupils who completed their course in the spring of 1898 became at once unsalaried employees at the different railways, and in from 1 to 3 months were put on the wage list, thus testifying to the practical value of the instruction.

(b) St. Gallen Railway School, constituting a part of the St. Gallen Training School, was opened in 1895. It devotes less attention to technical subjects, and trains rather for employment in the central offices and for station and yard officials. Purely technical instruction for railway officials and engineers is given at the Zurich Polytechnic Institute and at the University of Lausanne, and also at the advanced technical schools of Winterthur and Burgdorf.

The St. Gothard Railway, as indeed all the Swiss roads, lays great stress on the duty of the higher officials to look after the systematic instruction of all employees directly under them. A few extracts from the rules of the St. Gothard Railway illustrate this. "Every booking-office clerk, who has assistants, is expected to instruct them in their duties, and see that they learn their business." "The telegraph inspector has more particularly to attend to \* \* \* the training of the officials and employees connected with the telegraph service." "If a brakeman requires any explanation about any of the duties he has to perform, he is to apply to his driver, in the first place, and eventually to the chief of his depot." Instructions to guards and head guards specify the duty of instructing all men under them.

Traffic inspectors are required on their tours of inspection to ascertain whether their subordinates are perfectly acquainted with all the regulations, instructions, circulars, etc., that have been issued, and if they are not understood or have been misinterpreted to give the necessary explanations and elucidations. All employees of the St. Gothard Road are given full instruction in ambulance work and first aid to the injured in case of accidents and in the use of the sanitary materials which are provided everywhere. These lectures are given by the medical men of the railway staff.

While therefore laying emphasis upon the need of direct instruction of their employees by their own officials, the Swiss roads are also quick to recognize and support other institutions with similar aims which are started independently.

The opportunities for the higher officials in connection with such public educational institutions as the Polytechnic Institute at Zurich are well illustrated in the following table of free lectures which have been given during the past few years:

Session	Winter term	Hours per week	Summer term	Hours per week
1889-90	Railway signals	1	Railway telegraphs and signals	2
1890-91			Cost and organization of constructional work, commercial considerations	2
1891-92	Principles of the signaling service	1	Railway telegraphs and signals	2
			Financial organization of railways, tariffs	2
1892-93	do		Railway telegraphs and signals	2
1893-94	Signals and accidents	2	Commercial considerations in setting out a railway	2
			Railway telegraphs and signals	2
1894-95	Railways, cost of construction	1	Organization, tariffs, and constructional works	
	Management of traffic	1		
	Rolling stock	2	Railways in America	1
1895-96	Management of traffic	2	Organization, tariffs, and constructional works	
1896-97	Traffic, technical considerations	2	Traffic, technical considerations	
	Railways, general arrangement	1	Telegraphs and signals	
1897-98			do	2

4. SPAIN AND PORTUGAL.—The principal railway companies of Spain and Portugal have devoted considerable attention to the education of the children of their employees. In Valladolid, in the north of Spain, where one of the principal shops is located, the railway company has established a primary school for children of its employees. The graduates become apprentices in the shops, and the cost of the school is borne by the company. At Entroncamento the Royal Portuguese Company has shops and a school, the cost of which is borne by the sick and pension fund. This is also for elementary instruction for children of the employees from 6 to 15 years of age. Only a few companies have organized schools for the training of employees; such are the Madrid (Delicias) and the Lisbon (Santa Apolonia) schools, both intended to train guards, telegraphists, and train clerks for the traffic and locomotive departments and accountant's offices. The Lisbon school admits pupils who wish to become brakemen as well. The number of pupils taken is limited, and preference is given to the children of active, retired, or dead employees. Here instruction is given in traffic, tariffs, and station accounts; the instruction is given by the higher employees of the railway, who receive extra pay for this work. The courses take 3 months at the Madrid school and 6 months at the Lisbon school, and pupils who pass a final examination are taken on trial, and if satisfactory receive appointments in the railway service. The Amalgamated Society of Employees of Spanish Railways has founded a school at Madrid for training young men for telegraph and railway office work, and the school is under the patronage of the railway companies. Strictly speaking, however, no company in Spain or Portugal has organized any school for technical instruction, particularly for railway traction.

5. FRANCE AND BELGIUM.—Mr. Jourde's excellent report on these two countries, presented at the last session of the International Railway Congress, says that the general education need only be purely elementary, except in the case of inspectors and district officials. As to technical education, general opinion favors the acquisition of it by serving a probationary period at the particular duties of the appointment, but in the case of a certain class of employees, namely, the artisans employed in the shops, they should be men who have already acquired a thorough knowledge of their trade. Hence, three kinds of schools are necessary for candidates for employment by a railway company. (1) Primary schools; (2) higher schools; (3) apprenticeship schools for workmen. Something has been done by the railway administration in providing these three kinds of schools for the sons of their employees, a class which furnishes the best recruits for railway service. With respect to primary schools three systems have been adopted: (a) The direct management of the schools by the railway administration; (b) the granting of subsidies to schools attended by the children of railway families; (c) the founding of scholarships reserved for sons of employees. Secondly, with respect to higher schools, only the third method is in actual practice, although all three methods pursued in the case of primary schools might be, under certain circumstances, advisable. The French and Belgian railroads, however, do not control any higher schools or subsidize them, but do give, frequently, scholarships to the sons of railroad employees. Thirdly, with respect to apprenticeship schools for workmen, the French state railways utilize the public evening schools. The Orleans Company has established, in connection with its large workshop, evening classes for the teaching of physical science, applied mathematics, and mechanical drawing; likewise, the Northern Company has technical classes at La Chapelle, and lessons are given in drawing at their principal workshops. Other companies follow the same general method, and there is a general tendency not to lose any opportunity of affording workmen every chance of becoming first-class artisans.

6. ITALY.—Not one of the Italian railway companies has a complete scheme for the technical instruction of its employees arranged on a systematic basis. One company has afforded its employees every facility to attend courses, especially those in electro-technics, at the polytechnic schools at Turin. There is a school for firemen apprentices which was first established at Piedmont and a little later at Busalla, as early as 1853. Other schools were established later, and by agreement in 1885 the companies operating the three great Italian railway systems consented to maintain these schools, of which the following exist:

On the Mediterranean system, the schools of Milan, Turin, Alexandria, Rivarolo, Pisa, Rome, and Naples.

On the Adriatic system, the schools of Verona, Venice, Bologna, Florence, and Foggia.

On the Sicilian system, a mixed school for apprentice firemen and apprentice artisans held alternately at Palermo and Messina.

The instruction in these schools is both theoretical and practical and is given by the mechanical engineers of the companies.

The theoretical course takes 9 months and comprises the following subjects: (1) Arithmetic and geometry; (2) physics and chemistry; (3) the steam engine; (4) rolling stock; (5) traffic regulations.

The practical course consists in actual work as apprentice at the work of fireman for a whole year.

Apprentices are admitted between the ages of 19 and 26 years, on passing an examination in reading, writing, and arithmetic, and a test in practical work.

At the end of the course, and on the result of the examinations, those apprentices who are considered sufficiently advanced obtain a certificate of proficiency; the others are either discharged or allowed to follow the course again, according to the marks obtained; the most capable receive prizes in the form of savings-bank accounts opened at the company's expense.

The number of firemen prepared by the school is not sufficient to fill all vacancies, and other laborers are employed to act as firemen, but these can not compete for drivers' certificates till 4 years after their appointment as firemen.

In 1890 the Mediterranean Company established special schools for artisan apprentices in connection with their principal shops at Turin and Naples, the regulations for which were as follows:

(1) The instruction comprises both theoretical and practical training; the whole course extends over 3 years, according to a fixed schedule; (2) a maximum of 20 apprentices per annum, selected from among the sons of workmen and employees of the company, were admitted to the first year's course; (3) as soon as their names were entered on the register they were considered to be on the company's staff and eligible to benefit from the sick and benefit fund. After they had attended the courses for 3 years and had passed the final examinations, they were at once employed as artisans; (4) apprentices who failed to pass in the final examination might, nevertheless, be employed as workmen in the shops. This plan did not work well, because the pupils felt they were permanently admitted as employees as soon as they entered the school. New regulations, dated November, 1897, limit the number of pupils to 40, and provide for the admission of new pupils only every 3 years, so that the same pupils follow the 3-year course through. Pupils are no longer on the staff of the company, but may be appointed as artisans only after serving an 18-months' probationary period. Only boys from 14 to 17 years of age, sons of employees, are admitted to the school. They are paid a small wage from the date of admission. There is one private preparatory school for the training of employees in Italy, and this is partially subsidized by the Government. Italian railways encourage the children of employees to attend school by granting them passes to the nearest place where suitable schools are located. The Mediterranean Railway granted 3,000 such passes and the Adriatic Company 2,000 in the last 2 school years, 1897-1899. Primary schools have also been founded and aided by Italian railways, and two colleges, one at Ceccano and one at Veroli, have also been established through very liberal financial arrangements effected with the management of existing colleges at these places.

7. HUNGARY.—A rather novel experiment was tried by the minister of ways of communication and public work in Hungary, in the establishing of a new institution specially devoted to training men for railway service. This school is organized by the government minister and the managers of the various railway companies in the Kingdom. It is conducted and controlled by a board of inspectors, of which the under secretary of state in the ministry of commerce is president, and other members of the Government, and a representative from each participating railway administration, are members. This commission makes rules for the school, subject to the approval of the minister of commerce. With a few exceptions the professors may be chosen only from persons who have seen actual railway service, so that the work is essentially practical rather than theoretical. Pupils are divided into three classes. Regular pupils recommended by the participating administrations and those who present themselves for the complete course; private pupils who are already on the active staff of a railway and who are sent by the railway administration for a part of the course with a view to making up deficiencies and to passing the final examinations in the subjects taught at the schools; and lastly, voluntary pupils, who are also railway employees in actual service voluntarily attending some of the lectures and not required to pass an examination. The equivalent of a high-school education in this country is the standard required for admission to this school. Pupils must be at least 18 years of age. The required subjects of instruction are: The technology of railways, telegraphy, the working service, the commercial service, the geography of railways, the history of railways, railway legislation, especially as regards the fundamental laws of the constitution and the administration of the Kingdom, commercial arithmetic and railway bookkeeping, and also the description of articles of commerce; French and German are optional.

At the end of 1 year pupils are required to serve 3 months as apprentices at a railway station, after which they are appointed to the staff of a railway, provided they produce a certificate from the railway administration with which they served as apprentice stating that they fulfilled their duties in a satisfactory manner, and further provided that after their apprenticeship they pass a satisfactory examination on the work of the school. The school thus organized has been in actual operation for 13 years, and has supplied annually to the railways about 200 employees, who form the nucleus of a staff of employees well trained for responsible positions in connection with the commercial service, the telegraph service, and the traffic departments of Hungarian railways.

For the mechanical department, where special scientific training is required, reliance is placed upon the technical high schools, at which the minister of commerce has established 40 scholarships, given to young men with the understanding that during the summer holidays when the high school is closed they must serve an apprenticeship in the State railway workshop, for which they are paid at the rate of 2 florins per day. There are also special schools for apprentices in the workshops, and the general management of the Hungarian railways has created a considerable number of institutions to promote the welfare of their employees, and to provide general educational facilities for their children.

8. ENGLAND.—Perhaps the most notable illustration of the attention that is devoted to the education of railway employees by the English corporations is that of the shops and schools of the London and Northwestern Railway. Three institutions organized along similar lines are established as follows: (1) The Mechanics Institution at Crewe, especially designed for the locomotive department of the service; (2) the Viaduct Institute at Earlestown, for the wagon department; (3) the Science and Art Institute at Wolverton, for the carriage department of the service. The chief mechanical engineer of the London and Northwestern Railway, Mr. F. W. Webb, is the president of the Mechanics Institution, and similarly the wagon superintendent and the carriage superintendent, respectively, are the presiding officers of the institutions at Earlestown and Wolverton. The Crewe Mechanics Institution is managed by a council of 31 members, 3 appointed by the directors and 28 elected by the adult full members of the institution from among persons nominated by the directors and members. The directors retain practical control. Any person over 13 years of age may be admitted to membership upon payment of 7s. 6d. per annum as full members, 5s. as library members or news-room members, and 1s. 3d. per half session as class members. A payment of £5 constitutes a life member. A gymnasium, reading rooms, game rooms, hall, and smoking rooms are provided in addition to the evening classes, for which the school is specially organized.

Courses are offered in all elementary English studies, in French, music, shorthand, mechanical drawing, physics, chemistry, electricity, higher mathematics, mechanics, physiography, and hygiene. Courses begin in September and continue through to May. All full members are admitted free. Examinations are held and prizes offered. Scholarships are also provided. At the last distribution of prizes, which took place at a public gathering largely attended on November 28, 1900, addresses were made by Lord Stalbridge, the chairman of the railway company, by Mr. Webb, the president of the institution, by the Bishop of Chester, and by Sir Wilham Preece, the well-known authority on the subject of electricity, all speaking in the highest terms of the practical value of the thorough work done by the institution.

The total cost of this institution for the year 1899 was between \$8,000 and \$9,000, of which the railway company paid in apprentice premiums about \$2,500, the balance being made up of income from membership fees. This institution has been very successful, and from it the company has had no difficulty in selecting young men for any class of work carried on at its shops in Crewe. This was the primary object of the railway company when they established the institution in 1846. There is besides in the town a technical institute, which is under the control of the town council. The railway company prefers to keep entire control of its own institution, and therefore does not accept any grant of funds from the town council. The Viaduct Institute at Earlestown and the Wolverton Science and Art Institute are conducted in very much the same manner, and are intended to be of practical value along general educational lines as well as to have a direct influence upon the personnel of the railway staff.

9. GERMANY.—For the higher technical education for the engineering corps of railroad officials chiefly engaged in the construction departments and maintenance of way departments of the German railroads, reliance is had upon special

<sup>1</sup> See discussion "Eisenbahnschulen" in Roll's Encyclopadie, Vol. III, p. 1295, ff.

courses in the engineering schools, technical schools, and universities, which are Government institutions. For the higher administrative officials, the general staff, and the rank and file of superintendents, and others engaged in practical railroading, the problem of a suitable educational training, apart from the experience gained in practical service, is just as real and pressing one in Germany as in other countries. There are those who recommend special schools, railroad academies, etc., to be conducted in connection with the technical high schools, and those who recommend special courses on railroading in the universities. Both these plans have been tried. The requirements for admission to the special schools are pretty generally understood to be the same as for admission to the technical high schools; that is, a good general education, and in the conduct of the schools, the preference is decidedly in favor of having the lectures and instruction given by practical officials in the railway service. In connection with the Prussian State railways special classes and courses of study were already provided by some of the railroad directorates as long ago as 1866. These were for special classes of officials and such instruction was formally organized by ministerial decree of the Government dated March 11, 1878. The plan comprises meetings at the principal railroad stations once or twice a week, in which most of the officials participate. The office and station officials, trainmen, shopmen, freight employees, enginemen, and others take part in specified courses. Attendance is optional for the majority of the men. For some officials who have to pass periodical examinations it is compulsory. The instruction covers the rules and regulations, the principles of machinery and its operation, signaling, custom regulations, rates, railroad geography, etc. Also railroad law and the organization of railroad officials as State officers is taught. For the office force there is usually a greater number of lectures provided in half-year courses.

In 1884 in Württemberg courses similar to those in Prussia were provided. In 1882 the Rhine Railroad Company founded a technical railroad school at Nippes, which is a State institution opened to all employees in administrative work, and intended to prepare for the position of superintendent in the various grades of railroad service. There is also, in connection with this school, a school for apprentices in the lower grades of labor. A number of other such schools exist throughout Germany. Such schools were established at the principal shops of the Prussian railways by order of the Government, dated December 21, 1878. The period of instruction covers 4 years, and the entire training is intended to turn out a first-class mechanic. Pupils are admitted at the age of 14 and not older than 16 years of age. In a few exceptional cases the maximum age is fixed at 18. Pupils must have completed the courses in the elementary public schools. Instruction is free and the discipline is strict. The chances for permanent employment for those who go through these courses successfully is good. During the period of instruction pupils are paid a daily wage, beginning with 80 pfennigs, or about 20 cents, in the first year, and after that subject to an increase of 10 pfennigs every 6 months, with the exception of period in which the increase is 20 pfennigs, so that during the last half year of the course they receive the daily wage of 1½ marks, or about 36 cents. Pupils are also permitted to participate in the sick benefits to which regular workmen are admitted. At the end of the fiscal year 1899-90, the number of apprentices in such Prussian State schools was 1,745. Similar schools exist throughout the various German States.

The following account of the railway school at Breslau, as described in a German periodical, is given by Mr. Eaton:

The railway school at Breslau opened in October, 1897, under the control of the Royal Railway directors, teaches theoretical science and prepares candidates for appointment as secretaries and superintendents in the traffic and freight departments, and also gives employees already in the service opportunities for attending courses of lectures. The teachers are railway officials and appointed by the railway directors. The discipline of the school is the same as that on the railway. Lectures take place between 8 and 11 a. m., and on 3 days of the week from October to the end of March.

Frequent oral examinations are held. The courses are prescribed as follows:

1. Constitutional law of the State and the Empire, organization of the departments of the State and the Empire, executive government of the Prussian State railways, internal regulations of the offices: Thirty lectures.

2. Principal provisions of the law, or procedure of the law, as to the tutorial functions and jurisdiction of the administration, discipline, law, and the regulations applying to officers and employees: Fifteen lectures.

3. Geography: Ten lectures.

4. Officers' benevolent institutions: Ten lectures.

5. Workingmen's benevolent institutions: Twelve lectures.

6. Political economy: Ten lectures.
7. Cashier's department: Twenty lectures.\*
8. Account keeping: Twenty lectures.
9. Arrangements as to fares and freight rates for and additional pay to the tram staff: Six lectures.
10. New lines (laws dealing with railway undertakings, preliminary works, compulsory purchase, survey, regulations as to construction): Seventeen lectures.
11. Stores department: Eight lectures.
12. Workshops department: Six lectures.
13. Audit department: Nineteen lectures.
14. Rates department: Fifteen lectures.
15. Customs and taxes: Fifteen lectures.
16. Utilization of rolling stock: Eight lectures.

## II. Technical Education of Railway Employees in the United States.—

A. THE PRACTICE OF AMERICAN RAILWAYS.—In reply to the question: Is the technical education furnished by the railroad to its employees? If so, to what extent and to what grades of service? Replies were received from 40 roads in the United States operating 112,353 miles of line and employing 633,023 employees. Twenty of these roads replied that no technical education was furnished by them. The replies received from the other 20 roads operating 55,662 miles of line and employing 380,302 employees are as follows:

IS TECHNICAL EDUCATION FURNISHED BY THE RAILROAD TO ITS EMPLOYEES?  
IF SO, TO WHAT EXTENT AND FOR WHAT GRADES OF SERVICE?

1.

No, except in the way of reading rooms supplied with general and technical literature. We also encourage the use of the privileges afforded by the technical correspondence schools.

2.

(a) Special technical instruction is given all men engaged on locomotives or trains or having to do with the train service. They are required to pass certain frequent examinations.

(b) A car fitted with every modern device for the particular technical education which they need, and under competent instructors, is moved about the system.

3.

The company furnishes no technical education to its employees. Employees in all grades are encouraged to acquire a knowledge of the technical principles involved in their work and facilities are put in their way for obtaining the same outside of working hours in reading rooms and Railway Young Men's Christian Associations, where instructors are provided.

4.

Technical education is afforded employees of the transportation department through the medium of instruction cars equipped with necessary apparatus and charts. These in charge of competent instructors visit division points on the line periodically.

5.

No technical education is furnished by company, but all employees are encouraged to acquire such knowledge outside of working hours.

6.

No. They are encouraged to take tuition in the Scranton International Correspondence Schools and other similar institutions upon favorable terms.

7.

In the transportation and machinery departments: Apprentices to the trades of machinists, blacksmiths, boilermakers, tinsmiths, carpenters, and painters are taken at the principal shops of the company and serve a term of apprenticeship,

varying from 3 to 4 years, according to age, being released on attaining their majority. Some of the machinist's apprentices are given special instructions in mechanical drawing as a part of their apprentice course, but aside from the foregoing no technical education is furnished by this company.

In the road department: No.

8.

Technical education is furnished by the company to employees in practically all grades of the service with the exception of officials.

9.

Technical education is encouraged among employees engaged in the machinery and locomotive departments. Air brake rules and appliances are provided for the instruction of enginemen.

10.

There is practically no technical education furnished to employees, although some literature has been furnished engineers and firemen from time to time.

11.

In train service the technical education furnished by this company consists of special instructions to trainmen in regard to the use of air brakes and air signals, for which purposes we have fitted up a car to be used especially in connection therewith. In reference to apprentices in our shops, if special ability is shown, they are promoted to our drawing office, where they receive technical experience in mechanical engineering.

12.

Firemen for locomotives are furnished documents for study, and, if they are successful in passing first, second, and third year examinations, are qualified as engineers and assigned to special or regular service, civil service governing. Aside from this class of employees and apprentices in shops, technical education is not furnished by the company.

13.

For instruction in the use of certain appliances, such as air brakes, we have working models at various places, with instructors to explain their operation; we employ traveling officers to ride on locomotives to instruct enginemen as to proper methods of firing and handling the engine, and have established reading rooms at the division points, where employees may have access to current railroad literature. Many of our men are members of railroad technical correspondence schools, and we foster in every way such plans for their educational benefit.

14.

Yes. This company takes apprentices in its shops and makes them thorough mechanics; also in train service educates them in the use of air brakes, steam heat, light, etc.

15.

The company does not furnish any technical education to its employees, although such an education is considered very beneficial and generally proves to be a great advantage to young men entering the employ of the company in certain lines of service, particularly in the engineering and motive-power departments.

16.

Technical education is furnished machinery-department apprentices, for whom a regular night school is maintained at the company's machine shops.

17.

In train service, yes, in connection with the operation of air brake and signal appliances.

In electric service, no. In many positions in this department a technical education is necessary.

18.  
In air-brake work only.

19.

Technical education is encouraged among employees engaged in the machinery and locomotive departments. Air-brake rules and appliances are provided for the instruction of enginemen.

20.

Technical education is given in the handling of air brakes, steam-heat appliances, appliances for lighting passenger cars, etc., by the use of instruction car, under charge of an instructor, men are first instructed and then examined. Should a man fail to pass satisfactory examination, he is again required to attend car for instruction, and a second examination given. If he is then unsatisfactory, he is either dropped from the service or put in some other grade of employment. This instruction covers all men engaged in train and yard service of every grade.

From these replies it will be seen that very little in the educational line outside of what may be called the apprentice system is undertaken by American railroads.

Mr. George B. Leighton, president Los Angeles Terminal Railway, St. Louis, in his report to the International Railway Congress, says: "The education of railway employees and managers in the United States is at present undergoing a state of marked revolution. With two exceptions, \* \* \* there was no effort on the part of railway companies in the United States to offer special education for the training of young men and apprentices until within the past decade. There are now, however, a number of schools throughout the country which have added a course for mechanical engineers, adapting their students to the work of the mechanical department of railways. The courses in these schools are being extended and developed yearly." A list of 28 principal technical schools in the United States, in many of which tuition is free, is given in Mr. Leighton's report. The Baltimore and Ohio Railroad opened a technical school at Mount Claire, Md., February 1, 1885; 150 pupils took the examination for admission, and 40 passed. Mr. Leighton gives the following account of this school, and also of the Brooks Technical School, opened January 15, 1883, in connection with the Brooks Locomotive Works, at Dunkirk, N. Y., and intended for the benefit and use of the apprentices in the employ of those works:

(a) *The Baltimore and Ohio Technical School.*—The literary training at first consisted of algebra, geometry, and elementary physics, with free-hand and mechanical drawing. There was a great deal of shop work, the instructor accompanying the boys into the shops, directing their work, and examining them there to see how well they understood what they were doing. The instructor also taught them the use and care of tools and machinery and the nature of the material used. The boys at first were trained as machinists, brass finishers, carpenters, steam and gas pipe fitters, molders, upholsterers, draftsmen, painters, bridge builders, and engineers.

In President Garrett's order establishing the school, which is dated January 15, 1885, an examining board, consisting of three instructors in the school and two medical examiners, was provided for; the different classes of apprentices were established, and the pay for each class was given. The students were required to wear uniforms, the first suit being furnished free, and renewals at the expense of the students, the payments being arranged in installments. Apprentices were graded, according to ability and intelligence, into three classes, and the road exacted the privilege of keeping in its service such apprentices as were competent for at least 3 years after graduation.

The school was closed in the autumn of 1887 on account of the financial condition of the Baltimore and Ohio Railroad.

(b) *The Brooks Technical School.*—The officers of the works at the inauguration of the school stated that it was their intention to institute a high degree of excellence among their apprentices—first, by refusing all unfit applications, and second, by using special endeavors to afford them every advantage to become not only skillful and competent workmen, but also to educate them in the principles underlying mechanical construction and afford them opportunities to study and practice elementary mechanical drawing. Hence, no applicant would be accepted until a full investigation as to his character and elementary education had been made.

To the school was assigned the entire third floor of the new office building, the room having been fitted up with all modern school furniture and appliances. Competent instructors were employed, text-books, drawing instruments, and all

needed supplies were furnished, and the school opened with all the apprentices in the employ of the company, to the number of about 35, in attendance.

The rules for admission required that every applicant be an apprentice in the works and at least 18 years of age, of good moral character, with a fair knowledge of the ordinary English branches of education, and able to write legibly. The sessions of the school were held Monday, Wednesday, and Friday nights of each week from 7 to 9 o'clock, and instruction was given in penmanship, spelling, arithmetic, algebra, geometry, physics, and mechanical drawing. Prizes were offered for excellence in scholarship and regular attendance.

The school thus established continued with varying attendance for about 5 years, since which time it has not been continued, principally owing to the fact that the apprentice system of the works does not admit of sufficient new material with which to maintain a satisfactory attendance and owing to the growing disinclination of the apprentices to attend the school at night after working full time in the shops during the daytime. The report states, however, that the results obtained by this new departure have proven of a highly satisfactory character. Many of the young men who availed themselves of the opportunities offered now occupy responsible positions on railroads and in our shops and drafting department, and can trace the foundations of their usefulness to this and other companies to the instruction therein received.

B. THE GENERAL NEED FOR EDUCATION OF RAILWAY EMPLOYEES.—Mr. J. Shirley Eaton,<sup>1</sup> in a comprehensive report on "Educational training in railway service," speaks of the general opportunities which the railroad has for educational work. The railway library, for example, is something which by the use of the baggage car and the highly organized train and station staff can be circulated over a wide territory at no expense. The Boston and Albany Railroad has had a traveling library since 1869, and its annual circulation at the present time (1898) is about 3,000 books per year. It receives donations of money and books, but is chiefly supported by donations from the company. The library of the railroad branch of the Young Men's Christian Association of New York City was founded in 1847 by Mr. Cornelius Vanderbilt and contains 7,500 volumes, one-tenth of which are more or less technical. Books were delivered during the year 1898 to 724 readers along the lines of the New York Central Railroad. The Baltimore and Ohio free circulating library is located at Baltimore, and has been selected with special reference to the wants and tastes of the employees and their families, and books are circulated free to employees at any point on the Baltimore and Ohio lines. It is sustained by voluntary contributions of money and books by officers and employees of the railroad and by outsiders interested in this work. It began work in 1845 with 4,500 volumes, the nucleus of which was a collection of 600 volumes donated by John W. Garrett in 1869. The first year over 16,000 volumes were circulated, and there has been a steady growth since that time up to 1896, when 39,505 volumes were taken out by 2,500 borrowers. The books travel over 3,000 miles of railway system. The library now contains about 14,000 volumes. The Wells Fargo Express Company has also organized a traveling library among its employees.

In Mr. Eaton's valuable report there will be found a series of answers to questions propounded to leading railroad men on the subjects of: (1) General education of railway employees; (2) the apprentice system, and (3) education for the mechanical department. They indicate that considerable thought is being devoted to this subject by railroad officers, but do not bring out any additional facts concerning the practice of American roads other than those already exhibited in replies quoted in the answers to the question on the schedule of your expert agent. Both Mr. Eaton and Mr. Leighton, in the reports already referred to, discuss at considerable length the opportunities offered by the colleges, universities, and technical schools to furnish an education in engineering adapted to railroad uses and in commercial economics adapted to the office and general staff of railroad administration. There is a tendency and a willingness on the part of the American institutions for higher learning to meet any well-defined need in the community and to specialize and adapt specific courses to this end. Opportunities for the study of railway transportation and economics are now offered in special courses at the following universities: Chicago, Cornell, Harvard, Illinois, Leland Stanford Jr., Michigan, Minnesota, Pennsylvania, Purdue, Wisconsin, Yale, and others, in most of which there are also good railway mechanical engineering courses. There are also a number of special schools which are in great favor among practical railway officials, such as the Massachusetts Institute of Technology, the Troy Polytechnic, and the Stephens Institute, which have excellent engineering schools.

<sup>1</sup> See Report of the Commissioner of Education, 1898-99, Vol. I, Chap. XVII, pp. 871-955.

Few college men, comparatively speaking, go into railway service except from the engineering courses. A table, or rather some notes based on a large number of inquiries, are given in Mr. Eaton's report. Mr. Leighton, at a meeting of the New York Railway Club in January, 1897, outlined the topics of instruction which might be covered in a college course prepared especially for railway service, and which could be expected to bring into such service, especially in the administrative staff, men well prepared for rapid promotion. Mr. Leighton stated his views as follows.

The course as herein planned is under consideration at Harvard. It will be divided under several headings, the whole requiring several years' work, and the graduate will receive some proper degree. The first year would be devoted principally to subjects which belong to any course of liberal education, such as modern languages, history, and political economy. During the second year a beginning will be made of subjects pertaining directly to railways, and the third and fourth years wholly devoted to railway and transportation subjects.

The following titles suggest themselves under which most of the instruction would naturally be grouped:

1. *Economics.*—(a) *Historical.*—Relating to the conditions of commerce prior to the advent of railways. Transportation and distribution in 1800, both by land and water. Limitations of commerce and travel.

(b) *Traffic.*—The principles governing traffic, especially in relation to various kinds of commodities. State and other railway commissioners; their history and necessity and duties. American and foreign commissioners; how they may be of great assistance to the corporation and public, or disastrous to the interests of both.

(c) *Social.*—The railway as a social factor, showing the conditions of harmonious relations with the people and with the authority of the State; the Government control or regulation of railways at home and abroad.

(d) *Labor.*—The relation of labor to railways. Labor organizations, beneficial and harmful. Examples of profit sharing. Future relations as reviewed to-day.

(e) *Geographical.*—Differences in geographic conditions affecting traffic, such as Eastern system of dense traffic and those built in advance of actual need in the West. The difficulties attending operation of light traffic over long distances.

2. *Legal.*—(a) Position of the railway under the common and statute law. What a railway may and may not do. Leases and ownership of other lines from a legal standpoint. Receivers; their duties and responsibilities. Liabilities to the State and individuals.

3. *Business management.*—(a) *The operation of the railway.*—Duties of various officers and their relations to each other. Detailed study of organization, with special study of approved examples in America and Europe. Duty of general manager. The economic handling of traffic from an operative standpoint. The telegraph as used on railways.

(b) *Financial.*—Railway accounting. Study of some approved examples, with remarks on other methods. Duties of treasurer and auditor. Capital and securities of railways. Bonds, stocks, car trusts, etc. The status of the holders of these to the control of property.

4. *Mechanical.*—(a) *Machines.*—The locomotive, steam engine, dynamo, and motor. Conditions under which the work must be done. Cars and their moving parts.

(b) *Equipment.*—The adaptation of it to the work in hand. The varying demands of traffic necessitate material differences, but the elements of efficient equipment now fairly understood.

5. *Civil engineering.*—(a) *Historical.*—Development of the tramway from the cart road, and the further development of the modern railway. The surmounting of early difficulties, public opposition, and the lack of proper track and equipment.

(b) *Location.*—Fundamental principles of economical permanent ways. Proper location of line. Grades; their effect on operation.

C. RAILROAD TRADE SCHOOLS.—Mr. Walter G. Berg, chief engineer of the Lehigh Valley Railroad, presented a paper at the eighteenth annual convention of the Eastern Maintenance of Way Association, held at Saratoga, September 19, 1900, in which he discussed the question of "Education of railroad men." This is a subject to which he has devoted attention for a number of years. He has visited the leading technical and trade schools in Europe and similar institutions in this country. He maintains that there are three principal points to be kept distinctly in mind in any discussion of this question: (1) Clear division to be recognized between the higher and middle classes of railroad men and preparatory education suitable for each; (2) the higher class, offering the material for which the future managers, professional and heads of departments, may be drawn, should

be provided for by special railway departments at existing colleges and by adding general railway subjects to the present curriculum of the technical departments of colleges; (3) the middle class of railway employees, comprising young men entering the railroad service in subordinate positions of all kinds, many of whom will some day fill the large number of responsible minor railroad positions of trust, should receive, after leaving the ordinary school course, a special short preliminary schooling adapted to the particular departmental work they expect to take up on entering a railroad shop, gang, or office.

This special education will be gained most advantageously in a special railroad trade school, and such schools should be established wherever possible throughout the country.

Mr. Berg's idea is that these schools would be to railroad work what good commercial schools and business colleges are to business. They would come in between the regular public-school course and a boy's entrance into practical railroading. It would not necessarily take very long to give a bright American boy with a good public-school education a general familiarity with the technique of one or more departments of railway service and a broader sympathy with the railway business as a whole, which would facilitate his subsequent advancement. An outline of a plan for such schools was published by Mr. Berg as long ago as 1887, and has been frequently discussed, usually with favor, so far as its fundamental propositions are concerned in many meetings of railway officials. An abstract of Mr. Berg's recent Saratoga address may be found in the *Railway Age* for September 21, 1900, vol. 30, p. 236, and his programme for a special trade school is given in full in Mr. Eaton's report, published in the report of the Commissioner of Education, 1898-99, vol. 1, pp. 93-896.

D. THE CORRESPONDENCE SCHOOLS.—The desire on the part of a large number of ambitious young men with the true stamp of American enterprise for training that will enable employees to improve their position and enable those that are employees to find employment in the railway service is abundantly manifested by the business success of the correspondence schools. There are two large enterprises, which are also partly publishing ventures, in the United States, which supply instruction for railway men by correspondence. The first is the Railway Education Association Correspondence School, whose aims are described in the *Railway Age* as follows:

"Their aim is to give an engineer or fireman, a machinist, trackman, or a trainman instruction concerning his practical work that will make him most efficient therein, and, in addition, such other studies as must improve his mind and which he may find time to follow. We call these latter studies 'optional' studies, but advise the men to prosecute all they can of them. We require the students to take the studies relating to their practical work if they wish to receive our diploma."

The charge for this instruction for mechanics is, for 50 lesson books, containing 425 lessons, \$25, payable in 5 monthly payments, or \$30 if paid in 12 monthly payments. A member's ticket is transferable, nonforfeitable, and unlimited in time. The following outline indicates the scope of the courses offered. Instruction is also given to classes in first aid to the injured, mechanical drawing, electrical drawing, and such elementary subjects as arithmetic, grammar, composition, etc.

#### LOCOMOTIVE CONSTRUCTION AND MAINTENANCE.

[Fifty fully illustrated lessons.]

*Modern types of locomotives.*—General and detail descriptions and full-page illustrations of 18 types of American locomotives.

*Compound locomotives.*—Oil-burning locomotives; details of locomotive construction; relations of details; inspection and care of locomotives.

*Breakdowns.*—Temporary repairs; permanent repairs; modern shop appliances and practices.

*All locomotive appliances.*—Their construction, operation, and maintenance.

*The air brake.*—Its history, construction, tests, troubles, and maintenance.

#### MECHANICAL PHILOSOPHY.

[Twenty-five fully illustrated lessons.]

*Heat.*—The source of power.

*Steam engines.*—A résumé of their history.

*Matter.*—And its properties.

*Mechanics.*—The laws of motion; gravity, its laws and actions.

*Pneumatics.*—The nature, properties, and effects of air.

*Mechanical powers.*—The lever and pulley; the wheel and axle; inclined plane; the wedge; the screw.

*Hydrostatics.*—The nature, properties, and effects of water at rest and in motion; hydraulics; friction and lubrication; friction of fluids.

WORK OF THE MASTER CAR BUILDERS AND MASTER MECHANICS' CONVENTIONS, 1868-1900.

[Fifty fully illustrated chapters]

A review of the work of the 33 annual conventions of the American Railway Master Mechanics' Association from its inception in 1868 to the present, giving a concise description, with numerous illustrations of the association's work in dealing with the condition of American locomotive operating—a work of great importance, which in its course dealt with nearly every detail, material, and method of locomotive construction.

The review deals with this work consecutively as relating to the respective lines of research and recommendation. Thus, for instance, the subject of "boiler plates" is taken up and described to the end without interruption; and every important act of a member, a committee, or convention, showing the necessity of, or tending toward, improvement is described and illustrated. In like manner the review described the progress of improvement in each important matter of locomotive design, construction, and repair, which has given Americans to-day the highest types of locomotives in the world. The information revealed in this review regarding these matters is of great value to every railway mechanic who desires to know what is best in his line of work, and the long, expensive experience that has led to the adoption of what is believed to be the best.

#### ECONOMIC LOCOMOTIVE MANAGEMENT.

[Fifty lessons]

*Firing locomotives.*—The formation and combustion of bituminous and anthracite coal; advantages and disadvantages of different methods of firing.

*Principles of natural philosophy* underlying steam engineering.

*Boiler feeding.*—The formation of steam; great importance of correct methods of boiler feeding as affecting fuel consumption and the preservation of boilers.

*Use of steam.*—Advantages of high pressures and early cut-offs; cylinder condensation; effects of lowering rates of combustion.

*Duties of enginemen.*—Respective duties of engineers and firemen.

*Care of locomotives at terminals.*—Proper methods of "firing up;" importance of having the fire cover the grates; importance and methods of preventing the rapid cooling of boilers; utilization of surplus steam.

#### OPTIONAL STUDIES

[Fully illustrated]

*Electric motive power (fifty lessons).*—Nature and source of electricity; electric motors, their construction and operation; electric railway appliances.

*Mechanical and free-hand drawing (fifty lessons).*—Especially designed for railway men, with numerous plates and exercises.

*Arithmetic (fifty lessons).*—A complete course in arithmetic, with examples and problems upon the daily experience of railway men; the fundamental rules, fractions, percentage, square root, cube root, mensuration of surfaces and solids.

*Grammar and composition (fifty lessons).*—Plain and simple instruction designed to enable a man to improve his language and increase his power in its use.

*Penmanship and spelling (fifty lessons).*—Easy instruction; teaching a plain business hand, in connection with a course in spelling, consisting of words in common use.

The second large correspondence school is that known as the International Correspondence School at Scranton, Pa., which was started in 1891. The following outline of courses for engineers, firemen, conductors, train men, shop and round-house men will indicate the scope of this work:

## THE LOCOMOTIVE-RUNNING COURSE.

The locomotive-running course has been prepared exclusively for locomotive engineers and firemen. Through it any locomotive engineer or fireman can qualify himself to pass any examination required of engineers by any railroad. Every point likely to come up in an examination is treated in the instruction papers. No preliminary knowledge of mathematics is required before the student gets into practical lessons on the care and management of the engine. Illustrations are used wherever they will assist one to understand the subject; necessarily they occur very frequently. The illustrations are so made as to show sections of many parts, but in a picture style, which does away with the tedious study necessary in grasping the ideas to be conveyed in sectional illustrations. The illustrations of the air-brake system are the finest in print. No other work on the locomotive is so well adapted to the engineer and fireman as this. The course is in charge of men of wide experience, who devote every attention to the advancement of students.

## THE TRAIN-MEN'S COURSE

The train-men's course is intended for conductors, brakemen, and train hands generally. It consists of that part of the locomotive-running course which treats on the air brake, its construction and operation. Like the rest of the locomotive-running course, this portion has been prepared in such a manner as will make it most useful to train hands. It is freely illustrated with cuts which can be understood at a glance. It contains instruction in just what train men are required to know.

## THE LOCOMOTIVE-ENGINEERING COURSE.

This course is intended for railway employees or others who desire education in the principles involved in locomotive designing and construction. It is necessarily longer than the locomotive-running course, and includes instruction in mathematics, including mensuration and the use of formulas. This is followed by carefully prepared lessons in mechanics and mechanical drawing, mechanics, steam and steam engines, locomotives, dynamos and motors. Our description of the operation and construction of air brakes, vacuum brakes, etc., is the best in print. It is a course in locomotive designing and building more complete than can be obtained in any other manner.

## THE COMPLETE LOCOMOTIVE COURSE.

This course is a combination of the locomotive-running course and the locomotive-engineering course. The engineer or fireman who wishes to understand the theoretical design and the detailed construction, as well as the manipulation and care of the machine on the road, will find this course well adapted to his needs.

## THE COMPLETE MECHANICAL COURSE.

This is a thorough course in the elements of mechanical engineering intended for master mechanics, foremen, machinists, apprentices, draftsmen, and all classes who are anxious to obtain a first-class mechanical education.

## THE MECHANICAL-DRAWING COURSE.

This course includes instruction in mathematics and mechanical drawing, and is intended for those who wish to learn how to make and read mechanical drawings. Many graduates of this course are to-day filling important positions in drafting rooms, and the excellence of their work is not only attracting attention to them, but it is creating an increasing demand for draftsmen taught by the International Correspondence Schools.

## SYNOPSIS OF THE LOCOMOTIVE RUNNING AND TRAINMEN'S COURSES.

*Locomotive boilers.*—Types of boilers. Construction of boilers—Fire box, flues, heating surface, grate area, smoke box, draft appliances, causes which make an engine steam badly. Combustion and firing—Chemical elements and compounds, chemical combination, combustion, smoke, firing. Boiler attachments—Gauges,

safety valves, whistles, injectors, lubricators. Boiler feeding and management—Transfer of heat by radiation, conduction, and convection, circulation of water in boiler, feeding the boiler, height of water, foaming and priming, low water, oil in boilers, scale and mud, corrosion, blowing off boiler, excessive pressure, collapsed flues, boiler inspection, boiler explosions.

*Steam, cylinders, and valve gears.*—Work and energy. Heat, its effects and measurement. Steam—Formation of steam. Steam table—How to use steam table, work done by steam, the steam engine. The locomotive—Types of locomotives, locomotive running gear. Steam cylinder and connections—Steam cylinders and steam chest, the slide valve, balanced valves, valve setting.

*Management of locomotives.*—Running the locomotive, care of the locomotive. Breakdowns and running repairs. Compound locomotives.

*The air brake.*—Historical—The straight air brake. Westinghouse automatic air brake—General arrangement of the air-brake system, main reservoir, duplex air gauge, pump governors, the 8-inch pump, the 9½-inch air pump, plain triple valve, quick-action triple valve, freight and passenger equipments, train-line couplings, retaining valve, engineer's D-8 brake valve, engineer's D-5, E-6, or F-6 brake valve. Defects and remedies—Improved pump governor, old-style governor, pumps, quick-action triple valve, plain triple valve, care of triples, freight equipment. Retaining valve. D-8 brake valve, F-6 brake valve, care of the brake valves, equalizing reservoir. Operating and testing—Piston travel, the make-up of a train, making up a train, testing brakes, terminal test of train, running test, temperature test, handling trains, stops, service, emergency and accidental emergency stops. Piston travel and its adjustment. Levers and leverage—The simple lever, compound levers. Brake power. Train air signaling system—General arrangement of apparatus, description of apparatus, signaling, terminal test of system, signal-line defects. The high-speed air brake—high-speed service, general arrangement of apparatus, operation of apparatus, operating the brake system. The New York air brake—principles and operation of the air-brake apparatus, engineer's brake valve.

The plan of the International Correspondence School is a very simple one. For the following fees, to wit, for the mechanical locomotive department courses, \$58.13; train-men's courses, \$26.67; air-brake courses, \$20; locomotive engineering, \$27.13; locomotive running, \$10, a set of books is sent and correspondence entered into between the pupil and the teacher in charge of the course. Periodical examination papers are required, and everything is done to assist the pupil to master the course, no matter how long that may take. The prices specified above are the net prices when the fee is paid in advance. There is an arrangement by which the admission fee may be paid in installments, in which case the charge is somewhat higher. There are certain classes of men who undoubtedly can be greatly aided while in practical service, and who feel keenly the lack of book knowledge and of early opportunities to acquire the same. The courses, however, are looked upon by most well-trained railroad men with some suspicion, and are open to the criticism of being necessarily superficial or of not being able by this method to accomplish what they promise. The fact, however, that railroad employees are taking up these courses very eagerly, and that large numbers are enlisting in these correspondence schools, is abundant proof that there is a great demand that the railroads in this country to do more than they have done, to furnish technical training along theoretical lines as well as the practical supervision of work in the shops and in the operating department of the service. If, therefore, railroad men get a smattering of knowledge that is perhaps worse than none at all and are likely to be imposed upon by schools which are only schools in name and largely mere publishing ventures in reality, it is chiefly the fault of the roads themselves. They will find it cheaper in the end, and it is to be hoped that they will realize the fact in time to save a costly experience both for themselves and their employees, by establishing, either singly or collectively, a good system of railroad schools, from the lowest grades of the service to the highest. For the lower grades of service, and for the more elementary and popular topics of instruction, the machinery now in operation in the educational departments of the railroad branches of the Young Men's Christian Associations might be strengthened and utilized. For the highest grades of service, and for the highly specialized engineering education, the most economical plan would be for the railroad to cooperate with existing colleges and universities, as well as technological schools, to secure such courses as are needed. For the intermediate grades—that is, for the skilled artisan class and the lower ranks of the officials in all departments—new schools under direct railroad management and, if possible, on a cooperative basis, should be established.

## §8. THE DISCHARGE, PROMOTION, AND DISCIPLINE OF RAILWAY EMPLOYEES.

The regulations and rules governing the discharge and promotion of railway employees present many serious problems, in connection with which friction often arises between employers and employed. In the discussion in section 6 of the general requirements and regulations of railway corporations for admission to the various grades of service much has necessarily been said about the rules for promotion and especially concerning the methods of recruiting employees in one grade of service from those in another. In the schedule of inquiries sent out to the leading railway corporations, the following question was asked: What are the rules for discharging and promoting employees? To this question 38 roads replied. These 38 roads operate 100,630 miles of lines and employ 587,651 men. Their replies are as follows:

### WHAT ARE THE RULES FOR DISCHARGING AND PROMOTING EMPLOYEES?

1.

Employees are discharged for cause and governed in the matter of promotion by civil-service rules.

2.

Employees are discharged for violation of rules. Their promotion depends upon their qualifications.

3.

(1) Nature and degree of offense, with greatest possible leniency consistent with the nature of the service.

(2) Civil-service rules so far as practicable.

4.

Promotion or retention in service depends entirely upon past work and records of all the men

5.

**DISCHARGING.**—Board of inquiry, consisting of not less than 3 railway officers, investigate all cases of violation of rules, misconduct, and negligence, and apply discipline in accordance with the offense.

*Minor offenses.*—The practice is not to suspend 10, 15, 20, 25 days for minor offenses, but in all such cases discipline by reprimand, which is entered on the record and in the end constitutes accumulated bad record.

*Aggravated offenses.*—Discipline by suspension of 30 days or more.

*Unpardonable offenses.*—Incompetence, intoxication, gross neglect, and accumulated bad record; dismissal.

**PROMOTION.**—Demonstration of capacity for increased responsibility. All things being equal, preference is given to employee longest in service.

6.

Brown's system of discipline. Discharge for cause. Promote on merit.

7.

There are no printed regulations governing the discharge or promoting of employees. Promotions are usually made within the service and as the merit of the employee and the requirements of the service may dictate. Employees are discharged only when their service or conduct is unsatisfactory, or a curtailment in the movement of traffic renders a reduction in the force necessary

8.

Employees are discharged from and promoted in the service in accordance with their adaptability and fitness for the service required, as determined by the employing officer.

## 9.

The manual of instructions has the following provisions on this subject:

## SENIORITY AND PROMOTION.

1. In the choice of runs on any division, the engineer or fireman on that division who has been longest in service as an engineer or fireman, as the case may be, will have preference, provided he is considered competent by the superintendent and division master mechanic. By division is meant all the line under the jurisdiction of one superintendent.

A similar preference will apply to train men and switchmen, also to the promotion of firemen to be engineers, brakemen to be conductors, and switchmen to be foremen.

2. A temporary vacancy in passenger service of more than 30 days will be filled by the senior freight man, if competent; less than 30 days by the first man out that is competent.

When road crews do not make 2,600 miles per month, the men most recently employed or promoted will be set back firing, braking, or on the extra list, as the case may be.

In case of a shortage of men on one part of the road and a surplus on another, the surplus men will be transferred temporarily to avoid hiring new men.

3. Except as above provided, in case of a vacancy, either by death, resignation, dismissal, or promotion, or a new position created, or additional force being required in any position above the lowest rate of pay, the most capable man in any lower position should be promoted to fill the vacancy, no matter in what branch of the service he may be.

4. In order to have material worthy of promotion in every branch of the service, it will be necessary for heads of offices, departments, and divisions to select only the best applicants for such positions, as students, apprentices, office boys, clerks, operators, switchmen, brakemen, firemen, section foremen, etc., being the classes from which promotions are most commonly made, and make it a rule not to employ a new man for any position that can be well filled by promoting a man already in the company's employ.

5. Promotions from one branch of the service to another are desirable, and every employee should be encouraged to acquire a general knowledge of the business, especially of that branch toward which he has a natural inclination. To this end heads of offices, departments, and divisions will notify the general superintendent, general traffic manager, or general manager, of employees who are especially worthy of promotion to other departments. Care should be taken not to mistake a man's unfitness for his present work to be proof of a qualification for a better position in some other department, but rather the reverse.

6. There are some men in the company's employ who are receiving a higher rate of pay than the standard, on account of long service or a peculiar fitness for a particular position. In case a vacancy occurs in such a position no more than the standard rate should be paid to the man promoted. In case of an unusual advance, or in case the man has been very rapidly promoted, or in case the position has been made easier to fill, a reduction may be made below the standard rate, where it can be done without injustice to the man promoted.

The same principle should govern in the case of new employees, also in the case of new positions created.

## PERSONAL RECORDS.

1. Superintendents, division master mechanics, division engineers, general shop foremen, road masters, and bridge foremen will keep the personal records of employees under their respective jurisdiction. The personal records of other employees will be kept by the heads of offices and departments in which they are respectively employed.

2. Officials charged with the keeping of personal records will make a record of each occurrence which tends to indicate that a man is incompetent. If a man is forgetful, disobedient, careless, lazy or unlucky, uneconomical or untruthful, the same record will be made; also for the exhibition of a disagreeable demeanor, a quarrelsome, meddling disposition, a proneness for gossip and stirring up dissensions, personal uncleanness, or a foul tongue, intemperance or other viciousness.

3. In the more important cases an investigation will be made, and if the employee is then believed to be at fault a bulletin will be posted explaining briefly wherein the employee was at fault, and he will be so notified. Such bulletins will be simply for the purpose of giving instruction to other employees, and no names or dates will be given.

In the cases which are not investigated, the words "No investigation" will be entered in the record.

4. When a man's personal record, considering the length of time covered, is materially worse than the general average, he may be dismissed for the good of the service. Otherwise no employee will be dismissed (unless in cases of violent insubordination, dishonesty, or drunkenness), except where it is necessary to reduce the force.

5. In reducing force, conspicuously incompetent men having been dismissed, the men most recently hired will be laid off or dismissed as may be necessary.

6. Conspicuously incompetent men should be discharged. The primary reason for the discharge should be not to punish or to reform the man or to incidentally improve the service by giving an object lesson to the other men, but to directly improve the service by weeding out the incompetent after a calm and deliberate consideration of the facts and circumstances.

## 10.

Question of discharge or promotion of an employee is generally referred to heads of the various departments. Our rule is to suspend, rather than to dismiss. Continued infractions of the regulations of the company necessarily result in dismissal. Employees are promoted on what may be termed "civil-service rules."

## 11.

Employees are required to observe the rules issued by the company for the protection of life and property. Failure to observe these rules entails discharge. Employees are discharged for lack of care and attention to their duties, for discourtesy to the company's patrons, for insubordination, and for incompetency. Promotion follows faithful and satisfactory work, promotion by seniority in the same line of the service being the rule, provided the person next in line has shown, with other qualifications, undoubted ability to satisfactorily fill the vacancy.

## 12.

No printed rules. Employees are discharged only because of unsatisfactory service or conduct, or reduction in business. Promotions are governed by merit of employee and company's requirements.

## 13.

Dismissals are governed largely by the general character of the employee who is discharged for violations of the company's rules, but each individual case is handled on its merits. We endeavor to follow a civil-service system in promotions of men, but the general character of their work and merit enters largely into it.

## 14.

Special record kept of conduct of each employee. Following is from company's circular: "Such acts as disloyalty, intemperance, dishonesty, gross carelessness, or serious offenses of like nature will be considered a sufficient cause for dismissal.

"A charge will be made on the record book of every case of neglect of duty, violations of the rules or regulations, accidents not meriting dismissal, improper conduct, etc. Instead of suspension (except for investigation) the employee will be allowed to continue at work.

"Special credit will be given on an employee's record, and may also be bulletined, for notably excellent conduct, good judgment in emergencies, etc.

"When the record against an employee becomes such as to demonstrate his unfitness for the service, he will be dismissed."

## 15.

Civil-service rules of promotion are carried out so far as practicable. Discipline by record without actual suspension. Employees are not discharged except for insubordination, intoxication, immorality, violations of imperative rules, or repeated infractions of rules, indicating incompetency, carelessness, or negligence.

## 16.

The Brown system of discipline is used—

1. In the transportation and machinery department:

Circulars were issued from the office of the general superintendent February 25, 1898, explaining the operation of the Brown system of discipline and the rules

in force under it in regard to discharge and dismissal of employees. The following new rules for promotion of employees are under consideration, and will probably soon be approved for use:

"All employees will be regarded as in the line of promotion, advancement depending upon their loyalty to the company's interests, faithful discharge of duty, and capacity for increased responsibility. Examinations for promotion will be held from time to time, as may be required. Examinations for promotion in tram service will include physical condition, rules of the transportation department, air-brake practice, and such special examinations as the regulations of other departments may require. For promotion to position of conductor the applicant must have had 2 years' experience in tram service, of which the last year shall have been in freight-tram service. Employees desiring promotion to conductors must make application in their own handwriting to the tram master for examination, in which they must state their age, experience, and general qualifications for the position. Applicants for the position of engineman must, in addition to the requirements of the machinery department, pass examination as to their physical condition and the rules of the transportation department. Applicants will be examined in the order of their seniority, merit and ability being equal. Those who pass will rank in the service from the date of their examination on rules of the transportation department. Applicants who fail on the first examination must within 1 year make written application for reexamination. Those who fail on the second examination will be dropped from the service. Flagmen, brakemen, or firemen who do not apply for examination within 5 years may be dropped from the service."

2. In the road department, "No special rule; employees are discharged when their services are found to be unsatisfactory, on account of intemperance, dishonesty, lack of ability, or violation of established rules. They are promoted upon their merits, seniority governing when other things are equal."

17.

Employees are discharged when their services or conduct are unsatisfactory, and when we have no further work for them. In promoting employees we consider ability first, seniority second.

18.

Promotion depends upon age in the service and ability to handle increased responsibility. There are no printed rules for discharging employees, as it is never done except for the purpose of reducing force or in the interest of discipline.

19.

What is known as the "Brown system" is used in disciplining men in the tram, yard, and station service, and men in such service are only discharged for insubordination, use of intoxicants, and offenses of like nature. Employees are promoted on their merits, the oldest being given preference, other things being equal.

In the mechanical department there is no special rule either for discharging or promoting employees. Men are discharged for cause only, and their advancement is governed by the way their duties are performed.

20.

As a general practice, no employee is dismissed from the service without a fair and impartial trial, at which he has the right to be present, and at which he may be represented by other employees of the same rank.

In the promotion of employees, all are regarded as in line of promotion, advancement depending upon the faithful discharge of duty and capacity for increased responsibility.

21.

An employee is not dismissed for violation of rules without a thorough investigation, at which he is allowed to be present, and may also be represented by other employees of the same rank.

All employees are considered in line of promotion, advancement depending on merit, ability, and seniority. Everything being equal, employees longest in the service have the preference.

22.

Promotion depends upon age in the service and ability to handle increased responsibility. There are no printed rules for discharging employees, and it is never done except for the purpose of reducing force or in the interest of discipline.

23.

Employees are promoted and discharged on their records.

24.

Employees, who show by their conduct and performance of duty that they are incapable of properly performing them, for various causes are dismissed after proper warning has been given, although in some cases, where it is merited, immediate discharge is ordered.

Promotion is governed by age in service and ability.

25.

Employees in the operating department are promoted on the basis of seniority, all things being equal. Discipline is applied according to what is known as the "Brown system," or discipline without suspension. The records of employees are credited with "merits" or charged with "demerits," as the case may be, except for a dischargeable offense, in which case, if their previous record is not good, their services are dispensed with.

26.

Heads of departments are empowered to dismiss employees for infraction of printed rules and regulations and for incompetency, civil-service rules governing in matter of promotions.

27.

Employees discharged for breaking important rules. Seniority rule observed in promoting employees, capabilities considered.

28.

Employees are promoted in their respective line of service where competency is shown, good conduct being necessary; discharge being resorted to only in extreme cases.

29.

Violation of rules. Merit and length of service.

30.

We have no fixed rule for discharging employees, each case being handled on its merits.

Promotions are based on seniority in service and qualifications.

31.

When disciplining employees their previous services are considered, and discharges are made only for an accumulation of bad records, or for offenses of such magnitude as to render their retention in the service inconsistent with our obligations to the company and to the public. All discharged employees are given a fair and impartial hearing.

All employees are regarded as in line for promotion, advancement depending upon faithful discharge of duty and capacity for increased responsibility; where merit is equal, seniority in service governing.

32.

Employees are only discharged for cause, and are promoted for long and meritorious service.

33.

Have no regular established rules regulating the discharge or promotion of employees. Employment is usually of a fixed and permanent character, and generally dependent upon the faithful performance of duty on the part of employees, all of whom are regarded as being in the line of promotion in the different grades of service in which they may be engaged, provided their past services

have been satisfactory, and of such a nature as to merit their advancement, and provided they possess the requisite ability and capacity for assuming increased responsibility. Employees are seldom discharged, and only in such cases where serious misdemeanors or offenses, neglect of duty, violations of rules, etc., render it necessary to take such action in order to maintain discipline or protect the company's interests.

34.

There are no definite rules on this subject, but employees are rarely discharged for other causes than willful or malicious neglect of duty, intemperance, disloyalty, or gross carelessness. All employees are regarded in line of promotion, advancement depending upon their faithful discharge of duty and capacity for increased responsibility.

35.

Employees are discharged for various reasons; violation of rules, intoxication, insubordination, etc. Employees are promoted in accordance with their age in service and abilities to perform the service required.

36.

No fixed rule observed, but employees are subject to dismissal for incompetency, intemperance, dishonesty, gross carelessness, or negligence, insubordination or violation of vital rules and regulations, each case being decided according to the circumstances, and due consideration being given to the employee's past record. It is the intention to protect the company's interests and encourage desirable employees.

37.

No set rules for discharging or promoting employees. Employees are discharged or promoted by the superintendent on whose division they are employed. In discharges, the employee has a right to appeal his case to higher authority for investigation, and in promotions, seniority is considered.

38.

Men are discharged for serious violation of rules and for continued minor violations. Promotion of men is generally according to seniority.

From these replies it will be noted that the railway service is very generally regarded in a somewhat different light than ordinary employment. A man goes into what is essentially public service, and is expected to go in for life. No matter what rank he occupies at the start, and no matter what department of service he enters, it is a continuous service.

In the majority of cases men are employed only in the lower ranks in the various departments, and it is expected that they will be advanced from time to time in accordance with their records and their capacities. They are discharged only for serious cause and for inability. There prevails very generally a system of discipline, such as the Brown system or something similar, by which a record is kept of both meritorious and improper conduct, and on this record a man's chances for promotion and discharge, when any changes or reduction in the force are necessary, very largely depends.

From the nature of the service and from the highly specialized character of many departments of work, and in view of the fact that when a man passes a certain age he is not likely to secure employment as an applicant with a new road, it may occasion some surprise that these replies do not show a larger provision for some review of the causes of dismissal. Especially is this true where the power of discharge is vested in the superior officer, who comes most directly in contact with the work performed in the various departments of the service, and that without appeal or review from any higher authority. This is the cause of some complaint on the part of railroad employees all over the country. The rule is not invariable, however, and in some cases appeal is granted to the higher officials, but not often to anything in the nature of a court of revision in which there is a representative of the employees in the same grade of service as that of the person discharged. Such appeal is usually granted for violations of rules in the military service and in public governmental service; and it would seem that for

the stability of railway employment some plan to secure similar provision for what is essentially admitted to be a public service peculiar in its character would be desirable.

The question of discipline is one which naturally has been much discussed by the executive officers of railroad corporations. When a single railroad corporation may, in the transaction of its business, be required to employ an army of from 50,000 to 100,000 men, the management of such a labor force, from the point of view of securing maximum efficiency, assumes almost the proportions which military discipline plays in the organization of an army for purposes of warfare. The opportunities for violations of rules, and, indeed, the frequent temptations to slight deviation on the part of able employees under the extreme provocation to which railway servants in many grades of employment are constantly subjected, give cause for much reflection. The consequences of the acts of any employee who may violate rules are perhaps more costly to the railroad corporations than those of employees in other departments of industry, because of the heavy penalties for damages where loss of life and property ensue and the hostile legislation to which railroad corporations have been subjected.

Formerly the usual procedure was instant dismissal for any disobedience or violation of rules, no matter what the provocation or the previous record of the employee. This was supposed to be necessary, although oftentimes felt to be severe, in order to maintain the necessary discipline among the employees of the road. In more recent years this method of discipline has given way to many modifications, and now almost all the roads have some plan by which they keep a pretty accurate record of each man from the date of his first employment, and take this into consideration in dealing with any charge against him for violation of rules other than for the most serious offenses. Some of the larger roads have worked out for themselves a fairly complete system of discipline, in which this principle is recognized. There has been, however, no attempt made to establish for all roads a uniform system of grading and recording the work of railroad employees, looking to giving them merit and demerit marks, which shall be uniformly graded throughout the roads of the country, and which may form the basis of judging of the efficiency as well as the inefficiency of each individual employee. Mr. A. B. Stickney, a railroad president, in a paper entitled "A study of the principles and methods of hiring, disciplining, and discharging railway employees," complains that many able men are weeded out of the lower ranks of railroad employment by too strict enforcement of the rules of discipline in a period when they were learning the business. This has resulted in harm to the company as well as injustice to the men, and has prevented employers in many cases from making promotions from the ranks because of the lack of suitable men in the lower grades. The more ambitious oftentimes take too great risks in their eagerness for service, and in this way violate trifling rules. To quote from Mr. Stickney's paper:

"The greatest difficulty is in connection with those employees who have to do with the movements of engines, cars, and trains. It grows out of the rules in regard to so-called discipline which are based upon the absurd and impossible dogma that such men must be infallible.

"While as to all other men, both in and out of the railway service, it is admitted that 'to err is human,' and that sooner or later every man must and will make mistakes, which, owing to the imperfections of human nature, must be forgiven, there is no forgiveness for the train man who makes a mistake. Under the rules he must not forget; he must not allow any excitement to distract his attention; he must not fail to see a signal; he must not miscalculate the momentum of his train or the distance to an obstruction; he must not go to sleep on duty, even if overworked; he must not do anything which might result in an accident.

"Such is the theory of the rules, but in practice he may commit many of these faults unless they result in accident or the employee makes himself disagreeable.

"The usual penalty for a violation of rules which result in a serious accident is dismissal from the service; for violations resulting in minor accidents, deprivation of employment and wages for a fixed time—10, 30, or 60 days.

"The enforcement of penalties is called 'administering discipline.' Discipline is administered by all kinds of foremen—generally the immediate superior of the employee who is disciplined. It is safe to say that in perhaps a majority of the cases the discipline is administered summarily, in anger, and if the evidence of the fault is ever investigated the discipline is administered first. The rules do not prescribe the measure of penalty which shall be meted out to each fault, nor even a maximum. The whole problem of 'making the punishment fit the crime' is left to the administrator, so it sometimes happens that the highest penalty is administered for a petty disobedience, which did not and could not by any possibility result in an accident.

"When we consider what it means to an employee, especially if he has a family, to be discharged, and thereby compelled to seek a new employer and move his family to a distant home, especially in these days when the employers are few and employees are many, or when we consider what it means to an employee and his family for the husband to be compelled to live in enforced idleness for even 30 or 60 days, without taking into consideration the feelings which are engendered by the outrageous injustice which is too frequently coupled with the administration of discipline; and when we consider, further, that under the laws of our country no court, either the highest or the lowest, that no judge, no matter how learned or how distinguished, has the authority to inflict a penalty of \$10 except upon a written charge and evidence produced in open court, and except, if demanded, with the unanimous consent of a jury of 12 men, it must be admitted that the autocratic power of administering such discipline and inflicting such enormous penalties is an extraordinary power and imposes grave responsibilities in its execution.

"I agree entirely with the opinion of Mr. George R. Brown that as a rule these forms of punishment are as unjust and inhuman as they are unnecessary and mischievous to the interests of both parties."

President Stickney says distinctly that he is arguing from the point of view of the company's interest, and when he says that no employee should be discharged until it has been clearly demonstrated that he is incompetent, the discharge must be solely in the interest of better service, and this means, of course, that the incidental effect of a discharge upon other employees, while not the primary reason for discharge, may be taken into account. He says also, "The impracticable use of the discharge has been the vital spark of all brotherhood organizations." He seeks to discover some remedy to prevent the use of the arbitrary discharge by petty foremen and hot-headed superintendents, who have done more to stir up unpleasant relations with employees than all other factors in railway employment combined. He protests against the prevailing custom which regards infraction of rules relating to the safety of trains, without reference to the character or record of the man, as dischargeable errors for which there can be no excuse or explanation. Sooner or later every trainman is likely to commit one of these errors, and "It is only a question of time when the most competent men will be discharged." On the other hand, a large number of errors which do not produce serious accidents are evidence of incompetency; thus a man who commits a number of small errors, in which he breaks up the property of the company, wastes its fuel and material, may never be involved in any great accident, but in the long run does more damage to the company's interests than one who commits one of the unpardonable errors. A system of discipline, therefore, which will measure more accurately the degree of fidelity or incompetency which enters into every act of an employee is the only system scientifically justified.

This is the general philosophy underlying the Brown system of discipline, some account of which is given by President Stickney in Mr. George R. Brown's (general superintendent of Fall Brook Railway, New York) own language, as follows:

"For the trainmen we keep a record book. This book is never shown to any employee, except that page which is his personal record.

"In it I write down a brief statement of every irregularity for which a man is responsible. This record takes the place of the 'lay off' and is dreaded fully as much. The man goes to work at once, and no one but himself suffers, and he only in reputation at headquarters.

"We are very careful in the selection of our men; promote all our own engineers and conductors, and in a few months or a year or two our record tells us whether they are adapted for the business or not. We have engineers who have been running here more than 25 years without a scratch of the pen against them, while others who have been running as many months have quite a page full of irregular circumstances, but down near the bottom of such a page can generally be found the words, 'Discharged—incompetent.'

"When a man commences to make a record (in the book) we call him in and talk with him. He is reminded that if this gets too long we shall have to consider him a failure for our service, show him his weakness, and give him another chance. But he understands that it will not be entirely for the last offense that he is dismissed—the 'suspended-sentence' cases are against him.

"With this system the good men are retained, developed, benefited, and encouraged, and the culls are got rid of to the betterment of the service all round.

"It is well understood that we do not wish to retain in the service men who deliberately deceive us about mishaps on the road; we want the 'straight' of every matter, and we want it at first hands. It would be a very lively detective who could get to my office sooner than some of the men who are responsible for the accidents. If it is not serious enough for dismissal, the matter is overlooked or

made a matter of record, and the man goes out on his regular run. Then the 'miscellaneous board' has another object lesson on it.

"If there is anything that will stimulate a good man, who has become careless enough to make a lapse of duty that 'gets him in the book,' more than that simple record, I do not know what it is; but when the record is made and the victim warned to look out and attend to business in future, and to take his run out in the morning, he goes away with a mental vow that he will try and make his services satisfactory in future. On the contrary, if he reasons that the record is an easy way out of his trouble, makes light of it, and is frequently called on to explain irregularities, it is the best of evidence that he should not be retained in the service any longer. Some of the records are years apart. In some cases a memorandum is made, and never an occasion given for a second one.

"Good men who have made some little mistake are less likely to do so again than men who have not yet tried the responsibilities of running trains and engines, or men who are not familiar with our road or work. If the responsible officer takes such an offender into his office, talks the matter over dispassionately, and tells him that he is considered too good a man to be discharged for incompetency; that the accident has cost so much, which the company will stand 'this time,' but perhaps not the next, tell him that this is a matter of record against him, and if he desires to remain in the service these irregularities must not occur, this has a tendency to make better and more successful railroad men of the ones that are naturally adapted to railroad work, and the 'next time' comes only too soon to the man out of his sphere.

"There is nothing in this to disgrace him among his fellows, nothing to make him feel revengeful or maltreated; but everything to make him feel as though he was encouraged and helped, and that his final success depended solely upon himself. Can as much be said of the plan that disgraces a man among his fellows; that takes the comforts and perhaps the necessities from his home; that makes him a loafer for 30 or 60 days, and puts him in way of temptations that he would not find at his work, and that leaves him, in many cases, in debt to the dealers who furnish his family with supplies?

"On many roads there is a great want of cordiality or confidence between the men and the officials immediately over them. In too many cases a suggestion from a trainman to an officer would be resented as an unwarranted interference. It seems to me this is not in the interest of the railroad company, however much it may enhance the dignity of the official—who is himself only 'one of the hired hands' with a little more responsibility.

"I have found suggestions from the men of vital importance in matters of detail, and every man in the service knows that the rule and motto at headquarters is, 'Suggestions are always in order.'

"Train and engine men see and know things about the road that an operative officer could never find out in his office. At their suggestion, we have frequently made minor changes in time-tables, etc., and every change has been an improvement. A laborer on a section may suggest something that will save the company hundreds of dollars, and besides this, it encourages men to think and become more interested in their work, and feel at liberty to offer other suggestions.

"When a suggestion is made that is considered impracticable, the reason that it is so is pointed out, and both the man and the manager have learned something. I am sure that this rule makes and keeps up a friendly feeling between the men who plan the work and those who execute it.

"Roads that can afford to let one department fight another, who can afford to have hundreds of employees disinterested and dissatisfied with their work, who can afford to have the officers 'out' with the men, and the men glad to see any hoped for improvement a failure, are few and far between.

"Every wreck, every accident, every mistake, every loss has taught its lesson, and these are of no less value to the railroads and to railroad men than the successes. I practice making every mishap a lesson to every man on the road.

"It often happens that an accident, or a 'close shave' for one, is the best kind of a lesson to the man who could be blamed; and if he is retained in the service, he is a more valuable man than he would otherwise be, or one who could be hired to take his place.

"I am afraid that it would do me no good, and would do me harm, to lay me off for 30 days for any offense; and I am sure I would do no better when reinstated than if I had been allowed to continue in the service. I should feel as if I had been ill-treated, as if my family had been deprived of the necessities and comforts that my earnings afford them, and that they were the innocent victims of an injustice.

"In order to make every accident and incident happening on the road a lesson to all the trainmen, I established 12 years ago a miscellaneous bulletin board.

"On this we post up brief accounts of mishaps and other occurrences on the line, pointing out how such trouble could be avoided, etc. This board is closely scrutinized. We do not mention names, but, of course the men know 'who's who' in most cases. This board has done much to keep the men on their guard, prevented many accidents, and shows them how headquarters look at every case, instead of letting them discuss every accident around the roundhouse and caboose stoves and form their own conclusions—no two of which will be alike."

The system was aimed first of all at abolishing suspensions. It is usually spoken of as "discipline without suspension." In the first place, they are costly to the employee, and Mr. Brown claims, and his claim has been justified by a large number of railway officers, that there is an economic loss all around, while on the other hand the economic effects of record discipline are good.

On the Fall Brook Railway, which operates 250 miles of railroad of single track, and the tonnage for which at the end of 1896 was over 6,500,000 tons, the total amount paid the trainmen for overtime was \$389, indicating that the trains were mostly on time. Where suspension for violation of rules is followed, the employee feels that his family is deprived of the necessities and comforts of his earnings, and he becomes resentful, and disregards the real interests of the company; while on the other hand, where, for a violation which he could not well avoid, or for some misfortune which brings him a bad mark on the record book, under the operation of the system of discipline without suspension, he is at most simply retarded in his progress and feels that by greater care in the future he has a chance to clear his record.

On the Fall Brook Railway Mr. Brown notes the following improvement in 2 years after the introduction of his system. That the cost of wrecks and breaks of all kinds to locomotives and cars not attributable to natural wear in proportion to tonnage decreased 65 per cent; and the improvement in the cost of supplies for locomotives was over 57 per cent.

This system has been tried on the large roads as well as the small, it at first being maintained that it was applicable only to small roads where there was considerable personal supervision of the men. The Railroad Gazette for December 21, 1900, says in an editorial, reviewing a discussion of this topic which took place in the Rocky Mountain Railway Club at its October meeting.

"It remains true that a considerable number of large roads have now had the new plan in force for several years, and that on those roads the division superintendents that do not like the plan, if there be any, are so few that nothing is heard from them."

Again its editorial says.

"The chief reason why so many railroad officers have been convinced that suspensions are wrong is to be found no doubt in the inherent illogical nature of the practice.

"In suspending a man the company is punishing itself directly for the purpose of punishing the man somewhat indirectly. If the man is going to be again intrusted with his responsibilities, what advantage is to be secured by laying him off for 30 days?"

Over 57 roads, embracing more than one-third of the entire mileage of North America have now adopted the Brown system. The Louisville and Nashville announced on June 1, 1895, the establishment of the system on certain divisions. After 5 months the results were so satisfactory that it was extended to other divisions of the line, and at the end of 6 months announcement was made allowing employees credits as follows:

First. A suspension of 15 days or less charged against an employee will be considered canceled by a perfect record for 1 year.

Second. A suspension for more than 15 and not to exceed 30 days will be considered cleared by a perfect record for 2 years.

Third. Suspensions amounting to more than 30 days, not to exceed 60 days, will require 3 years' clear record for their cancellation.

Fourth. Suspension in excess of 60 days occurring in a period of 1 year will call for the special consideration of the board.

Fifth. A complimentary bulletin will be issued every 12 months in the prescribed manner, giving the employees who have a perfect record for 1 year a special credit.

Sixth. Acts of heroism and loyalty will call for special mention and consideration by the board.

This system has been tried with good success on the Southern Pacific, where it was put in operation July 16, 1896. The general manager, Mr. Kruttschnitt, presents the following reports exhibiting the results by 6 month periods from January 1, 1898, to June 30, 1900, as follows:

*Discipline by record system, 6 months ending June 30, 1900.*

[Southern Pacific Company.]

J. KRUTTSCHNITT,

*Fourth Vice-President and General Manager.*

SAN FRANCISCO, August 31, 1900

As an illustration of the adaptability of the Brown system to all conditions, it is interesting to note some of the modifications introduced on different roads.

General Superintendent Potter, for example, of the Long Island Railroad, abolished suspension 2 years ago and now announces that hereafter credit marks will be given for continuous satisfactory service; two credit marks will be entered for each half year, and one such mark will offset two debit marks of the value of a 10 days' suspension. Thus an employee with a clear record for 6 months would not be punished at all for acts which under the old plan would have laid him off for 40 days; he would simply be deprived of his accumulated record. This is an extension of the plan of awarding credit marks for heroism, fidelity, and other causes which are necessarily few and far between.

Perhaps Mr. Potter's terms are too lenient, but the move is a step in the right direction if the Brown system is to be logically developed. Other roads require a longer period of time to offset demerits. Thus the Southern Pacific requires a whole year of good service to cancel 30 days' demerits, and 2 years are required for the same purpose by the Louisville and Nashville.

The objects of the system of discipline by record, as summarized by Mr. Brown himself, are as follows:

(1) To secure a higher state of efficiency. Strict discipline is essential to successful operation; no continuous service performed by man can be perfect, but a high state of discipline and a careful selection of men will produce a high class of service, and successful operation will be the result.

(2) To avoid loss of time and wages of employees, resulting in possible suffering of those dependent upon their earnings, as well as demoralization of employees by enforced idleness.

(3) To avoid unnecessary severity in the dismissal of an employee, or requiring him to serve an actual suspension for a single offense, that does not injuriously reflect upon his reputation, conduct, capacity, or future usefulness in the service.

(4) To remove the false but too common impression in the minds of employees who have served actual suspensions, that the amount lost to them in wages is a payment to the company for the loss and trouble caused it and that in the future settlements can be made in the same manner.

(5) To avoid frequent service changes by considering each case of an erring employee on its merits, weighing his character, previous record, and future availability, without regard to parallel cases of other employees.

(6) To advance the education of employees through the medium of bulletin notes, enabling them to avoid the mistakes made by others.

(7) To establish in the service a feeling of security in the confidence that faithful service will be recognized and rewarded by uninterrupted employment, and the certainty that reward and promotion will not follow indifferent service.

(8) To raise the self-respect of employees and unite them more closely to the company by removing the element of force and relieving them of the public disgrace attached to the actual service of suspension.

The following circulars, by which the system was announced to the employees of the transportation departments of certain divisions of the Illinois Central Railroad, will illustrate the manner in which most of the roads have announced to their men, its adoption and the necessary changes in the rules where it has supplanted the older system of suspension:

CHICAGO, February 25, 1898.

*To employees of the transportation department, Mississippi, Louisiana, Memphis, and Louisville divisions.*

The system of "discipline by record" will be extended to and take effect upon the Mississippi, Louisiana, Memphis, and Louisville divisions of this road March 1, 1898, when suspension of employees from duty with consequent loss of time will be discontinued. Discipline will be maintained by reprimand, book suspension, or by dismissal from the service.

Reprimands will be noted, as well as suspensions, for a given number of days, although no actual suspension is served by the employee at fault.

An individual account will be opened March 1, 1898, with each man, in a book kept especially for the purpose in the office of the superintendent of each division. An entry will be made in this book for every case of neglect of duty, violation of the rules or of good practice, accidents, improper conduct, etc., with the discipline determined upon by the superintendent or by the board of inquiry.

Good judgment in emergencies, acts of heroism, loyalty to the service, and other meritorious conduct will be made matter of record and given full consideration in determining the standing of the employee. The record will also be taken into account when the question of promotion in the service is under consideration.

A perfect record will be one against which no unfavorable entry has been made. A clear record is one on which unfavorable entries have been extinguished.

Any employee may examine his own record at the superintendent's office during business hours, but the record book will not be open to others except division and general officers of the company. If not practicable for an employee to visit the office, a transcript of his record will be sent to him upon application.

No reprimand or suspension will be noted against an employee's record without written notice to him.

No suspension will be made for a period of less than 5 nor more than 60 days.

Reprimands and suspensions placed against the record of an employee will be extinguished by satisfactory service for various periods as follows:

(a) A reprimand will be extinguished by a clear record of 3 months.

(b) Five days of suspension will be extinguished by a clear record of 6 months.

(c) Ten days of suspension will be extinguished by a clear record of 9 months.

(d) Thirty days of suspension will be extinguished by a clear record of 1 year.

(e) Sixty days of suspension will be extinguished by a clear record of 18 months.

An accumulation of reprimands or suspensions upon the record, showing that the employee is not a desirable man for the service, will justify special consideration by board of inquiry, and the employee named may be dismissed, although he may not have committed any single offense that would warrant such action being taken.

Disloyalty, dishonesty, desertion, intemperance, immorality, insubordination, incompetency, willful neglect, gross carelessness, inexcusable violation of rules resulting in endangering or destroying company property, making false reports or statements, or concealing facts concerning matters under investigation will, as heretofore, subject the offender to dismissal.

No change will be made in the existing practice of consideration of offenses by board of inquiry; and ordinarily no action will be taken until investigation is

completed. In cases of intoxication on duty, insubordination, or of vicious conduct, employees will be taken out of the service pending final decision.

Superintendents will issue bulletins from time to time, posting the same at district and division terminals. These bulletins are intended to be educational. They will give a brief account of each case which has resulted in discipline, stating how the trouble or damage could have been avoided—omitting names of the persons at fault. Employees are enjoined to study these bulletins with care, that they may profit by the experience of others.

This system of discipline, it is hoped, will prove of mutual advantage to the company and its employees. Those guilty of offenses not requiring dismissal will not suffer loss of time beyond that required for investigation, and will be given an opportunity by subsequent good service to clear their records.

The operation of the system should engender a feeling of security, in the confidence that faithful service is recognized and will be rewarded by uninterrupted employment and the certainty that reward and promotion will not follow indifferent service.

The company expects the system to promote harmony and to stimulate employees to an earnest cooperation with its officers in attaining a more efficient service.

A. W. SULLIVAN,  
*General Superintendent.*

There are many signs that the railway corporations are being forced to take every precaution against the employment of incompetent men, and that they are becoming more severe in their regulations concerning the conduct of their employees. In view of the strict accountability to which the corporations are held when accidents occur through their men, renewed effort has been made of late on the Vandalia Line and also on other lines to weed out the employment of any men who use intoxicants at all. In the last year an order issued by the Southern Railway system in South Carolina declares that all employees that smoke cigarettes must cease to do so or lose their positions, and that in the future no one will be engaged by the road who is a cigarette smoker.

The Atlanta Division of the Southern Railway has also the same rule, which is based on the ground that the habitual cigarette smoker is untrustworthy. The brotherhoods cooperate with the corporations in discouraging the use of intoxicating liquors by their members, and lend their aid in anything that tends to improve the moral conduct of the railroad men.

The question of discharge has, however, other aspects than those provided for in a system of discipline by record and in general regulations for the improvement of the labor force. It involves a discussion of some of the most perplexing legal and economic questions relating to the right of discharge from what is essentially more than an ordinary form of employment. This question will be taken up in the next section.

**§ 9. THE BLACKLISTING OF RAILWAY EMPLOYEES—THE COMMON AND STATUTE LAW CONCERNING THE RIGHT TO QUIT WORK AND TO STRIKE.**

The question of blacklisting of railroad employees relates primarily to the practice of some roads of keeping a list of employees discharged for serious offenses and of sending such a list to other employers of the same class of labor, with a view to preventing such discharged employees from obtaining employment elsewhere.

It is asserted by many witnesses before the Industrial Commission (see Vol. IV, Transportation, Digest of Evidence and General Index) that such practice has been quite common in the past, although most railroad officials claim that it is now entirely done away with, especially since the passage of the United States arbitration act of 1898, which made it illegal. It is a point upon which, however, railroad employees feel very bitterly. It is very easy for a discharged employee, who finds it difficult to get work because he does not have a satisfactory recommendation from his last employer, to imagine that that employer is working aggressively to prevent him from obtaining employment, even when that is not the case. Such a supposition is perfectly natural, and undoubtedly much of the feeling that exists among railroad employees as to the prevalence of blacklisting is due to such figments of imagination. The president of a prominent railroad, who has been connected with a large number of railroads in different parts of the United States, who himself was accused of having written a letter of recommendation upon a sheet of water-marked paper, which was supposed to be notice to his fellow railroad officers that his words of general commendation were to be taken with an opposite meaning, was as much astonished to see the evidences of water-mark in the paper as those to whom it was shown for the first time as positive evidence of a conspiracy against an innocent workingman. The fact that such stories circulate at par value among railroad employees is sufficient indication that the subject needs investigation, if for no other reason than to show clearly the unreasonableness of such suppositions. No one will deny, however, that there is the possibility of serious injury being inflicted through the blacklist.

A corporation has an undoubted right to discharge an employee for any cause that it deems sufficient, even if it be merely because such employee has sympathized with interests inimical to the corporation, or because he has joined a labor organization, or has taken part in a strike, direct or sympathetic. The workingman, on the other hand, has the undoubted right to strike, to quit work, to sever his connection with the corporation, for any cause he deems sufficient. The corporation, however, insists that the man who strikes shall not interfere with its right to employ other men in his place; and the employee has an equal right to insist that the corporation shall not interfere with his seeking employment elsewhere. These rights are mutual and equal, and the courts will sustain them.

The difficulty discussed under the head of "Blacklisting" has arisen very largely since the Chicago strike in 1894. Many of the men who participated in that organized movement against the railroads of the country found great difficulty in securing employment anywhere, and charges of blacklisting were very frequent and probably not entirely unfounded. Mr. William J. Strong, in his testimony before the commission (Volume IV, page 503), has reviewed at considerable length the history of some of the strongest cases of alleged blacklisting. It is not necessary to add here anything to his statement. It states clearly the opinions of the most radical railroad employees. If they are well founded, the remedies for such illegal use of the blacklist, or for the abuses charged, are, under the common law, uncertain. Mr. F. J. Stimson, in his Handbook of the Labor Laws of the United States, says that it is difficult for a person injured by a boycott, blacklist, or conspiracy, whether employer or employee, to get redress in the criminal courts, and hence the popularity of the remedy given under courts of equity known as the injunction. He seems to think that criminal courts might construe an exchange of blacklists to be an unlawful combination, but in view of the uncertainty of judicial procedure in this direction 17 States and 1

Territory<sup>1</sup> have passed statutes forbidding blacklisting, by which is meant the exchange of a list of employees against whom an employer has a complaint, with other employers, for the purpose of preventing them from employing such employees. North Dakota and Utah are the only States which prohibit such an exchange of blacklists between corporations by constitutional enactment. Iowa, Indiana, Wisconsin, Alabama, Virginia, Montana, and Georgia make it a penal offense willfully to prevent discharged employees from obtaining new situations. The Florida and Georgia laws apply only to corporations. The Virginia law provides a penalty for any "corporation, manufacturer, or manufacturing company" using the blacklist. The laws of all the other States mentioned apply to all classes of employers. In Illinois and Minnesota it is the conspiracy or combination of two or more persons to use the blacklist that is declared unlawful.<sup>2</sup> Indiana, Montana, and Georgia have also required by statute the employer to furnish the employee with a written statement of the cause of his discharge, although this feature of the Georgia law has been declared unconstitutional. The case was one in which a man by the name of Wallace, who was employed July 9, 1892, by the Georgia, Carolina and Northern Railway Company as chief car inspector, brought suit to recover \$5,000 damages because he was discharged while performing his duties on August 12, 1892, and on August 18 made a written request for a specific statement in writing of the reasons, which request was duly delivered to the local agent of the company, and brought no reply within the next 20 days. The suit was dismissed by the city court of Atlanta, and the judgment affirmed by the Georgia supreme court, June, 1894, which declared the act unconstitutional. The argument of the decision was as follows:

"The public, whether as many or one, whether as a multitude or a sovereignty, has no interest to be protected or promoted by a correspondence between discharged agents or employees and their late employers, designed not for public but for private information, as to the reasons for discharges and as to the import and authorship of all complaints or communications which produced or suggested them. A statute which undertakes to make it the duty of incorporated railroad, express, and telegraph companies to engage in correspondence of this sort with their discharged agents and employees, and which subjects them in each case to a heavy forfeiture under the name of damages for failing or refusing to do so, is violative of the general private right of silence enjoyed in this State by all persons, natural or artificial, from time immemorial, and is utterly void and of no effect. Liberty of speech and of writing is secured by the Constitution, and incident thereto is the correlative liberty of silence, not less important nor less sacred. Statements or communications, oral or written, wanted for private information can not be coerced by mere legislative mandate at the will of one of the parties and against the will of the other. Compulsory private discovery, even from corporations, enforced not by suit or action but by statutory terror, is not allowable where rights are under the guardianship of due process of law.

"It follows from the foregoing that the act of October 21, 1891, entitled 'An act to require certain corporations to give their discharged employees or agents the causes of their removal or discharge when discharged or removed,' is unconstitutional, and that an action founded thereon for the recovery of \$5,000 as penalty or arbitrary damages, fixed by the statute for noncompliance with its mandates, can not be supported."<sup>3</sup>

In Iowa, Missouri, Montana, Georgia, and California blacklists are especially prohibited *eo nomine*.

The language of the constitutional enactment, in article 16, section 4, in the constitution of Utah, adopted November 5, 1895, is as follows: "The exchange of blacklists by railroad companies or other corporations, associations, or persons, is prohibited."

The constitution of North Dakota (sec. 23, Art. I) declares: "Every citizen of this State shall be free to obtain employment wherever possible, and any person, corporation, or agent thereof maliciously interfering or hindering in any way any citizen from obtaining or enjoying employment already obtained from any other corporation or person shall be deemed guilty of a misdemeanor;" and section 212 of article 17 of the constitution of North Dakota reads: "The exchange of blacklists between corporations shall be prohibited."

The constitution of Utah, in section 19 of article 12, in addition to article 16, section 4, already quoted, contains also a general guaranty of freedom to obtain

<sup>1</sup> Alabama, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Minnesota, Missouri, Montana, Nevada, North Dakota, Utah, Virginia, Wisconsin, Washington, and Oklahoma.

<sup>2</sup>The main provisions of these laws will be found quoted in an article by Mr. S. D. Fessenden in the U. S. Labor Bulletin, January, 1900, pp. 7-18.

<sup>3</sup>See *Southeastern Reporter*, vol. 22, p. 579; also, U. S. *Bulletin of Labor*, Vol. I, p. 203.

employment similar to that of section 23, Article I, of the constitution of North Dakota.

The laws of the United States relating to blacklisting are contained in a single Federal statute enacted by Congress, being part of the general arbitration act, chapter 370 of the acts of 1897-98, and referring only to certain employers. Sections 1 and 10 of the act referred to cover the subject in question, and read as follows:

"SECTION 1. The provisions of this act shall apply to any common carrier or carriers and their officers, agents, and employees, except masters of vessels and seamen, as defined in section 4612, Revised Statutes of the United States, engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, for a continuous carriage or shipment from one State or Territory in the United States or the District of Columbia, to any other State or Territory of the United States or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States. The term 'railroad' as used in this act shall include all bridges and ferries used or operated in connection with any railroad, whether owned or operated under a contract, agreement, or lease; and the term 'transportation' shall include all instrumentalities of shipment or carriage. The term 'employees' as used in this act shall include all persons actually engaged in any capacity in train operation or train service of any description, and notwithstanding that the cars upon or in which they are employed may be held and operated by the carrier under lease or other contract: *Provided, however*, That this act shall not be held to apply to employees of street railroads and shall apply only to employees engaged in railroad train service. \* \* \*

"SEC. 10. Any employer subject to the provisions of this act, and any officer, agent, or receiver of such employer \* \* \* who shall, after having discharged an employee, attempt or conspire to prevent such employee from obtaining employment, or who shall, after the quitting of an employee, attempt or conspire to prevent such employee from obtaining employment, is hereby declared to be guilty of a misdemeanor, and upon conviction thereof in any court of the United States of competent jurisdiction in the district in which such offense was committed shall be punished for each offense by a fine of not less than one hundred dollars and not more than one thousand dollars."

The legislation has been effective in preventing a recurrence of some of the worst abuses of blacklisting as it formerly existed; and it is the opinion of most of the witnesses, both those representing the railroad corporations and those representing organizations of railroad employees, which have appeared before the Industrial Commission, that this legislation is sufficient—at least if it is made general—to check open blacklisting, but the grand chiefs of the leading railway orders, in replying to the schedule of inquiries concerning railway labor, asked that the national arbitration law of June 1, 1898, be strengthened and reinforced, and that the penalties for blacklisting be made sufficiently strong to entirely stop the secret practice by making the fear of the penalty outweigh the desire to violate the law.

The real difficulty which it is sought to remedy by legislation reaches down to the roots of the conflict between labor and capital, employer and employee, which has always been an unequal struggle whenever the question of protecting the acknowledged rights of both parties was concerned. In railroad employment, for example, a man upon leaving his work, on account of discharge for cause, or where the road no longer needs his services, or because he desires voluntarily to quit his work—in all such cases it is customary for the employee to ask for a clearance paper on which is certified the length of time he has been in the employ of the corporation, the kind of work that he has done, and the reasons for quitting the service. Upon seeking reemployment he is asked to deposit this clearance paper with his application blank, and usually he can not get employment without first securing the clearance from the last road on which he was employed. If the reason why he left his last employer was that he struck to protect what may have been an essential right, the mere record of that fact, or the date of the clearance paper if it was at the time of a general strike, may be sufficient to close to him forever the doors of his chosen occupation. This can take place so long as the custom of the clearance paper prevails, without the railroad corporation committing any offense whatever under the most severe law to prevent blacklisting. The clearance paper, furthermore, is a necessity for the protection of the public, because it has always been the custom of railroad companies, and one which the public and the most intelligent employees will probably justify, to warn each other against incompetent men who might otherwise be placed in responsible positions, endangering the lives of many persons. In order,

therefore, to make the situation of the discharged employee equal with respect to rights with the corporation, it would be necessary to enable the applicant for work to ask of the corporation a clearance paper from the rank and file of its employees, at least in the department of service to which he sought admission, stating that the corporation had treated its men fairly and wisely. Of course such a requirement would be absurd in practice. A corporation employing a new hand must know something of his previous record. Even, therefore, if the clearance paper was done away with, it would be necessary to inquire where the man had worked; and if he gave the name of the corporation whose employment he had quit while on a strike, subsequent inquiry of that corporation would probably lessen his chances of securing new employment. The difficulty, therefore, is a very real one to the workingman, and one which can not be met readily in all fairness to the interests of both corporations and employees without many miscarriages of justice, even where the intention to do so is present.

In view of the Federal law prohibiting blacklisting, it may seem to have been almost an impertinence in the circulars of inquiry sent out by the expert agent of the Industrial Commission to railroad corporations to have asked the question, "Do you have a black list for employees discharged for serious offenses?" The answers to this question, received from 40 railroads operating 112,353 miles of line and employing a total of 633,023 men, were, of course, all in the negative. The Atchison, Topeka and Santa Fe Railway System called attention to the fact that the Brown<sup>1</sup> system of discipline is used on its system, under which a record of the performance of every man is kept, which is open to inspection to those entitled to see it. This would probably apply to a large number of roads where the Brown system of discipline is used. The Chicago, Burlington and Quincy Railroad stated that it had no black lists and did not receive or promulgate them. The practice of the Illinois Central Railroad Company is probably typical of general conditions. In the transportation, machinery, and road departments that company keeps no black list, but a record of men who have been discharged from the service of the company for the guidance of its employing officers, so that persons who have been found unworthy or undesirable will not be permitted to reenter the service of the company. The International and Great Northern Railroad also keeps a record of all employees for its own information and protection, and if any responsible railroad official writes to the company asking for the record of an employee who has left its service, and who has made application to him for employment, the record of the party while in the company's service, whether the party inquired about was discharged or left the service of his own accord, is given. No influence, however, in any way, shape, or form, is used to prevent such person who has been in the service of the company from obtaining employment from any other company, and any employee who thinks he has been unjustly discharged has the privilege of asking for an investigation, which is granted him, and if he can show that he has been unjustly dealt with he is reinstated. The Missouri Pacific Railway also keeps a record of employees discharged for serious offenses, in order that they may not be reemployed by other officers of the company not acquainted with the faults of the party discharged at some future time, and in order that the company and its patrons may not be subjected to accidents, loss, or damage by the careless acts of incompetent employees. The Northern Pacific Railway Company, on which the Brown system of discipline is in use, has on the basis of this system a record which will show whether an employee has been dismissed from its service for incompetency, extreme carelessness, or other well-established reasons, and will thus prevent him from being reemployed in the same capacity on some other section of the line. So far as the qualifications, as shown by this record, permit, the company is prepared to reemploy one who has been in its service or recommend him for employment upon other lines. The Southern Pacific Company has no black list, but for its own information and protection informs its officers of the names of those retired for serious offenses. The New York, New Haven and Hartford Railroad Company has a similar rule, and notices of discharges are sent to the officers of that company only.

From these statements the general practice of the railroads of the country will be readily understood.

The attitude of the courts in interpreting both the common law which might apply to cases of blacklisting and such statutory legislation as now exists may be clearly seen by a few of the cases that have come before our various courts. The first case in which an award of damages was made and paid is probably that of *Willett v. Jacksonville, St. Johns and Indian River Railroad Company*, in which the United States circuit court for the southern district of Florida on January 21,

<sup>1</sup> See p. 797ff for further discussion of the Brown system of discipline.

1896, awarded Willett damages to the amount of \$1,700 and costs, which amount was paid by the company. The case is reported in the United States Labor Bulletin (No. 4, May, 1896, page 437), for which the facts in the case were obtained from the clerk of the court, as follows:

"Willett, while employed as a conductor by the defendant company, sought employment on another railroad, the Savannah, Florida and Western (formerly the South Florida). He was notified that employment would be given him and directed to report for duty immediately, and passes were sent him to enable him to go over the road of the Savannah, Florida and Western Railroad Company and learn the route before entering regularly upon the duties of his new position. He at once telegraphed to the proper official of the Jacksonville, St. Johns and Indian River Railroad Company, asking to be relieved from duty at a certain station, but was requested by the company to remain in its employ and take out another train. He finished the run he was then making and made the return run, telegraphing the official that he would leave the employ of the company upon arrival at its terminus, which he did, and proceeded to go over the line of the Savannah, Florida and Western Railroad Company to learn the route.

"Before he had finished the preliminary trip he received a telegram from the officers of the last-named company, directing him to 'come back.' He complied with this order, and upon returning was informed that he could not be employed. He subsequently ascertained the reason for this refusal to employ him to have been that the superintendent of the company whose service he had left had written a letter to the superintendent of the company whose service he was about to enter, cautioning him against Willett, who, the letter stated, had left their employ with certain charges pending against him.

"The principal defense of the railroad company was that the letter was a personal one and not written officially; but this defense was of no avail, and, as before stated, Mr. Willett successfully prosecuted his suit against the company whose superintendent had prevented his employment by another company."

Six months earlier than the above decision Judge Pratt, of the court of common pleas of Lucas County, Ohio, in a suit by a man named Mattison against the Lake Shore and Michigan Southern Railway Company, sustained the plaintiff's right to sue the company for damages. The company had demurred to Mattison's complaint, and the question was raised as to whether the blacklist, resulting in an injury to an innocent discharged employee, is a wrong for which such an employee can obtain financial redress. Judge Pratt's decision of September 25, 1895, sustained the right of Mattison to sue the company for damages. Mattison was a conductor in the employ of the Lake Shore and Michigan Southern Railway Company at a salary of \$120 per month. As a representative of other workmen he made objection to certain rules adopted by the defendant company, known as "blacklist rules," shortly after which he was discharged, without cause or provocation, and, according to his claim, was unable to obtain work with other railroad companies because the blacklist rules were enforced against him. He finally secured employment as a policeman, but was able to earn only \$720 a year instead of \$1,440, which he had received as a railroad conductor. The report of the case, furnished the Department of Labor by the official stenographer of the court, gives the substance of the opinion as follows:<sup>1</sup>

"The employee's right to employment is equally sacred with the right of the employer to employ him. It is not only a serious right, affecting a man's life, but you may say that it is his life. The laboring man's employment is the only thing that stands between him and starvation, or what is little less than starvation—pauperism—and it is for the public interest and for the public good that the right of a man to his own employment, in any honest work which he may seek, should not be interfered with or violated.

"This, of course, does not meddle at all with the right of the company or of a man to judge himself who he will have to work for him, and it makes no difference whether he refuses to let a man work for him because he is incompetent or because he dislikes him. He has a right to seek his own employees, but, as is frequently said, one man's right ends where another man's commences, and the right of the employer to discharge ends with his own employment, and he must not trench upon the right of the employee to seek other employment by which he may support himself and his family, and it is for the public interest that the largest liberty to seek employment should be before every man, whatever may be his employment or whatever may be his business, trade, or occupation. It is also a matter of public interest to encourage men in becoming proficient in their employment. It is, of course, a matter of public policy that a railroad company

<sup>1</sup>See U. S. Labor Bulletin, Vol. I, No. 2, p. 217.

should have the right to employ such men as it sees fit and to judge for itself of the competency of its employees. There is no doubt about that. It is, however, for the public interest that a man who is skilled and who has become proficient in his employment should be able to find employment, if not with one railroad, with another railroad, or some other railroad—at least that the field should be open to him—that he should have that right; and while a railroad company may discharge its men and not employ them themselves, they trench upon the rights of the employees whenever they, by one deed or another, seek to prevent their employees from getting employment from other railroad companies, or combine or conspire in any way to prevent it, as is charged in this petition, and the matters alleged in the petition are, on demurrer, to be taken as confessed.

"Of course, there may be an injury that is not a legal injury resulting from a company discharging one of its employees, and so long as they simply discharge him their right to make the discharge should not be questioned; but if they make a combination, as is charged in this petition, with other companies that they shall not employ him, then, it seems to me, they go beyond their legal right."

The famous Ketcham case is reviewed by Mr. William J. Strong, the attorney for the plaintiff, as well as for many others bringing similar suits, in his evidence before the Industrial Commission. (See United States Labor Bulletin, Vol. IV, pp. 503-525.) Ketcham obtained a verdict of \$21,666 against the Chicago and Northwestern Railroad; but a new trial was ordered, and, in granting it, the judge said: "The verdict would not stand for a moment in a higher court." In the fall of 1899 Joseph O'Day,<sup>1</sup> who was a yardmaster on the Chicago and Northwestern, brought a suit similar to the Ketcham case, asking for \$50,000 damages; and earlier in the same year a suit was brought by William Green, a man who had held the position of superintendent of bridges and buildings, against the Cleveland, Cincinnati, Chicago, and St. Louis Railroad at Wabash, Ind. He was employed on the Michigan Central and had been dismissed 3 years previously.<sup>2</sup> A still more recent and a leading case is that of McDonald v. Illinois Central Railroad Company. McDonald was a switchman and conductor and had been in the employ of the company for 5 years. He quit the service October 6, 1894, as one of a number of striking employees, and he brought suit on the claim that the railroad companies having lines running into the city of Chicago had entered into a conspiracy, agreement, and understanding that employees who had been members of the American Railway Union would not be employed by any of the said companies without a release and consent from the railroad company by which any such employee was employed, such release and consent being commonly called by railroad men a "clearance." The case was carried to the supreme court of the State of Illinois, and Chief Justice Boggs, in handing down the opinion of the supreme court, October 19, 1900, used the following language:<sup>3</sup>

"Counsel for plaintiff in error (McDonald), in support of his insistence that the circuit court erred in holding the declaration did not state a cause of action, says: 'The question presented by the declaration and demurrer (when shorn of legal phraseology) is simply this: Is it lawful for all the employers in any line of industry to combine and agree that they will not hire any of each other's employees who have left the service of any one of them, unless the employer whose service they have left gives his consent that such employee may be employed? Or, to put it in another form: Is it lawful for all the employers in any line of industry to combine and conspire together to punish a man who leaves their service during a strike by refusing him employment, and thus preventing him from securing employment at his trade, unless his former master emancipates him by giving his consent to his employment?'"

"We do not think the question in either of its forms was presented to the trial judge by the pleadings. The allegation of the declaration is: 'Said defendant railroad companies (defendants in error and other railroad corporations named therein) entered into a conspiracy, agreement, and understanding that they, the said railroad companies, would furnish each to the other information as to all their employees who had committed offenses, or who were charged with having committed offenses, and also as to all their employees who had left their service during a strike which commenced on or about June 26, 1894, and ended on or about August 6, 1894, commonly known as the "A. R. U." or "American Railway Union" strike, and as to all their employees who were members of the A. R. U., or the American Railway Union, and that such employees of any and all said companies would not be employed by any of said companies without a release and consent from the railway company by which any such employee was last

<sup>1</sup> See Railroad Gazette, October 6, 1899.

<sup>3</sup> See U. S. Labor Bulletin No. 34, May, 1901, p. 530.

employed, such release and consent being commonly called by railroad men a "clearance." The meaning of the averment is equivocal. Counsel for plaintiff in error, ignoring a portion of the language, construes the declaration to charge that said defendant corporations agreed that former employees of either company should be required to have an instrument expressing the consent of the former employer to the subsequent employment by another company. That portion of the averment, alone considered, would as well bear the other construction—that the agreement was that such employee should show he had been released from his former employment or had quit with the consent of his employer. But the averment in its entirety is to be resorted to to ascertain the true meaning of the instrument denominated a "release and consent," and if two or more meanings present themselves that which is most unfavorable to the pleader is to be adopted. (4 Enc. Pl. and Prac., 759.) The pleader, in obedience, as we must assume, to his duty to state issuable facts, distinctly and definitely declares the "release and consent" referred to to be that which is commonly known as and called among railroad employees a "clearance." The trial court then properly held the averment of the declaration to mean that the "release and consent" instrument referred to in the declaration was the ordinary clearance or clearance card in common use among railroad corporations and their employees.

Under every rule of construction of pleadings there is no issuable averment that the companies defendant agreed the consent of either should be essential to the employment by the other of such companies of a discharged employee, but only that an employee who had voluntarily quit the employment of either of the companies during the strike should not be employed by the other unless he could produce the "clearance" or "clearance card" in common use among railroad circles, and commonly called by railroad men a "clearance." The declaration, by its own language, explains that the instrument of "release and consent" referred to by the pleader is simply that known and commonly called a "clearance" among railroad men. It is not averred the defendant companies (defendants in error here), or any of the corporations named in the declaration, agreed or had an understanding that employees who had joined in the strike mentioned in the declaration should not be granted "clearance cards." On the contrary, the inference deducible from all that is said on the point in the declaration is that the railroad companies continued to grant clearances after the strike as before, and that plaintiff in error applied to defendant in error, the Illinois Central Railroad Company, for a "clearance card." The declaration does not charge said defendant company refused to grant him a "clearance card" or a "clearance" setting forth truthfully all facts proper to be stated in a "clearance card," but the language of the declaration is that said company refused to give him such an instrument as would "enable him to obtain employment in the railroad business."

In what respect the release and consent or clearance which it is plainly inferred the company was willing to give the plaintiff was insufficient to enable him to obtain employment from other railroad corporations is not disclosed. The declaration does not charge that the Illinois Central Railroad Company refused to state fully and fairly the facts proper to be inserted in such an instrument, or that it inserted or desired to insert in the clearance any statement that was false or injurious to him, or that had no proper place in his clearance paper. The company was not required to give him a clearance that would enable him to get employment from other companies operating railroads. As we said in the Jenkins case (174 Ill., 398): "Such a card is in no sense a letter of recommendation, and in many cases might, and probably would, be of a form and character which the holder would hesitate and decline to present to any person to whom he was making application for employment." Whether the charge included in the question formulated by the counsel for plaintiff in error would constitute a cause of action was not presented to the trial court by the declaration, and we agree with the view entertained by the trial court, that the declaration failed to state a cause of action."

In this decision the court avoided passing upon the real question at issue whether blacklisting is legal. In cases now pending in the Supreme Court of Illinois the question is more clearly presented.

The Jenkins case, to which reference was made in the decision of Chief Justice Boggs, just quoted, was also a case decided by the supreme court of Illinois on appeal from the appellate court for the fourth district, to which appeal had been taken from the circuit court of Wabash county, Ill. The opinion was delivered by Mr. Justice Phillips, October 24, 1898. Jenkins had been a faithful employee of the Cleveland, Cincinnati, Chicago and St. Louis Railway Company for 10 years as conductor on a freight train. He was discharged without cause about November, 1893, and was refused a letter or clearance card, which is usually given to discharged employees, although he made several applications for it, both before and

after a trial in which Jenkins was implicated in a charge of larceny and was acquitted. Jenkins maintained in his suit that, inasmuch as the roads required for employment a clearance card, the granting of such a card to a discharged employee was obligatory and practically a part of the contract of employment. The jury in the trial court gave the plaintiff \$875 damages and the motion for a new trial was overruled and this judgment affirmed on appeal to the appellate court, from which the railroad company carried the case to the supreme court. The decision of the supreme court, as rendered by Mr. Justice Phillips, is as follows (see 174 Ill., 398; also U. S. Labor Bulletin, Vol. IV, p. 476):

"The gravamen of the declaration in this case is that the plaintiff was discharged and refused a clearance card or letter, to which he was entitled, without which he could not obtain employment on any other road, and that he failed to obtain such employment, whereby he suffered damages. The declaration avers a cause of action on the case arising out of a contract. It avers a contractual relation, out of which, as alleged, arose the duty when such contractual relation was severed to give a letter or clearance card for the purpose stated. Unless the law imposes on appellant in some form the duty to give appellee as one of its employees a letter of recommendation or clearance card, his action in this case can not be sustained. If a legal duty is imposed upon the employer to give a discharged employee, or one voluntarily leaving his service, a letter of recommendation, such a duty must arise either by the common law, by statute, by contract of employment, or by such a generally established usage or custom as would demand it to be done. Such usage, however, must be so well known and uniformly acted upon as to raise a fair presumption it was intended to be incorporated in the contract of employment. A distinction is to be made between what is known, in terms, as a clearance card and a letter of recommendation. This distinction is apparent not only from the evidence in this case but also from the knowledge which courts have of the general conduct and management of railroad business and affairs. It is the duty of courts to take, and they will take, judicial notice of the general business affairs of life and of the manner in which ordinary railroad business is conducted and of the everyday practical operation of them.

"From the evidence produced on this question and from this judicial notice which we take of the ordinary general management of railroads it is apparent that what is known as a clearance card is simply a letter, be it good, bad, or indifferent, given to an employee at the time of his discharge or end of service, showing the cause of such discharge or voluntary quittance, the length of time of service, his capacity, and such other facts as would give to those concerned information of his former employment. Such a card is in no sense a letter of recommendation, and in many cases might, and probably would, be of a form and character which the holder would hesitate and decline to present to any person to whom he was making application for employment. A letter of recommendation, on the contrary, is, as the term implies, a letter commending the former services of the holder and speaking of him in such terms as would tend to bring such services to the favorable notice of those to whom he might apply for employment.

"As stated, an action for failure to give an employee either of the above forms of letters must be based either upon the common law or the statute, or arise out of the contract of employment, or be required by usage or custom. By the common law no such duty was imposed upon the employer. By statute no duty is imposed upon the employer to give to an employee a clearance card, nor does any right to demand such accrue to the employee. Therefore, if any cause of action exists to the appellee in this case it must arise out of his contract of employment, or there must be shown and established such a custom or usage as would clearly entitle him to such. Under such views of the subject-matter involved in this case, where no action, either by law or by statute, accrued to the plaintiff, it was necessary for him to produce, in the first instance, evidence tending to show that a usage or custom existed on appellant's railroad, at the time of his contract of employment, to give to each discharged employee, or those voluntarily quitting its service, a clearance card or certificate of recommendation, and tending to show he was entitled to it under his contract of employment. For the purpose of proving the usage or custom on the part of the appellant road, the only evidence offered was one letter, purely personal in its character, and the statements of several witnesses that such a custom or usage existed, but without any apparent knowledge on which to make such statements. No other evidence was produced tending to show that appellant issued such cards or letters, or that it required them before employing its servants. A number of the witnesses offered by the appellee testified that on leaving the service of the appellant they had received no such letters or cards. The positive and direct testimony of the superintendent of the appellant road—the person charged with the duty of issuing such clearance

cards or letters of recommendation if any were to be issued—is that no custom or usage existed, and that it was of rare occurrence that an employee leaving its service received a letter of any character.

"To establish a usage or custom it is not sufficient to prove certain isolated instances. The usage must be positively established as a fact, and not left to be drawn, as a matter of inference, from transactions. A usage which is to govern a question of right should be so certain, uniform, and notorious as probably to be known to and understood by the parties as entering into their contract. There was no evidence tending to show any general custom or usage existing on the appellant road and entered into between it and other roads, as alleged in the declaration.

"In this case it is not shown, or even attempted to be shown, that appellee, at the time of his contract of employment with appellant, and as an incident of such employment, received any assurance that he would, at the time of the expiration of service, receive any clearance card or letter of recommendation from the appellant railroad.

"Had a rule applicable to conductors, providing for the issuing of clearance cards, as alleged in the declaration, been offered and established as a part of plaintiff's case, a different question might have been presented for the consideration of this court. In the condition of this record, however, where no usage or custom was shown to exist under which appellee could recover, and no provision incident to his contract of employment imposing upon appellant the duty to issue a clearance card or certificate, his action must fail. For the errors herein indicated, the judgment of the appellate court for the fourth district and the judgment of the circuit court of Wabash County are reversed, and the cause remanded."

Another important case (see U. S. Labor Bulletin, vol. iv, p. 455) is that of *Hundley v. Louisville and Nashville Railroad Company*, 48 Southwestern Reporter, page 429.—Action was brought by John Hundley against the above-named company to recover damages for alleged wrongful acts of the defendant, whereby he had been prevented from obtaining employment. In the circuit court of Marion County, Ky., where the suit was heard, a judgment was rendered for the defendant company, and the plaintiff appealed the case to the court of appeals of the State, which rendered its decision December 13, 1898, and affirmed the judgment of the lower court.

The facts in the case are shown in the opinion of the court of appeals, which was delivered by Judge Paynter, and which reads in part as follows:

"It is averred in the petition as amended that the plaintiff had no trade or calling except railroading, that for the past 5 years he has been in the employment of the defendant; that while engaged in the discharge of his duty he was wrongfully, unlawfully, and maliciously discharged by it; that it wrongfully, unlawfully, and maliciously blacklisted him; that he was blacklisted wrongfully, unlawfully, and maliciously, and falsely by its placing upon its records a pretended cause of discharge, to wit, neglect of duty, with a view of injuring and preventing him from entering its employment or that of other railroad companies; that it had entered into a conspiracy and combination with other railroad companies by which its employees discharged for cause will not be given employment by other railroad companies; that, on account of its false and malicious acts, and its conspiracy with other railroad companies, he has been deprived of the right to again engage in the employment of the defendant or other railroad companies; that the wrongful acts mentioned were committed for the purpose of making, and had made, it impossible for him to ever again get employment from the defendant on any of its lines, or from other railroad companies in the United States; and that he has been damaged thereby in the sum of \$5,000.

"Our attention has not been invited to nor have we been able to find any reported case involving exactly the same question as is involved in this case. It is a novel question in this court, although there are reported cases of other courts the doctrine of which might be applied to this case. As the population of the country increases, as the business and commercial industries multiply, as inventive genius causes the civilized peoples of the world to marvel at its discoveries and productions, as space is annihilated by the means of rapid transit for man, commerce, thought, and sound, thus facilitating the conduct of the business, the pursuit of occupations and callings, and the promotion of the social and political intercourse of the world, courts are called upon to apply familiar principles to new questions; if none seem to be applicable, to enunciate a just rule suited to the state of facts before it and for future application to similar facts. It can never be said that the novelty of a complaint is an objection to the action if it made to appear that an injury has been inflicted of which the law is cognizable. The familiar maxim of the law, 'Ubi jus, ibi remedium,' is considered valuable by all courts. It was this maxim which caused the invention of the

form of action called an 'action on the case.' It is the part of every man's civil rights to enter into any lawful business and to assume business relations with any person who is capable of making a contract. It is likewise a part of such rights to refuse to enter into business relations, whether such refusal be the result of reason, or of whim, caprice, prejudice, or malice. If he is wrongfully deprived of these rights, he is entitled to redress. Every person *sui juris* is entitled to pursue any lawful trade, occupation, or calling. It is part of his civil rights to do so. He is as much entitled to pursue his trade, occupation, or calling, and be protected in it, as is the citizen in his life, liberty, and property. Whoever wrongfully prevents him from doing so inflicts an actionable injury. For every injury suffered by reason of a violent or malicious act done to a man's occupation, profession, or way of getting a livelihood, an action lies. Such an act is an invasion of legal rights. A man's trade, occupation, or profession may be injured to such an extent, by reason of a violent or malicious act, as would prevent him from making a livelihood. One who has followed a certain trade or calling for years may be almost unfitted for any other business. To deprive him of his trade or calling is to condemn, not only him, but perchance a wife and children, to penury and want. Public interests, humanity, and individual rights alike demand the redress of a wrong which is followed by such lamentable consequences. A railroad company has the right to engage in its service whomsoever it pleases, and, as part of its right to conduct its business, is the right to discharge anyone from its service, unless to do so would be in violation of contractual relations with the employee. It is the duty of a railroad company to keep in its service persons who are capable of discharging their important duties in a careful and skillful manner. The public interest, as well as the vast property interests of the company, require that none other should be employed by it. Its duty in this regard and its right to discharge an employee does not imply the right to be guilty of a violent or malicious act which results in the injury of the discharged employee's calling. The company has a right to keep a record of the causes for which it discharges an employee, but in the exercise of this right the duty is imposed to make a truthful statement of the cause of the discharge. If, by an arrangement among the railroad companies of the country, a record is to be kept by them of the causes of the discharge of their employees, and when they are discharged for certain causes the others will not employ them, it becomes important that the record kept should contain a true statement of the cause of an employee's discharge. A false entry on the record may utterly destroy and prevent him from making a livelihood at his chosen business. Such false entry must be regarded as intended to injure the discharged employee; therefore a malicious act. If it is the custom of the railroads of the country to keep such record, and that employees discharged for certain causes are not to be employed by them, then it enters into and forms part of every contract of employment that neither a false entry shall be made, nor one so made communicated, directly or indirectly, to any other railroad company. Suppose it was the custom of railroads, when an employee was discharged without cause, to give him a card or statement to that effect, and if he did not have such card or statement he could not get employment with other railroad companies, then that custom would enter into every contract of employment; and if a company wrongfully refused to give it to the discharged employee, and in consequence of which refusal he was injured, a cause of action would lie for the damages sustained.

"The plaintiff does not seek to recover because he was discharged in violation of a contract which he had with the defendant. He does not allege that he had a contract with it to perform services for it for a given length of time. He seeks to recover damages for its alleged wrongful act in making the false entry upon its record against him, to prevent him from pursuing his calling by rendering it impossible for him to get employment from other railroad companies.

"The petition does not state a cause of action against the defendant. The averments that he has been deprived of the 'right' to again engage in the employment of other railroad companies and that the alleged wrongful act had made it impossible for him to ever again get employment with other railroad companies are mere conclusions of the pleader from the facts alleged. It should have been averred that he had sought and been refused employment by reason of the alleged wrongful act. An agreement made with other railroad companies not to employ defendant's discharged employees does not injure the plaintiff unless carried out. An averment that the defendant conspired and combined with other railroad companies to do an act, if unlawful, would not obviate the necessity of making the averment that he had sought and been refused employment by reason of the alleged wrongful act. Injury is the gist of the action. The liability is damages for doing, not for conspiracy. The charge of conspiracy does not change the

nature of the act. In an action for damages there must be some overt act, consequent upon the agreement to do a wrong, to give the plaintiff a standing in a court of law. For the reasons given the judgment sustaining a demurrer to the petition is affirmed."

It is significant also that nearly all the blacklisting cases are brought as actions under the common law, even in States where there is a statute. Illinois attorneys do not hesitate to say that they can present a stronger case under an action at common law. There are many cases still pending in the Illinois courts. Some of them were passed waiting the decision in the McDonald case. But more recently certain cases have come up against the packers of Chicago who blacklisted the label girls who struck February 9, 1900, on account of a 30 per cent cut in their wages. Mr. William J. Strong<sup>1</sup> brought suit for eight of them and the argument on demurrer in two of them came up in the circuit court before any of the railroad cases was reached, and on decision of the demurrers in two of the packing-house cases two of the circuit judges held that blacklisting was legal. One of these decisions is that of Judge Frank Baker in *Condon v. Libby, McNeil & Libby et al.* in which the court argued as follows:

"Plaintiff alleges that she is an expert can labeler, able to earn \$15 per week at her trade. That defendants are canners at the Union Stockyards, and are all the persons engaged in that business at that place. That upon February 5, 1900, defendants maliciously, etc., agreed and conspired together not to employ any employee of any one of them who should go out on a strike or quit on account of a disagreement as to wages, except by consent of the former employer. That for 2 years before February 5, 1900, plaintiff was employed by defendants, Libby, McNeil & Libby, and on that day quit because of disagreement as to wages. That she afterwards applied to defendants, Armour & Co., and Fairbanks Canning Company for employment, and was denied such employment because of said agreement and conspiracy. All this it is alleged was done maliciously with the intent to injure plaintiff. Defendants demur to the declaration.

"The case has been fully and most ably argued both orally and in writing. I shall not review the numerous authorities cited nor attempt to do more than to state my conclusions and the rules of law on which they rest.

"When damage is sustained by one person from the wrongful act of another, an action for compensation is given to the injured party against the wrongdoer. By wrongful act is to be understood not an act wrongful in morals only, but an act wrongful in law. An act is wrongful in law if it infringes upon the right of another, and not otherwise. An act which does not infringe upon the right of a person is not, as to such person, wrongful. One has the right to decline to enter the service of another, and several persons, acting jointly in pursuance of an agreement to that effect, have the right to so decline. So one has the right to decline to employ another, and several persons acting jointly in pursuance of an agreement to that effect, have the right to so decline.

"The existence of malice, of a malicious intent to injure a person, will not convert an act which does not infringe any right of such person into a wrongful act or a civil wrong. It follows that, in my opinion, the facts and agreements of the defendants set forth in the declaration can not be held to infringe upon any right of the plaintiff, and therefore are not as to her, in law, wrongful. The demurrer is sustained."

The packing-house cases are now before the Supreme Court in such shape that the court will probably pass upon the legality of blacklisting. In the meantime the Ketcham case and others have been passed awaiting further action of the Supreme Court.

Below is a bill prepared by Mr. Strong, whose activity as a lawyer in prosecuting blacklisting cases has made him familiar with the difficulties in getting them before the courts under common-law action or present statutes. This bill was introduced in the United States Senate by Senator J. K. Jones on May 14, 1900, and referred to the Committee on Education and Labor, from which it has not yet been reported. The bill in somewhat amended form will be presented at the next session of Congress.

A BILL to preserve and guard the safety of the public, and to prevent and punish blacklisting by railroad companies, sleeping-car companies, express companies, steamboat companies, telegraph and telephone companies engaged in interstate commerce, and to provide a civil remedy in damages for blacklisting.

*Be it enacted by the Senate and House of Representatives of the United States of America assembled:*

SECTION 1. That any combination, agreement, or understanding, tacit or otherwise, between two or more persons or corporations or between any person or persons with any corporation owning, running, or operating any railroad, steamboat, express, telegraph or telephone lines or transportation

<sup>1</sup>See Mr Strong's testimony on blacklisting, Ind. Com. Repts., Vol. IV, p. 503.

line, engaged in commerce between any of the several States or Territories of the United States, or between this nation and any foreign nation, and any such combination between any persons engaged in the service of any person or corporation so concerned in such commerce, to prevent or hinder the employment of any person or persons, or to cause the discharge of any person or persons from employment by any such railroad, telegraph, or other transportation line, by reason of any participation in any strike or labor trouble, or by reason of any membership or participation in any labor organization, or for any other cause, except for drunkenness while on duty, dishonesty, or gross carelessness in the performance of any such service, or physical or mental incapacity, as hereinafter set forth, shall be an unlawful conspiracy against the United States, and all persons and all officers and employees of any such corporation who shall be convicted of in any way participating in any such conspiracy shall be punished by imprisonment in the penitentiary for a term of not less than two nor more than ten years.

SEC. 2. That it shall be the duty of all persons and corporations engaged in any business described in the first section of this act to give every employee on request a service card showing the length of service and the particular branch of service in which he has been engaged, and such service cards shall in all instances state the length of service, the branch of service in which he has been engaged, and whether the service of any such employee has been "satisfactory" or "unsatisfactory," and nothing else shall be stated on any such service card whatever, and it shall be unlawful and prima facie evidence of a conspiracy to blacklist, and of his participation therein, for any person or officer or employee of any corporation to place on any such service card the date at which any employee left the service of any such person or corporation, or to place the word "unsatisfactory" on any such card without good cause, and before an investigation and hearing as hereinafter provided, and such word "unsatisfactory" shall not in any instance be placed on any such card by reason of participation in any strike, or because such employee belonged to any labor union or labor organization.

*Provided, however,* That if any such employee has been discharged for unsatisfactory service, drunkenness, dishonesty, gross carelessness, or physical inability, it shall be the duty of the person or official giving him a card to state such fact on the service card given to any such employee, and there shall be no liability, civil or criminal, for making such statement, if the same is made in good faith, and after a reasonable investigation and hearing to ascertain the truth or falsity of any such charge, of which hearing and investigation any such employee so charged shall be given ten days' notice in writing and an opportunity to be heard and to produce evidence and to examine witnesses in his own behalf.

SEC. 3. It shall be unlawful and prima facie evidence of a conspiracy to blacklist as herein defined, and of his or its participation therein, for any person or corporation mentioned in the first section of this act to require any applicant for employment to sign any written application, or to answer any question, written or oral, concerning his age, or previous employer, or the cause for leaving any former employer, or the time he left any former employer, and it shall also be unlawful and prima facie evidence of conspiracy to blacklist, and of his or its participation therein, for any such person or corporation, or any officer, agent, or employee thereof, to ask, or to give, by letter, telephone, telegraph, or otherwise, any information concerning any employee who has been discharged or left any such employment, other than may appear upon the service card of such person herein provided for.

*Provided, however,* That it shall be the duty of all persons employing men in such business to require every applicant for work, except inexperienced men, to show his service card, and all applicants, whether experienced or new men, to show the certificate of a physician hereinafter provided for when applying for work to any railroad company mentioned in the first section of this act. And if any employee to whom such service card and physician's certificate have been given has lost such card or certificate, it shall be the duty of the person or officer whose duty it is to give the same to issue and deliver such person, on demand, a duplicate thereof.

SEC. 4. It shall be the duty of every person and corporation engaged in any business described in the first section of this act to keep a record of the names of all employees, the length of service, and the causes, if any, of their discharge or for leaving such service, for the purpose of enabling them to give the service card in this act described, and it shall also be their duty to appoint some officer whose duty it shall be to issue such cards, and it shall also be the duty of every person or official whose duty it is to issue such cards to keep the office of said person or official at all times from eight a. m. until six p. m. each day (except Sundays and legal holidays) open and free of access, with some person in charge thereof, so that employees may not be hindered or delayed in procuring such service cards, and a failure to comply with any provision or provisions of this act shall make the person whose duty it is to give such cards, and the person or corporation employing him, liable to damages to any employee who has failed to get such card by reason of any neglect or omission, or duty herein described or refusal to give any such card on demand, and the same shall be considered and taken as prima facie evidence of an intention to blacklist such employee, and of the participation therein of the person and corporation so failing to do its duty as aforesaid. The records of employees described herein shall at all times be open for the inspection of all employees who may desire to see their own record, but no employee shall be allowed to see the record of any other employee, and none of such records shall be shown to any other person or persons whomsoever, except to the person in charge of the same, except that in any action, either civil or criminal, under this act such record shall be opened to the inspection of the attorney for the plaintiff or of the United States, regarding the record of any such employee who has instituted an action for damages, or on whose account a criminal prosecution is contemplated or commenced, or on whose account an action has been commenced by any other person entitled to bring such action under any of the provisions of this act, either civil or criminal, and a failure to allow such inspection or to produce such records in court on demand made in writing upon the person having the custody of the same, or upon any president, superintendent, or other general officer of such corporation mentioned in the first section of this act, shall subject such person or officer upon whom such demand in writing has been made to a fine of one thousand (\$1,000) dollars and imprisonment for one year for each and every refusal to allow such inspection or to produce such record in court, upon legal proof being made in open court of such demand and refusal, and in any civil action for damages under this act such refusal shall be prima facie evidence of the existence of a conspiracy to blacklist, and of the participation therein of the person or corporation so refusing to produce such record or allow such inspection.

SEC. 5. It shall be the duty of the Interstate Commerce Commission to appoint as many medical examiners as may be necessary in the opinion of such commission, who shall be licensed physicians, at each division headquarters of any such railroad mentioned in the first section of this act, whose duty it shall be to test the eyesight and hearing of all applicants for work, as well as the physical and mental condition of all such applicants who may present themselves, stating that they desire to apply for work to any corporation or person mentioned in the first section in this act, and upon examination of any such applicant, if he is in the opinion of such examiner fit for the service for which he intends to apply, it shall be the duty of such examiner to give a written certificate to such applicant concerning his eyesight, hearing, and physical and mental fitness to perform such service, which certificate shall be in the form prescribed by said Interstate Commerce Commission, and if in the opinion

of any such medical examiner any such applicant is qualified to engage in such service, and it shall be so stated in any such certificate; such certificate shall be prima facie evidence of the fitness of such person for such service, and it shall be unlawful and prima facie evidence of a conspiracy mentioned in the first section of this act, and of his or its participation therein, for any person, corporation, or servant thereof whose duty it is to employ men, to deny any such applicant employment when in need of men if any such applicant, at the time of his application, produces such certificate showing his fitness, and such service card heretofore mentioned showing that his former services have been "satisfactory," and any physician or medical examiner provided for in this act who shall willfully or maliciously refuse to give a certificate of fitness as herein provided to any such person applying for the same who is in fact entitled to the same shall upon satisfactory proof thereof, made before said Interstate Commerce Commission, be discharged from his position by said Interstate Commerce Commission, and forever barred from holding a similar position under this act, and in addition thereto shall upon proof thereof in any court of competent jurisdiction be deemed and held to be a party to the conspiracy described in the first section of this act, and subject to the penalties therein prescribed.

*Provided* That nothing in this section shall be construed to prevent any person or corporation engaged in the business mentioned in the first section of this act from selecting between two or more persons who may, at the same time, present themselves and apply for any position that may be open.

SEC. 6. The medical examiners provided for in the preceding section shall each receive a salary of twenty-five hundred (\$2,500) dollars per annum, which shall be paid quarterly out of the Treasury of the United States, and the salaries of such medical examiners shall be charged up pro rata against all the railroads and other persons or corporations engaged in the business mentioned in the first section of this act, and, having lines running into the division headquarters where any such examiners are located, which salaries shall be refunded and paid by such railroads and other persons and corporations mentioned in the first section of this act to the Treasurer of the United States, once each year upon the pro rata basis aforesaid, and no physician who has ever been in the employ of any railroad or of other said corporations or persons mentioned in the first section of this act shall be appointed to any position of medical examiner provided for in this act, and no such medical examiner shall, directly or indirectly, accept any other emolument or employment from any corporation or person mentioned in the first section of this act. And a violation of this provision by any such medical examiner shall be a cause for his removal from such position upon satisfactory proof thereof being made to said Interstate Commerce Commission. Such medical examiners shall hold their respective offices for a period of four years, unless sooner removed by said Interstate Commerce Commission for cause.

SEC. 7. Any person who has been prevented from securing employment or has been discharged from employment, or who is otherwise injured by an act done or omitted to be done, as provided in this act, may sue in the district or circuit court of the United States in any district where service may be had upon the defendant or one of the defendants, or in any State court of general jurisdiction in any county where legal service may be had upon any defendant under the laws of the State, and he may recover of any person or corporation concerned in such conspiracy all damages which he has sustained thereby, and in all actions for damages under this act, exemplary damages may be assessed in the discretion of the jury trying the case, and for the purposes of this act proof of refusal to give such service card described in section 2 of this act, or of any refusal to employ any person having and presenting such service card and physician's certificate aforesaid, by any of the persons or corporations mentioned in section 1 of this act, shall be prima facie evidence of blacklisting and of a intent to injure, in which damages may be recovered under this act.

*Provided, however,* That no damages shall be recovered under this act for discharging any employee, or for refusal to employ any person, when such discharge or refusal to employ was on account of the fact that no such were needed by the person or corporation so discharging or refusing such employment at the time of such discharge or refusal, and upon any truth, either civil or criminal, under this act, the burden of proving that no such were needed, and that any person discharged from employment or denied employment was discharged or denied employment by reason of the fact that no such were needed at the time of such discharge or refusal, shall in every case be upon the defendant or defendants.

SEC. 8. The denial of employment or discharge of any employee for any cause other than physical or mental unfitness, intoxication, dishonesty, or gross carelessness as described in section 1 of this act, shall be considered, and is by this act defined, to be "blacklisting," and in any civil action for damages or criminal prosecution under this act it shall be sufficient to allege in the indictment, complaint, or declaration that the plaintiff was blacklisted by the defendant or defendants, naming them, and giving the month and year when the same was done, and in the proof of any conspiracy under this act it shall be competent to offer in evidence any act or statement of the persons or corporations mentioned in the first section of this act, and of their agents who hire or discharge them, which tends in any way to establish such charge of blacklisting or conspiracy to blacklist, and the jury trying any such case shall have the right to infer that such person was blacklisted from circumstantial evidence; and actions for damages under this act shall survive to the personal representatives of any person injured.

*Provided,* That any discharge of employees by reason of slack business and lack of work shall not be considered a violation of this section.

SEC. 9. All laws and parts of laws which are in conflict with this act or any portion thereof are hereby repealed in so far as they may affect any provisions in this act or the rules of procedure, and evidence in all cases prosecuted under this act or any provision thereof.

Unless some legislation is secured for the guidance of the courts, the present methods of dealing with these cases will soon make railroad employees feel that a strike or any form of resistance against their employers, no matter how great or just their grievances may be, may lead to the loss of their occupation and not merely to the loss of a particular position. Such a feeling will create very soon a form of industrial slavery. It becomes necessary therefore to consider also in relation to the question of blacklisting, that of strikes and the legal right to quit work.

These decisions would seem to settle the questions arising out of the refusal to give a clearance card or out of the inference that damaging information in the clearance card is any proof of the existence of a blacklist. The plaintiff must be able to go back of this and prove the exchange of the blacklist with other parties amounting to a conspiracy to do him an injury.

Strikes have always been considered a more serious matter in railway employment than in other occupations, for the manifest reason that a successful strike, or even one measurably so, is apt to lead to cessation of traffic for a time at least and thus inconvenience the public. Persons who are interested in a more or less sentimental way in labor disputes in other occupations, often are directly interested when a strike affects the status of public transportation. The law regulating the right of the individual to quit work or to strike does not differ in principle but varies somewhat in application to railway labor as compared with that in other occupations. It has been summed up by Mr. Stimson for the Industrial Commission in the volume (Vol. V of the Commission's Reports) on "Labor legislation."

It is probable that under the common law the most harmless strike could be construed to be illegal and would come under the head of "Conspiracy." The labor statute law of England, and that of the United States law also, emphasizes perhaps unduly restrictions upon what was considered a conspiracy or an act in restriction of trade. Such acts were punished with great severity until the English statutes were modified through the growth of trade-union sentiment. In the United States the common law has been in most instances repealed by statutes expressly legalizing combinations of laborers for mutual improvement and in some cases legalizing strikes.<sup>1</sup> For the reasons already pointed out strikes on railroads are likely to be a particular menace to the public, and the undoubted right of an individual to quit work is, in reference to railroad employment, somewhat similar to that of a pilot on board of ship—it must be restricted more than in other occupations, because the public welfare demands it. Thus, an engineer of a freight train would not be justified in quitting work and leaving his train on the tracks where it might be an obstruction to a passenger train following. He would be required by law to complete his run. Some States have statutes which specifically regulate strikes upon railways. The acts especially affecting or limiting strikes on railways are collated in Stimson's Handbook of the Labor Laws of the United States, page 304,<sup>2</sup> as follows:

"In Maine and New Jersey, any employee of a railroad corporation who, in pursuance of an agreement or combination by two or more persons to do, or procure to be done, any act in contemplation or furtherance of a dispute between such corporation and its employees, unlawfully, or in violation of his duty or contract, stops, or unnecessarily delays, or abandons, or in any way injures a locomotive, or any car, or train of cars on the railway track of such corporation or in any way hinders, or obstructs the use of any locomotive, car, or train of cars on the railroad of such corporation, shall be punished by a fine not exceeding \$500, or imprisonment in the State prison, or in jail, not exceeding 1 year (Me., 123, 6). So, substantially, in New Jersey, the penalty being \$500 or 6 months. (N. J. Rev., 1877, p. 946, paragraphs 173, 175.)

"Whoever by any unlawful act or willful omission or neglect obstructs or causes to be obstructed any engine or car, or aids therein, or who having charge of any locomotive . . . or car, willfully stops, leaves, or abandons it, or renders or aids in rendering it unfit for or incapable of immediate use, with intent thereby to hinder, delay, obstruct, or injure the management and operation of the railroad, or the business of the company, is liable to a fine of \$1,000, or imprisonment for 2 years. (Me., 123, 7.)

"So, substantially, in Connecticut and New Jersey, the penalty is \$100 or 6 months, and \$500 or 6 months, respectively (Ct., 1517; N. J., ib., 174); and whoever, having any management of a railroad locomotive or car, while in use, is guilty of gross negligence or neglect, or maliciously stops or delays the same, or abstracts therefrom tools or appliances, may be punished by fine and imprisonment for 3 years. (Me., 123, 8.)

"Whoever, alone or in combination, does, or procures to be done, an act, in contemplation of furtherance of a dispute between a railroad, gas, or telegraph company and its employees, wrongfully and without legal authority, uses violence toward or intimidates any person with intent thereby to compel such person to do or abstain from doing any lawful act, or who, on the premises of the corporation, by bribery or in any manner induces, or tries to induce, such person to leave the employment with intent thereby to further the objects of such combination, or in any way interferes with such person while in the performance of his duty, or threatens, or persistently follows such person in a disorderly manner, or injures or threatens to injure his property, with either of said intents, is punishable by fine of \$300, or imprisonment for three months. (Me., 123, 9.)

<sup>1</sup> For the significant passages of these laws see Industrial Commission Reports, Vol. V, p. 130, and following.

<sup>2</sup> See also reference, Industrial Commission Report, Vol. V, p. 132.

"Any employee of a railroad who, in furtherance of the interests of either party to a dispute between another railroad and its employees, refuses to aid in moving the cars of such other railroad or trains, in whole or in part made up of such cars, over the tracks of the corporation employing him, or refuses to aid in loading or discharging such cars, is punished by imprisonment for 1 year, or fine of \$500. (Me., 123, 10.)

"And in New Jersey, if any person in aid or furtherance of the objects of any strike obstruct any railroad track, or injure or destroy rolling stock or any other property of the railroad, or take possession of, or remove it, or attempt to prevent the use thereof by the company or its employees, or by offer of recompense induce any employee to leave the service of the railroad while in transit, such person is guilty of a misdemeanor, and punishable by fine of \$500 and imprisonment for 1 year. (N. J. Rev., 1877, p. 916, s. 176.)

"And in Pennsylvania, Delaware, Illinois, and Kansas, if any engineer or railroad employee engaged in a strike, or with a view to incite others to such strike, or in furtherance of any combination or preconcerted arrangement with any other person to bring about a strike, abandons the engine in his charge attached to either a passenger or freight train, at any other place than its destination with the train, he is guilty of a misdemeanor—penalty \$500 or 6 months (Pa. Dig., p. 533, par. 35; Del., vol. 15, 481, 1), \$100 or 90 days (Ill., 114, 108; Kan., 2480).

"So, if such engineer or employee, for the purpose of furthering the object of or lending aid to any strike organized or attempted on any other road, refuses or neglects to remove cars, etc., of such road, or interferes with, molests, or obstructs any engineer or employee in the discharge of his duty, or obstructs any track, or injures or destroys rolling stock or other property of a railroad, or takes possession of or removes such property, or prevents or attempts to prevent its use by the railway. (Del., ib., 2-4; Pa. Dig., p. 533, par. 358-360; Del., vol. 15, 481, 2 and 5.)

"In Illinois, Michigan, and Kansas, if any person or persons shall willfully and maliciously by any act or by means of intimidation, impede or obstruct, except by due process of law, the regular operation and conduct of the business of any railroad company, or other corporation, firm, or individual in this State, or of the regular running of any locomotive engine, freight or passenger train of any such company, or the labor and business of any such corporation, firm, or individual, he or they shall, on conviction thereof, be punished by a fine of not less than \$20, nor less (more) than \$200, and confined in the county jail not more (less) than 20 days, nor more than 90 days. (Ill., 114, 109; Kan., 2481; Mich., 9274.)

"If two or more persons shall willfully and maliciously combine, or conspire together to obstruct, or impede by any act or by means of intimidation, the regular operation and conduct of the business of any railroad company or any other corporation, firm, or individual in this State, or to impede, hinder, or obstruct, except by due process of law, the regular running of any locomotive engine, freight or passenger train, on any railroad, or the labor, or business of any such corporation, firm, or individual, such person shall, on conviction thereof, be punished by fine not less than \$20, nor more than \$200, and confined in the county jail not less than 20 days, nor more than 90 days, etc. (Ill., 114, 110; Kan., 2482; Mich., 9275.)

"This act shall not be construed to apply to cases of persons voluntarily quitting the employment of any railroad company, or such other corporation, firm, or individual, whether by concert of action or otherwise, except as is above provided. (Ill., 114, 111; Mich., 9276; Kan., 2483.)

"In Wisconsin, any person who shall individually, or in association with others, willfully injure or remove any part of a railroad car, locomotive, or of any stationary engine, or other implement or machinery, for the purpose of destroying it, or preventing its useful operation, or who shall in any other way interfere with the running or operation of any locomotive or machinery, shall be punished by fine up to \$1,000, or imprisonment for 2 years, or both. (Wis., 1887, 427, 2.)

"In Texas, any person or persons who shall, by force, threats, or intimidation of any kind whatever against any railroad engineer or engineers, or any conductor, brakeman, or other officer or employee employed or engaged in running any passenger train, freight train, or construction train, running upon any railroad in this State, prevent the moving or running of said passenger, freight, or construction train, shall be deemed guilty of an offence, etc." (Tex., 1887, 92, 1.)

It is the almost unanimous opinion of modern economists of various schools of thought that labor combinations with the power to appeal in the last resort to a strike or a joint refusal to work are, under the present system of competition, necessary and expedient. While most labor organizations realize that the strike is a costly and, in most cases, a useless weapon with which to accomplish their

purposes, the wisdom of maintaining the right to strike, as a last resort, can not be questioned. It has been frequently affirmed in court decisions. Mr. Richard Olney, in his brief in the case of *Thomas C. Platt v. Philadelphia and Reading Railroad Company et al.*, said, November, 1894: "It is unnecessary to elaborate the proposition that a strike is not necessarily unlawful, since it is emphatically sustained by the recent decision of the circuit court of appeals in *Farmers' Loan and Trust Company v. Northern Pacific Railroad Company*." (Reported subnom. *Arthur v. Oakes*, 63 Fed. Rep., 310.)

The usual remedy is sought by employers through the use of the injunction to compel specific fulfillment of the labor contract, and to this use of the injunction the combined labor force of the United States is unalterably opposed and is insistent in its demand for legislation to correct what they consider an abuse of the power of injunction as exercised by the courts. While injunctions are granted to compel specific fulfillment of contract, and frequently in the nature of "blanket" injunctions against strikers, it is claimed that the injunction is no remedy for employees against blacklisting. The use of the injunction is discussed, and a long list of cases cited, by Mr. E. A. Mosely in his testimony before the Industrial Commission (Vol. IV, p. 9); and it is the opinion of many witnesses, including Prof. Emory R. Johnson, that the injunction has played an important part in assisting corporations to secure their ends in disputes with their employees, and that some statutory limitation will have to be placed upon the use of the injunction. The officers of the leading railway orders favor a bill, which has already been introduced in Congress, the text of which will be found in the commission's reports (Vol. IV, p. 761), providing that contempts of court be divided into two classes, direct and indirect, to be proceeded against in different ways. "Contempts committed during the sitting of the court or of a judge at chambers, in its or his presence or so near thereto as to obstruct the administration of justice, are direct contempts. All other are indirect contempts." Indirect contempts are to be proceeded against after a written accusation shall have been made and the accused required to answer, the trial proceeding upon testimony, as in criminal cases, and the accused being confronted with witnesses, and the court having the option of summoning a jury; and, finally, the judgment being subject to appeal to a higher court.<sup>1</sup>

<sup>1</sup> For a more complete discussion of the use and abuse of the injunction in reference to labor disputes see Stimson's *Handbook of the Labor Law of the United States*, p. 311 ff, also this report, pp. 602-615.

## PART III. THE ORGANIZATION OF RAILWAY EMPLOYEES.

---

### § 10. THE HISTORY OF RAILROAD ORDERS AND BROTHERHOODS.

One of the most important chapters in the history of organized labor, when it is properly and impassionately treated, will doubtless be the history of the organization of railroad men. In breadth of scope, in thoroughness of organization, and in the businesslike methods in which they are conducted, the leading brotherhoods and railway orders will compare favorably with any business enterprise. The majority of organizations now in existence have been in operation for several years, and the oldest goes back to a period when the country was involved in the difficulties of a great civil war. All of them are fashioned after the same model, though the differences in the way in which the emphasis is laid on one or other of their chief features is a significant key to the measure of subsequent success. The facts illustrating the life and growth of the organized labor movement among railroad men can be best appreciated by a survey of the activities of each of the brotherhoods in its particular field, and in its dealing with a particular grade of service, degree of skill and intelligence, and particular standard of economic welfare in the class to which it is restricted. A complete history of the brotherhoods has never been written, and the survey presented in the following pages is taken chiefly from the constitution, by-laws, rules, regulations, and literature published in the official organ of the several organizations to which reference is made.<sup>1</sup>

**I. The Grand International Brotherhood of Locomotive Engineers.**—The engineers were the first group of railroad men to organize. There was a strike on the Baltimore and Ohio Railroad in 1851, due to some difficulties which the engineers had with the officers of the Company. The result of the strike was that 16 engineers lost their situation. About this same time the extension of railroads in the country made the demand for engineers such that many inexperienced, incompetent, and intemperate men were engaged, and the older and more thoughtful engineers began to discuss some means of mutual protection and methods for the improvement of their fellow-craftsmen. A convention of locomotive engineers met in Baltimore on November 6, 1855, in response to a circular asking the men on all the railroads to send delegates. Seventy delegates were present, representing 14 States and 55 railroads. An organization known as the National Protective Association of the United States was formed, a constitution and by-laws were adopted, and the convention adjourned to meet at Columbus, Ohio, in October, 1856. At the meeting in Columbus no important business was transacted and the organization never held another meeting. Some few local organizations struggled on for several years.

By 1863 the need for mutual protection, especially against a tendency to reduce the wages of engineers, was keenly felt by the men in the service throughout the country. Certain action of the Michigan Central Railroad in the fall of 1863 seems to have aroused the engineers to the need for organization and resistance. An association of the employees of the Michigan Southern had been started at Adrian and the Central men were invited to join. Some of them did so, but found that the organization included all railroad employees in the mechanical departments, and reported back that in their judgment it would be better for the engineers and firemen to form an organization for themselves. As an outgrowth of this feeling of discontent the engineers on the Michigan Central, Michigan Southern, and Northern Indiana, Detroit and Milwaukee, Grand Trunk, on the American side, and the Detroit Branch on the Michigan Southern, were invited to attend a convention in Detroit May 5, 1863. This convention resulted in the adoption of a constitution and by-laws embodying the fundamental principles of the brotherhood as at present organized. Officers were elected and Division No. 1, Brotherhood of the Footboard, was organized. The fundamental thought in the minds

<sup>1</sup> A very complete account of the insurance and beneficial features of the brotherhoods is given by Prof. Emory R. Johnson in an article in the *Labor Bulletin* for July, 1898.

of the organizers seemed to be that members of the brotherhood should aim to reach a high standard of ability as engineers and of character as men, well fitted to the important and responsible nature of their occupation, thus entitling them to liberal compensation, which should be insisted upon by all legitimate means.

Mr. P. M. Arthur, in writing the history of the Engineers' Brotherhood, says of this period: "Argument, the true worth of able and competent men, and the highest and best interests of the companies themselves, rather than strikes, were at first, always have been, and are now the means on which the brotherhood has relied to maintain the justice of its requests at the hands of the railroad company."<sup>1</sup>

Other subdivisions were rapidly organized before the grand division was perfected in organization. The grand division was formed with 10 subdivisions, and began operations August 17, 1863, at Detroit. William D. Robinson, who is called the father of the brotherhood, was chosen chief grand engineer, and the convention adjourned to meet in Indianapolis August 17, 1864. The first conflict occurred early in 1864 when Division No. 12, of Fort Wayne, had a dispute with the officers of the Pittsburg, Fort Wayne and Chicago Railroad, which resulted in disaster to the engineers. It was felt that the constitution was not strict enough, and some divisions in order to be strong in numbers had unwisely admitted to membership anyone who could run an engine, and also some firemen and machinists. A special convention met in Detroit, February 23, and adopted an amendment excluding firemen and machinists. At the second annual convention, at Indianapolis August 17, 1864, the constitution and by-laws were made still more conservative and the name changed to the Grand International Brotherhood of Locomotive Engineers. The first grand assistant engineer was made the only salaried officer and paid \$125 per month. At the same convention the Trades Review, of Philadelphia, was made the official organ of the brotherhood. Organization in the early days had to go on quietly and secretly, because there was determined hostility and even combination on the part of the railroads to prevent any organization at all. The engineers of New England were not organized until after December 1, 1864, but by April, 1865, the New England States and Middle States had been added to the Western States represented in the organization. At this time there were perhaps 20,000 members divided among 319 divisions. The Locomotive Engineer's Journal was established at the convention of 1866, and has since that time been a great power in developing the brotherhood. At the same convention a widows', orphans', and disabled members' fund was established, which was subsequently changed into the general charity fund. On December 3, 1867, the Locomotive Engineers' Mutual Life Association was established. In 1870 the headquarters were established at Cleveland, where they remain up to the present time. A little later an attempt was made to secure a charter from Congress, but was unsuccessful. One division was incorporated in Tennessee in 1870, but died a natural death in 1877, and the brotherhood is not now incorporated.

Mr. P. M. Arthur was chosen chief of the brotherhood in 1874, and has held that office up to the present time. The brotherhood has been engaged in but few strikes, but they materially affected the interests of the public and were followed with keen interest. No organization has been more successful in making contracts with employers and none has been more conservatively managed and won more real victories for its members, at the same time retaining the respect and friendly consideration of the employers of its members and the confidence of the general public. Perhaps the general feeling of good will toward the locomotive engineers is fairly well indicated in the otherwise eccentric editorial in a recent issue of the New York Sun (September 19, 1899), on "Labor Unions and How to Make Them Pay."

"There is a man named Arthur, Peter M. Arthur. He is a locomotive engineer, and he is the Chief of the Brotherhood or Union of the Locomotive Engineers of the United States. When this man enters the office of a railroad president, he is treated with as much respect and consideration as if he were one of the largest stockholders or some other person of like distinction. His word is unimpeachable; his honesty has never been impugned. He has the confidence and the respect of the employers and the employees and he stands for all that is good and honorable in trades unionism, theoretic and practical.

"No one has ever heard of Mr. Arthur's 'calling out' the engineers on a great line of railroad because a Wall street stock-jobber wanted the price of its shares depressed in the market and was willing to pay well for bringing about a strike. No one ever heard of his ordering a railroad to adopt a new style of locomotive

<sup>1</sup>See Labor Movement in America, edited by George F. McNeil, Chap. XII, by P. M. Arthur on the Rise of Railroad Organizations. Boston and New York, 1887.

that would enable it to dispense with half of its engineers. And no one will ever hear of his doing any of these things. He doesn't know how to do them. He is an honest man. He is not in the union for his personal use. He is in it for his fellow-workmen, and all his ambition is to serve them well and faithfully. That he does; and in the doing of it he has the respect and admiration of the Sun.

"One would suppose that that powerful organization, the Stone Cutters' Union of Chicago, would try to select as its head a man like Mr. Arthur in place of the man it now has. This man, whose name is Sullivan, has been conspicuous lately in the public view by reason of the strenuous and passionate opposition that he has made to certain ceremonies in connection with the laying of the corner stone of the new Chicago post-office. This opposition he offered, it seems, to abate for a consideration of \$5,000. A man like Mr. Arthur would never have been immersed in such criminal disgrace, because a man like Mr. Arthur never would have created a fictitious and factitious grievance for the purpose of being bought off.

"These considerations apply to all unions. The fatal haste to get wealth infects their management. The men, at the head are not all Arthurs, and they yield to the temptation to make money by using the power and influence of the union for their own profit. This is the reason why we have strikes declared on our surface railroads, thus the reason why union workmen are idle and why union workmen are impoverished by assessments to provide for idle men who ought to be at work. This is part of the reason, if not all of the reason, of the strike in the Sun office, and this is why united labor is being assessed to enable professional workmen and men of the character of Delaney, the leader of the Typographical Union, to conduct a futile and stupid boycott.

"The labor unions had better seek out the Peter M. Arthurs in their ranks, and then they may come to enjoy the sympathy of the public and the respect of the Sun."

The object of the brotherhood is declared to be "to more effectually combine the interests of locomotive engineers, to elevate their standing as such and their character as men." Membership is limited to white men 21 years of age, of good moral character and temperate habits, who can read and write, and who have been in actual service at least 1 year as locomotive engineers. No candidate can be initiated while there is a strike on the road on which he is employed, and no member is allowed to join any other labor organization, except the order of steam engineers, on penalty of expulsion. An applicant who is a member of any other labor organization except the Brotherhood of Locomotive Firemen may be balloted for, but can not be initiated until satisfactory evidence is given that he has withdrawn from such other organization. Members of the firemen's brotherhood may be initiated, but must withdraw from the firemen's organization within 1 year. Drunkenness is an offense for which a member is liable to be reprimanded, suspended, or expelled; and if a member is found guilty of keeping a saloon where intoxicating liquors are sold, the chief of his local division must declare him expelled without a ballot. Any member who takes the place of one engaged in a strike by any legally organized labor body, when duly recognized by existing railway organizations as a legitimate organization, is to be expelled when proved guilty. A member may be expelled who does not attend a meeting of his local division once in 3 months, unless excused by the division. Members joining any secret detective organization, or who procure a pass or other favor for a brother member without ascertaining beyond a reasonable doubt that he is entitled to it, must be expelled, without a ballot, by the chief of their local division.

The officers of the brotherhood are: A grand chief engineer and assistant grand chief engineer, and first, second, and third grand engineers, first, second, and third grand assistant engineers, grand guide, and grand chaplain. The first grand engineer is the secretary and treasurer of the brotherhood, the second grand engineer is the editor and manager of the official journal, and the third grand engineer has charge of stationery and supplies and of the Journal mailing list. All officers are elected by the national convention for a term of 2 years, except the G. C. E., A. G. C. E., F. G. E., S. G. E., and T. G. E., who are elected alternately to serve 4 years.

The initiation fee is \$10, and the grand dues for the central organization are \$2.50 per year. Fifty cents of this amount must be applied to a charity fund to pay pensions. The executive committee, consisting of 5 members appointed from the employees of different railroad companies, has power to levy assessments when necessary. Members, however, who have not earned \$50 per month for the preceding 3 months, because of sickness or lack of work, are exempt from such assessments. If a member fails to pay his dues for 3 months, he is expelled

unless excused by a majority vote of the members of his division at any regular meeting; and if a member is retained who is 3 months in arrears, the local division is held responsible for the payment of his dues.

The Brotherhood of Locomotive Engineers' Journal is a monthly magazine containing about 60 pages of reading matter besides a directory of the subordinate divisions and formal announcements concerning the business of the brotherhood; it is also an illustrated magazine of general literature, but contains technical articles of interest to locomotive engineers. It is sent free to all members, and the subscription to all others is \$1 per year.

There is a general board of adjustment on each system of railroad where two or more subdivisions are organized, and an executive board of adjustment, composed of the chairmen of the separate committees, may be established on each composite system of railroad. The chairman of the general board of adjustment may be a salaried officer, devoting his whole time to the work, if two-thirds of the members of the system so elect. The chairman of the general board acts with the local committees in adjusting differences between members and their employers. The general board of adjustment must be convened whenever a majority of the subdivisions on the system desire it, and may be convened at the discretion of the chairman. Any action taken by the general board is binding on all members and subdivisions on the system until repeated by said board or by a two-thirds vote of the members on the system. If the general board fails to settle any difficulty, it must notify the grand chief engineer, who gives such a call precedence over all other business and at once visits such system and is required to use all honorable means to prevent trouble between members and their employers. Any member meeting with an accident in the discharge of his duties must make a complete report in writing for the benefit of the board of adjustment. Members are prohibited from signing any contract with the railway or from making any verbal agreement without the consent of the general board. General boards of adjustment have the power to fix the rate of pay for their own members, and the expenses of such committees, together with compensation for the time they lose, are raised by assessment on all members employed on the system represented.

Subdivisions in each State may, by a two-thirds vote of all the divisions in each State, establish a legislative board, with power to take charge of all matters coming before the legislature involving the interests of the brotherhood. Expenses of such boards, together with pay for lost time by members engaged in such service, are met by assessments upon all members of the brotherhood in the State who earn \$50 or over per month. Delegates are particularly directed to secure laws prohibiting blacklisting. Any member of the legislative board who is discriminated against by the railroad company and loses his situation is to be provided for at the same rate of pay given to the members of the board of adjustment.

There are at the present time over 500 subdivisions and over 32,000 members in the brotherhood. The minimum cost of membership is about \$6 per year, including local and grand dues; the average cost, not including insurance assessments, is probably \$8 to \$9 per annum, which includes of course the subscription to the monthly Journal.

There are 3 general funds maintained: First, the current-expense fund, made up from charter fees, grand dues, profits on printing, etc., from which general expenses, salaries, printing bills, and biennial convention expenses are drawn; second, the charity fund, which is supplied from the general fund by amounts set aside at each biennial convention for charitable purposes, about \$42 annually being thus given to the widows and orphans of deceased members; third, a contingent or strike fund, amounting at present to about \$100,000, which is also under normal circumstances, accumulated from appropriations from the general fund, and comes from the grand dues and profits on the Journal and other printing.

The brotherhood has ever been insistent upon raising the standard of men admitted to the craft of railroad engineers. It is particularly severe in dealing with cases of intoxication. Grand Chief Arthur, in his testimony before this Industrial Commission, stated that in one year—the fifth in the history of the organization—172 members were expelled for intoxication.

The engineers' brotherhood is a trade union in a stricter sense than is perhaps true of any other railroad organization. For this reason it has consistently refused to federate with the Knights of Labor, American Railway Union, Federation of American Railway Employees, or any other labor organization, or to allow its members to retain membership in any other labor organization. It is unincorporated, and the general policy seems to be opposed to incorporation. The insurance department, which is managed as a separate association, had to become incorporated in order to do business in some states.

The insurance features of the brotherhood are provided for under a separate organization, known as "The Locomotive Engineers' Mutual Life and Accident Insurance Association." The first insurance association was organized December 3, 1867, and membership in it was voluntary until it was reorganized and incorporated under the laws of Ohio on March 3, 1894, after which membership became compulsory for all members of the brotherhood who fulfilled the age and other requirements. Previous to incorporation the insurance association was managed by the officers of the brotherhood, but since incorporation it has been necessary that the insurance association have its own officers and be managed no longer as an adjunct of the brotherhood.

The business of the insurance association is conducted as a strict mutual insurance business, and in this respect differs from the merely beneficiary features of the other brotherhoods. The cost of insurance is said to be much less than it would be possible for men in so hazardous a calling to receive on the regular market. The grand chief engineer, in his testimony before the Industrial Commission,<sup>1</sup> stated that the rate had never yet exceeded 14 per cent since the date of organization in 1867. He further stated, "We think it [the system of insurance] one of the best. It is better than we can get in any old-line company, from the fact that we pay for the loss of a hand, arm, limb, or eyesight of one or both eyes, the same amount as we do for death."

The assessments levied per \$1,000 of insurance in the 7 years 1894-1900 varied from \$14.50 to \$18.34, and averaged \$16.55 per year. This was based on a membership of between 16,000 and 26,000 and outstanding insurance amounting to from \$30,000,000 to \$53,000,000. The claims paid in the 7 years referred to amounted to a total of \$1,551,327.89.

The officers of the insurance association are: A president, vice-president, secretary, treasurer, and 5 trustees. Membership is open only to members of the brotherhood not over 50 years of age, and all members of the brotherhood who are eligible must make application for one or more policies in the association. An entrance fee of 50 cents and an annual assessment of 50 cents provides for the general expenses of the association. A medical examination is required. Policies of \$750 and \$1,500 are issued. Three \$1,500 policies may be taken by a member under 40 years of age. Applicants under 45 may carry \$3,000 insurance, and applicants between 45 and 50 \$1,500. Applicants must be in good health and in possession of 2 good eyes and both hands and feet.

A member who loses a hand by amputation at or above the wrist joint, or a foot at or above the ankle joint, or sustains a total and permanent loss of sight in one or both eyes, is entitled to the full amount of his insurance. Assessments are levied for each loss at not less than 25 cents for each \$750 policy and not less than 50 cents for each \$1,500 policy. A member of 5 years' standing who is totally disabled, or who, on account of age and infirmity, can not follow his vocation and has no income, or a member of 10 years' standing, who is over 50 years of age and can not pay his assessments, because out of employment, may make application to have his insurance carried by the association.

Article VIII of the constitution for subordinate divisions states that in the case of a death of any member of good standing the chief engineer of the local division shall appoint a committee to inquire into the circumstances of the family and to give necessary assistance as long as the widow or children are in need. A sick or disabled member may be helped with the funds of the local division, or with money raised by special assessment or by voluntary contribution, as the division may decide.

<sup>1</sup> Reports, Vol. IV, Transportation, p. 121.

**II. Order of Railway Conductors of America.**—In the spring of 1868 the conductors on the Illinois Central Railway at Amboy, Ill., instituted an association called the Conductors' Union. Shortly thereafter the conductors on the Chicago, Burlington and Quincy at Galesburg formed themselves into Division No. 2 of this union. A meeting was arranged between representatives of these two divisions at Mendota, Ill., in July, 1868, and the Conductors' Brotherhood was formed, laws were adopted, and officers elected. Division No. 3 was organized at Aurora, Ill., in August, 1868, and Division No. 4 at Centralia, Ill., in September. In October of that year the officials of the Chicago, Burlington and Quincy ordered their men to leave the brotherhood or the service of the Company, and Divisions 2 and 3 became defunct.

In November, 1868, a call was issued to the railroad conductors of the United States and British provinces for a convention to be held at Columbus, Ohio, December 15, for the purpose of organizing a brotherhood of conductors. This convention was held, the constitution was revised, the benefit department instituted, and officers were elected. Annual meetings of the grand division have been held since then up to the year 1891, when the plan of holding them biennially was adopted.

The conductors' brotherhood was reorganized in 1878 under the present name. Its headquarters are at Cedar Rapids, Iowa, and it includes railroad conductors in the United States, Canada, and Mexico. The number of local unions and the total membership for various years since 1877 and for each year since 1890 are as follows:

Year	Number of sub-ordinate divisions	Total membership	Year	Number of sub-ordinate divisions	Total membership
1877	51	1,058	1894	363	19,253
1882	64	2,014	1895	370	19,737
1887	225	11,947	1896	373	19,810
1889	249	13,720	1897	382	20,697
1890	267	14,453	1898	388	21,950
1891	302	17,906	1899	396	23,526
1892	337	20,238	1900	404	24,502
1893	342	20,356			

It is estimated that about 3,000 railroad conductors are members of other organizations and that about 1,000 are nonunion men. The grand division holds a general convention biennially, to which each subordinate division sends one delegate. A two-thirds vote of the grand division is necessary to change or enact any law. The officers of the grand division are: grand chief conductor, assistant grand chief conductor, grand secretary and treasurer, grand senior conductor, and grand junior conductor, all of whom are elected for 2 years, and 3 trustees and 3 insurance commissioners, elected for 4 years. The grand chief conductor receives a salary of \$5,000 per year, the assistant grand chief conductor \$2,000, and the grand secretary and treasurer \$3,000, to which is added legitimate traveling expenses after being approved by the trustees. The grand senior conductor and grand junior conductor each receive \$2,000 and traveling expenses. The trustees are paid \$100 per annum, and the chairman of the trustees \$300 per annum and necessary expenses. The members of the insurance committee are compensated in the same manner as trustees. There is a board of directors, which acts as an executive committee, and is composed of the grand chief conductor, the assistant grand chief conductor, grand secretary and treasurer, grand senior conductor, the trustees, and members of the insurance committee. This board may be called to meet at any time by the chairman, and the expenses of attending these meetings are paid by the order; likewise the expenses of the biennial convention are paid by the order. All of the officers of the grand division are required to give bonds in the amount of \$25,000.

The revenue of the grand division is derived from the following sources: First, for charter and supplies for a new division, \$60; second, for every division card issued by the grand secretary, \$1; third, for every honorary credential, \$1; fourth, every division pays annually in advance for every member in good standing, \$1; the grand dues may be increased at any time by the grand division, provided they do not exceed \$2. The minimum admission fee which any local division may charge is fixed at \$5.

Any person actually employed as a conductor on a steam surface railroad outside of yard limits, and who has had at least 12 months' actual experience, is

eligible to membership. An applicant must be recommended by three members of the division, who certify that he is a man of good moral character. The use of alcoholic liquors as a beverage is a sufficient cause for rejection of any petition for membership. Applications are referred to a committee of three, and if recommended by the committee are voted upon; two black balls are sufficient to reject. The trial of members or officers for misconduct, or for violation of the constitution and laws of the order, is provided for in great detail in the statutes. The decision rests upon a majority vote of the members of the local division, with appeal to the grand chief conductor, and from his decision to the grand division; the penalties are expulsions and reprimands, but no fines.

In addition to the general funds of the grand division and to the insurance funds, which are kept separate, the order has a protective fund of \$100,000, maintained by an assessment of 50 cents per quarter upon each member whenever the fund is less than \$100,000. Expenditures are made by appropriation of the grand division, requiring a two-thirds vote of the members. The statutes of the order provide an elaborate and conservative method of procedure in all negotiations with employers concerning the conditions of employment and relating to grievances. Various committees having charge of these negotiations are empowered to make agreements with the different railway systems. The conditions of employment are usually fixed by such annual agreement.

In each division there is a local grievance committee for each line of railway whose employees are members of the division, composed of 3 members employed by that line, who serve 2 years, when a complaint is made on the part of a member the chief conductor, if he deems necessary, calls a special meeting of the division; if the division approves the complaint by a two-thirds vote it is referred to the local committee for the line against which the complaint is made, and such committee is directed to proceed to adjust the matter with the local officials. If unsuccessful the division may direct the committee to place the matter in the hands of the general committee of their system of railway. On each railroad system there is a general grievance committee, composed of representatives from each local division. If the members on any system of railway desire the entire time of the chairman of this general committee they may so direct by a two-thirds vote, and the expenses must then be paid out of a system of assessments and be sufficient to guarantee the services of the chairman for at least 3 months. The chairman of the general committee works with and through the local committee, and if unsuccessful he may convene the general committee of adjustment. In case of a strike the grand chief conductor is the recognized leader and has full command of the entire resources of the protective department. No strike is authorized until the general committee of adjustment has failed, after exhausting all honorable means to affect an amicable adjustment, in which case the grand chief conductor and the committee may order a strike on all or any portion of the system involved, provided such action is agreed upon by two-thirds of the members employed upon the territory involved. The same system and authority that brings about a strike is empowered to end it, striking members are paid \$50 per month until the close of the strike, and the payment may continue in some cases beyond the end of the strike.

It is the general policy of this order to obtain written agreements with employers, fixing wages, hours, and conditions of employment. Most railway systems have made such agreements with their men. The order is furthermore ardent in its support of the principle of arbitration, and will not resort to other measures until arbitration has been refused by the other side. Many cases have been arbitrated, and the organization has always secured the major part or all of its contention. No decision of arbitrators has ever been violated by the order, and only one by an employer. The state boards of arbitration of New York and New Jersey intervened in the trouble with the Lehigh Valley Railroad in 1894 and assisted in reaching a compromise.

The mutual benefit department is distinct, so far as the management of its funds is concerned, from the general order. Applicants for membership in the order are required to take out insurance on a mutual benefit plan; insurance policies of 1, 2, 3, 4 or 5 thousand are issued. Members under 30 may insure for any amount; from 30 to 60 years of age they are limited to \$1,000, and over 60 are not permitted to join the mutual benefit department. Regular monthly assessments to the annual amount of \$16 per \$1,000 of insurance are collected, and when this does not prove sufficient additional assessments may be levied by the insurance committee. At death the benefit is paid to the person designated in the policy, or in accordance with the provisions in the will of the deceased, or in the absence of a will, to the widow, children, father, mother, brothers, and sisters of the deceased in the order named; if no relatives survive only funeral expenses are paid and the

insurance reverts to the order. Total disability, through the loss of a hand or foot at or above the joint, or total loss of eyesight or hearing entitles a member to the full amount of insurance. Any member disabled from other causes may have his monthly assessments paid by the benefit department and charged against his certificate. A reserve fund for the insurance department is provided from an assessment of \$1 per year on each \$1,000 of insurance until this reserve fund reaches \$500,000. On June 30, 1900, this fund amounted to \$37,841, at the same time the insurance expense fund amounted to \$13,129, the mortuary fund to \$38,139, the general fund \$114,888, and the strike fund \$100,000, making in all assets of the order amounting to \$303,997. The following benefits were paid in 1897: Deaths, \$336,000; disabilities, \$80,000, 1898, deaths, \$102,000; disabilities, \$79,000; 1899, deaths, \$138,500; disabilities, \$67,000. In addition to these benefits most of the local divisions pay some sick and disability benefits. In the biennial period ending December 31, 1900, there were 488 insurance claims paid, aggregating \$1,020,000. The total amount of insurance paid by the benefit department since organization is \$4,415,467.

The membership of the benefit department at various dates since organization has been as follows.

1877	51	1890	3,933	1898	17,403
1882	70	1892	9,942	1900	20,415
1887	4,768	1894	12,704		
1889	4,296	1896	14,619		

The cost of \$1,000 of insurance is about \$16 per annum, and the minimum cost of membership, including initiation fee of \$5 the first year, fee and assessments on \$1,000 of insurance, annual dues to the grand division, local dues and assessments, is about \$27, and in most local divisions will probably not exceed \$30. In a recent period of 5 years in only 1 year did the assessments amount to as much as \$16 per \$1,000 of insurance. They averaged nearer \$14 on a basis of an average of over \$25,000,000 outstanding insurance.

**III. Brotherhood of Locomotive Firemen**—The Brotherhood of Locomotive Firemen, with its headquarters at Peoria, Ill., was organized December 1, 1873, at Port Jervis, N. Y., with 11 members and one lodge, known as the Deer Park

Lodge. It has grown until it had on July 1, 1900, 572 local unions and a total of 36,084 members. The first annual convention was held at Hornellsville, N. Y., December 15, 1874 at which time 12 lodges had been organized. The second annual convention was held at Indianapolis in December, 1875, and had representatives from 31 lodges, which showed a total membership of 600. At the third annual convention in St. Louis in September, 1876, 53 lodges were represented and 1,500 members. At this meeting the order established the *Locomotive Firemen's Magazine*, an organ which has been published uninterruptedly since that date.<sup>1</sup> At the outset the *Locomotive Firemen's Magazine* was a pamphlet of 32 pages, and the subscription price was fixed at \$1.10 per year; in 1877 it became the property of the brotherhood, and the subscription price was fixed at \$1; in 1882 it was increased in size to 48 pages, and 1883 to 64, and in 1886, when the dues for the grand lodge were increased from \$1 to \$1.50, the magazine was ordered sent free to all members. Since 1888 the magazine has had a minimum of 96 pages, and in 1889 the grand dues were increased to \$2 to cover deficit due to cost of publication of the magazine. The cost of publication was estimated at 92 cents per member for the fiscal year 1899, when the aggregate bulk for the year was 2,024 pages, and at 81 cents per member for the fiscal year ending June 30, 1900, when the aggregate bulk was 1,904 pages.<sup>2</sup> Besides editorials expressing opinions upon questions of special interest to railroad men, it contains a directory of subordinate lodges and items relating to the routine business of the brotherhood, in addition to which general reading matter of a literary character. Its editorials of recent years are frequently bitter in their complaint that locomotive firemen have not shared in the general industrial prosperity. It has opposed the relief associations of railroad companies, the general political tendencies in the direction of expansion and the increase of military forces, the legislation favoring railway corporations, and, in conjunction with other railroad labor unions, it has favored an 8-hour day, municipal ownership of public utilities, compulsory education, stricter liability of employers, factory-inspection laws, abolition of sweat shops and contract labor, legislation against injunctions, and the nationalization of railroads, telegraphs, and telephones. It has looked upon the growth of trusts, and what it generally styles the increasing power of capital, with distrust and with a desire for more effective legislation to protect labor.

Prior to the organization of the brotherhood, firemen were combined in what was called the International Firemen's Union and Protective Association, which met with determined opposition from the railroads. The brotherhood up to 1877 was known as an insurance and fraternal organization, but by that time it had absorbed the few remaining local unions of the International Firemen's Union, and it became a labor organization and participated in some of the strikes of 1877 which spread over the country. The disfavor with which members of the firemen's brotherhood were generally regarded, after the strikes of 1877, retarded the growth of the brotherhood, but since 1885 it has generally been successful in espousing the interests of this class of railroad employees. The brotherhood, however, in recent years, especially in a declaration adopted at the convention of 1894, deprecates strikes and insists upon its members standing by agreements which they make with employers. The firemen have always been anxious to bring about closer relationships between the various organizations of railway men, and especially to secure united action of its legislative committees with those of other brotherhoods in order to strengthen their position with the state and national legislatures. The constitution of the Brotherhood of Locomotive Firemen provides that at least 15 days before the convening of the legislature of any state each lodge in that state may select a member to serve as a legislative representative. Such representative shall meet with other representatives similarly elected, which body must elect two or more of their number to constitute a legislative board of the Brotherhood of Locomotive Firemen, and whose duties will be to influence, in conjunction with other labor representatives, the enactment, repeal, or amendment of laws in which firemen are interested. A legislative board is not constituted in any state unless two-thirds of the lodges select legislative representatives. The legislative representatives may assess members within their jurisdiction to defray the expenses for legislative purposes.

Membership in the brotherhood is restricted to those who have served at least 9 months as locomotive firemen, and who are in act of service at the time of application. An applicant must, furthermore, be white born, of good moral character, sober and industrious, sound in body and limb, and not less than 18 years of age. Locomotive engine hostlers who have served 14 years are also eligible

<sup>1</sup> See historical sketch of the brotherhood, published in souvenir book of the fourteenth annual convention in Atlanta in 1888.

<sup>2</sup> See *Locomotive Firemen's Magazine*, Vol. IV, p. 1500.

to membership. All applicants must pass a medical examination in order to participate in the benefit features of the organization, and no applicant over 45 years of age is admitted to the beneficiary department, nor those who fail to pass the medical test. Three or more "black balls" in the local lodge to which a person applies for membership are sufficient to reject an applicant.

Fees for membership are, first, application fee of \$2; second, initiation fee, fixed by the local lodge, of not less than \$3; third, grand dues, \$2 per annum; fourth, beneficiary dues, to be determined by the lodge and to vary with the amount of beneficiary certificate, but in no case to be less than \$4.50 for a beneficiary certificate of \$1,500; \$3.50 for \$1,000, and \$2 for \$500. The application fee is applied to the payment of the grand dues, the initiation fee goes into the general fund of the local lodge, and the grand dues go to the secretary and treasurer of the grand lodge. Subordinate lodges may levy a special assessment fee agreed to at a regular meeting of the lodge by a two-thirds vote.

One of the chief purposes of the organization is to improve the character and condition of its members. Charges of misconduct may be made in writing and signed by any member of the order in good standing. They are then referred to a committee of three disinterested members, which committee takes testimony and submits its report in writing at the next regular meeting of the lodge. If the report is accepted by a majority of the members present, it is declared to be the judgment of the lodge, and the master must enforce the penalties provided for in the constitution. From such decision any member may, within 30 days, take an appeal to the grand lodge, which, when submitted in writing, is filed by the grand secretary and brought before the next regular meeting of the grand lodge, whose decision is final. The convention of 1898 provided a penalty of expulsion for any one proven guilty of giving away or selling a pass. The constitution also provides that any member using intoxicating liquor to excess, or found guilty of other things of immoral character, may be suspended for the first offense, if of a light character, but if of a serious nature, and for a second offense, shall be expelled. Expulsion is always the penalty for making use of any improper means for obtaining relief benefits. No lodge is allowed to derive revenue from the sale of liquor at picnics or at entertainments upon a penalty of forfeiting its charter.

All funds due the local lodges are received by a collector and turned over by him to a receiver, who gives a receipt for them and makes payments on orders signed by the master and secretary. The funds of local lodges are invested by local boards of trustees, in conjunction with the receiver, in such securities as the lodges may direct. The trustees must examine the books of the receiver monthly, and must make a quarterly report in writing to the lodge. Funds received by the grand secretary and treasurer must be deposited daily in bank, and not withdrawn except upon check signed by the grand master and grand secretary and treasurer, each of whom is bonded by some reputable company—the grand master for \$125,000 and the secretary and treasurer for \$100,000. All regular receipts of the grand lodge, including insurance assessments, and magazine subscriptions, and income from advertisements in the magazine, are paid into one general fund. Special assessments, which the grand lodge has power to levy for the protection of its members and the promotion of its welfare, constitute special funds for the purposes for which they were levied. No funds can be donated or loaned for any purpose except by two-thirds' vote at a meeting of the grand lodge. Large sums are voted to members not entitled to insurance. In 1896 \$32,000 was so voted, and at the convention of 1898 \$28,000.

The beneficiary department of the grand lodge is compulsory for all members who are eligible to participate in its benefits. In case of death it pays, first, to the widow; second, to the child or children; third, father; fourth, mother, and fifth, brothers and sisters, in this order, unless payment is otherwise directed by the member to be made in some other order to any of the persons in the classes above designated; in case of there being none of the above relatives, the amount may be made payable to whomsoever the member may direct.

If none of the above relatives are living and the member has failed to designate anyone else, payment of his benefit goes to the local lodge of which he was a member. The grand lodge has power to levy assessments for the purpose of providing such benefits. These assessments amount to \$2 for a beneficiary certificate of \$1,500; \$1.50 for \$1,000, and 75 cents for \$500; such assessments to be levied as often as may be required to meet outstanding claims. In case of total disability the beneficiary certificate is paid in full, the same as in case of death; and total disability is construed to mean to become totally blind, or sustain loss of hand at or above the wrist joint, or a foot at or above the ankle joint; also in cases where a beneficiary member in good standing is totally and permanently incapacitated

from performing manual labor, from consumption, Bright's disease of the kidneys, or total and permanent paralysis.

Charges against the officers of the grand lodge may be made for the following causes: Drunkenness, incapacity, disobedience to superior officer, abusive or threatening language to a brother officer, misappropriating or diverting grand lodge funds, neglect of duty, or any conduct subversive to the interest of the well-being of the order. When such charges are made in writing, the chairman of the executive board of the grand lodge must call a meeting of the board and summon the accuser and the accused, and witnesses for a trial of the accused. If found guilty, the expense of the trial is borne by the grand lodge funds, but if not guilty, it is assessed upon the accuser. Appeal may be taken to the ensuing meeting of the grand lodge.

The grand lodge furnishes all printing and supplies for the subordinate lodges, and makes this a source of some revenue. The constitution of the grand lodge, and also of subordinate lodges, may be amended only when the proposed change quotes in full the section to be changed, incorporating an alteration or amendment, and is filed in the grand lodge not less than 60 days before the meeting of the next biennial convention. The grand secretary and treasurer must have such proposed amendments printed, and copies sent to each subordinate lodge, and also referred to the committee on constitution and by-laws. If the amendment is approved by the committee, it shall be reported to the meeting, and if such report is adopted by two-thirds vote, it shall constitute a part of the constitutional law of the grand lodge, to take effect at such time as may be determined by the meeting, otherwise it shall be rejected, and so declared.

The officers of the grand lodge are a grand master, grand secretary and treasurer, editor and manager of the magazine, grand executive board, and board of grand trustees, all of whom are elected for a term of two years. No member holding membership in any other labor organization can hold office in the grand lodge. A charter fee of \$50 must be paid by each subordinate lodge at the time of its organization and in return such subordinate lodge receives a full line of blank books, blank forms, and lodge supplies. Members of local lodges, whose claims for disability have been allowed, may become honorary members of said lodges and are exempt from payment of dues and assessments.

The protective department of the brotherhood provides that any member who considers that he has been unjustly dealt with by his employer is to report in writing to the lodge having jurisdiction, and it deemed a proper subject for investigation the matter shall be referred to the protective board, provided the lodge may authorize the protective board to adjust grievances pertaining to rights specified by contract or agreement with the company without having first been referred to the lodge, and in such cases a member may submit his grievances to the chairman of the board. The protective board shall carefully and impartially examine all matters referred to it and proceed to adjust the same as soon as practicable thereafter, upon a basis of equity and justice, and every honorable method known to arbitration shall be exhausted in effecting an amicable and satisfactory adjustment of the difficulty.

In their efforts to adjust a grievance the board shall present the same to the lowest subordinate official who has jurisdiction. Should they fail to adjust a grievance with a division of officials, they shall call the chairman of the joint board to act with or for them, and, if they fail, the entire joint board may be convened. The joint board is made up of the chairmen of the local boards of each lodge upon a single railroad system. The protective board has power to make and enter into written contracts with officials of the company upon whose lines they are employed, making such rules and agreements as they may deem just and equitable for the government of their wages and the seniority rights of the members which they represent. They shall also have power to adjust all grievances of a general character arising from violation of said rules and agreements. Agreements signed by the railway officials and the joint protective board and approved by the grand master are binding on all members employed on that railway or system of railways. Any member violating any of the provisions of said rules or agreements shall be immediately expelled from the order by his lodge. Failure to do so means that the grand master has power to revoke the charter of the lodge. Members inciting a strike or participating in a strike, except when sanctioned by the grand master and joint board, after having failed in all honorable efforts to effect an amicable and satisfactory adjustment, and after having received the consent to strike of at least two-thirds of the parties interested, shall be expelled from the order.

The order has a protective fund for which each member is assessed 75 cents per quarter, so long as this fund remains under \$100,000. When it reaches this

amount assessments cease. The protective fund is held by a special officer in each local lodge and reports made of the amounts so held to the grand secretary and treasurer, who issues quarterly a circular report to subordinate lodges, showing the total amount of the protective fund. When an emergency arises necessitating the use of this fund, the grand secretary and treasurer instructed by the grand master, who is the leader of any strike, makes a pro rata call upon the lodges and when the protective fund is insufficient additional assessments may be made during the continuance of the strike.<sup>1</sup> Striking employees are paid at the rate of \$25 per month, and no member receives pay for a longer period than 3 months. Authority is vested in the same parties to end a strike as have power to begin it.

The history of the brotherhood, as may be inferred from the above account obtained from its constitution and by-laws, has been marked by various experiences of considerable educational value. Before the institution of the brotherhood the International Firemen's Union succeeded in arousing considerable hostility on the part of railway officials. In 1878 the brotherhood seemed to be in a hopeless condition. Opposition had been increased by the strike of 1877; only 51 lodges reporting at the convention of 1878, and the treasury was depleted. At this time many of the lodges of the International Firemen's Union accepted the invitation of the brotherhood to organize as subordinate lodges of that body, and the membership was increased in numbers without being much strengthened in quality. The virtual leader up to 1880 was W. N. Sayer, grand secretary and treasurer, who was removed from office by the grand master because of his excesses in the use of intoxicating liquor. Eugene V. Debs was appointed to fill the position and was duly elected at the subsequent convention in 1880. Mr. Debs occupied this position until 1892. At the time of his election he opposed any resort to strikes, and upon his suggestion a general policy to ignore strikes was adopted. The opposition of railway officials was thereby considerably removed and the membership increased in numbers. In 1885 the Firemen's Brotherhood again adopted an aggressive policy and the membership increased but slightly during the next 5 years. Mr. Debs resigned the position of secretary and treasurer in 1892, but edited the *Locomotive Firemen's Magazine* until 1894. In 1894 the brotherhood suffered greatly from the great railway strike. It had no official connection with the American Railway Union, but many of its members were drawn into the strike, and the organization fell off in membership and did not regain its position of 1894 again until the year 1898. The following table shows the membership reported by the brotherhood for each year since 1881

Year	Members	Year	Members	Year	Members
1881.....	3,160	1888.....	18,278	1895.....	21,408
1882.....	5,125	1889.....	17,087	1896.....	22,461
1883.....	7,888	1890.....	18,657	1897.....	24,251
1884.....	12,216	1891.....	22,460	1898.....	27,039
1885.....	14,694	1892.....	25,967	1899.....	30,748
1886.....	16,196	1893.....	28,681	1900.....	36,084
1887.....	17,017	1894.....	26,508		

During these same years the following amounts were paid as insurance benefits to deceased and disabled members:

Year	Amount	Year	Amount	Year	Amount.
1881.....	\$12,104	1888.....	\$217,500	1895.....	\$333,816
1882.....	23,937	1889.....	290,150	1896.....	319,584
1883.....	55,000	1890.....	247,500	1897.....	313,924
1884.....	77,035	1891.....	359,000	1898.....	338,000
1885.....	119,960	1892.....	399,250	1899.....	424,900
1886.....	227,900	1893.....	176,750	1900.....	465,672
1887.....	225,166	1894.....	435,467		

A report presented at the last convention, held in Des Moines, Iowa, September 10, 1900, showed that since the beginning of the beneficiary department of the order a grand total of \$5,474,911.67 has been paid in benefits.

<sup>1</sup> All of section 218 (of the constitution) relating to the protective fund was suspended by the second biennial convention, and will remain inoperative unless exigency arises necessitating its revival, to which due notice will be given by the grand lodge.

The average cost per year for each member of the brotherhood for general and beneficiary funds, including publishing of the magazine, has been calculated on the basis of a \$1,500 insurance policy. These sums vary from \$18.50 in the year 1886 to as high as \$20 in the 2 years 1892 and 1894, and to as low as \$16 in 1896. Since 1897 they have averaged, each year, \$18. The amounts disbursed from the protective fund in each fiscal year since the fund was created are reported in the *Freemen's Magazine* for August, 1900, as follows:

Year	Amount	Year	Amount	Year	Amount
1888	\$220,036 10	1892	\$158 15	1896	\$176 59
1889	216,363 65	1893	12,716 20	1897	854 10
1890	128 75	1894	107,657 89	1898	1,235 84
1891	136 05	1895	10,901 12	1899	1,221 30

When the beneficiary department was first organized membership in it was restricted to members in the brotherhood, but was not compulsory. The association issued certificates of membership, agreeing to pay the heirs of deceased members 50 cents for each member of the association, and providing for sick and funeral benefits, fixing the lowest limit of the former at 50 cents a week and the amount of the latter at \$25. In 1877 the separate association was abolished and insurance was made compulsory on all members of the brotherhood. A fixed per capita assessment was retained, and the plan of paying an amount based upon a fixed per capita assessment was followed until 1881, when the insurance was fixed at \$1,000. In 1884 the amount of insurance was increased to \$1,500. The assessments, however, were burdensome, and transfers of large amounts from other funds had to be made to the beneficiary fund in order to lighten the burden of assessments, although conventions repeatedly refused to reduce the amount of insurance paid. In 1894 three grades of insurance were established and the dues fixed as quoted above, and in 1896 the distinction between the beneficiary fund and the general fund of the organization was abolished. There has been some discussion of extending the insurance features to cover accident, sickness, and out-of-work benefits, but thus far the members of the brotherhood restrict the benevolent activity of the organization to cases of death and total disability.<sup>1</sup>

The brotherhood has an employment bureau, through which all the officers of the grand lodge and the subordinate lodges alike cooperate in trying to find employment for members out of work.

*Statistics of the beneficiary department of the Brotherhood of Locomotive Firemen, 1892 to 1900*

a Fiscal year ending June 30

**IV. Brotherhood of Railroad Trainmen.**—The Trainmen's Brotherhood was organized December 23, 1883, to cover the territory of the United States and Canada, and to include men in train and yard service. Its headquarters are at Cleveland, Ohio, and the growth of the organization has been quite steady from the beginning. The number of local lodges, the total membership of the brotherhood, and the number of members expelled for each year since the date of organization are as follows.

<sup>1</sup>See *Locomotive Firemen's Magazine*, August, 1900.

*Membership, Brotherhood of Railroad Trainmen.*

a For 16 months, Sept. 1, 1893-Dec. 31, 1894.

b For 2 years.

The preamble to the constitution states the object of the brotherhood to be to unite the railroad trainmen; to promote their general welfare and advance their interests, social, moral, and intellectual, to protect their families by the exercise of a systematic benevolence, very needful is so hazardous a calling. The preamble further states: "Persuaded that it is for the interests both of our members and their employers that a good understanding should at all times exist between the two, it will be the constant endeavor of this organization to establish mutual confidence, and create and maintain harmonious relations."

The grand lodge meets biennially and its enactments and decisions are the supreme law of the brotherhood. Its officers are—a grand master, three vice grand masters, a grand secretary and treasurer, a board of grand trustees, consisting of 3 members and 1 delegate from each subordinate lodge. These officers are not permitted to represent the local lodges in the convention of the grand lodge, but they have a voice in said convention though not a vote. They are elected for 2 years, but no such officer is permitted to retain membership in any other protective railway labor organization. The grand master, together with the grand secretary and treasurer, is responsible for the disbursement of funds, he is therefore bonded in the sum of \$25,000. He supervises the publication of the Journal and decides all controversies referred to him which may arise in the brotherhood; his decision is final unless reversed by a two-thirds vote of the grand lodge at its next meeting. His compensation, as well as that of the three vice grand masters, is fixed by the biennial convention. The grand secretary and treasurer is bonded in the sum of \$75,000. He is authorized to issue assessments in sums of not less than 75 cents per month for each member who shall carry a beneficiary certificate in Class A, amounting to \$100, and not less than \$1.50 per month for each member who shall carry a beneficiary certificate in Class B, amounting to \$800, and not less than \$2 per month for each member who shall carry a beneficiary certificate in Class C, amounting to \$1,200, and must preserve the surplus amount on each claim until the next biennial convention, with which amount the claims presented to the convention are adjusted. After all claims allowed by the convention are paid, the balance, if any, is disposed of by the convention for beneficiary purposes.

The minimum total cost of membership in the brotherhood, with all its privileges, protection, Journal, and insurance, may be estimated as follows:

*Statement showing monthly membership fees, etc., of the Brotherhood of Railroad Trainmen.*

	Class A (insurance, \$100)	Class B (insurance, \$800)	Class C (insurance, \$1,200)
Beneficiary assessment.....	\$0.75	\$1.50	\$2.00
Monthly dues.....	50	50	50
Grand dues.....	28	25	25

The above rates are the prevailing ones. The amount of monthly dues for beneficiary purposes is fixed by the constitution and does not change. The monthly dues for subordinate lodge purposes are usually 50 cents per month, although in a number of lodges the charge is but 25 cents per month. The grand dues are 25 cents per month and are collected 8 months in the year,

so that in making yearly estimates for each class this should be taken into account. There is a nonbeneficiary membership—those not physically eligible to the insurance department. The minimum payment made for monthly dues by this class is 50 cents; in addition to this they pay grand dues the same as beneficiary members. The admission fee by initiation is fixed by the lodge, but the constitution fixes the minimum thereof at \$1. A protective-fund assessment of \$1 per year is provided by the brotherhood laws, payable quarterly, but only in the event of this fund falling below \$100,000. There have been no assessments for the protective fund since August, 1895. In addition to the foregoing charges there may be levied assessments to cover the expenses of members of the grievance committee for time lost in adjusting complaints, wages, schedules, etc., with the officers of the company. Such expense is provided for by the levy of a pro rata assessment on every member of the brotherhood working on the system, the amount of which varies in accordance with the time used by the committee in this work, as well as the number of men on the system. Some systems having a very large membership, the pro rata assessment is small; while others having a comparatively small membership, for similar services of their committee would necessarily have to pay a much larger pro rata assessment. Every 2 years an assessment is levied on each member of the brotherhood to pay mileage and per diem expenses of the delegates attending the biennial conventions. The assessments per member for the last two conventions were \$1.20 and \$1.60, respectively.

The grand secretary and treasurer, with the approval of the grand master, employs such assistants as are necessary, but they must come, if possible, from the ranks of the brotherhood. The board of grand trustees is charged with the duty of seeing that the grand officers discharge their duties faithfully and efficiently. In case of irregularity they must prefer charges to the grand executive committee. The trustees audit and examine the accounts of the grand lodge officers at the close of each fiscal year, and they provide for extraordinary expenses arising in the grand lodge; they also recommend to the grand lodge legislation to promote its financial welfare. The grand executive board is the judicial tribunal.

The Railroad Trainmen's Journal is the official organ of the brotherhood. The grand master appoints an editor and manager, who works subject to his approval, but whose compensation is fixed, like that of all the officers, the trustees, and executive board, by each biennial convention. The general fund of the grand lodge is depleted from the grand dues, charter fees, journal receipts, and money from the sale of supplies to subordinate lodges. The grand lodge assesses a tax of 7 cents per month for the first and second months of each quarter, to be known as grand dues, and the grand master and grand secretary and treasurer have power, in conjunction with the board of trustees, to levy special assessments for the protection of members and the promotion of the welfare of the brotherhood.

The beneficiary fund is kept separate on the books and is depleted from the assessments already mentioned upon the beneficiary certificates. The funds of the brotherhood having been raised for the protection and relief of its members may not be donated for any purpose except by a two-thirds vote of the grand lodge in convention assembled. The constitution makes minute provision for the trial of grand officers before the grand executive board as a judicial tribunal, with appeal to the convention of the brotherhood, where a two-thirds vote is necessary to reverse the decision of the grand executive committee.

The charter fee for each new lodge is fixed at \$50. The constitution of the brotherhood may be amended only by a two-thirds vote of the members present at a biennial convention, at which 150 members are necessary to constitute a quorum.

The beneficiary department provides that applicants must be examined by a physician and application blanks accompanied by a certificate of the medical examiner of the subordinate lodge. All beneficiary certificates are said to be interpreted and construed in accordance with the laws of the State of Illinois; no action at law or in equity may be begun on any certificate except in the courts holden in that State. Death benefits must be made payable to families, heirs, blood relations, affianced wife, or to persons dependent upon the member, provided that a member having no wife or children living may with the consent of the grand lodge make a charitable institution or a subordinate lodge of the brotherhood the beneficiary. In case a member makes an unlawful designation in violation of these provisions, the amount of his certificate reverts to the brotherhood. Proof of death or total disability must be submitted within 6 months, or otherwise the brotherhood is not liable. Total disability, meaning the loss of a hand at or above the wrist joint, or the loss of a foot at or above the ankle joint, or the loss of the sight of both eyes, entitles to the full amount of the beneficiary certificate. All other claims for disability not coming within these provisions are considered to fall within the limits of the systematic benevolence of the brotherhood, but do not constitute a legal claim. Such claims are referred to a bene-

ficiary board, and if approved by the board the claimant may receive the amount of his beneficiary certificate in part or in full. Members making a claim for total disability must be examined by a reputable physician or surgeon selected by the grand master and at the expense of the brotherhood. Death claims as well as disability claims when disallowed by the grand secretary and treasurer are referred to the beneficiary board, and if rejected by the said board the claimant has the right of appeal to the next succeeding convention of the grand lodge, but not afterwards.

Subordinate lodges must elect local grievance committees of 3 members each for each division or system represented in the lodge by 5 or more members. On any line or system of railroad where 3 or more lodges are located there is a general grievance committee made up of the chairmen of the local grievance committees on that line of road. Where there are 3 or more general grievance committees on any line or system of railroad, the chairmen of the several general committees, under the several general superintendents or general managers, constitute a general board of adjustment. A member of any grievance committee failing or refusing to attend a meeting, after proper notification, is, unless excused for good and sufficient cause, expelled from the brotherhood. A member having a grievance must make a statement of it in writing and secure the signature thereto of a majority of the members of the lodge employed on that division. The lodge then determines by a majority vote of the members present, employees of the division, whether to sustain or reject the grievance; if sustained, the local grievance committee takes the matter up with the local officers of the railroad. If the result is not satisfactory it is then referred to the general grievance committee. In cases where the provisions of an agreement or schedule are violated by the employer, thus affecting the general terms of the schedule, it is not necessary to secure the signatures to a grievance of a majority of the members of the lodge employed on the division before it is submitted to the lodge. No grievance is considered by any subordinate lodge unless the brother has attended a regular meeting at least once a month for 6 months previous to presenting the grievance, unless prevented by unavoidable cause of which ample proof has been presented to the lodge and excuse granted. When a grievance goes from the local grievance committee to the general grievance committee a duplicate copy of the grievance is sent to the grand master. The general committee takes it up either with the grand master on systems where there is no board of adjustment, or with the assistance of the chairman and secretary of the board of adjustment where there is one.

When the general committee fails to effect a settlement, the grand master is called in and must respond at once, except when in attendance at the session of the grand lodge, and he must meet with the general grievance committee or board of adjustment, or deputize an officer of the grand lodge to act for him. If the grand master, or general grievance committee, or board of adjustment fail to secure a satisfactory settlement they have power to order a strike, provided such action is agreed upon by two-thirds of the members involved. The expenses of the general grievance committee are paid from a fund raised by an equal assessment on the members of the brotherhood working on the system involved. Each general grievance committee establishes its rate of pay, not to exceed \$5 per day, and an additional allowance for expenses. The protective fund is raised from contributions of \$1 per year by each member of the brotherhood, except nonbeneficiary members; when the fund reaches \$100,000 assessments cease. In emergency cases when the protective fund proves insufficient additional assessments may be levied by the grand master, grand secretary and treasurer in conjunction with the board of grand trustees, provided such assessments shall not exceed \$2 per member in any one month. Striking members are paid at the rate of \$35 per month.

Each lodge must be represented by 1 delegate at the biennial convention of the grand lodge; the delegates are allowed mileage and compensation for their services at the rate of \$5 per day and 60 cents per hour for night sessions, which amounts are paid out of the convention fund. No convention can change the rate of pay or mileage of delegates, but may make a proposal for such change to the subordinate lodges, which becomes effective upon the approval of two-thirds of all subordinate lodges. Strict rules are provided whereby a member receives pay only when in actual attendance upon the convention.

The brotherhood makes provision for legislative boards which serve in any State during a session of the legislature for which they were selected. Their duty is to use their influence by cooperation with the representatives of other labor or industrial organizations or otherwise to secure the enactment of such laws as may best promote the interests of their constituents. Such legislative representatives are chosen 15 days previous to the convening of any legislature in any State by the lodges in that State, and they are authorized to levy assessments to defray neces-

The provisions for membership in the local lodges and for penalties of nonpayments of dues, and also for sick and funeral benefits, as well as for transfer and traveling cards, are quite similar to the rules in the other brotherhoods. Members are prohibited from dealing in or being in any way connected with the sale of intoxicating liquors, and members making use of improper means to obtain relief or benefits or convicted of drunkenness may be expelled. In the case of drunkenness the penalty for the first offense is a reprimand or suspension for 30 days, or both, for the second offense suspension for not less than 30 days nor more than 2 months, and for the third offense, expulsion. Any member of the brotherhood having received transportation over any railroad and found guilty of selling the same must be expelled.

The financial status of the Trammens' Brotherhood is remarkably good at the present time. A statement dated August 1, 1900, shows that the total assets amounted to over \$369,000 distributed as follows:

Beneficiary fund	\$204,109.93
General grievance committee fund	2,821.26
Protective fund	100,899.85
General fund	59,204.39
Convention fund	5,817.20
The outstanding liabilities at the same date were	125,600.00
The receipts for the beneficiary fund during the calendar year 1899 amounted to	724,326.06
And the disbursements	671,292.60

The funds of the order are placed in banks and certificates of deposit taken for the same, with the exception of the amount of \$50 which is kept on open account. The total amount paid on account of death claims since the organization of the brotherhood in 1883 to July 1, 1900, amounted to \$5,760,067.63. The brotherhood has had no important strikes recently. It seeks to procure a 10-hour day for its members. The attitude of employers, it is claimed, is generally friendly and it has secured in many cases written agreements as to wages and hours. It favors arbitration and conciliation but has had very little experience with arbitrated cases. In the strike on the Lehigh Valley Railroad in November, 1893, the State boards of arbitration of the States of New Jersey and New York were appealed to and succeeded in effecting a settlement of the strike.

*Statistical summary of beneficiary department—Brotherhood of Railroad Trammens.*

Fiscal year	Membership of brotherhood at close of year	Initiations at close of year	Memberships of beneficiary department at close of year	Amount of assessment of each member holding a certain rate for								Cost per \$1,000 of insurance carried	Number claims paid	Total paid on insurance claims

a No record of 1883 and 1884.

b For sixteen months, September 1, 1893, to December 31, 1894, inclusive.

c Biennial periods, 1895-1896 and 1897-1898.

**V. The Order of Railroad Telegraphers.**—The National organization of the Railroad Telegraphers was effected June 9, 1886. Its headquarters are at St. Louis, Mo., and the territory it covers includes United States, Canada, and Mexico. Its chief purpose, as outlined in the preamble of its constitution, is "to unite railroad telegraphers for the protection of their interests, to elevate their social, moral, and intellectual condition, to promote the general welfare of its member-

ship, and to establish a mortuary fund for the benefit of those depending upon its members. The grand division meets biennially. Each local division is entitled to one representative for the first fifty members, one for the second fifty or fraction thereof, and one for each hundred after the first hundred. The officers of the grand division, including the president, first vice-president, secretary and treasurer, the five members of the board of directors, and the senior and junior past president, together with the delegates elected from the local divisions, as provided for above, constitute the grand division, which has general authority over the brotherhood. The grand division legislates for the entire order, and may amend its constitution only by a two-thirds vote. The president is the official head of the order, and appoints 8 standing committees composed of 7 members each: (1) On credentials, (2) constitution, (3) statutes, (4) local divisions, (5) system divisions, (6) grand officers' reports, (7) finance and salaries, and (8) grievances and appeals. He also appoints the following special committees composed of 3 members each: (1) On printing, (2) state and national legislation, (3) labor and labor statistics, (4) resolutions, petitions, and greetings, (5) rules, special and general, (6) official organ, (7) ritual and secret work, (8) minutes, and (9) press. He must give a bond for \$10,000. He has power to grant charters, to organize new divisions, and to suspend from his official function any officer of any division, subject to the right of appeal by said officer to the grand division. He is elected for 2 years, and receives such compensation as may be determined by the biennial convention. The other officers are a deputy president, who may be appointed for a definite time as the immediate representative of the president and subject to his direction, 3 vice-presidents, who are paid such compensation as may be determined upon by the grand division, and are also paid their necessary traveling expenses, and serve for a term of 2 years; a secretary and treasurer, also elected for 2 years, whose compensation is fixed at each session of the grand division. This officer, under the supervision of the president, has editorial charge and business management of the Railroad Telegrapher, the official organ of the order. All moneys are paid out only after the joint approval of the president and the secretary and treasurer. A marshal, inside sentinel, and outside sentinel are officers appointed at the opening of each session of the grand division, who serve only during that session. The board of directors consists of 5 members elected to serve 4 years and chosen alternately, 3 and 2, at each convention of the order. This board constitutes a board of appeal, and has appellate jurisdiction during the recess of the grand division, and decides all questions of law and equity when appeal is taken from the decision of the president. The decision of the board stands until rescinded by the grand division. This board also tries any officer charged with misconduct, and has power to call a special session of the grand division. It may suspend any or all of the grand officers, and may fill vacancies, except the office of president, until the next session of the grand division. Charges against any officer must be made in writing to the chairman of the board, and the accused must have a copy of the charges and 30 days' notice of the time and place of trial. The accused may be present or represented by counsel, provided the counsel is a member of the order in good standing. The penalties for guilt are reprimand, suspension from office, and expulsion from the order, but no fines.

The revenues of the grand division are derived from, first, charter fees of \$10 received from each new division; second, for every person initiated in a new division 75 cents is paid to the grand division; third, each division pays semi-annually for every member 50 cents per capita tax, which amount must accompany the weekly report of increase in membership to the secretary and treasurer as the members pay their dues. Supplies are furnished each new division by the grand division at a cost of \$10 in addition to the charter fee. A division being organized must pay the organizing officer a fee of \$1 per day and mileage, but no organizer may charge for more than 3 days in organizing one division. The initiation fee of a member is fixed at \$3.50 and the dues shall not be less than \$4 per year.

The Railroad Telegrapher, published monthly, is sent free to all members in good standing, but each division is charged annually \$1 per capita for this account. The magazine contains editorial and literary material of a readable and instructive character intended to promote the general welfare of the order; a section is reserved for notices of assessments, reports, and other documents emanating from the grand division; but all material in the magazine must be nonpartisan and nonsectarian and it shall contain nothing of a religious or partisan character. Any deficits on account of the magazine are made up from the general fund and any profits turned into this fund.

Membership in the order is limited to any white person of good moral character who is 18 years of age or over, who is actually employed as a telegrapher, lineman, leverman, or electro-pneumatic interlocker on a railroad, and who has had at least 1 year's experience as such. Any white person of good moral character

who has had at some time 3 years' experience as a telegrapher, is also eligible to membership. The use of alcoholic liquors as a beverage is sufficient cause for rejecting any application for membership. Applications are referred to a committee, and when duly reported are balloted on. Two blackballs reject. Any member of the order who shall violate his obligations, or shall knowingly violate the established principles, rules, and customs of the order, or shall disregard the requirements of the constitution and statutes of the order or the by-laws of his division, or shall commence any proceedings either in law or in equity in any matters pertaining to the order in any court without first exhausting the remedies provided by the laws of the order, or be guilty of any other conduct unbecoming a member of the order, is amenable to the division of which he is a member and must be tried and punished. Elaborate rules for such trials are laid down in the statutes. Women are eligible to membership in the order the same as men and are entitled to all rights and privileges. All the members of the order employed on any one line of railroad may be organized and chartered in a system division under the jurisdiction of the grand division, the officers of which shall be a local board of adjustment, consisting of members of each division or district of the railroad on which the division is located, and a general committee, to consist of a general chairman and the chairmen of the local boards of adjustment on said line of railroad. A system division is established only when a majority of the members on any one line of railway desire it.

The protective department of the order must be participated in by each member; each subordinate division elects a local board of adjustment and the chairmen of all the local boards on a system of railroad constitute a general committee. It is unlawful for members of the order to present any proposed contract, set of rules, or schedule to their employers unless a majority of the telegraphers on that line of road are members of the order in good standing. Members having grievances report them in writing to a division meeting or to the chairman of the local board of adjustment, which is required to proceed to adjust the same upon a basis of equity and justice and to effect an amicable and satisfactory settlement, provided however that the general committee shall not present a schedule to the railway officials or attempt to secure its adoption until it has first been approved by the president, if the local board fails, the matter is referred to the general chairman of the system upon which the grievance exists, who, if necessary, convenes the general committee and tries to adjust the grievance; if unsuccessful the matter is forwarded to the president. The president and general committee have authority to order a strike after having exhausted amicable means of settlement, provided the strike is agreed to by two-thirds of the general committee interested. The president becomes the leader of the strike, and the same power that orders the strike may discontinue it. Members engaging in any strike not authorized by the order shall be expelled. Each member of the order is assessed \$1.50 semiannually, in addition to his regular semiannual dues and subject to the same conditions for nonpayment, for the protective fund; when the fund reaches \$50,000, the assessments cease.

The mutual-benefit department of the Order of Railroad Telegraphers was not established until January 1, 1898. It is under the control and government of the grand division. It issues certificates in 3 series—series A, limited to \$300; B, to \$500, and series C, to \$1,000. Any member of the order in good standing and satisfactory physical condition is compelled to be a member of the benefit department. Members over 18 and under 45 are eligible to hold 1 certificate and no more in either of the 3 series, A, B, or C. Members over 45 and not over 50 are eligible to series A or B only; members over 50 and not over 60 are eligible to series A only; members over 60 are not eligible to membership in the mutual-benefit department. Forfeiture of membership in the mutual-benefit department on the part of anyone coming under the provisions of its regulations carries with it suspension from the order without further notice until reinstated in the mutual-benefit department. Members of the order whose dues and assessments are not fully paid within 60 days from the beginning of the semiannual dues periods forfeit their membership in the mutual-benefit department without further notice. The board of directors of the order constitutes the insurance committee, and the officers of the order are ex officio the members of the mutual-benefit department. The dues in the mutual-benefit department are payable bimonthly; they amount, therefore, to 6 payments of 35 cents each for a certificate in series A, of 50 cents each for certificate in series B, and for \$1 each in series C. There is furthermore an initiation fee or admission fee of \$1 for either of the series. Whenever the assessments thus provided prove insufficient to pay the approved claims of the department the secretary may, with and by the advice and consent of the insurance committee, levy extra assessments in such sums as may be directed. Claims must be filed and

proof of death submitted within 1 year from the date of death, otherwise the department is relieved of any liability; total disability entitles the member to make application to the insurance committee, which may order his assessments in the benefit department paid from the expense fund of the department and charged to the member's certificate. Death benefits are payable only to the family, heirs, blood relations, affianced wife of, or to persons dependent upon, the member; a member having no wife or children living may, with the consent of the grand division, make a charitable institution the beneficiary. In default of the above provisions the expenses of the last sickness and funeral of the deceased are paid and the balance of his certificate reverts to the expense fund. In 1899 death claims were paid to the amount of \$17,500. Insurance costs about \$7 per year for \$1,000.

The order is not very strong, and in the year 1900 had 77 subdivisions with from 15,000-20,000 members. The minimum cost of membership is \$10.50 the first year and \$7 per year thereafter. It is estimated by the officers of the order that very few telegraphers are members of other labor organizations, but that about 30,000 are nonunion workers. Since January 1, 1899, the telegraphers have had one important strike on the Southern Railway in which their chief demands were for increased wages, a 12-hour day, and pay for overtime. The result of this strike was a considerable loss to both parties in the struggle. At the date of this writing a strike is in progress on the Santa Fe system (1900).

It is claimed by the order that the attitude of employers to it is usually friendly and that it attempts to secure written agreements with employers fixing wages, hours, and conditions of labor and that in this it is quite generally successful. The order favors arbitration and conciliation, and in one case, in connection with the Grand Trunk Railway of Canada, a question of wages was submitted to three arbitrators, who gave the telegraphers an annual increase amounting to about \$70,000.

**VI. Brotherhood of Railway Trackmen of America.**—This brotherhood was organized in 1891 as an educational and fraternal society to which only road masters and foremen of gangs were eligible to membership. Since December, 1898, the scope has been enlarged to include all maintenance-of-way employees. Its headquarters are at St. Louis, Mo., and it covers the territory of the United States and Canada. Its objects, as stated in the preamble to its constitution, are to exalt the character and increase the ability of trackmen to perform their duties; to insure greater safety in the maintenance-of-way department by an interchange of ideas; to relieve sick or distressed members; to bury deceased members and to provide for their widows and orphans; to allow no person to remain a member of the order who does not live a sober and moral life; to use all honorable means to secure the passage of laws beneficial to the craft and to improve the trackman's condition. The officers of the grand division of the order are a grand chief, three vice grand chiefs, and a grand executive committee of five members. The grand chief receives a salary of \$1,500 per year, he decides all controversies appealed from subdivisions, and his decision is final, subject only to revision by a majority vote of the delegates at the following convention. He has power to appoint an organizer for each State and Territory in which the services of an organizer is needed and to dispense with the services and discontinue the salaries of the vice chiefs and organizers. He is also the financial officer of the order and the custodian of all its important papers. He pays all just and lawful bills and keeps an accurate record of all moneys received and forwarded to each division secretary and treasurer. He is required to give a bond of \$5,000, and must deposit the money of the order in a bank account in the name of the order as often as he has a balance of \$100 on hand. He must employ his assistants from the ranks of the brotherhood. The first vice grand chief is the chairman of the grand executive committee; he gives a bond for \$500, and when employed by the brotherhood receives a compensation of \$100 per month and traveling expenses. The second vice grand chief also is bonded to the amount of \$500, and performs the duties of the first grand chief in case of his disability, and otherwise acts under the direction of the grand chief; when employed by the brotherhood he receives \$60 per month and traveling expenses. The status and the compensation of the third vice grand chief are the same as those of the second. The premiums on the bonds of all grand officers are paid from the general expense fund. Organizers appointed by the grand chief are paid for actual services \$50 per month. The grand executive committee has power to summon a special meeting of the grand division; it audits the books of the grand chief, tries all charges against grand officers, and has power to suspend or remove any or all of them from office until the next regular session of the grand division. The consent of the executive committee is necessary to any appointment made by the grand chief to fill vacancies

in the grand division. All claims for death and disability or any claims against the brotherhood must be submitted to the executive committee for approval before payment is made. Compensation of members of the executive committee is determined by the order at each convention.

Membership in the order is open to any roadmaster, foreman, or apprentice who can read and write, is sober, moral, and otherwise of good character, and who has served in the maintenance-of-way department for 1 year or more, and who is considered competent to run a gang. Applicants between the ages of 18 and 55 who are in good physical condition may be admitted to the insurance department. The grand chief is authorized to refer any applicant for insurance to a resident physician if deemed necessary in deciding whether an applicant is eligible. Five members may petition a grand division for a local charter.

The Trackmen's Advance Advocate is the official organ of the brotherhood, and is sent free each month to all members; and the subscription to nonmembers is \$1 per year.

The revenues of the order are derived from, first, the grand dues from each foreman or roadmaster, \$3 per year; second, grand dues for each apprentice, \$2 per year; third, certificates to subordinate divisions for foremen \$2 each, subordinate divisions for apprentices \$1 each, fourth, certificates to foremen joining grand division \$3, and apprentices \$2, fifth, traveling cards \$1 each, withdrawal cards \$1 each, transfer cards from one subdivision to another 20 cents each, transfer cards from grand division to subdivision and from the subdivision to the grand division 25 cents each; sixth, subdivision seal, \$2, and subdivision record book, \$1 each. Each member of the brotherhood pays quarterly in advance 50 cents dues for the maintenance of the protective department, and on beneficiary certificates of \$1,000 there is a monthly assessment of \$1, and on beneficiary certificates of \$500 a monthly assessment of 50 cents. When the sums realized from these insurance assessments are insufficient to pay claims the grand executive committee has power to levy additional assessments, notice of which is printed in the Trackmen's Advocate, and said notice is considered a legal notification.

Subdivisions are organized in which three members in good standing constitute a quorum qualified to transact legal business. The officers of subdivisions are a division chief, a vice division chief, a secretary and treasurer, a warden, a sentinel, and a journal agent elected to serve one year; there is also provision for an executive committee of three members. The fee for admission to membership in any division is \$3 for roadmasters or foremen and \$2 for apprentices, and an advance assessment of \$1 on certificates of \$1,000 and 50 cents on certificates of \$500, payable at the time application is made. Grand division dues are \$3 a year for foremen and \$2 for apprentices, payable half yearly in advance. All members are required to participate in the protective department of the brotherhood, the dues for which are 50 cents per quarter.

In the beneficiary department total disability, which is defined as the loss of both legs, or both arms, or both eyes, or one leg and one arm, entitles a member to the full value of his insurance certificate. The loss of one leg or one arm entitles to half the face value of the member's certificate. There is also a provision in the constitution that the order is not responsible for injury or loss of life to members engaged in riot, unlawful assembly, or in military or naval service, or while in the act of violating any of the laws of the country. In case the beneficiaries of deceased members can not be found, or fail to make their claim in five years after the death of a member, the value of the policy reverts to the general-expense fund of the order.

No subordinate division is allowed to pay any sick benefits to members disabled through intemperance or immoral conduct. A subordinate division may advance the funeral expenses of a brother not to exceed one hundred dollars (\$100), which will be retained from his policy by the grand chief and paid to his division.

Members are charged with the duty of reporting to the division chief or grand chief whenever they have knowledge that any member of the brotherhood has conducted himself in an unbecoming manner calculated to bring disgrace upon the brotherhood, or is guilty of drunkenness or of keeping a saloon where intoxicating liquors are sold, or should he be guilty of neglecting his duty, or maliciously injuring the property of his employers, or wilfully endangering the lives of persons traveling over the road.

The constitution of the order may be altered and legislation on any topic adopted at any regular biannual convention of the order by a majority vote.

Each division elects annually three members as a protective board, and when a member has any grievance against his employer he reports it in writing to a meeting of the subdivision, where a majority vote determines whether it shall be

referred to the local protective board. When so referred the chairman convenes the local board, which must do all in its power to have the grievance properly adjusted with the railway company's local officials. If unsuccessful the grievance is then carried to the joint protective board made up of the chairman of each local board on the system on which the aggrieved member is employed. A joint protective board has power to make rules and agreements with the officials of any railroad binding upon all the members employed upon said railroad system. In cases where the joint protective board is unable to adjust grievances it submits the matter in writing to the grand chief, who is required by the constitution to renew all honorable methods to effect a peaceable and satisfactory settlement, failing in which the grand chief and joint protective board shall have authority to sanction a strike, provided such action is agreed upon by at least two-thirds of the parties interested.

In the event of a strike the grand chief is the leader. Any members engaging in a strike brought about otherwise than through the machinery just described must be expelled by their local divisions, which, in event of their failure to do so, may have their charters revoked by the grand chief. During a strike the joint protective board has power to levy assessments when the protective fund becomes inadequate. The same authority which is empowered to call a strike may discontinue the same. Members engaged in a strike properly authorized are paid \$20 a month to continue to the close of the strike, provided that no member shall receive pay for a longer period than 3 months. Members securing employment during the progress of a strike do not receive strike benefits from the protective fund. Striking members during the continuance of a strike and while out of employment, are exempt from special assessments levied for the benefit of the protective department.

The cash balance in the treasury of the brotherhood on August 1, 1900, with all approved claims paid, was \$9,571.24. All the funds of the order seem to be merged into one general fund. There is no sinking fund nor reserve fund. It is estimated that 20 per cent of the deaths upon which benefits have been paid have been due to accident, and disability benefits are paid only in cases of accidental injuries.

The membership of the order on August 1, 1900, was estimated at 3,000, and there were 142 subdivisions. The officers of the brotherhood estimate that there are 275,000 nonunion men employed in the department of service which they cover. The brotherhood is, therefore, not very strong, it is not generally recognized by employers, and it has as yet met with no success in securing written agreements with employers which would fix wages, hours, or conditions of labor for this class of railroad employees.

**VII. Brotherhood of Railway Carmen of America.**—This brotherhood was organized December 9, 1890, and has its headquarters at Kansas City, Mo. It endeavors to organize all men engaged in building, inspecting, repairing, oiling, and cleaning railway cars in the United States, Canada, and Mexico. It was formed out of a consolidation of the Brotherhood of Railway Car Repairers, organized at Cedar Rapids, Iowa, October 27, 1888; the Carmen's Mutual Aid Association, organized at Minneapolis, November 23, 1888; Car Inspectors and Repairers and Oilers' Protective Association, organized at Indianapolis in 1890; and the Brotherhood of Railway Carmen of Canada, organized at Toronto in January, 1890. In 1900, it had 90 local unions with an estimated membership of 3,500.

It is estimated by the brotherhood that there are 40,000 nonunion men engaged in these occupations, and that 10,000 of these belong to other labor organizations than the Brotherhood of Railway Carmen. A general convention is held every 2 years, to which delegates are chosen by the local lodges. The officers of the national organization elected at these biennial conventions are a grand chief carman, who is authorized to organize all the lodges of the brotherhood and to visit and instruct them; he also appoints a majority of all committees not otherwise provided for, and he receives a compensation fixed by the biennial convention; 3 vice-chief carmen, the first of whom appoints a minority of all committees not otherwise provided for; a grand secretary and treasurer, a board of trustees, called the executive board, composed of 5 members. The executive board, together with the grand chief carman and grand secretary and treasurer, constitutes a general grievance committee, which takes up questions arising between employers and members after the local grievance committee and grand chief carman have failed to effect a settlement. Members of the executive board receive a compensation of \$3 per day while on duty; the treasurer receives a compensation fixed by the biennial convention; he has full charge of the journal published as the organ of the brotherhood.

Each lodge pays to the grand lodge a charter fee of \$25, and \$1.50 per year, in quarterly payments, dues for each member. Charges against officers of the grand

lodge are made in writing to the grand executive board, which institutes a trial. From its decision an appeal may be taken to the next meeting of the grand lodge. All printing, badges, and supplies are furnished to the local lodges by the grand lodge, and are provided under the direction of the grand secretary and treasurer and grand chief carman, who are required to do business so far as possible only with firms employing union labor. The local lodges are required to have an initiation fee of not less than \$1 and monthly dues not less than 25 cents. The qualifications for membership specify that any male white person, from 18 to 60 years of age, who believes in the existence of a Supreme Being, and is free from hereditary or contracted disease, of good moral character, and steady habits, and who has been actively employed for 1 year, and is so employed at the time he seeks to join, as car builder, car inspector, car repairer, car oiler or coach cleaner when he is qualified to repair cars, and any planing-mill man when he is competent to frame cars, is eligible to membership. Persons over 60, otherwise qualified, may be admitted, but not to the beneficiary department. Applications for membership are referred to a committee of 3 and reported upon before a vote is taken; three black balls reject, and the candidate can not be proposed again for 6 months. A member 3 months in arrears for dues is suspended, and one a year in arrears may be dropped. Suspended members may be reinstated within 1 year by a majority vote of their lodge upon payment of all dues, and members who have been dropped may be reinstated upon payment of \$1 upon making due application. A member who has no visible means of support, and makes no effort to obtain support for himself or family, must be suspended or expelled at the discretion of the lodge; any member engaging in the sale of intoxicating liquors or other unlawful business must withdraw from the order. Members who refuse to serve in any office or on any committee to which they are elected are liable to a fine of \$1. The constitution of the order may be amended at the biennial convention by a majority vote of all lodges in good standing, 60 days' notice having been given.

The Journal of the Railway Carmen is published monthly and sent free to every member in good standing. It provides space devoted to advertising vacancies for carmen and to other methods of securing employment.

The beneficiary department is separately organized, but with the same officers as the grand lodge. Local lodges must appoint an insurance agent to solicit members and explain insurance plan and to collect all moneys for initiation, assessments, and dues, and forward the same to the secretary and treasurer, deducting only the actual cost of express for money orders and postage. Any member in good standing not over 60 years of age, who shall pass a satisfactory physical examination, is eligible to membership in the mutual aid association. The examination is conducted by the insurance agent. At the death or total disability of a member of this association, and within 60 days after proof of death or disability, the association pays to the disabled member, or in case of death to the beneficiary mentioned in certificate, the amount of one full assessment, not to exceed the amount specified in the certificate of membership, which may be \$250, \$500, or \$1,000. The membership fee in the association is 50 cents, the annual dues 60 cents, from which amounts the expenses of the association must be defrayed and balances transferred to the benefit fund. Assessments are made as follows: Upon the death of a member of the association, or upon notice of total disability, every member pays 25 cents on a certificate of \$250; 50 cents on \$500, and \$1 on \$1,000. All assessments must be paid within 30 days, upon the expiration of which the secretary sends a second notice, and then if not paid within 10 days the member stands suspended and debarred from all benefits of the association. Total disability is defined as loss of both feet or both arms or both eyes, loss of one arm or one leg, or such other causes as shall be decided upon by a competent board of physicians to be such as would forever debar one from gaining a living by manual labor. Members must make their benefits payable to those dependent upon them—first, wife and children; second, father and mother, brothers or sisters, or others who are dependent upon them. In addition to this, sick benefits are often paid by local lodges; likewise funeral donations and donations to members in need. Provision is made in the constitution of the local lodges for visiting the sick, and members failing to perform this duty when it is assigned to them are liable to fine. Since September, 1899, it is reported that the local lodges of the carmen had paid sick benefits amounting to \$212.25; funeral benefits, \$112.75, and donations, \$85 to \$90. It is quite probable that some amounts paid by local lodges were not reported to the grand lodge.

The history of the carmen's brotherhood shows plainly that the organization was extremely weak until within the last year, and that it is now beginning to develop new strength. The reason for this is attributable not only to the hostility of the railroad corporations, but more largely to unwise management in the

past. The objects of the brotherhood, as stated in the preamble to the constitution, are worthy ones, namely, to exalt the character and increase the efficiency of carmen, and to encourage sobriety, education, and fidelity to duty, and to provide for those dependent upon them in case of accident or the uncertainties of employment. Unfortunately, however, in 1893 the grand secretary and treasurer of the brotherhood resigned his position to become general secretary of the American Railway Union, and advised the local lodges to join the union in a body. As a result, the membership decreased, and for several years the future of the brotherhood was extremely uncertain. Under new leadership since 1899 the brotherhood is gaining in strength.

*Statistics of Brotherhood of Railway Carmen's Mutual Aid Association 1892 to 1900*

Fiscal year ending June 30	Member- ship of brother- hood at close of year	Lodges at close of year	Membership of mutual aid association at close of year	Amount of assess- ments levied	Number of bene- fits paid	Total benefits paid
1892	5,000	135	70	\$1 00	1	\$70 00
1893	4,200	159	193	3 00	3	460 00
1894	2,900	110	141	2 00	2	283 00
1895	1,800	60	122	2 00	2	250 00
1896	740	42	60	1 00	1	57 00
1897	1,300	35	90	1 00	1	90 00
1898	1,000	30	50			.....
1899	1,700	50	60			
1900	3,000	90	65	2 00	2	150 00

**VIII. The Brotherhood of Railroad Bridgemen.** This is a new organization, and has as yet a small membership. The main features of its constitution are as follows.

Any male person 21 years of age and not over 50 years who is a wage earner, and works in the bridge and building department of any railway, is eligible to membership. The brotherhood covers in general the following occupations: Laborers, pump repairers, well sinkers, cement workers, iron wood and stone bridge builders, building carpenters and repairers, pump men, pile-driver men and crib workers. Applicants for membership are balloted for either by open vote when a two-thirds vote is necessary to elect, or by ball ballot when three black balls reject. The brotherhood meets biennially in convention, known as the supreme lodge. The supreme lodge has final authority in brotherhood matters and may amend the constitution by a two-thirds vote. The principal officers of the brotherhood are members of the supreme lodge, and each local union or division lodge is represented by 1 delegate for the first 100 members or fraction thereof, and 1 additional delegate for each additional 100 members. The principal officers are, a supreme master foreman, five chief foremen, and a secretary-treasurer. The supreme master foreman may suspend any local union or officer for a violation of the constitution and by-laws of the national union, and may fill any vacancy among the supreme lodge officers with the consent of the executive council. The executive council is composed of all the officers, and it constitutes a national board of arbitration and conciliation. It has full power to legislate for the brotherhood in the intervals between conventions. It is especially directed to watch legislative measures affecting the interests of the brotherhood and to effect such legislation as the supreme lodge may direct. Members of the executive council not in receipt of a regular salary, including their expenses, from the brotherhood, receive \$2.50 per day and hotel expenses when engaged on brotherhood business. The secretary-treasurer receives \$3.50 per day and expenses; he is not allowed to hold more than \$500 subject to his order, and must deposit funds in excess of this amount in the name of the trustees. The revenues of the brotherhood are derived from a charter fee of \$25 for each local union, which receives for this amount a seal and outfit of books, stationery, and a per capita tax of 20 cents per month from all members in good standing, together with fines and assessments, initiation fees, and moneys received from local unions for supplies. The executive council may levy assessments when necessary. A member 3 months in arrears in dues is not in good standing, and forfeits his rights in the benefit department until his dues are paid; if he is 6 months in arrears, he is suspended, and can be readmitted only as a new member. No member losing his position because of intoxication can receive out-of-work benefit, nor can he receive sick or disability benefit when sickness was caused by the use of alcoholic

beverages. A member guilty of drunkenness is liable to a fine of \$10 to \$20 for the first offense, and expulsion for the second. Members may be expelled or fined for drunkenness, crime, or scabbing, or for buying nonunion made goods when union-labor goods can be obtained or for undermining a fellow-member in prices or wages, or for calumniating a fellow-member, or for revealing the business of the brotherhood.

The constitution of the brotherhood declares that no member of the labor union ought to work for any political party, except a trades or labor party. Members who appear on any other party platform are enemies of the brotherhood and of all organized labor. The brotherhood has in its programme the following demands: Direct legislation, proportional representation, universal suffrage for both sexes, Government and municipal ownership of all public utilities and franchises, compulsory arbitration of the New Zealand type, an eight-hour day, and the issue of all currency and the loaning of money by the General Government only.

The provision for the inauguration of strikes requires a two-thirds vote of the local union concerned. After such a vote is taken by secret ballot, the sanction of the executive council is necessary, and any local engaging in a general strike without such sanction may be expelled. A member who seeks work or takes work where a strike or lockout is pending, is subject to a fine of \$25 or expulsion, or both.

To become a member of the beneficiary department, a member of the brotherhood must not be less than 21 or more than 50 years of age, and must be in sound health. Men afflicted with chronic disease or over 50 years of age may become semi-beneficial members not entitled to accident and sick benefits, but entitled to a death benefit not exceeding \$40. On the death of a beneficial member after one year's membership, a funeral benefit of \$75 is paid, after two years, \$150; after three years, \$200; after 4 years, \$250, and after five years, \$300. A member permanently disabled by accident is entitled to \$100 on one year's membership, and an additional \$100 for each additional year up to 5, but no benefit is paid if the disability is due to negligence or to the use of alcoholic drinks. A sick benefit of \$7 per week is paid for not more than 15 weeks in any one year, provided sickness is not caused by debauchery, intemperance, or other immoral conduct. Out-of-work benefit of \$3 per week is paid for not more than 6 weeks in any one year. A traveling benefit may be obtained in the form of a loan not exceeding \$15 at one time, when a member out of employment wishes to leave the jurisdiction of his local lodge. The strike benefit is \$7 per week for the first 16 weeks and \$5 per week thereafter. A funeral benefit of \$25 is paid upon the death of a wife after one year's membership and \$50 after two years' membership, provided the wife was in good health when the brother joined the brotherhood. The same benefit is paid to an unmarried member on the death of a widowed mother whom he was supporting. If any local union owes 3 months' dues or taxes to the brotherhood, its members are not entitled to any benefits until all arrearages are paid; and any member 3 months in arrears forfeits all benefits until 3 months after his arrearages are paid.

**IX. The Switchmen's Union of North America.**—The switchmen's union is the outgrowth of the Switchmen's Mutual Aid Association, which was at one time a large and flourishing organization, but was dissolved through disintegration and a defalcation on the part of their secretary and treasurer. The reorganization was effected in 1897. The objects of the union are stated in the preamble to the present constitution as follows: "(1) Benevolence. To unite and promote the general welfare and advance the interests—social, moral, and intellectual—of its members; benevolence, very needful in a calling as hazardous as ours, has led to the organization of this union. (2) Hope. Believing that it is for the best interests, both of our members and their employers, that a good understanding should at all times exist between them, it will be the constant endeavor of this union to establish mutual confidence and create and maintain harmonious relations between employer and employee. (3) Protection. By kindly bearing with each other's weakness, aiding with our counsel distressed or erring brothers, and to exercise at all times its influence in the interests of right and justice. The special object of this union is to raise a fund for the legitimate expenses of the union."

The grand lodge is located at Buffalo, N. Y. The officers are a grand master, 5 vice-grandmasters, grand secretary and treasurer, editor of journal, and a board of directors composed of three members and one delegate from each subordinate lodge. The officers are elected at the annual convention, held on the third Monday in May.

Five persons may petition for a charter for a subordinate lodge, the fee for which is \$25. The grand lodge conducts a beneficiary department, has power to levy a per capita tax for grand lodge dues, and to levy special assessments. Each lodge

must be represented in the annual convention and delegates are paid \$5 per day out of the convention fund levied by assessment by the grand lodge.

The beneficiary department of the grand lodge levies assessments of \$1 per month from each member for each certificate of \$600. The full amount of certificate is paid on loss of foot, half of foot, hand or thumb, and three fingers, or four fingers of one hand at or above the second joint by complete severance thereof, or upon other disability that permanently prevents a member from performing the duties of a switchman.

Membership in the union is obtained by joining a subordinate lodge. A candidate must be white, of good moral character, have had six months' experience as a switchman, and be actually employed in railroad service at the time of application. No person engaged in the liquor traffic shall be eligible to membership. Pilots, switchtenders, and yardmasters are eligible. The initiation fee shall not be less than \$2. The grand dues of each member are \$3 per year payable quarterly in advance.

**X. Ladies' auxiliaries to the brotherhoods.**—These are organizations similar in plan to the brotherhoods themselves, in which the wives and sisters of railway employees work for the betterment of their own intellectual and maternal condition, and endeavor to assist in the relief work of the brotherhoods, in looking after their members and their families. Five auxiliaries exist at present.

(1) The Grand International Auxiliary to the Brotherhood of Locomotive Engineers, organized in Chicago, October 21, 1887. It has several hundred subdivisions located at important railroad centers, and several thousand members. It instituted a voluntary relief association in March, 1890, statistics of which, as published by Professor Johnson in his article on relief and insurance of railway employees, shows that in 1896 out of 5,395 members, 1,621 were members of the relief association, carrying 2,167 policies, assessments for which averaged for the year \$7.25, out of which 33 claims were paid aggregating \$14,159.63. The benefit paid on each policy is the sum received from an assessment of 25 cents on each outstanding policy, the total amount not to exceed \$500. Each member is allowed to carry two policies.

(2) The Ladies' Auxiliary to the Order of the Railway Conductors, organized in February, 1888, had a membership in July, 1897, of about 2,500, organized in 105 divisions. The membership in June, 1898 was 2,775. The objects of this auxiliary as declared in its constitution are:

First. To unite the interests of the wives of the members of the Order of Railway Conductors for moral and social improvement.

Second. To secure to its members support and assistance in time of sickness or distress.

Third. To provide for organizing subordinate divisions, and for the government, control, or dissolution of the same, all as may be provided in the laws and rules which may be adopted from time to time.

Fourth. To cooperate with the Order of Railway Conductors in further extending their interests and membership.

Fifth. Also to cheerfully sustain the cause of temperance, both in the grand division and subordinate divisions.

(3) The Ladies' Auxiliary to the Brotherhood of Railroad Trainmen, organized at Fort Gratiot, Mich., in January, 1889, had a membership in July, 1897, of about 2,200, organized in 122 divisions.

(4) The Ladies' Society of Brotherhood of Locomotive Firemen was organized at Tucson, Ariz., April, 1887, and formally recognized as an auxiliary in the brotherhood in September, 1890. It has a voluntary benevolent insurance association.

(5) The Ladies' Auxiliary of the Order of Railroad Telegraphers was established in 1897, and has no insurance association. In the ladies' organizations of the engineers and railway conductors only the wives of members or widows whose husbands were members of good standing at the time of death are eligible to membership. The firemen's and trainmen's auxiliaries are broader in their membership requirements and admit "the mother, wife or widow, sister, married or unmarried, or daughter of one of the members." These organizations enlist the interest of the families of railroad men in the work of the brotherhoods, in their journals and publications, and encourage visiting of the sick and considerable mutual help of a charitable character.

Some further data relating to the insurance features of the auxiliary, and also to the home for aged and disabled employees located at Highland Park, on Lake Michigan, 22 miles north of Chicago, may be found in Professor Johnson's article on "Relief and insurance of railway employees."<sup>1</sup>

<sup>1</sup> Labor Bulletin, July, 1898.

## § 11. EDUCATIONAL, RELIGIOUS, AND FRATERNAL ASSOCIATIONS.

From the discussion of the requirements of railway service, as brought out in part 2 of this report, and from the history of the railway orders and fraternities, it is evident that the class spirit prevails among railway employees to as great an extent, if not greater, than is the case in most occupations or professions. The brotherhood organizations are, of course, the most important of all efforts at association on the part of railway employees. They are in a sense both educational and fraternal, and, using the term in its broadest sense, might even be said to be religious, because some of them at least are imbued with a desire to realize a larger life and to emphasize a spirit of mutual helpfulness. In addition to the brotherhoods and railway orders, with their vast network of subordinate lodges and affiliated associations, there exists among railway men, both officials and employees, no inconsiderable number of associations of all kinds. These are not different from the sort of associations that men form, irrespective of occupations, in all communities. There are literary clubs, social clubs, musical clubs, associations which meet together for purely educational purposes, to hear lectures, enjoy entertainments, to debate and discuss problems in which their members have a practical interest. The nature of railroad service, the fact that it is a life in itself, somewhat apart from that of the ordinary man in business or in an occupation that follows the conventional hours of work, the peripatetic aspects of the occupation, and, lastly, the element of risk and danger which has had an influence in binding railroad men to each other wherever they meet, are the causes which have led railroad men to form these organizations made up exclusively of their own members rather than to participate in similar organizations outside the limits of their occupation in the various communities in which they reside. Of course, probably no inconsiderable number, especially of railroad officials and also of employees, connect themselves with the ordinary secret societies and social institutions of their respective communities. But it is worth while to note here the existence, if nothing more, of numerous associations confined to railroad employment of educational, religious, and fraternal character. It may mean much more for the future of railroad employment than the present strength of these organizations would indicate that there are so many agencies still in their infancy that must inevitably develop a spirit of cohesion, loyalty to each other, and helpful aid to development of a most important class in the industrial community.

**I. Educational and Fraternal Associations.**—Among railway officials perhaps the most important organization is the International Railway Congress, which meets at intervals of about 3 years and brings together and publishes in its proceedings a vast amount of important material relating to the management and control of railways in all countries. Six such congresses have been held—the first met at Brussels in 1885, the second at Milan in 1887, the third in Paris in 1889, the fourth in St. Petersburg in 1892, the fifth at London in 1895, the sixth at Paris in 1900, and the seventh is scheduled to meet at Washington, D. C. (the first meeting held in the United States), in 1903. Mr. M. A. Du Bois, president of the International Commission, prepared a history of the organization and results of international railway congresses, which was published as a part of the proceedings of the London congress in 1895. In this history he summarized the reports of the first four international railway congresses. Among the questions dealt with relating directly to railway employees were (1) Question XI, of the Brussels programme (1885), which related to the Sunday holiday; (2) Question XX, on "Engaging a new staff and employment of women;" Question XXII, on "Methods of interesting the staff in economical working," and Question XXIII, on "Provident funds," of the Milan (1887) programme; (3) Question XX, on "Bonuses to the staff," and Question XXI, on "Provident funds," of the Paris (1889) programme; (4) Question XXXI, on "Pensions and sick and accident funds," of the St. Petersburg (1892) programme. Similar questions have been reported upon at great length at the subsequent congresses. Mr. Du Bois summarizes the principal resolutions which dealt with these questions before the first four congresses, as follows:

(1) The congress has expressed the opinion "that it is advisable to extend the periodical holiday as far as possible, making it coincide with Sunday and public holidays, for the benefit of the staff and for the advantage of the service."

(2) It recommended "the foundation of special preparatory schools for employees and looked with satisfaction on the tendency shown to engage the children of employees."

(3) It recognized that experience shows that women may be advantageously admitted into most departments.

(4) The congress recommended "that the wages of employees should be increased by endeavoring to reduce the staff."

(5) The congress has recognized the advantage of bonuses being granted for economizing expenses and increasing receipts.

(6) The congress agreed "that when private initiative fails it is advisable to institute stores—provided employees are not obliged to deal at them—but that it is preferable that they should be on a cooperative basis."

(7) The congress declared "that they considered it morally incumbent upon administrations to insure, as far as possible, the future of former employees, and, next, that of their families."

The body is merely a deliberative one, but one whose conclusions carry with them great authority, because of the fact that the leading railroads of the world are officially represented, and also the principal governments which own or control railroads.

Next in importance to the International Railway Congress is a national organization working along somewhat similar lines and known as the American Railway Association. In 1899, 257 railroad companies, operating 171,180 miles of line in the United States, were members of this association. Its headquarters are in New York. It meets twice a year and issues important publications.

Next to the American Railway Association in importance come the railroad men's clubs, made up chiefly of officials. These exist in all the leading railroad centers, especially the large cities. Seven or eight of the more important clubs, such as those in New York, Chicago, Boston, Buffalo, and St. Louis, have a combined membership of over 2,500. These clubs meet monthly to discuss technical questions relating to railroad operation. Most of them publish proceedings. Their members are chiefly the active officers in the mechanical and operating departments. Their purpose is mainly educational, although in part they have important social features.

The next class of associations has a combined membership of still larger proportions. It reaches most all of the officials of the roads, and includes such organizations as the following:

1. Maintenance of Way Association
2. Passenger and Ticket Agents' Association
3. The Association of Railway Telegraph Superintendents
4. Railway Transportation Association
5. Train Passengers' Association of America
6. Freight Claim Agents' Association
7. American Association of Traveling Passenger Agents
8. Association of American Accounting Officers
9. Central Association of Railroad Officers
10. Master Car Builders' Association.
11. Master Mechanics' Association.
12. Traveling Engineers' Association.
13. Road Masters' Association.

The above are among the more important organizations of this class. Their members meet usually in annual conventions which furnish a basis for comparison of methods and results of work in different parts of the country, and also a pleasant occasion for an outing and vacation on the part of the delegates or members participating. Some of these organizations meet at more frequent intervals, and others have local branches meeting at frequent intervals. Several of them have offered prizes and carry on a work that has contributed materially to the solution of difficult problems of railway management.

The numerous clubs and organizations of one kind and another among the employees of the lower grades of service are usually organized for social, fraternal, and beneficial purposes alone. With the growth of the brotherhoods most of these organizations have been either affiliated with or transformed into local and subordinate lodges. There are many, however, which exist independent of the brotherhoods, and some of these have accident, sick, and other forms of beneficiary insurance.

A list of railway associations, mostly of the class of railway clubs and the technical associations already referred to, was published by the Interstate Commerce Commission, February, 1898. This list gave the names of the officers of the associations. It has not been corrected to date, but the pocket list of railroad officials published quarterly by the Official Railway Equipment Register, 24 Park place, New York City, contains a list of the associations of railroad officers, and gives the names and addresses of the chief officers of each association.

## II. The Railroad Branch of the Young Men's Christian Association.—

Among the religious organizations of railway employees none has assumed the general importance of the railroad departments of the Young Men's Christian Association.

ciation now organized at over 150 division points, with a membership of over 37,000 railroad employees. The railroad corporations now contribute annually over \$180,000 toward the support of this work. Thirty-five of these associations reported in the year 1900 that they had educational classes in which 112 branches were being taught. The railroad department combines all that is best in the reading room, library, and club-house features of the general Young Men's Christian Association, and is besides this a positive aggressive power for good. It offers many attractions which are peculiarly valued by railroad men, because of the very nature of their employment, which deprives them of many opportunities easily enjoyed by the average workman in other occupations. Attractive rooms, where the railroad man can readily go in his uniform or working clothes, if necessary, and spend a pleasant evening or the few hours of free time during a lay-over have of themselves many attractions; but among the privileges offered by the better equipped railroad associations, of which there are not a few located at the prominent railroad terminals, are reading rooms, library, social rooms, bathrooms, parlors, classes in light gymnastics, bowling alleys, rest rooms, lunch rooms, temporary hospitals, educational classes, practical lectures on railroad topics, social receptions, entertainments, and religious services. The work and organization of railroad associations is under the supervision of the international committee, with headquarters in New York. This committee employs six men for this purpose. The local associations are managed by a local committee, usually made up of Christian railroad men. The expenses of local associations are met by small membership fees and by appropriations from the railroad corporations. Certain privileges, such as the reading room, are free to the use of all railroad men, including employees of express, telegraph, and palace-car companies, and employees in the Railway Mail Service; the baths and other privileges are exclusively for members. All railroad employees, including those just specified, without regard to religious belief, are eligible to membership, and a membership ticket in one association usually carries with it free access to all the privileges of other associations at all other points. The active executive officer of each local association is the general secretary, who is a paid and trained official. A strong evangelical religious spirit prevails in the management and conduct of these associations. Many men professing no religious belief are members, but how far members of Roman Catholic, Unitarian, and other religious bodies not usually classed as evangelical are made to feel at home in the association it is difficult to say. The railroad associations are justified from the point of view of railroad officials, chiefly on purely economic considerations, and there is therefore a tendency on the part of the managers to avoid drawing religious lines too strictly. The desire is to make the association as broad as possible, at least in so far as consistent with the maintenance of a general religious tone to the organization. At the Tenth International Congress of these Railroad Associations, which your expert agent attended in the city of Philadelphia, a plea was made by President Baldwin, of the Long Island road, on this very point. President Baldwin said: "I believe, as a practical man, that the most effective work with real results can only be brought about by the work which you are doing, and it can only be brought about in the manner in which you are doing it. When I say the manner in which you are doing it, I mean the manner in which you think you are doing it, or ought to do it. It is not a false note for me to again suggest that you do not accomplish the greatest results, you do not do your work in a real high Christian spirit, unless you so conduct each branch and the whole organization as to welcome every man of every creed within your walls and make it so agreeable and so pleasant and so attractive (without leaving any sharp points sticking out) as not to keep out the Catholics, the Orthodox, the Hebrew, or the Mohammedan, or even (pointing to himself) the Unitarian. You are strong enough; you are sincere enough; you are bright enough, all of you, to let the true, bright Christian spirit prevail, so that we all may feel the effect, the inspiration of the work which you really mean to do."

The highest encomiums have been passed upon this work by the leading officials of the railway profession. From the time the first railway branch was established in 1872, in Cleveland,<sup>1</sup> up to the present, when 68 of these associations occupy entire buildings, 45 of which are owned by the associations, the remaining 23 having been set apart for association uses by railroad companies or officials, almost a unanimous verdict on the good results in intellectual and moral improvement of the labor force has been freely rendered by railway corporations which have given practical expression to their opinion in liberal financial support. Most of the buildings referred to have

<sup>1</sup>An excellent historical article on "The Young Men's Christian Association in its relations to railroad employees," by William Bender Wilson, and another article by the same author on the Pennsylvania Railroad department of the Young Men's Christian Association appeared in the Pennsylvania Railroad Men's News for October, 1900.

been erected largely at the expense of the railway companies on whose lines they are located; 12 such buildings were erected during the year 1899, 11 of which were at points where associations were newly organized; 3 were put up by railway companies which bore the entire expense and 9 by joint contributions of the railroad men and the railroad companies. Of course money spent in this way by the railroad corporations must be justified to the stockholders on purely economic grounds. The directors would not be warranted in spending the stockholders' money for a purely charitable or religious enterprise no matter how laudable a purpose it subserve. It is an interesting feature of this work that though strictly religious in its essential characteristics, it has nevertheless stood the economic test, and this fact warrants its consideration in this report, and also promises larger development of such work in the near future, especially along educational lines. The late President Roberts, of the Pennsylvania Railroad Company, was an active supporter of this work, and one of the finest buildings devoted to it in the country is that of the Pennsylvania Railroad Department of the Young Men's Christian Association at Philadelphia, a building which cost \$175,000, chiefly contributed by the company and its officers and stockholders as individuals through the personal solicitations of Captain Caldwell, Mr. William Bender Wilson, Mr. William A. Patton, and others in the service of the Pennsylvania Railroad Company. President Roberts at one time, in asking the board of directors to appropriate \$10,000 to this work, said: "Gentlemen, I only want to say that if you vote this money for this purpose it means more to the Pennsylvania Railroad than the sum would if invested in steel rails."

Mr. Cornelius Vanderbilt was so well satisfied with the work of the Railroad Y. M. C. A. in New York that he secured a secretary for the department and placed him on the pay roll of the company, and later erected a building at a cost of over \$100,000. The associations form a common meeting ground for capital and labor, employer and employee, and for the promotion of mutual understanding and sympathy. This is no visionary dream, but is an ideal that has been realized, not in its perfection, but in greater measure than is found in any other organization where employers and employed come together. The association throws around railroad men a strong arm of protection from moral dangers peculiar to their calling, and extends to them a cordial and sympathetic hand in many cases of difficulty. It meets, perhaps, in a peculiar manner, the religious need of railroad men, who, by reason of Sunday labor, are deprived of the opportunity of availing themselves of the ordinary privileges of regular churches. Of course these organizations are open to certain dangers to which all religious organizations are liable, chiefly that of being carried away by waves of emotionalism. While they undoubtedly serve a useful economic purpose, from the point of view of the corporation, in making the men more contented with their profession and in developing loyalty and fidelity to duty, it is not impossible to think of them in some great labor crisis giving sympathy and aid to interests opposed to those of the corporations that have built them up. There is also a tendency on the part of some associations to depart from the purely democratic spirit in which they were founded, and perhaps in this way to lose some of their usefulness. It is said that in some of the larger associations the men do not feel free to make use of the rooms in loafing hours when dressed in their overalls or uniforms, but are apt to visit the building only in the evenings or when off duty. These are the chief objections or criticisms of the work of the associations to which attention is usually called. Neither of them has gone far enough to constitute a serious drawback to the progress of this work, and all can be readily counteracted by forces already strong within the organizations themselves. The work is likely to grow in the future and to take on new proportions, especially in educational lines.

Most of the associations offer courses of popular entertainments, which are largely attended by the members and their families; but in addition to this the real educational work is done in evening classes.

A schedule of the P. R. R. department of the Y. M. C. A. of Philadelphia may be taken as typical of the best development in this direction. Instruction is given in arithmetic, book keeping, penmanship, grammar, spelling, stenography, mechanical drafting, and electricity. A charge of \$1 for a study course is made for the entire season of six months, and the classes usually meet one night in the week for two hours, and a few special classes, those in mechanical drafting, shorthand, and telegraphy, meet twice a week.

There is also a department of mechanical instruction for the special benefit of men in the train service and motive power departments. Lectures and demonstrations are conducted regularly for the study of mechanical appliances used on trains, unusual facilities being provided through the courses of the railroad company.

A general idea of the amount of time devoted to this work and the subjects cov-

ered, may be obtained from the following announcement. There are also courses in music, instruction being given on the banjo and in vocal music.

*Art trade*.—Plant in operation and demonstrations on alternate Monday and Friday afternoons and evenings during October, and on Friday afternoons and evenings during the remainder of the season.

*Steam heating*.—Model and cut sections provided—demonstrations given on alternate Monday and Friday afternoons and evenings during October.

*Valve motion*.—Demonstrations with special models, Monday afternoons and evenings during November.

*Lubrication*.—Lectures on valve, engine, and machine lubrication, Monday afternoons and evenings during December.

*Injectors*.—Lectures—with models of Sellers' and Monitor injectors, Monday afternoons and evenings during January.

*Sigbee and safety valves*.—Illustrated lectures, Monday afternoons and evenings during February.

*Coal and locomotive firing*.—Lectures, Monday afternoons and evenings during March.

*First aid to the injured*.—Lectures, Monday afternoons and evenings during April.

The instructors will be experts on these subjects.

The models, cut sections, charts, and other appliances will be at the service of all employees of the Pennsylvania Railroad Company for inspection daily, except Sunday, from 9 a. m. to 10 p. m. No fee charged for instruction or use of appliances.

## § 12. THE FEDERATION OF RAILWAY BROTHERHOODS AND THEIR RELATION TO OTHER LABOR ORGANIZATIONS.

The history of the organization of railway employees in brotherhoods and orders has been sketched in section 10 of this report, from which it will be seen that the bond of union has been very largely the beneficiary features and the trade or craft feeling. The protective features have been for the most part later developments. As these have grown and the desire to utilize the railway orders and brotherhoods as instruments for improving the hours of labor or the wages of their members has been emphasized rather than the features of mutual helpfulness and personal development, the necessity for strengthening the organizations in numbers has been manifest. The idea of a federation of all railway employees' organizations has frequently been proposed and attempted with varying degrees of success. While the idea of federation has sprung primarily from the motive of aggressive action, either in support of larger demands or in defense of existing rights and privileges, rather than from the educational and philanthropic motives which gave rise to the separate organizations among specific classes of railway employees, a federation of some of these orders might conceivably greatly strengthen their usefulness along the original lines. This is felt to be true by many of their wisest leaders, yet the very fact that greater strength in numbers tends almost inevitably to emphasize the so-called protective features has led to opposition on the part of employers and on the part of the more conservative officers and members of the brotherhoods.

In 1899 the United Orders of Railway Employees was formed by federation of the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen, the Switchmen's Mutual Aid Association, and the Brotherhood of Railway Conductors. The latter organization was established in 1888 by the conductors on Western railroads who objected to the nonprotective policy of the Order of Railway Conductors, the larger organization, and hence formed their own association, known as the Brotherhood of Railway Conductors. The Order of Railway Conductors, however, in 1890, voted to adopt the protective feature, and in 1891 decided to join the United Orders of Railway Employees. About the same time, however, a disagreement arose between two of the united orders, and that federation was abolished.

Nothing further was done until 1895, when representatives of the existing brotherhoods got together and adopted what was known as "The Cedar Rapids Plan," by which the chairmen of the grievance committees of the several brotherhoods represented on any one railway system might constitute a general federated committee for that system. It was hoped in this way to secure a practical basis of larger cooperation between the brotherhoods which might lead ultimately to a federation with better practical results than that of the United Orders of Railway Employees.

The details of the plan are sufficiently clear from the articles of federation, as follows. (The Cedar Rapids plan.)

### ARTICLES OF FEDERATION

[As amended (in accordance with section 10) February 8, 1895.]

SECTION 1. On any system of railway the members of any of the following named organizations, Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, and Order of Railroad Telegraphers, may federate through their general committees or boards of adjustment, as hereinafter provided, for the purpose of adjusting any complaint which may be presented, in accordance with the laws of the organization aggrieved.

SEC. 2. A copy of these articles duly signed by the authorized representatives of each of the organizations represented in the federation of any system, accompanied by a certified statement from the chairman and secretary of the general committee of each organization that these articles have been adopted by a two-thirds vote of the members of the organization, employees of that system, shall be forwarded to the chief executive of each organization, and receive his approval before becoming effective, and no member of this organization shall engage in, or be a party to, any federation or alliance, except as herein provided.

SEC. 3. In event of any general committee or board of adjustment failing to adjust a complaint in accordance with the laws governing their organization, the secretary of such general committee or board of adjustment shall forward to the chief executive of the organization interested, signed by the committee, a full and complete statement of the complaint and action taken. When directed (in person, by writing, or by telegraph) by the chief executive officer of the organization, copies of this statement with notice of time and place of meeting shall be forwarded by the secretary to the chairman of the general committee or board of adjustment of each organization party to the federation.

SEC. 4. The chairman of any general committee receiving statement as provided in section 3, from the chairman and secretary of any general committee, representing any organization participating in the federation, shall answer such call in person, meeting the others at such time and place as is designated, and when so convened the several general chairmen shall constitute the general federated committee of that system, and shall proceed to organize by the election of a chairman and secretary, who shall serve until their successors are duly elected. After such organization they shall, if they approve the complaint, exert every honorable effort to adjust the same.

SEC. 5. When the federated committee have, after exhausting all honorable efforts, failed to adjust the complaint referred to them, and when the chief executive officer of the organization aggrieved is prepared to approve a strike, he shall immediately convene the chief executives of all organizations represented in the federation, and in the event of it becoming necessary to inaugurate a strike, the same shall be authorized only by a two-thirds majority of the federated committee and the consent of the chief executives of the organizations represented.

SEC. 6. Should a strike be inaugurated, the chief executive of the organization aggrieved shall be the recognized leader, and shall have power to declare the strike off with the consent of the general federated committee, together with the approval of the chief executives of the organizations embraced in the federation, as provided in section 5.

SEC. 7. The expenses incurred in the settlement of any complaint (or in case of a strike) shall be paid by each organization in accordance with the provisions of their respective constitutions and by-laws.

SEC. 8. Any organization that is a part of this federation failing to comply with the rules and regulations contained herein shall not receive any support or recognition from any organization embraced in this federation on the system upon which the violation occurs, but no organization will be deprived of the benefits of this federation by reason of the acts of its representatives, or its individual members, until such time as they have approved of the action by failure to discipline the parties at fault, and then only after proper trial and conviction by a two-thirds vote of the federated board, subject to an appeal to the executives of the organizations parties hereto.

SEC. 9. If a federation is formed on any system which does not include all the organizations herein named, the others shall be eligible to membership, and may file application for such membership with the secretary of the federated board. Upon receipt of such application he will forward the same to the chairman of such general committee, party to the federation, who will in turn submit it to his associates. Upon receipt of the vote of his associates, he shall file with the secretary of the federated board the vote of his organization in accordance therewith, and the organization applying for membership shall be admitted, if a majority of the organizations party to the federation vote in favor of such admission.

SEC. 10. These articles may be revised, altered, or amended by the executives of the organizations parties hereto.

E. P. SARGENT, *Grand Master B. of L. F.*  
 P. M. ARTHUR, *Grand Chief Engineer B. of L. F.*  
 E. E. CLARK, *Grand Chief Conductor O. of R. C.*  
 S. E. WILKINSON, *Grand Master B. of R. T.*  
 W. V. POWELL, *Grand Chief Telegrapher O. of R. T.*

This plan is still in operation, although for a time it was practically superseded by a more ambitious scheme of federation, established April 1, 1898, and known as the Federation of American Railway Employees. This was dissolved on February 1, 1900, and the employees of most of the brotherhoods given permission to revert to the former, or Cedar Rapids, plan of system federation.

The biennial conventions of conductors, firemen, trainmen, and telegraphers each appointed a committee, which met at Peoria, Ill., October 12, 1897, to confer with the representatives of other brotherhoods and to formulate a general plan for more substantial federation. The plan adopted was formulated in the following articles of federation governing the Federation of American Railway Employees, which went into effect April 1, 1898.

#### ARTICLES OF FEDERATION GOVERNING THE FEDERATION OF AMERICAN RAILWAY EMPLOYEES, AS AMENDED UNDER THE PROVISIONS OF SECTION 13

SECTION 1. When ratified by the proper authority in four or more of the following-named organizations—Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, and Order of Railroad Telegraphers, and so certified by the executives of those organizations—an alliance for the mutual advancement and protection of the interests of the railway employees of America, to be known as the Federation of American Railway Employees, and to be governed by the following rules, will be formed and in effect.

SEC. 2. If the Federation is formed between four of the organizations named, the fifth will be admitted upon filing with the secretary of the executive committee notice of their ratification of the plan and desire to become a member.

SEC. 3. No organization participating in this Federation shall be or become a part of any other federation, organization, or alliance of railway employees while holding membership in this one.

SEC. 4. The affairs of the Federation which do not involve or pertain to the interests of the employees of any particular or individual railway company shall be conducted by an executive

committee composed of the chief executive officer of each organization party to the federation, or one of his associate officers duly authorized to represent him.

This executive committee shall organize by the election of a chairman, a vice-chairman, and a secretary. A full representation of the organizations must be present to constitute a quorum.

Sec. 5. The influence of this Federation may be used through its executive committee in favor of or in opposition to national legislation which involves the interests of the membership and upon which the committee are fully agreed. Where circumstances will permit, the opinion of the membership in general will be secured before action is taken.

State or provincial legislative matters will be left to State or provincial committees.

Sec. 6. Each organization party to this federation shall have regularly established local and general grievance committees or boards of adjustment on each system of railway, as provided in their laws.

The chairman and secretary of each general committee or board of adjustment for the system, together with the executives of the organizations or their duly appointed associate officers shall constitute the federated board for that system of railways.

Each organization shall handle its own grievances and those of its members under its own laws up to such time as it has exhausted its efforts. When the general committee or board of adjustment and its chief executive, or his legal representative, have failed to reach a satisfactory adjustment of any matter properly in their hands, and it is deemed by them proper to proceed further, a full statement of the matter, of all steps taken, the exact condition existing at the time the statement is made, and description of any settlement which it is possible for the committee to make, shall be printed and handed to each member of the organization, with a blank coupon or vote in the following form:

(Name of organization) \_\_\_\_\_,  
(Date) \_\_\_\_\_

(Name of chairman) \_\_\_\_\_ chairman general committee (or board of adjustment) of the  
(name of organization) \_\_\_\_\_ for the \_\_\_\_\_ railway.

I have read the statement of case in your hands bearing date of \_\_\_\_\_ and I hereby cast my vote (member voting will write the word "for" or "against") a strike in order to adjust said complaint, providing same shall be approved by the proper authority in our organization and by the federated board.

(Signature) \_\_\_\_\_

This vote will be placed in a sealed envelope by the member voting, and be handed to the committeeman authorized to receive it. When the poll is complete it shall be canvassed by the general committee and the chief executive of the organization, or by a subcommittee appointed by the general committee and some person duly authorized to represent the chief executive. Ballots will be preserved and laid before the federated board, if it is convened.

When the executive of the organization has the vote of two-thirds of his members employed on the system in favor of a strike, and is ready to approve such strike under the laws of his organization, he may call upon the chairman of the executive committee to convene the federated board. The chairman of the executive committee will notify each of the chief executives, setting time and place of meeting, and each executive officer will notify the chairman and secretary of the general committee of his organization of that system to attend such meeting of the federated board.

When the federated board has been convened, the officers and the chairman and secretary of the committee of the aggrieved organization shall present a full and detailed statement of the trouble from its organization and all steps taken, together with the results reached. After hearing such statement, the federated board will decide by a majority vote of its members whether or not they consider the complaint a just one, and if they approve it they shall wait upon the managing officers of the road, by committee or in a body, and make reasonable efforts to adjust the matter. If no settlement acceptable to a majority of the members of the federated board can be reached, the question of a strike shall be considered. Each organization shall have one vote on this question, and that vote shall be determined by the three representatives of that organization, the affirmative vote of the executive officer and one other member being necessary. If each organization votes in favor of a strike, a strike on part of the members of all the organizations party to the federation employed on that system will be declared by the executives at a time fixed by them, and every member employed on that system of railway shall respond promptly thereto.

No member of any organization party to this Federation shall engage in any strike of railway employees which is not sanctioned by this Federation in accordance with this section.

Sec. 7. In the event of a strike the executive committee of the Federation shall be the recognized leader.

Sec. 8. If a strike is declared by this Federation it may be declared off at any time by the federated board by the same vote by which it was sanctioned. After a strike has been in progress for a period of 2 weeks, if the federated board can not agree as to declaring it off, the disputed point shall be submitted to the chairman of the boards of trustees or executive committees of the organizations (one from each organization), who shall have authority to decide it by a majority vote of their number.

Sec. 9. In the event of its being impossible for any chairman of the general committee to attend a called meeting of federated board he shall promptly so notify the vice-chairman, if one there be. If the chairman and vice-chairman are unable to attend, or if the secretary is unable to be present, the chairman shall designate a member of that committee to fill the vacancy. If the chairman and vice-chairman are unable to act or appoint members to fill the vacancy this duty will devolve upon the secretary of the committee.

Sec. 10. In carrying out the provisions and requirements of these articles each organization will pay the expenses of its own representatives and members in accordance with its own laws.

Sec. 11. Each organization party to this Federation will be required to see that its members and officers comply with all the requirements of these articles. If any organization neglects or refuses to discipline any of its officers or members who may be guilty of violating these rules, such organization will be summoned by the executive committee to appear, through its officers, before the trial board for trial.

The trial board shall consist of the chief executive and two associate officers of each organization party to the Federation, excepting the one on trial. A two-thirds majority vote of the trial board shall be necessary to convict.

An organization convicted under this section may be suspended for a stated time, or expelled from the Federation. The vote shall be first taken on expulsion, and, if less than a majority vote for expulsion, the organization shall be suspended for a time fixed by a majority vote of the trial board.

Sec. 12. An organization not under charges may withdraw from membership in the Federation by filing with the secretary of the executive committee notice in writing, signed by its chief executive officer and grand secretary, and over seal of its grand division or grand lodge, of its desire to withdraw at the end of 60 days from the date of filing notice. The secretary of the executive committee shall, upon the receipt of such notice, immediately notify all members of the executive com-

mittee of its receipt, and no withdrawal shall be effective until the expiration of said 60 days from the date upon which notice is received by the secretary of the executive committee. Until the withdrawal is effective the organization shall be amenable to all the provisions of these articles.

SEC. 13. These articles may be amended by the unanimous vote of the executive committee of the Federation.

The grand chief of the Brotherhood of Locomotive Engineers was not authorized to represent his brotherhood in the conference at which the above articles of federation were adopted, but he conferred with the committee in the capacity of a private individual. The Engineers' Brotherhood discussed the question of such federation at considerable length at its biennial convention in May, 1898, and decided not to join the Federation. The reasons for this decision were summed up by Mr. P. M. Arthur, grand chief of Locomotive Engineers, in his testimony before the Industrial Commission, volume I, page 123, in which he said:

I am not willing to delegate the power and authority to a conductor, a telegraph operator, a fireman, or a brakeman to say whether the engineers shall quit work or not. I want that question to be decided by engineers, not by anybody else. That is one of my principal reasons. Another reason is, the moment you federate you lose your identity as an organization. No matter how you may do it, the public will look upon it that you have become a part of the Federation, and you will be known then as the American Federation of Railway Employees only. There will be no Brotherhood of Locomotive Engineers, or Brotherhood of Locomotive Firemen, or Order of Railway Conductors, or Order of Railway Telegraphers. I may be mistaken. We are the pioneers in the work of reformation among railway men. For years we were the only organization that claimed to be a protective organization. For 22 years the Order of Railway Conductors was known as a nonprotective organization, the same way with the Brotherhood of Locomotive Firemen up to 1885, and for 30 years we went right along adjusting our grievances, making agreements with the companies without the aid or assistance of anybody. We have treated everybody well so far as we know how, and I never could understand, and I do not know to-day, why it is necessary for the locomotive engineers to federate with others. For what purpose? Might never made right. Some, however, advance this argument: If a delegation representing every branch of the service walks into the office of the general manager he would not dare say no. Well, that remains to be seen. I do not believe that we ought to win by resorting to coercive measures, nor do I believe you would be respected in the same spirit if you would approach him in that coercive way. Again, it may be selfish, but federation would mean that each organization would have to spend its time and money in adjusting other people's differences. Personally I have always been opposed to it, and there has never been any argument advanced by anyone to convince me that it was necessary for the Brotherhood of Locomotive Engineers to federate with the organizations for its future good.

This federation, usually known as the National Federation, worked well for a time and was really a move in the direction of conservatism, and for that reason did not satisfy the more radical members of several of the brotherhoods. The cause of dissolution was practically a dispute in which the executive committee would not approve the grievances of the Brotherhood of Railroad Trainmen against the Pittsburgh yard roads. According to the terms of the federation the trainmen could not strike without such approval. They determined to strike, however, and withdrew from the federation on January 18, 1900, and were followed by the Order of Railway Conductors and the Order of Railroad Telegraphers. Grand Master Sargent announced the dissolution of the federation in official circular No. 9, under date of February 1, 1900, in which he said:

"It becomes my duty to advise that the Federation of American Railway Employees, as established April 1, 1898, has ceased to exist on account of the withdrawal of the Order of Railway Conductors, Brotherhood of Railroad Trainmen, and Order of Railroad Telegraphers.

"Accompanying this circular is the official communication, duly approved by the chief executive of each organization, which will explain to the membership the reasons for the dissolution.

"The Brotherhood of Locomotive Firemen having ratified the articles of federation, whereby they became the laws of the order, and not having vested the grand master or grand executive board with any authority whereby we would be justified in withdrawing, we did not feel at liberty to assume the authority of serving official notice of the withdrawal of the organization until we had presented the question to the membership to vote thereon. Had not each of the organizations above named withdrawn from the federation, thereby dissolving the same, we would have submitted the question to the membership. The entire matter will be presented to the convention at Des Moines, Iowa, and the grand body will be in a position to determine what further arrangements for an alliance with the sister organizations shall be consummated.

"In the meantime we trust that the same good feeling will be maintained among the rank and file of the membership in their relations with the membership of the sister organizations, and that where there is a disposition for cooperation we shall at all times be ready to encourage and assist. It will be understood that no federation of any character will be permissible, and the membership will enter into no compact which will in any way come in conflict with the laws as they now exist. When the

convention is held, if system federation is thought advisable, provisions can be made for its adoption, but it will not be permissible until the meeting of the grand body."

This announcement was accompanied by a circular letter under date of January 30, 1900, signed by the representatives of the four organizations in the federation and giving the reasons for its dissolution.

JANUARY 30, 1900

*To the members of Order of Railway Conductors, Brotherhood of Railroad Trainmen, Brotherhood of Locomotive Firemen, Order of Railroad Telegraphers*

The federation which has been in force as between the above-named organizations has not worked out in practice what was hoped for it or what it promised in theory. It may safely be said that one of the prime reasons for its failure to work out what was hoped for is that the sentiment among the membership, which is necessary to the satisfactory working of such a plan, is not sufficiently general to insure that result. An alliance between organizations, under which the aid of the organizations party to the alliance is proposed to be exercised in behalf of any one of those organizations, in order to be entirely successful, must be supported by a spirit of willingness to sacrifice considerable of self-interest, if need be, in order to advance the interests of the whole, or in order to establish a principle, even though, just at that moment, it may have no direct bearing except upon the aggrieved organization. The federation was intended as a supreme court on the matter of grievances within organizations party to the federation, and if the extreme provided for in its rules became necessary, it was intended to be a supreme test of the strength of the united organizations.

There has been some difference of opinion expressed by the members of the organizations as to the propriety of invoking the aid of the federation in certain causes or instances, and while some differences of opinion have, as a matter of course, existed among those who composed the different federated boards, nothing of an unresolvable nature or necessarily lasting in its effects arose in that direction. A labor organization in order to fulfill its mission must be recognized as the agent or representative of the membership that compose it. If it can not be recognized as such agent, the membership, of necessity, must lose or surrender some of the benefits otherwise to be derived from the organization. If the executive officer of an organization is called by the members and is denied the right to appear and speak for them, he has not the means of asserting or insisting upon that right except as he is supported in so insisting by the membership employed on that system. If the membership of the organizations generally were to assume the position that they are willing to waive their right to be represented by their organizations simply upon a declaration of a railway official to meet them, the influence of the protective feature of the organizations would soon be materially lessened.

In two or three instances the aid of the federation was invoked by organizations that had been denied a hearing, and the federated board was also denied a hearing, and some one or more of the classes of employees who have made up the federation have been unwilling to support an issue on that question. When an aggrieved organization has in hand a complaint which their representatives have endorsed as reasonable, and which their membership, by a two-thirds vote, have expressed themselves as willing to support to an extreme, if necessary, and they are denied the opportunity of presenting it and being heard upon it, and the federation prevents them from taking an aggressive position which they would otherwise take, and at the same time prevents their receiving any satisfaction from their efforts, they naturally feel that the alliance operates more to their detriment than to their good.

In forming this federation the idea of giving the members directly employed on the road in question the controlling voice in its affairs was strictly adhered to. There are a very large number of systems where the relations between the membership of the organizations is harmonious and satisfactory as the relations between the organizations themselves, or between their officers as such. There are some systems where these conditions do not prevail. It is believed that if the allied organizations accept the refusal of a railroad official to meet them, and "lay down" because some official sees fit to take that position, it would eventually destroy the influence of the organizations individually and of their protective policy. Various suggestions have been offered from time to time to improve the situation, but nothing of an entirely satisfactory nature has been offered. Believing that the conditions which have developed demanded such action, the officers of some of the organizations party to the federation have, under the authority vested in them by their organizations, withdrawn from membership in the federation, and, as a result, the federation is in effect dissolved. This action is not taken without regret, because much of good was hoped from this plan, and beyond doubt much good has been derived from it. But the good which has been secured has not sufficiently outweighed the resulting evil above outlined to justify a continuance of the alliance. It was said at the time the federation was formed that it would operate to reduce or prevent strikes, and it has certainly operated in that direction, but in the two instances where a strike vote has been taken in the federated board, upon a proposition which has been approved by the federation, it has been negatived by the votes of men who were employed on the system.

The dissolution of the federation must not be understood to indicate any friction or irrepressible conflict between the organizations that composed it. If the membership of the organizations, as a whole, were as well prepared for federation and as nearly federated in their sentiments as their officers are there could be no question as to the success of the plan. The relations between the organizations are as pleasant as they ever were, if not more so, and wherever, on any system of road, the membership desire to cooperate through their committees, under the laws of the organizations, in adjusting any matters of mutual concern, the officers of the organizations will be found ready and willing to assist in carrying such movements to a successful termination, and will be found working together as harmoniously as ever before.

Our faith in the principle of federation is not shaken, but our conviction is that in order to make it a success self interest must, to a large extent, be lost sight of and a willingness to make sacrifices in the interests of the general good result must be entertained by the members of the organizations forming the alliance. We urge upon the membership of our several organizations to do everything in their power to spread and strengthen the spirit of fraternity among the craft, to lend a helping hand to their brothers whenever possible, and to do all in their power to assist in building up the sister organizations by encouraging all who should hold membership therein to become members. In all places where the proper sentiment and spirit prevails among the members of the several organizations, it is now possible to work out, through cooperation and friendly assistance of each other, the same practical results that were expected to come from the federation.

The withdrawal of the Brotherhood of Railway Trainmen became effective January 18; that of the Order of Railway Conductors January 23, and that of the Order of Railroad Telegraphers on January 25. The officers of the Brotherhood of Locomotive Firemen are unwilling to take action without consulting their lodges. As above stated, however, the federation is dissolved, and no effort will be made by any to invoke its assistance. We believe that is ultimately some means for overcoming what-

ever defects this plan may have possessed will be found, and that a little more experience will demonstrate beyond question the good possible to be secured through an exercise of the spirit which has heretofore been stated as necessary to the complete success of an alliance such as has now been dissolved, and such as, in all probability, will arise at some time in the not distant future from the ashes of this one.

Yours, fraternally,

E. E. CLARK, *Grand Chief O. R. C.*  
 P. H. MORRISSEY, *Grand Master, E. R. T.*  
 F. P. SARGENT, *Grand Master, R. I. F.*  
 W. V. POWELL, *President O. R. T.*

The status of the question of federation of railway employees is, therefore, now just where it was under the Cedar Rapids plan, which is still in effect on those systems where the members of the several organizations desire it. The reversion to this plan has been formally approved by the engineers, conductors, and firemen, and will doubtless soon be approved by other organizations.

### § 13. THE ATTITUDE OF RAILWAY CORPORATIONS TOWARD LABOR ORGANIZATIONS AND TOWARD THE QUESTION OF ARBITRATION OF LABOR DISPUTES.

The results of an investigation of the relations existing between railway corporations and their employees, as obtained in reply to a circular sent out by the Interstate Commerce Commission August 12, 1889, to all railroad commissions, railroad journals, and to the officials of 85 leading railway corporations, are summarized in Appendix 11 of the third annual report of the Interstate Commerce Commission. The questions in this circular related chiefly to (1) what the roads were doing for their men in the way of providing sick, accident, and death insurance; (2) reading rooms, amusement places, eating houses, lodging places for trainmen, and (3) provision for technical education in shops. Of the results of this investigation the commission in its report says: "The inquiries addressed to the railroad companies are quite fully answered and embody much valuable information. All to whom the circular was addressed have responded fully. Of the 85 answering, 12 appear to have instituted insurance funds in the interests of their men, 5 others have hospital funds; 5 have benefit associations provided for wholly by employees, 1 contributes annually \$500 for a like purpose, and 1 contemplates starting an insurance department at an early day. Fifty per cent of the lines heard from furnish eating or lodging houses to their employees needing them; 20 of them provide technical education to a greater or less extent, but in all cases where no regular technical training is supplied as such training the apprentice system prevails, or men are selected who have proved their competency by actual service. It is plain from the responses obtained from both classes that with the growth of closer relations between employees and corporations not only are the interests of both greatly promoted, but the public is assured of better and more efficient transportation service."<sup>1</sup>

The same topic was reported upon by the secretary of the Interstate Commerce Commission in 1892. (See Appendix G to the sixth annual report.) The secretary in his report to the commission said: "The safety of the public, the efficiency of railway service, the profit of the corporation, and the current and future welfare of the employees may all be furthered by improved relations of the companies to the men, even if such improvement depends on no higher motive than mutual self-interest of those concerned. If, instead of being mutually unfriendly and destructive, only selfish considerations lead to more harmonious efforts of these great combinations of capital and labor, the following results may be hoped for:

(1) To the public, greater efficiency of the railroad service and immunity from payment to railroad companies for property destroyed in the labor riots.

(2) To the railroad, freedom from strikes and from damage suits for injuries suffered in employment in its service, and consequently greater receipts and profits from the work of the road.

(3) To the employees, more regular and more certain employment, relief in case of injury or sickness occurring in the service, relief to families of employees dying when in the service of the company, and the provision for pension in old age.

(4) To both railroad and employees, mutual trust and confidence, the self-interest of each one the common interest of all, each one conscious in every act pertaining to the service that he serves himself best who best serves the organic whole of which he is a necessary constituent part.

The secretary then sums up the results of this set of questions similar, to those sent out in 1889, which were addressed, under date of August 2, 1892, to 350 railroad companies, with the result that 59 out of the 350 provided an insurance or guaranty fund

<sup>1</sup> See Third Annual Report of the Interstate Commerce Commission, 1889, pages 103 and 104.

or hospital fund or relief association, offering aid in various degrees and ways to employees, and maintained either by the companies or by the employees or by both cooperating on some mutual plan. Fifty-two companies provided either eating or lodging houses or meals or lodgings at reduced rates for their employees. Seventy-eight companies provided reading rooms or some kind of places of resort for their employees, 44 of these being in connection with the Railroad Young Men's Christian Association work. Forty-eight companies provided in different modes and degrees for the technical education of their employees. Thirteen companies made distinct provision for their employees when superannuated in their service. One hundred and twenty-five companies stated that their employees, when disabled by accident, were given preference for the performance of other service for which they were qualified, or during disability were provided for in divers ways and degrees at the expense of the company.

Two of the topics covered in the circular sent out in both of these cases by the Interstate Commerce Commission have been discussed in other sections of this report.<sup>1</sup>

It is interesting to compare the results of these earlier investigations with the information that has been gathered by your expert agent at this later day in connection with the investigations of the Industrial Commission. Such comparison can be made with respect to the growth of provision for technical education and in provision for insurance protection by a comparison with the other sections of this report to which reference has just been made. In this place we desire to comment briefly upon certain facts having a bearing on the relation of railway corporations to labor organizations, and to discuss the extent to which arbitration, rather than the appeal to force, is being used to settle any differences which may exist. On the circular of inquiry sent out by your expert agent to 62 of the leading railroads of the country the questions were asked: "What methods do you pursue in the settlement of strikes and disputes among your employees?" "Have you had recourse to either State or national arbitration boards; and, if so, with what result?" Answers were received to these questions from 37 roads, operating 107,075 miles of line and employing 612,678 men. The answers are as follows.

WHAT METHODS DO YOU PURSUE IN THE SETTLEMENT OF STRIKES AND DISPUTES AMONG YOUR EMPLOYEES? HAVE YOU HAD RECOURSE TO EITHER STATE OR NATIONAL ARBITRATION BOARDS, AND IF SO, WITH WHAT RESULT?

1. Any method that promises success consistent with equity. Have never tried State or national boards of arbitration.

2. Have never had a strike.

3. For more than 20 years the operation of this road has been so conducted that all differences between the management and those in its employ have been adjusted without strikes. These adjustments have been successfully made by full and free conferences between the officers and committees of the employees at which the widest and freest discussion has always been encouraged, and whenever the employees have so desired, the chief officers of their labor organizations have been invited to take part in the discussions.

This plan has worked so satisfactorily to all parties in interest that we have never been obliged to consider either the necessities or merits of arbitration as applicable to our interests.

4. Have had no strike of any consequence for many years. All differences, when any occur, are settled with the men themselves, without recourse to outside arbitration.

5. Have had no strikes. All matters in dispute have been settled amicably by conferences between the officers and employees. Have had no recourse to arbitration.

6. Have not had recourse to arbitration.

7. The officers of the company are always willing to meet the employees individually or committees from them for discussion of any grievances or complaints, and the same are adjusted upon their merits, and so far with entire success and without strikes or recourse to outside assistance from State or national boards of arbitration.

8. We have never had recourse to arbitration boards in labor matters.

9. We have had no occasion to settle any strikes or disputes since the "Pullman" strike of 1894, when our men had no grievances of their own and were glad to come back to work under any circumstances. We have since met one committee of engineers who asked for certain things; these were thoroughly talked over and those of the requests which were considered by the officers of the company to be

<sup>1</sup> See section 7, on technical education of railroad employees, and section 14, on railway employees, hospitals and insurance.

reasonable were granted, the matter ending there to the apparent satisfaction of all concerned.

10. Arbitration with committees representing the organized labor. No.

11. Have had no strikes.

12. The management is at all times willing to receive its employees of all grades, listen to complaints, and discuss with them matters of alleged grievance.

Never have had recourse to either State or national arbitration boards.

13. Grievances or complaints of employees, presented individually or by committee, are always cheerfully discussed with them by the company's officers, and so far they have been satisfactorily adjusted without any outside assistance or strikes.

14. We deal with employees direct, having never resorted to outside arbitration, and the results are very satisfactory. We encourage employees to make their grievances known to their immediate superiors, and if they fail to reach mutual understanding, they are given the right to appeal to the company for adjustment of their differences. By this course we find it unnecessary to apply to either State or national arbitration boards.

15. Have never had any.

16. In events of grievances being presented by employees, matter is taken up by the general grievance committee and satisfactory arrangement arrived at in conference. It has not been necessary for this company to have recourse to either State or national arbitration boards.

17. We have always succeeded in the settlement of disputes and strikes among our employees by direct conference with them, have had no occasion to refer any such questions to State or national arbitration boards.

18. If an employee strikes we consider that he has voluntarily left the service of the company, and we proceed to fill his place with someone else. In regard to disputes, any employee feeling aggrieved has the privilege of taking his case up and a hearing will be given him by the head of the department in which he is working, and he has the right to appeal from the decision of that officer to the next highest official, and so on up to the second vice-president and general superintendent, and has the privilege of being represented by a committee of employees if he desires to be so represented. This company has never had recourse to either State or national arbitration boards.

19. We have always been able to settle all disputes with our men, and have never had recourse to either State or national arbitration boards.

20. It is our practice to treat directly with the employees only in the adjustment of any differences that may arise, generally in the form of committees or individuals delegated by the different classes of employees. We have not found it necessary to call upon either the State or the national arbitration boards in the adjustment of such differences.

21. We treat directly with the employees in the adjustment of any differences arising. We have not found it necessary to call upon either State or national arbitration boards in the adjustment of such differences.

22. We have never had recourse to State or national board in settlement of differences with employees, have had no strikes or serious disputes.

23. Do not have any.

24. The settlement of strikes and disputes among employees is usually adjusted amicably by a meeting of the officers of the company with a committee of its employees. We have never had recourse to either State or national arbitration boards.

25. We have very little trouble with our men, and in case of disputes they are always settled satisfactorily by us.

26. There have been no strikes in any of our service since I have been connected with the property, and have had no recourse whatever to State or national arbitration boards.

27. Since the Pullman agitation in 1894 this company has never experienced any strikes. At that time those so engaged were given an opportunity to report for service within a certain period and were reemployed from that date as new men, rank and age in service beginning at the time of their application. The management undertakes to recognize the service of its employees, is ever ready to grant additional compensation and consideration as to rules governing their employment as circumstances and conditions will permit, so that there should be no reasonable grounds for the inauguration of a strike. In case of disaffection among any class of employees, they are given the opportunity of discussing the matter with the head of their department, and in case of a disagreement have the privilege, under certain conditions, of presenting their grievances to the management. The heads of departments usually dispose of such matters, however, and conferences with the management are

rare. We have never had occasion to call upon any State or national board of arbitration.

28. Deal directly with employees, which plan has been very successful. No arbitration boards.

29. There has been no occasion for recourse to either State or national arbitration boards. Such differences as have arisen from time to time have been satisfactorily adjusted with the individuals directly interested.

30. We have had no occasion to settle strikes or disputes among our employees, and have not had recourse to either State or national arbitration boards. The only experience we have had with strikes was a disturbance in the telegraph department in April last, on account of order issued by the president of the Order of Railroad Telegraphers. There was no occasion for any negotiations looking to a settlement of this trouble. (Note at the end of this letter giving general explanation regarding dates, etc.)

31. This is fully answered by our previous report inclosed. We have had no strikes whatever since the A. R. U.-Pullman strike of many years ago, which involved our road in common with most all others in the country. We have not had to have recourse to either State or national arbitration boards, always thus far managing to settle our disputes amicably by mutual agreement.

32. The management of this company is ever ready to personally hear and pass on all grievances, either real or fancied, and the pursuance of this policy has had the effect of averting strikes or disputes without recourse to State or national arbitration boards, and, so far as is known, to the full satisfaction and benefit of employees of all grades.

33. Strikes are generally avoided by officials of the company giving proper and just consideration to any grievances or complaints which may be presented or brought to their attention by employees, and no strike has occurred upon this company's lines since the general labor strike of 1877. This company has never found it necessary to have any recourse to either State or national arbitration boards for the purpose of settling any grievances on the part of its employees.

34. There has been no strike of this company's employees for many years, and no recourse has been necessary to either State or national arbitration boards.

35. We have never had any occasion to take any action in case of strikes, none having occurred on the line. Every employee is privileged to call upon his superior officer whenever he has a grievance. So far we have always been able to come to an amicable understanding without recourse to arbitration.

36. We have had no strikes, and therefore have had no occasion to have recourse to arbitration boards. In adjusting questions relating to rates of wages or hours of service we endeavor to deal directly with the employees interested. Every employee has the privilege of going to the head of his department with grievances, if any, and this method usually brings about satisfactory settlement.

37. We have had but few strikes, none of them of any importance, in the last year. Our endeavor has been and is to meet with our men and adjust their grievances where such exist, and up to the present time a very good understanding has existed between our employees and the management. We have never called upon State or national arbitration boards.

The above questions and answers were intended to show rather the practice of railroad corporations with respect to those questions concerning which disputes are most likely to arise, rather than to show the theoretical attitude which the corporations take toward their employees. The answers show rather conclusively that arbitration by any outside parties has made but little headway in railroad employment. The answers would also seem to indicate that disputes were frequently settled by direct discussion between the men and the employing officers of the roads. Of course, these answers are likely to represent only those roads which have been particularly successful with this method. Those that have not and those that have had serious strikes and labor troubles are likely to be the ones which did not answer this question. The fact, however, that the answers do represent roads operating 55.3 per cent of the total mileage of the country in 1900 and employing 60.2 per cent of the total number of employees the same year indicates a very favorable showing for the major part of railroad employment.

The National Civic Federation called a national conference, which met in Chicago December 17 and 18, 1900, to discuss the subject of conciliation and arbitration in labor disputes. The conference made the following recommendations and appointed a special committee to work out a plan to promote arbitration of labor disputes. On this committee, it will be noted, were appointed two men, one the vice-president of the Atchison, Topeka and Santa Fe Railroad system, and the other the grand master

of the Brotherhood of Locomotive Firemen, both of whom represented the discussion of this question from the point of view of railroad labor.

The resolutions adopted at the conference on conciliation and arbitration, Chicago, December, 1900, are as follows:

First That employers and wage earners should enter into annual or semiannual agreements or contracts.

Second That all industries in the United States should establish boards of conciliation within the several and varied interests, to which boards of conciliation all differences and disputes arising between employer and employee, if not readily adjusted between the immediate interests concerned may be referred for settlement.

Third Recognizing the fact that compulsory arbitration aside from all other objections urged against it, is not at this time a question of practical industrial reform, and inasmuch as the systems of arbitration now in vogue do not seem fully to meet the requirements of the different interests, and appreciating the importance of the subject,

We, therefore, recommend that the presiding officer of this conference appoint a committee to serve for a period of one year, to be composed of six representatives of the employer class and six representatives of the employee class, these representatives to be selected as nearly as possible from the different sections of the country, for the purpose of formulating some plan of action looking to the establishment of a general system of conciliation that will promote industrial peace, and that this joint committee be empowered to add to its number and fill any vacancies that may occur.

We would recommend, also, that this joint committee be given power to appoint such auxiliary committees from the industries, trades, and professions as may seem best to promote the work of conciliation and education.

We believe that this conference will have, in part at least, failed of its mission unless it strenuously insists that the proper time to arbitrate is not after a strike or lockout has been inaugurated, but before it has begun. We fully realize that all plans of arbitration and conciliation will be unavailing unless we are all animated by a spirit of fairness and justice and are willing to open our eyes to such rights as belong to every citizen.

In accordance with the above recommendations the presiding officer appointed the following-named gentlemen to constitute the committee:

A. C. BARTLETT,  
*Vice-President Hubbard, Spencer, Bartlett & Co., Wholesale Hayware*  
SAMUEL GOMPERS,  
*President American Federation of Labor*  
HENRY W. HOYT,  
*President National Founders' Association*  
JOHN MITCHELL,  
*President United Mine Workers of America*  
HERMAN JOSH,  
*Commissioner Illinois Coal Operators' Association*  
MARTIN FOX,  
*President Iron Molders' Union of America*  
E. D. KENNA,  
*Vice-President Atchison, Topeka and Santa Fe Railway System.*  
F. L. P. SARGENT,  
*Grand Master Brotherhood of Locomotive Firemen*  
G. WATSON FRENCH,  
*Vice-President Republic Iron and Steel Company*  
HENRY WHITE,  
*General Secretary United Garment Workers of America*  
CHAUNCEY H. CASPER,  
*President Slave Founders' National Defense Association*  
JAMES M. LYNCH,  
*President International Typographical Union*

In connection with the work of this committee Mr. Kenna sent a circular letter addressed to the various railroad presidents of the United States, asking whether they would favor a plan for an organization among railroad officials looking to the arbitration of labor disputes. This was merely for the purpose of ascertaining the various opinions entertained by such officials as the basis of intelligent action for the committee of which Mr. Kenna was a member. The replies indicated that many railroad presidents favored some such plan, but that the majority were undoubtedly opposed to it on the ground that such an organization would be viewed with disfavor by both the employees and the general public, which might regard it as a coercive measure. The subsequent work of the national committee on conciliation and arbitration resulted in the adoption of the following plan, applicable to labor disputes in all departments of industry, and designed to aid in the prevention of industrial disturbances, strikes, and lockouts. This general announcement of policy on the part of the committee was agreed upon, after a full discussion at a meeting held in New York City, in which the committee met in executive session for several days. The decision means that the national committee on conciliation and arbitration will devote itself chiefly to educational work, the scope of which has been broadly outlined by the committee as follows:

(1) "To form in the public mind the conviction. First, that industrial disturbances in the nature of strikes or lockouts can and should be avoided, second, that the only reliable method of avoiding such disturbances is through full and frank conferences between employers and workmen, with the avowed purpose of reaching an agreement as to terms of employment. Trade agreements between employers and workmen, where established for a definite term, have so fully demonstrated their great value in maintaining industrial peace that they should be generally adopted, third, that under conditions existing to-day, and as they are likely to exist for the future, organizations suitable for

comprehensive and conclusive consideration of these complex questions involved in the mutual relations of employers and workmen are most valuable and important, and where possible should be utilized, but in any event the true and safe policy is comprehended in conference and agreement between employers and workmen covering as large a constituency as possible; and, fourth, that the surest way to keep organizations of employers and workmen free from unwise and injurious action is through cooperation and the mutual education and respect which will inevitably follow from it.

(2) "To establish and maintain a board or commission composed of the most competent persons available, selected from employers and employees of judgment, experience, and reliability, which shall be charged with the above-described duties and shall also be expected to make known to workmen and employers that their counsel and aid will be available if desired in securing that cooperation, mutual understanding, and agreement already indicated as the general purpose of this National Committee on Conciliation and Arbitration."

The general method of operation only may be outlined, specific measures will have to be determined from time to time as study, investigation, and experience may show cause.

The committee will secure the fullest possible information as to the methods and measures of arbitration in vogue throughout the world, it will put itself into communication with all representative bodies of workmen and employers, inform them as to its purpose, offer its services, and secure their cooperation, advice, and good will if possible, asking particularly of general organizations that whenever any specific questions are arising where there is no established method of joint consideration and settlement existing, the national committee be informed in order that it may use its influence before trouble occurs. This method to be extended to local organizations when the committee may find itself sufficiently equipped so to do.

The committee will adopt such measures as may seem feasible to disseminate through the general newspaper press, through magazines, periodicals, and special pamphlets the results of its investigations, together with its recommendations and suggestions.

The committee may enlarge its membership so as to include such leaders of industry and labor and such representatives of the general public as it may deem necessary to effectively extend the scope of its usefulness. The committee will select from its members an executive committee of fifteen, in whom will be invested power to equip and direct such working organization as in its judgment will be necessary. The committee shall appoint a finance committee to secure sufficient funds to put the organization upon a firm basis and to enable it to carry out the work on the lines indicated.

So far as arbitration is a remedy for labor disputes in railroad business, much more may be hoped for from the special law of June 1, 1898, applicable to those fields of labor, which was worked out with so much care by Congress. While this measure is one of purely voluntary arbitration, it does provide with great care that a dispute once submitted to arbitration will receive the best expert consideration and fair representation of interests and the strongest measures for executing the decision as against either party to the controversy. The text of this act is given in full on p. —.

Perhaps the more usual way of testing the relations of employers and employees would be to ascertain the theoretical attitude of the companies toward their employees, and especially on the question of labor organizations. To this end, the question was asked in the circular letter to railways: "Do you make any objection to employees being members of railway brotherhoods or orders, or of other labor organizations?" Thirty-nine railroad companies, operating 110,170 miles of line and employing 627,782 employees, made reply to this question; practically all the replies but one being in the negative, although several of them were qualified by more explicit statements of the position of the company. The one which evidently does not look with favor upon such organizations among its employees is a large and important road, which answered as follows: "Secret organizations, etc., are not recognized by the company, and in the adjustment of any differences between the company and its employees the latter are treated with directly as employees of the company and not as members of any organization." The more explicit statements of the answers of several roads may be summed up in the single sentence that these roads have no objection to labor organizations per se, nor to their employees being members of the same, provided it does not interfere in any way with their work, and also provided that such employees do not make themselves offensive either to the officials of the road or to their fellow-employees because of such membership. Doubtless many of the railroads which answered in the negative would take the same attitude as indicated in the one answer quoted, on the question of dealing with the representatives of such organizations in matters affecting the interests of their employees.

A more specific test of the extent to which the companies take cognizance of membership in labor organizations is furnished in the answers to another question, namely: "What percentage of the men in various grades of service belong to such organizations?" To this question 35 companies replied, representing 105,411 miles of line and 607,088 employees. Of these 35 replies, 23 stated definitely that the company had no information, did not keep any record, and did not know the number or percentage of its men in labor organizations. The remaining 12 replies represent 31,420 miles of line and 138,996 employees, and are as follows:

(1) "Engineers, firemen, conductors, brakemen, 80 per cent; machinists, carpenters, etc., 70 per cent; agents and operators, 60 per cent; clerks, none.

(2) "Trainmen and switchmen, 90 per cent; other classes, 20 per cent.

(3) "A large majority of those employed in train service; a very small percentage of other employees.

(4) "Can only estimate it at about 75 per cent in train service, about 10 per cent

in the mechanical department, and unknown in the maintenance of way and engineering departments.

(5) "Have no means of knowing, but should judge about 85 per cent of enginemen and firemen, 75 per cent of brakemen, and 50 per cent of conductors and shopmen.

(6) "In the transportation and machinery departments a large proportion of our men are known to belong to the Order of Railway Conductors, Brotherhood of Railway Trainmen, Brotherhood of Locomotive Engineers, and Brotherhood of Locomotive Firemen, but very few of our men belong to any other labor organizations. We have no means of knowing the exact percentage. In the road department, a very small number of our trackmen belong to the Brotherhood of Railway Trackmen of America, but this number is so small as scarcely to deserve mention. We have no means of knowing positively how many of our men do belong to labor organizations.

(7) "Twenty-five per cent of the men in the operating department. Practically all engineers and firemen belong to the Brotherhood of Locomotive Engineers and Firemen, respectively. Probably 80 per cent of the shopmen belong to labor organizations.

(8) "It is impracticable to state what percentage of our men are members of labor organizations; probably not more than 4 or 5 per cent of the total number of employees.

(9) "Seventy-four per cent, other than laborers.

(10) "In the maintenance of way department few if any employees belong to labor organizations. Some shop employees have joined various unions, but the majority of the brotherhood employees are found in the train and station service. We offer no objections to the men joining these brotherhoods, and keep no statistics showing how many of the men are members.

(11) "Number not known; estimated about 25 per cent.

(12) "No inquiry has ever been made on the subject, and figures can not be given, but the number varies considerably in the different grades of service. Engineers, firemen, conductors, and brakemen belong very generally to their respective brotherhoods, and in other lines of service to a less extent."

The Hon. Charles Francis Adams in a paper on "The prevention of railway strikes" has contributed to the discussion of the relations of employers and employed in railroad service some very interesting suggestions. They are the more worthy of attention in that they represent a forward movement which has not as yet taken definite shape, but indications of which are plainly seen in the thought and activities of many railroad employers. After discussing some of the peculiarities of railway employment and some of the facts of railway employment, as brought out in Mr. Adams's own experience as president of the Union Pacific, employing 14,000 men, he suggests that first of all a distinction is to be drawn between two classes of men on the pay rolls of the operating department: (1) Those who have been admitted into the permanent service of the company; and (2) those who for any cause are only temporarily in their service. Men should be admitted to the first class only after having served an apprenticeship in the second class, and admission to the permanent service would then be in the nature of a promotion. Speaking then with reference to the permanent service, and security of employment in this service, Mr. Adams has the following suggestions to make:

"The permanent service of a great railroad company should in many essential respects be very much like a national service—that of the Army or Navy, for instance—except in one particular, and a very important particular, to wit: Those in it must of necessity always be at liberty to resign from it, in other words, to leave it. The railroad company can hold no one in its employ one moment against his will. Meanwhile, to belong to the permanent service of a railroad company of the first class, so far as the employee is concerned, should mean a great deal.

"Beyond this, the man who is permanently enrolled should feel that, though he may not rise to a higher position, yet, as a matter of right, he is entitled to hold the position to which he has arisen just so long as he demeaned himself properly and does his duty well. He should be free from fear of arbitrary dismissal. In order that he may have this security, a tribunal should be devised before which he would have the right to be heard in case charges of misdemeanor are advanced against him.

"No such tribunal has yet been provided in the organization of any railroad company; neither, as a rule, has the suggestion of such a tribunal been looked upon with favor either by the official or the employee. The latter is apt to argue that he already has such a tribunal in the executive committee of his own labor organization, and a tribunal, too, upon which he can depend to decide always in his favor. The official, on the other hand, contends that if he is to be responsible for results he must have the power of arbitrarily dismissing the employee. Without it he will not be able to maintain discipline. The two arguments, besides answering each other, divide the

railroad service into hostile camps. The executive committees of the labor organizations practically can not save the members of those organizations from being got rid of, though they do in many cases protect them against summary discharge, and, on the other hand, the official, in the face of the executive committee, enjoys only in theory the power of summary discharge. The situation is accordingly false and bad. It provokes hostility. The one party boasts of a protection which he does not enjoy, the other insists upon a power which he dares not exercise. The remedy is manifest. A system should be devised based upon recognized facts—a system which would secure reasonable protection to the employee, and at the same time enable the official to enforce all necessary discipline. This a permanent service, with a properly organized tribunal to appeal to, would bring about. Meanwhile the winnowing process would be provided for in the temporary service. Over that the official would have complete control, and the idle, the worthless, and the insubordinate would be kept off. The wheat would then be separated from the chaff.

Not only should permanent employees be entitled to retain their position during good behavior, but they should also look forward to the continual bettering of their condition. That is, apart from promotion, seniority in the service should carry with it certain rights and privileges. Take the case of conductors, brakemen, engineers, machinists, and the like, there seems to be no reason why length of faithful service should not carry with it a stipulated increase of pay. If conductors, for example, have a regular pay of \$100 a month, there seems no good reason why the pay should not increase by 'steps of \$5 with each 5 years' service, so that when the conductor has been 25 years in the service his pay should be increased by one-quarter, or \$25 a month. The increase might be more or less. The figures suggested merely illustrate. So also with the engineer, the brakeman, the section man, the machinist. A certain prospect of increased pay, if a man demeans himself faithfully, is a great incentive to faithful demeanor.

"How is the employee to be assured a voice in the management of these joint interests without bringing about demoralization?" No one has yet had the courage to face this question, and yet it is a question which must be faced if a solution of existing difficulties is to be found. If the employees contribute to the insurance and other funds, it is right that they should have a voice in the management of those funds. If an employee holds his situation during good behavior, he has a right to be heard in the organization of the board which, in case of his suspension for alleged cause, is to pass upon his behavior. No system will succeed which does not recognize these rights. In other words, it will be impossible to establish perfectly good faith and the highest morale in the service of the companies until the problem of giving this voice to employees, and giving it effectively, is solved. It can be solved in but one way, that is, by representation. To solve it may mean industrial peace.

"It is, of course, impossible to dispose of these difficult matters in town meeting. Nevertheless, the town meeting must be at the base of any successful plan for disposing of them. The end in view is to bring the employer—who in this case is the company, represented by its president and board of directors—and the employees into direct and immediate contact through a representative system. When thus brought into direct and immediate contact, the parties must arrive at results through the usual method, that is, by discussion and rational agreement. It has already been noticed that the operating department of a great railroad company naturally subdivides itself into those concerned in the train movement, those concerned in the care of the permanent way, and those concerned in the work of the mechanical department. It would seem proper, therefore, that a council of employees should be formed, of such a number as might be agreed on, containing representatives from each of these departments. In order to make an effective representation the council would have to be a large body. For present purposes, and for the sake of illustration merely, it might be supposed that, in the case of the Union Pacific, each department in a division of the road would elect its own members of the employees' council. There are 5 of these divisions and 3 departments in every division. The operating-men, the yard and section men, and the machinists of the division would, therefore, under this arrangement, choose a given number of representatives. If 1 such representative was chosen to each 100 employees in the permanent service, those thus selected would constitute a division council. To perfect the organization, without disturbing the necessary work of the company, each of these division councils would then select certain (say, for example, 3) of their number, representing the mechanical, the operating, and the permanent way departments, and these delegates from each of the departments would, at certain periods of the year, to be provided for by the articles of organization, all meet together at the headquarters of the company at Omaha. The central council, under the system here suggested, would consist of 15 men; that is, 1 representing each of the 3 departments of the 5 several divisions. These 15

men would represent the employees. It would be for them to select a board of delegates, or small executive committee, to confer directly with the president and board of directors. Here would be found the organization through which the voice of the employees would make itself heard and felt in matters which directly affect the rights of employees, including the appointment of a tribunal to pass upon cases of misdemeanor, and the management of all institutions, whether financial or educational, to which the employees had contributed and in which they had a consequent interest."

The discussion of the work of the insurance, superannuation, and pension features of the various railroad companies, as presented in another section of this report, gives much important material bearing on the relations of railroad employees and their employers. One other important aspect of the interest which railroad employers take in their employees remains to be discussed. Several roads have of late attempted to interest their employees as holders of investments in the property of the road. Chief among such experiments have been those of the Illinois Central Railroad Company, which is presented in the following circular sent out from the president's office May 25, 1896:

ILLINOIS CENTRAL RAILROAD COMPANY.  
PRESIDENT'S OFFICE.  
Chicago, May 25, 1896.

*To Officers and Employees of the Illinois Central Railroad Company.*

Referring to my circular letter of May 18, 1893, outlining the plan for assisting employees of the company to purchase shares of its stock it is with much gratification that I note their increasing desire to thus identify their interests with those of the company.

In order that the plan may be more clearly understood I present it herewith in greater detail. On the first day of each month the company will quote to employees, through the heads of their departments, a price at which their applications will be accepted for the purchase of Illinois Central shares during that month. An employee is entitled to the privilege of subscribing for one share at a time, payable by installments in sums of \$5, or any multiple of \$5, on the completion of which the company will deliver to him a certificate of the share registered in his name on the books of the company. He can then, if he wishes, begin the purchase of another share on the installment plan. The certificate of stock is transferable on the company's books, and entitles the owner to such dividends as may be declared by the board of directors and to a vote in their election.

Any officer or employee making payments on this plan will be entitled to receive interest on his deposits, at the rate of 1 per cent per annum during the time he is paying for his share of stock, provided he does not allow 12 consecutive months to elapse without making any payment at the expiration of which period interest will cease to accrue, and the sum at his credit will be returned to him on his application therefor.

Any officer or employee making payments on the foregoing plan, and for any reason desiring to discontinue them, can have his money returned to him with accrued interest by making application to the head of the department in which he is employed.

An employee who has made application for a share of stock on the installment plan is expected to make the first payment from the first wages which may be due him. Forms are provided for the purpose, on which the subscribing employee authorizes the local treasurer in Chicago, or the local treasurer in New Orleans, or the paymaster, or the assistant paymaster, to retain from his wages the amount of installment to be credited monthly to the employee for the purchase of a share of stock.

In case an employee leaves the service of the company from any cause, he must then either pay in full for the share for which he has subscribed, and received a certificate therefor, or take his money with the interest which has accrued.

The foregoing does not preclude the purchase of shares of stock for cash. An employee who has not already an outstanding application for a share of stock on the installment plan, which is not fully paid for, can in any given month make application for a share of stock for cash at the price quoted to employees for that month, and he can in the same month if he so desires, make application for another share on the installment plan.

Employees who want to purchase more than one share at a time for cash should address the vice-president in Chicago, who will obtain for them from the New York office a price at which the stock can be purchased.

Any employee desiring to purchase stock (except in special purchase of more than one share for cash) should apply to his immediate superior officer or to one of the local treasurers.

STUYVESANT FISH, President.

The efforts of the company in this direction began in May, 1893. Under date of October 29, 1900, the president of the company informed your expert agent that 211 employees had made partial payments on account of one share each of stock; those payments aggregating \$7,951.80, an average of \$37.69 on each share. So long as the shares were below par the men bought steadily, but since the shares advanced to a premium some have sold and taken the profit and comparatively few have bought. Up to June 30, 1900, 3,090 shares of the company's stock had been purchased and paid for under the plan outlined in the circular just quoted, the average cost to the purchaser having been \$98.13 per share. The present market price of the stock is about \$116 per share. When the stock went above par, the employees seemed to confuse shares of \$100 with a promise to pay that sum and were naturally unwilling to pay more than they expected to get. The company's officials are very well satisfied with the results of the plan. It has induced others not employed by the company but resident on or near the line to buy shares, a feature that has been stimulated by the company's offer to carry registered holders of stock to Chicago and back free once a year at the time of the annual meeting. The distribution of the capital stock of the

Illinois Central Railroad Company, as announced at the time of the annual meeting, September 26, 1900, was as follows:

The capital stock is \$60,000,000, divided into 600,000 shares of \$100 each. This is represented by certificates for 599,949 full shares and scrip for fractions aggregating 51 shares. The certificates are registered in the names of 6,931 different holders. One of these, the administration office, in Amsterdam, has held large blocks of stock for nearly forty years, against which it has outstanding its own receipts or due bills, good to bearer, which are held by a very large but unknown number of individual proprietors in Holland. There are registered in the name of the administration office 39,577 shares. This leaves 560,372 shares in the name of the remaining 6,940 stockholders as registered on the company's books, the average holding being 80.71 shares, or \$8,074.

There are in America 4,350 stockholders owning 355,227 shares, being 59.21 per cent of the whole. In each one of the twelve States in which the company runs its trains we have a number of proprietors, ranging from 6 in Nebraska, who own 149 shares, to 879 in Illinois, who own 38,117 shares, or \$3,811,700.

The certificates of stock are registered as follows		Shares.
In 6 names, 5,000 shares or over, 12.01 per cent of the whole.....		72,057
In 75 names, from 1,000 to 4,999 shares each, 21.03 per cent of the whole.....		145,771
In 98 names, from 500 to 999 shares each, 9.73 per cent of the whole.....		58,406
In 741 names, from 100 to 499 shares each, 25.78 per cent of the whole.....		154,667
In 193 names, precisely 100 shares each, 8.22 per cent of the whole.....		49,300
In 5,538 names, less than 100 shares apiece, 19.96 per cent of the whole.....		119,718
Total.....		599,949

The above statement shows that a decided and growing majority of the stock is held in America, and of all the holdings the majority is held in lots of less than 500 shares (\$50,000). The actual number of proprietors is even greater than the statement shows, because each account is treated on the books of the company as one holding, although many such accounts represent executors, trustees, and corporations acting for many individuals. The Great Northern Railway has a similar plan to provide for the investments of employees. It is not a gift of stock nor a sale to employees, as under the Illinois Central plan. Ten thousand shares (\$1,000,000) were set aside by the directors to be handled by a company known as The Great Northern Employees' Investment Association, Limited. Certificates were issued against these shares in multiples of \$10, the certificates drawing 7 per cent interest in dividends paid quarterly. Any employee may buy \$10 worth and upward of these certificates, provided he has been in the employ of the company 3 years and does not receive over \$3,000 pay. He may also withdraw at any time, receiving the full amount and dividends accrued at that date. The average market rate of the stock at the time this plan was put in operation was \$155, thus affording ample security for a 7 per cent investment of savings.

Both the Illinois Central Railroad and the Union Pacific have a plan by which the company has made arrangements to secure accident insurance policies at specially advantageous rates to their employees. In the case of the Union Pacific, the company offers to bear one-third of the cost of the insurance for all employees engaged in the more hazardous occupations and to bear one-fourth of the premium in all other cases. The Union Pacific plan went into operation January 1, 1901. All insurance, beneficiary, and pension schemes, however viewed, indicate one phase of the attitude of corporations toward their employees, and are discussed in the specific section of this report relating to that subject.<sup>1</sup>

<sup>1</sup>See section 14.

## PART IV. —THE RELATIONS OF RAILWAY CORPORATIONS AND THEIR EMPLOYEES.

### § 14. RAILWAY EMPLOYEES' HOSPITALS, INSURANCE, AND PENSIONS

The American workman is accustomed to provide for his own necessities and personally to look after those things which guarantee his general welfare and that of his family. With the growth of industries which bring together great numbers of men in the employ of a single company we may expect as a natural outcome an increase in the number of services or wants provided for on some mutual plan. With the better organization of the labor force of large employing concerns we may also expect more to be done by the companies for their employees. The present movement toward what is called "industrial betterment" is an illustration of this. The railroads have already made some progress in this direction. With over 1,000,000 railroad employees, and at least 3,000,000 persons dependent upon their earnings, they have to do with the economic welfare of over one-twentieth of our population. Public sentiment will, therefore, justify any well-directed effort looking to the improvement of this class, in the efficiency of which the public is also directly interested. Railroad corporations see very clearly the economic advantage of performing for their employees and in aiding them to do for themselves many things that make for their greater safety and protection in an employment at best beset with peculiar dangers and difficulties. The following methods or agencies for relief in which the railroad companies participate may be mentioned: (1) The securing of accident insurance. (2) Hospital relief. (3) Insurance providing for sick and death benefits. (4) Pensions and superannuation funds. (5) Saving institutions.

The replies to the inquiry concerning what the railroads are doing in these directions at the present time came in response to the question, "What forms of company relief and insurance or beneficial associations are supported in part or in whole by the company?" This inquiry, addressed to 62 railways, brought replies from 40, which operate 112,353 miles of line and employ 633,923 employees. On 27 of these 40 roads, representing 61,158 miles of line and 323,359 employees, it would seem that nothing had been done directly by the companies, although some relief organizations had been established on at least 4 of these roads, but were supported entirely by the contributions of the employees. The replies from these 4 roads are as follows:

(1) *The Kansas City, Fort Scott and Memphis Railroad*.—For the care of sick and injured employees "The Employees' Hospital Association" was formed, and is supported by contributions from the employees, those receiving \$50 per month or more paying 50 cents per month, and those receiving less than \$50 and over \$4.99 per month, 35 cents.

(2) *The Missouri Pacific Railway*.—The only relief association connected with the company is that of the hospital department which is, however, entirely supported by the employees.

(3) *The Northern Pacific Railway Company*.—Officers and employees have an organization called "The Northern Pacific Beneficial Association," a self-supporting institution, having hospitals at Bramerd, Minn., and Missoula, Mont., with a large staff of physicians and surgeons at all important points.

(4) *The Oregon Railroad and Navigation Company*.—Free medical and surgical attendance and hospital privileges furnished to all employees in consideration of a deduction of 40 cents each from their monthly pay. These four roads operate 12,704 miles of line and employ 45,992 men. Another road, the Boston and Maine, has organized a relief association, but the company does not contribute to its support.

The thirteen railroad companies reporting some form of relief association in which the company participates are as follows:

(1) *The Atchison, Topeka and Santa Fé Railway System.*—The company operates a hospital association which is maintained by and operated for the benefit of its employees, who subscribe monthly to its support on a basis fixed by the amount of salary which they receive. The railway company has furnished ground and erected hospitals located at various convenient points along the line which have been donated to the hospital association, and which association is just about self-supporting. Aside from this there are no relief or insurance organizations.

(2) *The Atlantic Coast Line Railroad Company* has organized as a department of the service "The Atlantic Coast Line Relief Department."

(3) *The Chesapeake and Ohio Railway Company.*—The railway company has furnished for the use of its employees 2 hospital buildings and grounds which cost \$40,000, and bears the cost of maintenance of the same. The railway company has also furnished for the use of its employees 6 Y. M. C. A. buildings and grounds, and bears the cost of maintenance of same.

(4) *The Chicago and Eastern Illinois Railroad Company.*—This company supports in part an accident insurance department. The amount of the support can not be definitely stated for any time. The company issues a policy providing certain benefits to employees in case of accident or to their families in case of death. Premiums are collected for this insurance on a regular schedule. This department was put in operation June 1, 1893, and is not self-sustaining, but the company pays all deficits. The company has also distributed \$1,000 during each of the past 2 years among deserving employees who needed pecuniary assistance, and contributes to the support of railroad Y. M. C. A.'s. The company also has a corps of local surgeons at different points on the road, who render free service to employees in case of accident.

(5) *The Chicago, Burlington and Quincy Railroad Company* assists in providing insurance for its employees, and has organized what is known as "The Burlington Voluntary Relief Department" as a department of the service.

(6) *The Cleveland, Cincinnati, Chicago and St. Louis Railway.*—There is a mutual insurance company known as "The Big Four Mutual Insurance Company," and such employees of the company as desire may become members, but it is not compulsory. The railroad company contributes to its support by making up the annual deficit should there be any.

(7) *The Illinois Central Railway Company.*—The company has had under consideration for some years past the question of providing relief for its employees in case of sickness and support in old age, but up to the present time has not established a general system to meet these conditions. It has, however, on its Louisville division, at Paducah, Ky., a hospital founded by the cooperation of the employees of that division and the company which formerly owned the line that is self-supporting, is of much benefit to the employees of that division, and is an institution in which they take pride. The company has also made arrangements with a strong accident insurance company whereby the most favorable rates are obtained for its employees on the entire system. Since May, 1893, the company has put prominently before its employees a practical plan whereby they can save small sums of money from their wages and buy shares of the company's stock, the company allowing them all the time they may want to pay for the stock by the payment of interest at the rate of 4 per cent per annum on the deferred payments, and with the option of withdrawing on demand the money so deposited, with accrued interest thereon. This opportunity to become part owners in the property of the company has been availed of by all classes of employees. On June 30, 1900, 3,090 shares of the company's stock had been purchased and paid for under this plan, the average cost to the purchaser having been \$98.13 per share. The present market price of the stock is about \$116 per share.

(8) *The Southern Pacific Company.*—The company maintains a hospital department. Its members contribute 50 cents a month, the company managing the department, furnishing office room free, transportation, and collecting and accounting for the funds free of charge.

(9) *The Texas and Pacific Railway Company.*—This company has hospitals for the benefit and use of sick and injured employees, which are partly supported by deductions from wages of employees, the balance being made up by the company, also, it has arrangements with various accident companies whereby the employees are insured at reasonable rates and under as favorable terms as possible.

(10) *The Pennsylvania Railroad Company.*—The company has established and contributes to the maintenance and support of a relief, insurance, and beneficial department for employees, known as "The Pennsylvania Railroad voluntary relief department," and also entirely maintains a pension department and has in operation an employees' saving fund.

(11) *The Denver and Rio Grande Railroad Company.*—The Denver and Rio

**Grande Railroad Company Employees' Relief Association** provides medical care and attention to any employee, on request, either at his home or in the hospital of the relief association at different points on the road, for which a charge of 50 cents a month is deducted from the wages of all employees.

(12) *The Plant System of Railways.*—The Plant System Relief and Hospital Department, with sick and other benefits, medical attention and hospitals supported by contributions from railroad and employees.

(13) *The Lehigh Valley Railroad Company* has inaugurated a relief fund for the benefit of persons in the employ of the Lehigh Valley and associated companies. It is maintained by voluntary contributions from such persons and from the companies themselves.

These 14 roads are among the larger railroad corporations of the country and operate 18,195 miles of line and employ 309,661 men. Doubtless many of the roads which replied that they did nothing by way of direct company relief have on their lines organizations of their employees for hospital and other relief purposes, but sustained entirely by the employees; even in such cases the companies usually at irregular intervals contribute something, either by gifts of ground or memorial buildings, especially to the hospital associations.

**I Accident insurance.**—Taking up for further discussion the various forms of company relief indicated in the above replies, we have first of all to discuss the provision made for accident insurance. Of the companies already mentioned, that of the Chicago and Eastern Illinois Railroad Company is worthy of special mention, because the company itself apparently carries the insurance. The company issues a policy providing for certain benefits in case of accident and for certain death benefits payable to the families of their employees in case of death. The following are the sample forms of application blanks and certificates for these policies:

Residence ————— No. ————— I hereby apply to the Chicago and Eastern Illinois Railroad Company for an accident insurance policy, and request said company to advance for me the premium thereon as hereinafter specified and I agree to accept said policy subject to all its conditions and provisions. Death loss under such policy if any to be made payable to ————— survive me otherwise to my legal representatives. I hereby authorize and direct the paymaster of said company to deduct from my pay each month, so long as I shall remain in the service of said company, and until such policy shall be canceled by said company, any amount with the provisions thereof one per cent of my usual monthly wages. For the purposes of such insurance I hereby agree that said ————— shall be considered to be my usual monthly wages and shall be the basis for the computation of all premiums and benefits to be paid under such policy. Signature —————	ONE PER CENT No. 48176 I hereby agree that said ————— Employee has —————
---	--

#### RATES OF PREMIUM

Office men, station men, passenger conductors, tower men and flagmen	1/2 per cent of wages
Freight train men and switchmen	2 per cent "
All others	1 per cent "

**NOTE.** The applicant must sign his own name in full if he can write. If he can not write, he must make his mark, which must be witnessed.

#### READ CONDITIONS CAREFULLY

Form 1 D S  
 No. ————— \$ ————— per month

This is to certify That ————— employed by the CHICAGO AND EASTERN ILLINOIS RAILROAD COMPANY is ————— residing at ————— is insured, subject to the conditions hereinafter mentioned, against accidents resulting in bodily injury or death.

By the terms of his insurance said insured will receive, through the paymaster of said Chicago and Eastern Illinois Railroad Company (on regular pay days only), in case he shall sustain accidental injury at any time after the date hereof, and while he remains in the employ of said company (unless this certificate shall be sooner canceled, as hereinafter provided), the following benefits:

1. In case of accidental injury not resulting in death, one-half of his usual wages during such time (not exceeding sixty weeks) as he shall be totally and *necessarily* disabled from all work by reason of such injury, the total amount not to exceed the sum of one thousand dollars. Such benefit shall not accrue nor be payable except on presentation of certificate of attending surgeon as to consequent disability, and the certificate of the local surgeon of the Chicago and Eastern Illinois Railroad Company shall determine the period of such disability.

2. In case of accidental injury resulting in death, ————— of insured, if surviving, otherwise the legal representatives of said insured, will receive one-half of his usual wages for one year (less such amounts as shall have been paid to said insured by reason of such injury during his lifetime), said company will also pay funeral expenses and doctor's bills (not exceeding one hundred dollars), the total in no event to exceed the sum of one thousand dollars.

For the purposes of this insurance it is hereby agreed that ————— dollar per month shall be considered to be the "usual wages" of said insured, and shall be the basis for the computation of all premiums and benefits to be paid hereunder.

Such benefits shall not accrue except for accidental injury sustained by said insured while he is

actually engaged in the service of said company, nor unless immediate notice of such injury shall be given by said insured to his superior officer.

No benefits shall accrue hereunder for any injury that may be sustained by said insured by reason of the act of God, or of accident occurring as the result of a riot or other violation of law.

*This insurance does not cover injury of which there is no visible mark on the body.*

Whenever said insured shall change his employment in said company's service he must make application for a new certificate.

Said company reserves the right to cancel this certificate at any time, provided that thirty days' notice of such cancellation be given to said insured by written notice delivered to him, or by printed notices posted on its various bulletin boards, and at the stations on its railroad.

This certificate is issued in accordance with the application of said insured and bears same date.

Dated at Chicago, Illinois, this — day of June, 1901

CHICAGO AND EASTERN ILLINOIS RAILROAD COMPANY,  
BY \_\_\_\_\_,

2d Vice-President and Treasurer

This certificate will not be valid unless countersigned  
by \_\_\_\_\_

Countersigned  
\_\_\_\_\_

As already stated in the reply of this company, quoted above, the company makes itself liable for all deficits, inasmuch as this form of insurance is not self-sustaining on the basis of the premiums charged, as indicated on the application blanks. The department was put in operation June 1, 1893, and up to January 1, 1901, the company had contributed the sum of \$3,065.59 over and above premium receipts.

The Illinois Central Railroad Company has simply made arrangements with a strong accident-insurance company whereby the most favorable rates are obtained for its employees on the entire system. The same is true of the Texas and Pacific Railway Company. Many railway companies urge their employees to carry policies in life and accident insurance companies. In some cases the railway corporations collect the premiums on these policies by deducting the amounts from the wages of the employees, handing them over to the insurance companies. The Ann Arbor Railroad requires all employees in the train service to carry such policies in a regular specified insurance company. The Cincinnati, New Orleans and Texas Pacific Railway for some years past has encouraged various accident and life insurance companies to do business on its roads, assisting them in securing as many policies as possible, and collecting premiums without charge. It was, furthermore, announced on July 12, 1897, that the receiver of the road had arranged with the Railway Officials and Accident Association, of Indianapolis, to issue policies of insurance upon the conductors, engineers, firemen, brakemen, bridge carpenters and signalmen, yardmen and foremen in its employ, at the regular rates, and that the railway company would, until further notice, pay 45 per cent of the premiums named in the policies. Employees are not compelled to insure, but if they do they are obliged to pay only 55 per cent of the regular premiums. All occupations in the railroad service are classified, and the premiums vary with the degree of hazardness of each class of labor.<sup>1</sup>

The Railroad Gazette of November 3, 1899, gives an account of the plan adopted by the Chicago and Alton Railroad Company, in which it says:

The Chicago and Alton has notified its employees that it will aid them in securing life and accident insurance. The terms on which this is to be done are set forth in a circular which reads:

"The company has entered into a contract with the Etna Life Insurance Company, of Hartford, Conn., the largest company in the United States issuing both life and accident policies, whereby all employees may obtain insurance upon most favorable terms. To aid its employees to secure the best accident insurance at the lowest rates, the company will bear one-half of the premium of the insurance company for all conductors, baggage-men, brakemen, engineers, firemen, bridge carpenters, and yardmen and switchmen, and for all other employees, on account of the low rates of premium to them, it will bear 30 per cent of the premium. In connection with this accident insurance the management has also provided for the insurance to those of its employees who may desire it, a term life policy, insuring for a term of not exceeding five years, the employee against death from natural causes, and in aid of the employee desiring the term life policy, the company will bear one-half of the premium for the first year, the employee paying the premium for all subsequent years during the term. This term life policy, however, will be issued only to such as hold an accident policy in the Etna Life Insurance Company, as provided for by this company, and for the same amount. The management offers this opportunity (it is in no respect compulsory), believing the faithful service of its employees, in all departments, warrants it in rendering them substantial aid in the protection of their families and of themselves."

The Union Pacific Railroad Company has also recently put into force (January 1, 1901) a plan whereby its employees obtain accident insurance policies partly at the expense of the company. The company pays one-third of the premium for those in the most hazardous occupation and one-fourth of the premiums in all other cases where the cost of the insurance is lower.

<sup>1</sup>See article on Brotherhood Relief and Insurance of Railway Employees, by Prof. E. R. Johnson, labor bulletin, July, 1898.

Especially in justification of this kind of insurance, and, indeed, applicable to all forms of company relief, it may be said that railroad men as a class need some stimulus to make them protect themselves properly against the risks of their occupation and to enable them to overcome the obstacles they sometimes meet with in applying for ordinary insurance.

As a class, the railroad employees are comparatively well paid. Many branches of the service require a certain degree of intelligence which entitles the possessor to good wages. But in spite of the economically favorable position of the greater number of railroad employees, they seem, as a class, to be proverbially improvident and indisposed to systematic saving, unless by means of some quasi-obligatory arrangement, such as dues to a beneficial society. Their itinerant life is not conducive of regular, thrifty habits. Their wages vary greatly, according to the fluctuating activity of the lines with which they are connected. Formerly, when accidents, sickness, or death, resulting from one or the other, overtook the railway employee, this calamity was frequently altogether unprepared for; and particularly in the case where a wife or family was dependent upon the wage-earner the economic consequences of such a misfortune were disastrous. Not only on account of the danger of accident usually associated with railway labor, and which, no doubt, leads the insurance companies to consider this occupation as hazardous, but because of the exposure of many railroad employees to the inclemencies of the weather in a manner adapted to the contraction of illnesses, some provision against calamity has generally been considered necessary. Such provision could, of course, be made by railway employees themselves. The insurance companies, the savings banks, the beneficial associations—all these are open to them for this purpose. Railway employees are, however, a class by themselves, with special needs and special conditions of existence; they are naturally drawn together by a community of interests. Where they have seen fit to enter beneficial organizations, they have consequently drawn together into brotherhoods exclusively organized for railroad men—for engineers, for firemen, etc. These brotherhoods invariably have, as one of their principal objects, relief in case of accident, sickness, or death.<sup>1</sup> Besides these brotherhoods and various orders of railway employees which are doing good work in their respective fields of mutual assistance, there are in the United States numerous local organizations which furnish aid in a small way to railway employees and their families.

The general life and accident insurance companies charge for railroad employees rates which are almost prohibitive, and in connection with them the collection of benefits is too often accompanied with delay, annoyance, and expense. Nor do railroad employees frequently patronize the mutual benefit associations of a general character, because many of them are unreliable and not based on sound financial principles. Toward savings banks railroad men often feel a certain mistrust, or are kept from depositing in them because of inconvenient location or want of familiarity with business methods.

**II. Hospital relief.**—Such relief is one of the oldest forms, and is very general. It is frequently organized exclusively by the employees themselves, but frequently with some aid from the companies. The usual plan is for employees, under the direction of the company, to form an association to provide hospital accommodations for sick and injured employees of certain classes. The company then directs that a specific deduction from the monthly pay of employees in these classes be made and then aids the hospital association, sometimes with gifts of land or buildings or both, and sometimes by way of making up annual deficits to provide the amount of relief actually needed.

The rules of the Kansas City, Fort Scott and Memphis Railroad Company Employees' Hospital Association as adopted August 1, 1897, declare that since the association has agreed to furnish necessary medical, surgical, and hospital treatment to such employees of the associated companies as may be ill or injured while in the service, and to erect and maintain hospitals for the use of such ill and injured, and such plan having received the consent of the employees, a deduction shall be made on the pay rolls of each company from the pay of employees, as follows: 50 cents per month when pay amounts to \$50, and 35 cents when over \$5 and less than \$50. The railroad companies agree to contribute to the hospital association the sum of \$500 annually. Ill and injured employees are entitled to hospital care and treatment free of charge for a term not exceeding 1 year continuously, unless by permission of the board of trustees of such hospital association, so long as they continue to obey the rules established for their protection and require surgical or medical treatment. Foremen are supplied with blank certificates, which, when filled out, entitle an employee to receive from the head of his department free

<sup>1</sup>See section 10 of this report.

transportation over the company's lines to the hospital, which in dangerous or emergency cases may be telegraphed for. Minute instructions to conductors of trains with reference to summoning emergency aid from surgeons or getting injured employees to the emergency hospitals and finally to the general hospital are prescribed in the book of rules. Employees are entitled to receive medicines upon a prescription from a regular physician when forwarded to the hospital or nearest dispensary, provided the proper certificate, signed by the employees' foreman or superior officer, shows that he is entitled to it, and provided also that no prescriptions for patent or proprietary medicines are filled. Medicine is forwarded by train without charge. The general hospital of the association is located at Kansas City, but emergency hospitals are located at Fort Scott, Kans.; Springfield, Mo.; Memphis, Tenn., and Birmingham, Ala., and in addition to these there are a number of dispensaries.

The employees' relief association of the Denver and Rio Grande Railroad Company in its constitution, revised September, 1890, provides that members shall pay monthly dues amounting to 50 cents for each employee, provided those who work less than one-half a month shall pay one-half the full rate, and those who work more than half a month shall pay the full rate. Such amounts are deducted from the pay roll, but no payment is required in any month where there is no time reported upon the rolls for the employee. The association is controlled by a board of 11 trustees, 6 of whom must be employees, 2 each from the three departments, machinery and car department, engineering and maintenance-of-way department, and transportation department. The general manager of the road appoints the additional 5 trustees, all of whom serve for one year. All hospitals, dispensaries, and medical and surgical treatments, including furnishing of all medicines, are, by the rules and regulations, under the control and direction of the medical department of the company. Sick and disabled employees are entitled to treatment free of expense other than the monthly dues as provided. The hospitals of the company are governed by the rules of the hospitals association, which has also power to establish additional hospitals. The benefits and relief furnished to all contributing employees of the Denver and Rio Grande Railroad are such as prescribed by the board of trustees in their by-laws and rules, provided that the benefits and relief, as enumerated in the rules of the company, as follows, are guaranteed.

First. Sick employees will be treated at the hospitals of the association, or at the office of the medical staff, by the physicians and surgeons of the association, free of charge, provided, that relief shall be withheld, except as hereinafter provided, from persons afflicted with chronic diseases or diseases contracted prior to entrance into the service of the company, and from those afflicted with venereal or contagious diseases, and from those whose sickness, disability, or death results from intoxication or the intemperate use of stimulants or narcotics, or by the hand of justice.

Second. Employees disabled by accident will be treated at their homes, if practicable, otherwise at a hospital of the association.

Third. Medicines will be furnished free from the dispensaries of the association on the prescription of any surgeon of the association.

Fourth. At points where there may be no dispensary of the association and no company physician, all reasonable expenses of sick or disabled employees at such points for treatment and medicines will be defrayed from the fund hereby created, on order of the chief surgeon, provided, that if, in the opinion of the chief surgeon, it is advisable to remove the patient to an association hospital, in that case it shall be done, otherwise the fund hereby created shall not be liable for the expenses incurred.

Fifth. Employees shall be entitled to free vaccination. Smallpox is a contagious disease provided for by the municipal authorities, and will not be cared for at the expense of the association.

Sixth. No greater sum than \$25 will be allowed from the relief fund for funeral expenses of deceased employees from accident in line of duty, or from sickness contracted during employment, and that only in case of necessity.

Seventh. Employees who shall become intoxicated in the hospital, or become insubordinate to the rules thereof, may be discharged therefrom and excluded from the benefits of the fund at once, upon the order of the chief surgeon.

The Southern Pacific Company has a hospital association organized on essentially the same plan as that just described. The contribution of 50 cents a month is collected from all officials and employees with the exception of Chinese and those excluded from all benefits by direction of the chief surgeon. The contribution is due on the third day after entering the employ of the company, and is collected for that month and monthly thereafter by deduction on pay roll; but contributions are not collected for time away from duty on account of sickness or injury after the month in which same commenced. Benefits provided for contributors to the fund as subject to the regulations are: Hospital treatment, medical and surgical treatment outside the hospital, special treatment at the Hot Springs sanitarium, medicine and surgical dressings, artificial limbs and appliances.

The Northern Pacific has a beneficial association whose object is the medical and surgical care of its members and provision for burial expenses at their death. It operates also the hospital of the Northern Pacific Railway at Missoula and the one at Brainerd for the gratuitous care and treatment of its members, but takes

into these hospitals other persons as pay patients. All officers and employees are eligible to membership on approval of the board of managers, and pay monthly dues of 25 cents where the monthly compensation is less than \$25; 50 cents where the monthly compensation is over \$25 and less than \$100; \$1 where compensation is over \$100 and less than \$200, and \$2 where the monthly compensation is over \$200. The dues are deducted from the monthly salary or wages of each officer and employee, but no payment is required when wages are not received. The association is controlled by a board of 19 managers, ten of whom are elected, one each by ten groups of employees (conductors, brakemen, etc., acting as separate groups), and eight appointed by the second vice-president of the company. The eighteenth annual report of this association for the fiscal year ending June 30, 1900, showed receipts for the year amounting to \$122,000 and expenses of \$99,000, leaving a surplus of nearly \$23,000. Twenty-two thousand two hundred and eighty-two cases were treated during the year.

The Chesapeake and Ohio Railway Company has furnished for the use of its employees two hospital buildings and grounds. "This company," declared Mr. Melville E. Ingalls, president of the Cleveland, Chicago, Cincinnati and St. Louis, and of the Chesapeake and Ohio Railroad Companies, in his testimony before the Industrial Commission in 1899, "has had rather interesting and successful results with its hospital system. Our general manager got very much interested in it and he took it up with the heads of these different brotherhoods and their representatives, and they appointed committees which examined into the different systems. They finally agreed to it and fixed a form of assessment on those that belonged. We gave them a hospital at Clifton Forge which cost us \$75,000, and which, I think, is as complete a hospital as there is in America. Everybody that can be is sent there, and medicines are distributed from there. They have a good surgeon and trained nurses. It has been running now for two years, and we are establishing branches at other places. It has really been a wonderful success." The hospital is maintained by assessment on the employees, taken from their wages, and varying from \$6, paid by the president, down to 10 cents on some of the men. Membership, however, is optional; it entitles to the privileges of going to the hospital and being taken care of until discharged by the surgeon, without any charge. Members may also have medicines sent to them at the request of the local surgeons. If they are injured at a distance from the hospital, arrangements have been made by which private hospitals take care of them, and the expense is paid out of the fund, which has already accumulated a surplus.

The New York Central and Hudson River Railroad Company, whose lines run through a thickly settled country well supplied with hospitals at all points, has made arrangements with numerous hospitals by which injured men are taken care of.

The Illinois Central Railroad Company has a hospital founded by the cooperation of the employees of its Louisville Division and the company which formerly owned the line. This hospital is self-supporting.

The Oregon Railroad and Navigation Company furnishes free medical and surgical attendance and hospital privileges to all employees in consideration of a deduction of 10 cents each from their monthly pay.

The Texas and Pacific Railway Company has hospitals for the benefit and use of sick and injured employees, which are partly supported by deductions from the wages of employees, the balance being made up by the company.

The Missouri Pacific Railway Company has a hospital department entirely supported by employees.

The regulations of these associations just enumerated almost invariably state that no relief is due to persons afflicted with chronic diseases, or diseases contracted prior to entrance into the service of the railroad company. Relief is likewise withheld, except in special cases, from those afflicted with venereal or contagious diseases, and from those whose sickness, disability, or death results from intoxication or the imtemperate use of stimulants or narcotics, or by the hand of justice.

**III. Railway relief departments.**—However creditable and important railroad hospitals may be, it can not be maintained that they are a sufficient guaranty against the misfortunes due to the sickness, disablement, or death of railroad employees. For there are others dependent upon the wage-earner, whose economic position becomes disastrous when he is unable to furnish them with the means of subsistence. No matter how well the sick or injured employee may be attended to, or how frequently the company or hospital association may help in case of death to bear the expense of his burial, the wife and children, or perhaps the mother and father, to whose support he contributed, will oftentimes fall into dire want. Hence the general desire among railroad employees to secure financial aid in case of sickness or accident and to obtain a life insurance that

would protect their dependents against want. Any scheme for complete protection—sure, prompt, and substantial benefits—must appeal to them strongly. Considerations of this sort led them to perceive the advantages of establishing by periodical payments a fund destined to counteract the disastrous economic effects of death or involuntary unemployment caused by injury or disease. Under the intelligent guidance of railway officials some of our railway systems have taken the matter in hand and led to the formation of so-called railway relief departments. These "departments," which generally form part of the railway service, represent the application of the insurance principle to railway employees, with the purpose of enabling them to contribute definite sums from their monthly wages to a fund administered by the department for the benefit of its members. Before the passage of the law of 1898, membership in some of these relief departments was compulsory upon all persons entering the employ of the railway company; now, by the provisions of that law forbidding compulsion, they are at least, ostensibly, voluntary organizations.

Philanthropic motives have perhaps played some part in determining railway companies to establish relief departments. It is probable, however, that an intelligent, broad conception of the interests of the company has been more potent in this direction. "The directors of some railways, at least," says Prof. Emory R. Johnson, of the University of Pennsylvania,<sup>1</sup> "became convinced that the best interests of the roads, even when these interests were viewed strictly from a business standpoint, required that the employed should be connected with the companies they serve by some other bond than that created by the payment of current wages, and the companies thus realized that their greater good required them to identify as fully as possible their own and their employees' interests. Indeed, in this way only is it possible to create such an esprit de corps as makes strikes impossible and prompts men to give their employers the highest possible grade of service. In 1889 Mr. E. P. Ripley, general manager of the Chicago, Burlington and Quincy Railroad, stated that the object of the company in establishing a relief department was to enable its employees to make provision for themselves and families at the least possible cost to them in the event of sickness, accident, or death. The company has established this department not only because it has the interest of its employees at heart, but because it believes that the department will serve to retain and attract a good class of employees, lessen the amount of discontent caused by improvidence, diminish the amount of litigation in cases of accident, and increase the good will of the employees toward the company and their confidence in the good will of the company toward them."

A. HISTORY AND ORGANIZATION OF RELIEF DEPARTMENTS.—Most railroad companies, when an employee is disabled, make it a point to find him a place in their employ which he can fill notwithstanding this disablement. The loss of an arm, for example, would incapacitate him for hard labor, and in such an event the company would give him a position as watchman or something of that sort. It has been a general practice to collect voluntary subscriptions from friends and associates when an employee meets with disablement or death; and as a rule the corporations make contributions in aid of needy employees or their dependents, especially when a man has been in their employ for a long time.

The insufficiency of such arrangements, however, was long ago felt by the employees and the management of a number of our most important railroad systems, particularly in view of the successful organization and effective working of systematic relief departments in connection with British, Continental European, and Canadian railways. As early as 1850 there were relief associations of this kind in England. The Canadian Grand Trunk Railway organized an employees' accident insurance association in 1873.

*Baltimore and Ohio.*—It seems that the first organization of this nature in the United States, in connection with a great railroad system, was the Employees' Relief Association of the Baltimore and Ohio Company. Dr. W. T. Barnard, of Baltimore, who had made a careful examination of similar schemes as practiced in other countries, was chiefly instrumental in the establishment of this association on May 1, 1880. Membership was at first voluntary for officials receiving over \$2,000 annually and those whose duties did not expose them to accident. Later membership in the association was made compulsory upon every person promoted or who entered the permanent employ of the company. Since the passage of the United States arbitration act of June 1, 1898, such compulsion is pro-

<sup>1</sup> In the Bulletin of the Department of Labor, No. 8, January, 1897, article on "Railway relief departments," p. 41. Professor Johnson has also discussed the early history of railway relief departments in a paper published in the *Annals of the American Academy of Political and Social Science*, vol. v, p. 421. It is not necessary here to more than briefly refer to that phase of the question.

hibited. Before the enactment of this law, half the departments then in existence had compulsory membership, while the others were voluntary. The charter of the Baltimore and Ohio association, of May 3, 1882, was repealed in 1888; whereupon the railroad company on March 15, 1889, established a relief department as a regular part of its service, assuming the liabilities of the association, concluding its existence, and receiving into membership about 95 per cent of those who belonged to the association, i. e. 19,467 out of 20,606.

"At first the railroad company paid all the operating expenses of the association, but when the pension feature was introduced about October, 1884, the company ceased to pay the operating expenses, which since then have been paid from the contributions of members, while a portion of the amount formerly paid by the company for operating expenses was applied to the payment of pensions."

The old association contemplated an elaborate annuity and superannuation scheme in connection with the ordinary relief features, but this was a failure; and afterwards the present pension feature, which is very simple and by no means as comprehensive, was established. The department is now operated as a department of the company's service. The company gives the service of its officers and employees on the line, furnishes office room, furniture, and use of facilities, such as mail and telegraph, becomes the custodian of the funds, and guarantees the obligations of the department. The company also contributes \$6,000 a year for the support of the "Relief feature," and \$2,500 annually to cover the expense of the physical examination of employees. For the support of the "Pension feature," the company annually appropriates \$25,000. If the relief feature does not need any or all of the \$6,000 apportioned to it, the part not needed is turned over to the pension feature.

There are three sections of the department, namely: The relief feature, the pension feature (both of which have been mentioned), and the savings feature. The whole department is now under the charge and financial control of a committee of the president and directors of the company. The officers of the department are appointed by the president. There are also 2 advisory committees, 1 for the lines east of the Ohio River and 1 for the lines west of the river. These advisory committees consist of 7 members each, namely, the general manager of the divisions or lines represented, and 6 chosen annually from among the members. Two are chosen from the machinery department, 2 from the transportation department, and 2 from the road department by the members of these respective departments of the relief feature. The superintendent of the relief department has immediate charge of the conduct of business, but appeal may be had from his decision to the advisory committee, and if the advisory committee, upon investigation, considers the appeal well founded, it reports the matter fully, in writing, to the committee of the president and directors, whose decision is final. The advisory committee may also make recommendations with reference to the general business of the department to the committee of the president and directors, and examines into and reports on such matters as this committee may refer to it.

The relief feature affords relief to its members on account of disability from sickness or accident, and to the families of members in the event of their death. The savings feature enables the employees and their near relatives to deposit savings and earn interest, and enables employees to borrow money, at moderate rates and under favorable conditions of payment, for the purpose of buying or improving a homestead or freeing it from debt. The pension feature makes provision for certain employees who, by reason of age or infirmity, are relieved or retire from the service of the company.

The *Pennsylvania Railroad Voluntary Relief Department*, comprising the relief work of the Pennsylvania Railroad line east of Pittsburg and Erie, the Northern Central, the Philadelphia, Wilmington and Baltimore, and the West Jersey and Seashore lines, was founded in the early part of 1886. The subject of providing some aid for worthy employees in case of death or disablement by accident or sickness had been urged upon the management of the Pennsylvania Railroad Company by the employees of that road as far back as 1876. The subject was taken up from time to time, and the plan finally adopted was largely due to Mr. J. A. Anderson, of Trenton, N. J., who has continuously been the superintendent of the department until January 1, 1900. When the Employees' Relief Association of the Baltimore and Ohio Railroad became a department of the company's service, in 1889, Mr. Anderson's plans were used as a model. Indeed, the similarity, not only in general outline but in many points of detail, between

U. C. Bartlett, "Railway Relief Departments," a paper read before the St. Louis Railway Club, February 12, 1897.

the Pennsylvania plan and relief schemes adopted in connection with other lines testifies to the excellence of the plan prepared by Mr. Anderson. He saw the weaknesses of the association scheme and recommended the department arrangement from the outset. The relief department is consequently a distinct department of the company's service; it is operated by the company and is in the executive charge of a superintendent appointed by the boards of directors; it is subject to the business control of the general manager. The object of the department is declared to be "the establishment and management of a fund to be known as the relief fund, for the payment of definite amounts to employees contributing to the fund, who under the regulations shall be entitled thereto when they are disabled by accident or sickness, and in the event of their death to the relatives or other beneficiaries" specified in their applications.

The relief fund is formed (a) by voluntary contributions from employees; (b) by appropriations, when necessary to make up any deficit, from the company; and (c) income or profit derived from the investment of the moneys of the fund and such gifts or legacies as may be made to the company for the use of the fund. The company not only takes general charge of the department, but guarantees the fulfillment of the obligations assumed by it in conformity with the regulations, manages the funds, and is responsible for their safe-keeping, supplies the necessary facilities for conducting the business of the department, and pays all the operating expenses thereof. The final control centers in an advisory committee, composed of the general manager, who is ex-officio member and chairman of the committee, and 12 other members, 6 of whom are chosen by the representative companies and 6 by the relief-fund members from among themselves.<sup>1</sup> The advisory committee has general supervision of the operations of the department and sees that they are conducted in accordance with the regulations. The moneys received for the relief fund are held by the company in trust for the relief department. The advisory committee directs the investment, and any changes therein, of money which is not required to be kept on hand for current use. The company being the trustee and guarantor of the fund, the investments are made in such securities as are approved by the board of directors, and are made in the name of the company, "in trust for the relief department." The superintendent of the relief department is secretary of the advisory committee.

The business operations of the department are divided into periods of 3 years. If the fund is not sufficient to pay the benefits, the company pays them as they become due, and if at the end of any period of 3 years a deficiency exists, the company, having paid it as it accrued, charges the amount to itself, thereby giving the amount of the deficiency to the relief fund, which starts off afresh for another period of 3 years. If at the end of any such period, however, there should be a surplus, after making due allowance for liabilities incurred and not paid, such surplus is not used to make up any deficiency in any other such period, but is placed in a fund known as the relief fund surplus. The interest upon this fund on January 1, 1900, constitutes a superannuation fund, from which are paid the superannuation allowances authorized by the regulations.

Only employees may become members. Membership in the relief fund is entirely voluntary, and any employee may enter who is under 45 years of age and who passes a satisfactory physical examination.

The aid of the company in maintaining the department represents items of no mean importance. In the first place, the maintenance of the department as a part of the company's service and without expense to its members, represents a value of about \$100,000 annually, and insures to the department the assistance of the entire organization of the railways in carrying on its work. Secondly, the company pays interest on money held in trust. Thirdly, the company guarantees the payment of all benefits promised by the department and agrees to make up any deficiencies which the funds may have at the end of each period of 3 years.

The Pennsylvania lines west of Pittsburg and Erie have the same kind of a voluntary relief department as that just outlined. It was established April 16, 1889, and extends to the Pittsburg, Cincinnati, Chicago and St. Louis Railway, as well as to the Pennsylvania company. It went into operation July 1, 1889.

The *Burlington Voluntary Relief Department*, established in connection with the Chicago, Burlington and Quincy Railroad Company, on March 15, 1889, and which began operations June 1, 1889, includes not only the above-mentioned company, but also the following lines: Hannibal and St. Joseph; Kansas City, St. Joseph and Council Bluffs; St. Louis, Keokuk and Northwestern; Chicago, Burlington and Kansas City; the Keokuk and Western, and the Chicago, Burlington

<sup>1</sup>In balloting for members of the committee, each contributing employee, member of the relief fund, shall be entitled to cast one vote.

and Northern. Here, too, Mr. Anderson's plan served as a model, with certain modifications, to which further reference will be made.

The *Philadelphia and Reading Railroad Relief Department* was organized October 30, 1888, in Reading, Pa., at a meeting of the representatives of the employees of the various divisions and departments of the company's service. The department includes the permanent employees of this company and of its affiliated, controlled, and leased lines. The Reading, like the Baltimore and Ohio, and unlike the two Pennsylvania and the Burlington departments, originally made membership compulsory upon those subsequently entering the permanent service of the company. By the act of 1898 such compulsion has become illegal. The Reading's relief department is in charge of a superintendent appointed by the first vice-president, and subject to the control of the advisory committee. This committee is composed of 15 members, 8 of whom are chosen annually by the members of the relief fund and 6 by the board of directors. The first vice-president is chairman of the committee. This committee seems to have more complete charge of the relief department than is the case in any other of the systems. All controversies are decided by it, it directs the investment of current funds not needed for immediate use and determines how the surplus shall be used. The operating expenses of the department are paid in part by the company and in part by the contributions of the members. The company does not guarantee the payment of benefits and deficiencies. But it contributed to the fund 10 per cent of the amount contributed by the members, until this amount reached \$1,000,000, since then it has regularly contributed 5 per cent as much as the members.

The *Plant System Relief and Hospital Department* was established July 1, 1896. It is similar in plan to the Baltimore and Ohio's department, although there are some important differences. The Plant System and its employees maintained a hospital for 15 years. In 1895 a second hospital was erected, and in 1896 it became necessary to add 2 more. It was then that Mr. Plant decided to establish a relief department, which at the same time should manage these 4 hospitals. The regulations made membership voluntary with all employees then in the service, and compulsory on all new employees as a condition of promotion. Ninety-five per cent of the employees are said to have joined voluntarily within a few months. The Plant System includes 4 steamship lines and 13 railroad companies, owning in all 2,000 miles of road. The relief and hospital department includes the employees of both the steamship and railroad companies.

The *Atlantic Coast Line Relief Department*, founded March 10, 1899, includes employees of the following companies: Wilmington and Weldon, Atlantic Coast Line Railroad Company of Virginia, Atlantic Coast Line Railroad Company of South Carolina and the Norfolk and Carolina. Its organization closely follows that of the Pennsylvania department. Part of the fund is used to maintain hospitals built and equipped by the company, to which sick and injured members may be sent. If any persons not members of the fund are treated in the hospitals, the expense of their treatment is paid into the fund. There is no provision for a superannuation allowance such as is provided for by the Pennsylvania system.

Besides these seven important relief departments thus briefly outlined, similar schemes have been established in connection with other railway systems.

The *Relief Fund of the Lehigh Valley Railroad Company and Associated Companies* is maintained for the benefit of contributors injured by accident while on duty and for the families of such contributors as may lose their lives by such accidents. Persons suffering from illness not resulting from accident, even though this illness be contracted while on duty, are not entitled to relief. The company and subscribing employees contribute equal amounts to the maintenance of the fund. Every person in the employ of the company (and including the associated lines) may become a member. Each class of persons employed by the company on each road may elect one of their number to act as their representative, in connection with the superintendent or assistant superintendent of that road or division, in managing and drawing money from the fund. The expense of managing the fund and keeping it is borne by the company. The method of contribution differs from that prescribed by the other departments, inasmuch as the company can make a call for the payment of fixed contributions whenever the fund shall become so reduced as to need replenishing. The payments occur, therefore, at irregular intervals. But whenever payments are called for, each contributor may renew his contribution, or not, just as he chooses. Withdrawal, however, means the forfeiture of benefits.

Inasmuch as the Lehigh Valley relief fund in this general plan of organization

is not discussed in great detail by Professor Johnson in the papers referred to in the footnote on page 874, the following statement of the plan as announced to its employees may be given. This went into effect May 1, 1896:

First. This relief fund is established and maintained by voluntary contributions from persons in the employ of either of these companies and from the companies themselves, for the benefit of those contributors in the employ of either company who may be injured by accidents occurring to them while in the discharge of their duty to the company (and they shall for this purpose be considered to be on duty while upon the company's premises going to or returning from their daily work), and for the families of those contributors who may lose their lives by such accidents. An accident, as contemplated by this plan, is a bodily injury caused solely by external, violent, and accidental means, which may include sunstroke and freezing, and persons suffering from illness not resulting from such causes as intemperance, even though contracted while on duty, are not entitled to relief hereunder.

Second. Every person employed by either of the companies in any manner, may, if so disposed, at any time subscribe to the said fund the amount of one day's wages or less, but in no case is the amount subscribed to the fund to exceed \$3. The amount so subscribed to be taken from the pay roll for that month. Each of the companies will, at all times, contribute to said fund an amount equal to the aggregate of that paid in by all of the contributors in their employ.

Third. Each class of persons employed by the company on each road, division, or canal, such as engineers, firemen, conductors of each class of trains, baggage masters, brakemen of each class of trains, track foremen, laborers of each kind, mechanics of each kind, etc., may, after the first call made in each year, elect one of their number to act as their representative, in connection with the superintendent or assistant superintendent of that road or division, in managing and drawing money from the fund, such representative to hold his appointment until his successor is elected in the same manner. Should the office of representative become vacant at any time, it may be filled by a similar election. In case of vacancy in the office of representative, by reason of failure to elect on the part of any one or more of the classes of employees referred to or for other cause, the superintendent of the road or division shall appoint some suitable person to fill the vacancy.

Fourth. The money so raised shall be kept, without expense to the fund, by an officer of the Lehigh Valley Railroad Company, to be designated by the president of said company, and shall be subject at all times to the written orders drawn upon it, in accordance with these rules, jointly by the superintendent or assistant superintendent of the road or division to which the entitled person is attached and the representative of that road or division of the class to which the entitled person belonged; and in every case some person having personal knowledge of the accident shall sign the order, such order to be approved by the general superintendent, and in case of accident (not fatal) to be accompanied by a certificate signed by the physician who attended to the case, stating the total disability of the employee to work during the period covered by the certificate.

The superintendent or assistant superintendent of the road or division and the representative together shall determine when such payment shall cease.

Fifth. No money shall be paid out of the fund except upon such joint written orders of a superintendent or assistant superintendent and of the proper representative, approved by the general superintendent as above stated, and no one shall be entitled to the benefit of the fund except, first, employees of either of said companies who shall have contributed to the fund on or subsequent to the last previous call and before the time of their accident, and who shall have been accidentally injured while in the discharge of their duty to the company, second, widows, children, and other relatives of such contributors so injured or killed, as specified in section sixth.

Sixth. The money of the fund shall be appropriated and drawn out, as provided in sections fourth and fifth, for the benefit of those entitled to it, as follows, viz. In case of a disabling accident occurring under the circumstances mentioned in section first to a contributor not in arrears to the fund, he shall be allowed from the fund three-fourths as much per day as that contributed by him to the fund, for every working day during his total disability to work, but not longer than for the period of nine months, but in no case will such be counted in as a working day. The amount of the bills of physicians and surgeons for services rendered in consequence of such accident shall be deducted from such allowance and applied to the payment of such bills. In case such accident results in the loss of a limb which can be artificially replaced, appropriation and payment shall also be made from the fund for the purchase of a proper artificial limb. In case such accident results in the death of such contributor not in arrears to the fund, such death occurring at once or within six months from the time of accident, \$50 shall be appropriated and paid from the fund for his funeral and other immediate expenses, and in addition to such payment there shall be appropriated monthly for two years from the time of his decease an allowance for every working day at the daily rate of three-fourths the amount of his contribution. The amount of the bills of physicians and surgeons for services rendered in consequence of such accident shall be deducted from such appropriation and applied to the payment of such bills, and the balance remaining shall be paid to the following-described persons in the order named:

1. To the widow, provided she shall remain unmarried, and provided also that she shall not have been separated and living apart from her husband at the time of his decease.

2. If the decedent shall leave no such widow, or if she shall die or remarry before such period of 2 years shall expire, then to any child or children under 16 years of age left by said decedent, for their joint use and benefit, if more than one, until said period shall expire, or until such child or the youngest of such children shall attain the age of 16 years, whichever shall first happen.

3. If the decedent shall leave no such widow, child, or children, or if their rights shall all determine as above provided before such period of 2 years shall expire, then to the mother for the whole or the remainder of such period, as the case may be.

4. To the father if none of the above-named relatives shall be left by the decedent, or if such father shall survive them all, for the whole or the remainder of such period, as the case may be.

5. And to the brother or brothers, and sister or sisters, under 16 years of age, for their joint use and benefit, if more than one, if none of the above-named relatives shall be left by the decedent, or if any such brother or brothers, sister or sisters shall survive them all, for the whole or remainder of such period, as the case may be, or until the youngest brother or sister shall attain the age of 16 years, whichever shall first happen.

The said allowance shall in no case be paid for longer than 2 years after the decedent's death, and if the last entitled of the relatives above named shall die before such period expires such payments shall then cease.

To insure to subscribers these benefits from the fund, all cases of disabling injuries must be reported, immediately after the occurrence, to the conductor, foreman, or other person in charge of the work, whose duty it shall be to investigate the case and report the same to his superior officer.

Seventh. The payment on each call is to cover the risk of the contributor to such accident up to the time of the next call but no longer, and no such payment or payments will in any case, be refunded to the contributor.

Eighth. Whenever said fund shall, by its appropriation or use as above prescribed, become so much reduced as to need replenishing, the companies will call for another payment of the amount prescribed in article second. Each contributor shall then have the option to renew his contribution or not, as he may choose.

To old subscribers who renew their subscriptions with every call, the benefits from the fund will be continuous, subject, however, to sections fourth, fifth, and sixth of this plan. Any employee of these companies not a member of the fund may subscribe to it at any time, but accidents occurring to such new subscriber previous to the first day of the month following his subscription will not entitle him to relief from the fund.

Ninth. A list of contributors to the fund, corrected after each call, shall be kept in the office of the treasurer of the fund, showing the date from which each contributor became entitled to its benefits.

Tenth. The companies reserve the right to give notice of any change which they, the companies, desire to make in the plan, such notice to be given at the time of making any call, and the specified changes to take effect from and after the time when contributors become entitled to relief on said call, and the companies reserve the right to give notice at any time to the contributors that no further contributions will be called for. In case of such notice no contribution will thereafter be received from either of the companies or from any of their employees, and the companies will thereafter use the remaining balance of the fund for the purposes and in the manner herein set forth until all of the said money shall be so used at which time the benefits of the fund shall cease.

Eleventh. As the companies contribute one half of the entire fund so provided, and take upon themselves the trouble and expense of the management of the fund, they will not consider themselves bound to give any and whatever to any person or to the family of any person in their employ who has refused or neglected to become a contributor to said fund.

B. THE RECENT OPERATIONS OF RAILWAY RELIEF DEPARTMENTS.—The last annual report of the *Burlington Voluntary Relief Department* for the year ending December 31, 1900, showed an estimated surplus of \$329,145.29. The net contributions of members for the year 1900 amounted to \$354,107.68. The railroad company allowed interest on monthly balances at 4 per cent per annum, which amounted to \$42,532.94. The payments by the railroad companies from their own funds in establishing, operating, and maintaining the relief department from 1889 to 1900, inclusive, are as follows: Establishment and maintenance to 1899, inclusive, \$558,365.48; operating expenses for the year 1900, \$83,206.06, making a total of \$641,572.44, to which must also be added deficiencies charged off during the whole period amounting to \$42,532.94, making the total cash payments by the railroad companies \$684,105.38. The considerable surplus carried will not be used as a basis for a superannuation feature. This was not contemplated in the Burlington form of organization. The surplus will probably be needed, because, in the first place, the regulations, as amended January 1, 1900, have become more liberal, and secondly, the average age of the permanent force is increasing, and therefore the death rate must increase. With these two considerations in view, the amount of surplus is small considering the magnitude of the operations and the amount of death benefit at risk. The total amount of death benefit carried by the 19,000 members of the Burlington Voluntary Relief Department is nearly \$12,000,000. The benefits paid in 1900 were classified as follows: Disability from sickness, \$83,841.23; death from sickness, \$61,110, making a total on account of sickness of \$144,951.23; disability from accident, \$98,581; death from accident, \$32,488.31; surgical attendance, \$19,861.57; total accident account, \$150,933.91, grand total of benefits, \$295,885.14. The membership in this fund on December 31 of each year since 1889 is as follows:

Year.	Members	Year	Members
1889 ...	5,027	1895.	13,468
1890 ...	9,467	1896.	12,755
1891 ...	10,336	1897.	15,228
1892 ...	12,283	1898...	16,325
1893 ...	11,476	1899...	17,412
1894 ...	11,768	1900...	18,668

The percentage of members to employees has remained about constant during this period. In December, 1889, it was 55.09 per cent, and in December, 1900, 57.78 per cent.

The Pennsylvania Railroad Voluntary Relief Department for the year ending December 31, 1900, showed for the relief fund account a balance on hand of \$248,799.93, in addition to which the relief-fund surplus, together with interest during the year, amounted on December 31, 1900, to \$669,981.90; the interest of which, amounting to \$29,877.05, was used for a superannuation fund, allowances being paid retired members during the year amounting to \$28,503.32. The total benefits paid during the year amounted to \$846,686.53, and the relief from contributions by the companies for members continuing disabled by sickness after receiving benefits for 52 weeks amounted to \$4,833.19. This item has been discontinued since the adoption of the pension-fund feature by the Pennsylvania Railroad Company. During the 5 years which the department has been in

operation the following benefits have been paid: For disablement by accident in the service, \$1,556,469.21; for sickness, \$2,764,721.77, making a total for disablement of \$4,321,190.98; for death from accident in the service, \$860,305.73; from other causes, \$2,616,035.55. Total death benefits, \$3,476,341.28, making a grand total from the relief fund of \$7,797,532.26. In addition to this there have been paid by the companies, first for operating expenses, \$1,300,654.30; special payments, \$60,652.86; for relief to sick members who had exhausted their title to benefits, \$363,919.05; the deficiencies in the relief fund amounting to \$76,585.51, making a total contribution by the companies of \$1,801,811.72. Thus in all the payments from the relief fund and the companies aggregated \$9,599,343.98. The accessions to membership during 1900 were 12,939, averaging 1,038 per month and exceeding the deaths and withdrawals by 12,302. There were 9,303 members who left the service. The net gain in membership was 2,999, the average monthly membership 50,184, and the total at the close of the year 1900 was 51,528 members.<sup>1</sup>

The twelfth annual report of the *Philadelphia and Reading Relief Association* for the year ending November 30, 1900, shows contributions by members amounting to \$236,615.45, contributions by the Philadelphia and Reading Railroad Company, \$8,753.79; interest on monthly bank balances at 3 per cent per annum, \$439.48; income from investments, \$25,945.95, making total receipts of \$274,884.67. Total death benefits paid during the year amounted to \$105,462.80, and the total disablement benefits amounted to \$148,595.15. The surplus for the year was \$6,818.12, and the accumulated surplus on November 30, 1900, was \$407,285.60. The advisory committee directed the setting aside of \$10,687.45 from the surplus fund for the further support of such disabled members as, having received 52 weeks' disabled benefits, remain thereafter totally unable to earn a livelihood. The expenses of operating the relief association for the year were \$27,692.76, of which amount \$11,181.16 was paid by the company and the balance, \$13,508.30, was paid out of the relief fund. In addition to this amount the company contributed \$11,853.79, which was equivalent to 5 per cent of the sums contributed during the year by the employees who were members of the association. This was in accordance with the agreement of the company with the association. It made a cash outlay by the company for the year of \$26,038.25, in addition to which the company contributed the time of certain officials in several departments of the service who attended to relief-association business, legal services and expenses, the rent and care of offices, and the use of telegraph facilities. The average age of members who died during the year was 41.54 years. The average membership for the year was 16,782, and the membership at the close of the year was 17,208, being an increase compared with the previous year of 821.

The following statement shows the operations of the *Lehigh Valley Railroad Relief Fund* for the year ending December 31, 1900

<i>Receipt</i>		
Balance December 31, 1899		\$19,002.08
Contributions by employees		30,319.75
Contributions by companies		30,319.75
		<hr/> \$79,701.58
<i>Disbursements</i>		
Death benefits		24,806.39
Disablement benefits		14,470.83
		<hr/> 69,277.22
Balance December 31, 1900		10,424.36
Average number of contributors		5,290

C. GENERAL RESULTS AND CRITICISM OF RAILWAY RELIEF DEPARTMENTS.—The stability of most of the departments just described depends entirely upon the extent to which the companies stand back of them and are willing to guarantee their financial obligations; otherwise they would not differ from the ordinary forms of fraternal insurance and would probably be subject to the varied and sometimes disastrous results of mutual organizations for fraternal insurance,

<sup>1</sup> For a very complete statement of the operation and present condition of the Pennsylvania Railroad employees' relief fund, see articles by Mr. J. A. Anderson in the *Railroad Gazette* for December 21, 1900, and December 28, 1900. Mr. Anderson was superintendent of this department until January 1, 1900, at which time he was retired under the pension department regulations. The plan is very largely of Mr. Anderson's creation and development. His suggestions have usually been followed by the company with great success, and, as already noted, other companies have very largely followed this example. See also Professor Johnson's articles in the *United States Bulletin of Labor*, No. 8, January, 1897, page 55, and *Annals of the American Academy*, volume 3, 1895. See also pamphlet entitled *The Pennsylvania Railroad Voluntary Relief Department, How Organized, and the Results of Thirteen Years' Operation*, published by the advisory committee, Trenton, N. J.

which would necessitate their being organized on a plan by which the risk would have to be very much more carefully measured. As an illustration of this it may be worth while here to call attention to one association not heretofore mentioned, which is a type of what has been attempted on many roads without assistance and among varied groups of workmen, usually with the same result. We refer to the mutual insurance association of the Cleveland, Cincinnati, Chicago and St. Louis Railway. This association is known as "The Big Four Mutual Insurance Association," and is organized solely among the employees, the company itself having nothing whatever to do with it. It has paid out between \$600,000 and \$700,000 in benefits to its members, and has done much good, but at the thirty-first annual meeting, held at Indianapolis on October 24, 1900, it was found that new members of an age to decrease the average age were not being recruited fast enough to keep the association in a prosperous condition. The report for the year showed a falling off in the number of members, partly through deaths, but to some considerable extent through forfeiture of policies, due to the fact that the assessments were increasing; thus, while at the beginning of the year there were 1,089 members, with 67 new members admitted in Class A and 26 new members in Class B, and 5 members reinstated, making a total of 1,187, the report closed with only 1,055 members on the roll and only 954 full members, of whom 893 were in class A and 162 in Class B. The reserve fund was used up to such an extent that there was only a balance of \$134. This illustrates fairly well the inherent weakness of such forms of insurance, unless, as has been previously stated, a strong financial corporation stands ready by agreement to make good all deficiencies. The same risks are run by the brotherhood insurance which is explained very fully in section 10 of this report (see page 821 ff.). A few of the brotherhoods have provided against this evil by putting aside a definite percentage of all receipts for the creation of a reserve fund. The difficulty arises from the fact that the average age of the members increases to such an extent that the death rate is disproportionate to the contributions, which makes it necessary for reorganization, in which there is usually an increase of rates imposed, especially upon the older members. This additional burden comes after they have reached an age in life when their capacity for earning money, as a rule, is on the decline, while the rates, as before stated, are proportionally very much larger. The results are especially disastrous, because members are thus compelled to withdraw at a time of life when they are no longer insurable in other concerns except at very heavy rates. Some mutual insurance associations and beneficial and fraternal orders have learned this lesson from bitter experience and have provided successfully against a recurrence of this evil. It might be well if legislation were enacted requiring mutual-insurance societies, whether existing as separate organizations among railway employees or as features of the brotherhood organizations, to make every assessment include a certain percentage to be used as a reserve fund. The amount should be based on rates that would result after 25 years' contribution in protecting the assessments of members who had contributed through that period in order that they would either receive full-paid policies at the end of that time or be relieved of any increased assessment because of an increase in the average age of members. Some beneficial societies have such a provision, and some of the brotherhood insurance departments now add \$1 per year to their assessments, the income from which is put in a reserve fund.

Such restrictive legislation would not be necessary in regard to the relief departments of railroads where the benefits are guaranteed by corporations in good financial standing, because the members are doubly protected by their own contributions and the promise and ability of such companies to make up any deficiency which might occur. The rates charged members of these funds are at a minimum, but they are sure of receiving certain fixed sums for the benefits provided.

A very important feature of railroad relief funds is that the influx of new employees who are constantly being engaged to fill the places of those retired or whose service with the company may be severed has a tendency to keep down the average age. For example, the statistics of the relief department of the Pennsylvania Railroad show that in the 15 years of its existence the average age has decreased, and under the rule adopted with the recent inauguration of the pension scheme, which limits the age of new employees to not over 35 years, the average age will be still further lowered. The average age in the relief department of the Pennsylvania Railroad in recent years has been about 27 years.

Many objections, and indeed harsh criticisms, have been passed on the relief and pension departments of railroads. Some of these are summed up and commented upon by Professor Johnson in his article on *Railway Departments for the Relief and Insurance of Employees* (*Annals of American Academy*, vol. 5, 1895,

p. 457ff), his conclusion being that such institutions are of undoubted benefit to the employees, the railway companies, and the public, but that the railway relief department ought not to take the place of organizations in which railway employees have membership. He says, "The provision of relief and insurance is only one of the purposes of the orders and brotherhoods of railway employees. Were they to turn over this function entirely to the railway relief departments, their societies would still perform the chief service for which they were established and would still appeal strongly to the interest and support of railway employees. There is, however, no need of this. There is a work for both to do in providing relief and insurance." The testimony of many representatives of railway labor who appeared before the Industrial Commission brought out the opposition of the brotherhoods (see Industrial Commission Reports, vol. 4, on transportation, especially the testimony of Messrs. Sargent, Arthur, Wilson, Ronemus, and Professor Johnson). The reasons for this are very ably summarized in the Digest to the Industrial Commission Reports, vol. 4, pp. 156-158, and the whole subject is gone into at considerable length by the legislative representative of five of the national brotherhoods in his testimony. (See testimony of Mr. H. R. Fuller, Industrial Commission Reports, vol. IX, pp. 43-69, inclusive.) Mr. Fuller charges that the main object of these relief departments, and in general of the insurance and pension features, when conducted by the companies, is to make the employees more dependent upon the company, to take away their freedom from changing employers by causing them to forfeit the benefits for which they have paid assessments; to weaken their own organizations by preventing them from offering insurance features as attractions for membership, because the men can rarely afford to carry two forms of insurance, and that of the company is practically made obligatory in that no application for employment is accepted unless accompanied by an application for membership in the relief department, and lastly, to prevent men from taking legal measures to recover damages from the company for injuries unless they forfeit their insurance. Such in the main are the charges or grievances entertained by a large number of railway employees. Various legislation to overcome these difficulties has been attempted or is proposed. The arbitration act of June 1, 1898, makes it illegal to compel memberships in such organizations, but this is easily evaded in the way suggested by Mr. Fuller, by the companies simply declining to employ men who do not at the time of their application for employment apply also for membership in the relief department. To test the sentiment of railroad men with respect to this feature, Mr. Fuller sent out to a number of lodges of the several brotherhoods which he represents a circular letter asking whether the employees considered membership in the relief department voluntary or compulsory, and also whether in the opinion of the employees the prime object of the railroad companies in operating the relief department was to deprive the employees of their right to recover for injury, and to alienate their interest from the brotherhoods. Other questions of a similar import were asked in this circular letter. The answers to the two questions indicated were as follows: (1) Coming from 45 lodges, 36 cities and towns in 8 different States, and representing 1,031 members, all of them employees of the Pennsylvania Railroad, 96 per cent said that they considered membership in the relief department compulsory, and 92 per cent answered the second question in the affirmative; (2) the replies from 28 lodges in 26 cities and towns and 7 different States, representing 1,674 members, all of them employees of the Baltimore and Ohio Railroad, indicated that 100 per cent considered membership in the relief department compulsory, and 100 per cent answered the second question in the affirmative.

It has been proposed that members should have the right either to continue membership in such funds after severing their connection with the service of the company or that their rights in such funds, after a certain period of payment, should have a paid-up value or a withdrawal value, as in the case of some insurance policies where one lapses in the payment of premium. Both of these propositions are impossible of realization without striking at the entire existence of railway relief departments. It is impossible for a railway to permit membership in such funds to continue after the employee has left the service for the reason that action of this kind would probably be construed in the light of insurance business on the part of the railroad company, which their charters, in all probability, would not permit. Neither would it be possible to refund to them a certain proportion of their contributions, because the paramount idea in the operation of these funds is to provide sick or accident benefits, and the employees are thus protected as long as they remain with the company and retain membership in the fund, the payment of death benefits being only incidental thereto, and the rates having been fixed accordingly. If the death benefits were left out

of the question the payments might be reduced somewhat. Their contributions, however, are intended primarily for the purpose of insuring the employee of income in case of sickness or accident from month to month, while in the service of the railroad company. The business is not an insurance business in any sense of the term, and it is not intended to accumulate a reserve to set over against outstanding and possible liabilities. If a reserve is accumulated it is intended to be used in the interest of the employee to meet other immediate risks. If it were necessary for railway relief departments to provide a reserve or surplus, such as required of insurance companies, in which contributing members had withdrawal rights, it would be necessary to materially increase the assessments.

**IV Pension features.** A few American railways now provide some form of superannuation or pension relief. Pension features have of course been a natural outgrowth of the relief departments or relief features just described under the captions "Accident insurance," "Hospital relief," and "Relief departments." They sprang from the same thought, and evolved naturally from the experience of the companies in such work. They therefore represent the culmination, in most cases, of plans entertained by the companies at the time the relief departments were established. Pension features as a rule rest upon a more truly humanitarian or philanthropic basis than do the relief departments. They are not to the same extent open to the charge that they are instituted for the purpose of holding employees in the service or preventing them from joining labor organizations which provide their own schemes of insurance. It would hardly be possible for any labor organization to undertake unaided the heavy financial responsibility of guaranteeing pensions or superannuation allowances.

In one sense the pension feature is the oldest form of effort which companies made to take care of their employees, although it was not known under this name nor was it definitely organized. The custom on American railways of the companies taking care of their aged and disabled employees and the families of those killed while in the service was long ago established. This was done either by voluntary contribution or by providing some sort of suitable work for persons needing this form of assistance. The pension plan simply means reducing this practice to a logical and business basis, and therefore enables the companies to do away with a great deal of desultory charity and assure their employees some measure of relief on a uniform and business footing. The best-matured plan is that recently established by the Pennsylvania Railroad Company, which went into effect on its lines east of Pittsburg on January 1, 1900, and on the lines west of Pittsburg January 1, 1901. On account of the magnitude of this system and its relative importance, the number of men affected, and the care with which the plan was worked out, it will be explained somewhat in detail.

(A) PENNSYLVANIA SUPERANNUATION PLAN AND PENSION DEPARTMENT. We have already indicated that the original features of the Pennsylvania relief department were provision for accident, sickness, and death, and it was primarily intended that receipts and disbursements would nearly balance one another, so as to produce neither surplus nor deficiency. Should there be a deficiency at the end of a triennial period, the company would pay it. Should there, however, be a surplus, it was to be put aside to form a separate fund. The interest upon this fund (called the relief-fund surplus) from January 1, 1900, was destined, moreover, to form still another fund—the superannuation fund and constitutes the financial basis for another variety of relief work, namely, the provision of an income for old retired employees. This fund could only be used for the benefit of contributing members. The regulations provided that a member who is retired from active service with the company by reason of age or physical condition is entitled to the receipt of a regular superannuation allowance when he does not receive wages from the company nor continue to draw disablement benefits. Whoever accepts superannuation allowances relinquishes his right to benefits, for he is not supposed to receive two varieties of relief at the same time.

When on January 1, 1900, the time came to begin the creation of a superannuation fund, the relief-fund surplus amounted to \$664,481.90. The interest on this sum during the year 1900 amounted to \$28,503.52, and permitted the superannuation scheme to begin operating. The sum was, of course, not large enough to permit of large superannuation allowances, but they nevertheless afford some help.

The inadequacy, in certain cases, of the relief provided by the department was observed by the company almost at the very outset; whereupon, since October, 1887, the Pennsylvania Railroad put in operation a variety of relief not provided for in the regulations. This so-called "company relief" is, or was, essentially a liberal pension-fund arrangement by which the company, entirely at its own cost,

contributed to the support of those members of the relief fund who had drawn their 52 weeks' sick benefits and were still sick and needy. The payments of the company enabled these members to keep alive their title to death benefit in the relief fund and gave them additional financial help. When the new pension department of the Pennsylvania Railroad was inaugurated on January 1, 1900, the company thus took an important financial burden exclusively upon itself and therefore ceased to provide for "company relief." The inauguration of the pension department was, as a matter of fact, due likewise to the recognition of the inadequacy of the primary relief scheme. But before we pass on to a discussion of the pension scheme it will be proper to give some account of the superannuation allowances provided for by the relief department regulations. Although conceived before the pension scheme, the superannuation plan went into effect simultaneously with it on January 1, 1900. This fact, as well as the dependence of the superannuation fund on the interest of a surplus fund which might or might not reach a considerable amount, shows that the superannuation scheme was no essential part of the relief department as originally outlined.

There was, however, a surplus, and a surplus large enough to produce during 1900 interest amounting to nearly \$30,000, most of which was paid out in allowances as prescribed.

The regulations prescribe that superannuation allowances are determined by multiplying the number of each class in which an employee has been a member by the number of full calendar months in each class, respectively, and adding the results. The sum thus obtained shall be the rate in cents of the monthly allowances. Members receiving these allowances may retain their title to death benefits by contributing thereto at the usual rates.

Supposing that an employee has during 20 full years or 240 calendar months, received \$10 per month as a member of class 2, and that he has subsequently received \$60 per month for 15 full years, or 180 full calendar months, as a member of class 3, then his monthly superannuation allowance would be twice 240 plus three times 180, or \$10.20. The payment of allowances at this rate is, however, conditioned upon the size of the fund set aside for this purpose. Should the superannuation fund be found inadequate during any annual or semiannual period to meet the demands of such allowances, then a pro rata reduction is made in such allowances for such periods.

For the systematic relief of retired employees on a large scale the superannuation fund was of course too small. The company had for a long time contemplated the establishment of a pension feature not confined in its workings to the members of the relief organization. As the funds of the relief department could only be paid out to members of that organization, a scheme which would embrace all the employees of the road was required to be based on a new arrangement. The probably large amount of expenditure involved in any general pension plan, such as that contemplated by the company, enjoined the most careful consideration of each feature of the scheme, and the preliminary study of attempts which had already been made elsewhere in this direction. A special committee on superannuation and pension funds was appointed by the advisory committee of the relief department. The committee examined into and reported upon the various systems of pensioning in operation on upwards of 50 of the leading railways of Europe, America, Asia, Africa, and Australia.<sup>1</sup> The committee, moreover, gave the matter considerable original thought. The original plan embodied only the care of superannuated employees who were members of the relief fund. As the result of the discussion and amendment the plan finally adopted made general provision for all old employees, by the company assuming the obligation of providing them with a pension allowance in addition to what the relief fund could afford to grant to its members who might be retired by the company.

The arrangement finally adopted was made known to the employees by general notices issued on December 18, 1899, and went into effect January 1, 1900.<sup>2</sup> These notices declared that a new department had been created, to be known as the Pennsylvania Railroad pension department, having for its purpose the payment of regular allowances, from the funds of the company, to two classes of employees relieved from active service, namely:

- (a) All officers and employees who shall have attained the age of 70 years.
- (b) All officers and employees 65 to 69 years of age, inclusive, who shall have been 30 or more years in the service, and shall, in the opinion of the board of officers, have become physically disqualified.

It was made the duty of every employing officer of the company to report to the board of officers, at least a month in advance of their retirement, all employ-

<sup>1</sup>See Exhibit 3 of this report, p. 93, ff.

<sup>2</sup>See further details, Exhibit 3, p. 967 ff.

ees about to attain the age of 70 years, in order that they might be considered as candidates for a pension allowance. In relieving employees who have attained the age of 70 years their retirement is made effective from the first day of the calendar month following that in which they attained that age; in all other cases the date of retirement is from the first day of the calendar month determined by the board of officers. An employee who has reached the age of 70 years and fulfills all the other conditions for receiving a pension is generally supposed to be ipso facto entitled to that pension. If, however, an employee is from 65 to 69 years of age, inclusive, and has been 30 or more years in the service of the company, his retirement may be voluntary or involuntary, that is to say, he may himself ask to be retired, or his employing officer may propose the employee's name for a pension if he considers him physically disqualified for further service. In either case the board of officers investigates the matter and decides whether or not the employee in question shall be relieved from the service after physical examination by a board of three physicians appointed by the chairman of the board of officers.

It has already been pointed out that the pension plan extends to all employees. It consequently embraces all those persons who are employed upon or in connection with any of the railroads or works belonging to the Pennsylvania Railroad system east of Pittsburgh and Erie. The service of any such employee is considered as continuous from the date from which he has been continuously employed upon such roads, whether prior or subsequent to their control or acquisition by that system.

The pension allowances authorized by the boards of directors to be paid monthly are determined upon the following basis: For each year of service 1 per cent of the average monthly pay for the 10 years preceding retirement. As the total expense for these allowances is borne by the company, it seemed advisable to set a limit to the total annual sum to be disbursed in pensions. This limit was placed at \$300,000 by the boards of directors of the various companies associated in the administration of the pension department. Whenever at any time it shall be found that this basis of pension allowances would create demands in excess of \$300,000, then a new basis, ratably reducing the pensions, will be established so as to bring the expenditures within the limitation, and the decision of the boards of directors in establishing such new basis shall be absolutely conclusive without appeal. It is provided that notice of such a new basis will be given before the beginning of the year in which it may be decided to put the same into effect.

In computing service it is reckoned from the date of entry in the service to the date when relieved, making deduction of the actual time out of the service and commuting in the final result any fractional part of a month. If, for example, an employee has been in the service of the company steadily for 41 years and during that time has been out of service for periods amounting to 1 year, and if his average wages for the past 10 years were \$10 per month, then, upon retirement now, he would receive 10 per cent of \$10, or \$16 per month as his pension allowance.

The bases of retirement, as thus indicated, are age and service, with an allowance proportioned, furthermore, to the pay received during a designated period preceding retirement. Beside the pension allowance of the company, such retired employees as are also members of the relief fund receive in addition the superannuation allowance provided for by the relief department regulations.

When the pension department pays the allowances authorized by its regulations, the sums are, unless and until revoked by the company, paid out monthly, commencing on the first day of a calendar month and terminating with the date of death. But no pension allowance will be paid to any person for a period during which he is receiving accident or sick benefits from the relief department. The employee who receives a pension allowance can not, of course, re-enter the service of the company, but he may, if he chooses, engage in other business.

The pension department under the supervision of the president of the Pennsylvania Railroad is in charge of a board of officers appointed annually by the boards of directors. This board of officers has the power, subject to the approval of the boards of directors, to make and enforce rules and regulations for the care and operation of the department, to determine the eligibility of employees to receive pension allowances; to fix the amount of such allowances, and to prescribe the conditions under which such allowances may mature. This board is furthermore empowered to make rules for its government not inconsistent with these regulations, elect their own chairman and secretary, and, from time to time, or whenever required, make reports of their action to the boards of directors for approval.

Each company may discharge any officer, agent, or employee at any time, when in its judgment the interests of the company so require, without liability for pension or for other allowances save salary or wages due.

An important protection is afforded the pension fund by the age limitations now laid down by the company, and according to which no person may be permanently taken into the service of the company who is over 35 years of age or who can not pass the required physical examination; except that with the approval of the board of directors and after consideration by the board of officers former employees desiring reinstatement may be permitted to reenter the service within a period of 3 years after leaving it. Persons too may be employed with the approval of the board of directors irrespective of age in at where the service for which they are needed requires professional or other special qualifications, or for temporary service not exceeding 6 months, with authorized renewal.

During the first year of operation, 1900, it was natural that many problems should arise concerning the interpretation of the regulations concerning the pension plan. The decisions adopted by the railroad authorities concerning these problems are a matter of some importance because of the evident tendency of the company to interpret its own provisions, not in a narrow-minded, but a fair and sometimes in a generous way. It will be worth while, therefore, to mention a few of these decisions.

Absence from work on account of disablement is not deducted in computing service, unless the employee was discharged on account of such disablement. Absence on furlough or during suspension is not deducted in computing service. The average regular monthly pay of an employee who has been sick for the 10 years preceding retirement is determined by using the last regular monthly pay which the employee received when he performed the duties of his position within regular working hours. When an employee has been absent from duty on account of disablement or other causes, or when he has received company relief a portion of the time during the 10 years preceding retirement, his average regular monthly pay shall be determined by ascertaining the average regular monthly wages the employee would have earned, in his various positions, under regular normal conditions if he had been able to fulfill the duties of his position every working day during that time. A disabled employee, member of the relief fund, receiving disablement benefits, when relieved from the service, can elect at that time to continue to receive disablement benefits from the relief fund in lieu of pension allowance, and whenever he recovers from his disability or decides to relinquish his title to disablement benefits from the relief fund, he will receive a pension allowance. Such allowance, however, shall commence with the first day of the month after such recovery or relinquishment. In no case shall anyone 70 years of age or over be employed in the service or carried on the pay rolls of any of the companies associated in the administration of the pension department.

The department rounded out its first year of operation on December 31, 1900. It is therefore possible to give an account of its actual working for an entire year. The employees of the company's system east of Pittsburg and Erie number in the neighborhood of 80,000. There was authorized to be paid in pension allowances during the year the sum of \$244,019.97, which expenditure was borne by the associated companies, in addition to the cost of operation of the department. The retirements during the year numbered 1,292, 89 per cent of whom, or 1,149, were 70 years of age or over, and 11 per cent, or 143, between 65 and 69 years old. Of the latter 83 were retired at their own request on the recommendation of their employing officers; the remainder, 60 in number, purely upon the recommendation of their employing officers. One hundred and two pensioners died during the year, 95 of whom were of the 70 year or over class and 7 of the 65 to 69 year class.

In order to meet the conditions brought about by the absorbing of the Western New York and Pennsylvania Railway and Allegheny Valley Railroad companies by the Pennsylvania Railroad Company during the past year, amendments were adopted, effective from January 1, 1901, which provide for extending to the employees embraced in the Buffalo and Allegheny Valley Division all the advantages of the pension department. Amendments were also adopted granting employees, in the computation of the pension allowance, credit for any time passed in the service of the Pennsylvania lines west of Pittsburg and Erie. This service in not a few cases added an additional sum to the pension allowance already granted employees, besides making the provision of the department replete in the fact that it covers the employees on the entire system east of Pittsburg and Erie and their service on the system east and west. A similar pension plan for the western system, moreover, was adopted, and went into effect on January 1, 1901.

We may also note in this connection the results, much more modest than those above enumerated, of the superannuation scheme of the relief department. The superannuation fund during 1900 amounted to \$29,877.05; and of this the allow-

ances paid to retired members of the relief fund amounted to \$28,503.52, leaving a balance of \$1,373.53.

While the pension fund is a distinct and separate provision by the company from its own funds for the benefit of its employees, and will be operated from a distinctive company standpoint, its relation to the relief organization will be unavoidably so intimate as to make it appear as an auxiliary feature thereof. By the addition of the superannuation and pension features to the benefits afforded by the relief fund, the company has virtually established for its employees a relief and pension institution, which will be more apparent when it is remarked that the aims and results of the 2 features are inseparably interwoven in one fundamental principle—humanization.

The new fund will affect the entire force of employees on the lines of its system east of Pittsburg and Erie, and scattered along a trackage of over 1,100 miles, located in the States of New York, New Jersey, Pennsylvania, Delaware, Maryland, and Virginia, and the District of Columbia, and since January 1, 1901, a similar plan for the Pennsylvania lines west of Pittsburg is operative for the 25,000 employees on those lines, making in all at least 100,000 employees subject to pension relief.

In response to the query as to what are the main objects of the consolidated fund, it was said: First, the manifestly humane purpose to protect the immediate interests of active and preserve the future welfare of aged and infirm employees; and, secondly, to increase and improve the effectiveness of the company's service. The interests of active employees are guarded by a fixed responsibility voluntarily assumed by the company toward the fund, which insures them during their period of efficient service fair wages and an adequate allowance in the event of sickness, accident, or death, while their future welfare is amply protected by the same assumption of company responsibility, which guarantees them upon incapacitation by age or infirmities a fixed life annuity. The company's benefits consist for the most part in the efficiency of service naturally consequent upon the employment of younger and more robust men in the stead of those whose incapacitation has rendered their retirement beneficial to both themselves and the service, also in welding more firmly the mutual interests of employer and employee, thereby the better enabling that concentration of effort and uniformity of action so essential in the management and conduct of corporate affairs.

No other railway company in the world, whether under State or private control, possesses a joint fund whose direct and general beneficial features present the admirable system and thoroughness that are so manifest in the one under consideration.

The employees eligible to retirement will not receive the pension allowance as a favor nor as a charitable act on the part of the company extending it. They will be in position to consider themselves the recipients of a permanent annuity earned by and merited through years of faithful, efficient, and loyal service; for it is, above all else, a mark of regard shown by a great corporation, through its administrative representatives, toward each and every employee who has won it by conscientious and capable performance of assigned duties.

No act of the company's directorate, or the officers who have been prominently identified with the pension work, will redound so much to their individual credit nor reflect so much honor and dignity upon their official accomplishments, as the part they have played in the establishment of this, one of the best of modern beneficent organizations, involving in its execution an outlay on the part of the company estimated at considerably over \$300,000 per annum.

**B. THE BALTIMORE AND OHIO RAILROAD PENSION FEATURE.**—Most of the railroads in organizing their relief departments made provision that where any surplus accumulated it might be used for superannuation or pension allowances. This was, of course, anticipating a somewhat distant and uncertain future. The Baltimore and Ohio Railway Company, however, began with a pension feature at the outset, and it is the oldest organization of this kind, although it has not been carried out on so large a scale as the Pennsylvania plan just discussed. The pension feature of the Baltimore and Ohio relief department is provided for by the regulations concerning the relief department, established March 15, 1899, as follows:

The fund for the payment of pensions will be derived wholly from the contributions of the company. The company's contributions will be applied to the purposes which are herein stated in the order of their precedence.

First. To provide means of support during life for those persons, members of the relief feature of the Baltimore and Ohio Employees' Relief Association for four consecutive years who, having served the company for ten consecutive years, and having reached the age of 65, shall be honorably relieved from duty.

Second. To provide in the same manner for like persons who elect to retire from the service.

Third. If at any time the funds applicable to the purposes of this feature shall, in the opinion of the

committee, be more than sufficient to provide for the persons mentioned above, such surplus shall be applied to aid or support such class or classes of the company's employees, members of the relief feature, as the committee may think most deserving and most in need of help under such supplemental regulations as the committee may then adopt.

No member shall be entitled to wages from the company and to a pension allowance at the same time, or to benefits from the relief feature and a pension at the same time.

Pensions will be paid monthly. Each pensioner will receive a duly allowance, excluding Sundays, equal to one-half the benefits provided to be paid for sickness under the regulations of the relief feature to a member of the class to which the pensioner would, while in service, have been assigned under said regulations had he been required to become a full member of said feature. In the case of a pensioner who has been continuously a member of the relief feature or the Baltimore and Ohio Employees' Relief Association fifteen years, this allowance will be increased by the addition of 5 per cent thereof, and a like addition will be made for each additional term of five consecutive years of such membership. The following table shows in brief the amount of allowance to pensioners.

	Ten years' membership and under, one-half sick rate	Fifteen years' membership, 5 per cent additional	Twenty years' membership, 10 per cent additional
Those contributing under relief feature to Class A	\$0 25	\$0 26½	\$0 27
Those contributing under relief feature to Class B	50	52½	55
Those contributing under relief feature to Class C	75	78½	82½
Those contributing under relief feature to Class D	1 00	1 05	1 10
Those contributing under relief feature to Class E	1 25	1 31½	1 37½

The committee may, at any time, make a percentage reduction of all pensions, or further limit the classes of persons who may become pensioners.

The statement of a member's age contained in his application for membership in the relief feature shall, for the purpose of this feature, be final and conclusive.

For the purposes of this feature, membership shall be considered as in the company's service during the time they receive benefits from the relief feature.

The failure of any pensioner to claim his benefits for two years, counted from the last payment to him, shall be presumptive evidence that such pension has terminated by reason of the pensioner's death, and his name shall be stricken from the list of pensioners, subject to the right of restoration to the same on a new application by the pensioner and satisfactorily accounting to the superintendent for his failure to claim his pension.

Upon the death of a pensioner the accrued pension to the date of his death shall not be considered a part of the estate of the deceased, nor liable to be applied to the payment of the debts of said estate in any case whatever, but shall inure to the sole and exclusive benefit of his widow or children, and if no widow or child survive no payment whatever of the accrued pension shall be made or allowed, except so much thereof as may be necessary to defray the expenses of the burial of the decedent in case he shall not leave sufficient assets to meet such expenses, and the burial expenses thus to be allowed shall be in the discretion of the superintendent.

Any pledge, mortgage, sale, assignment, or transfer, of any right or claim to any pension granted under these regulations shall be void and of no effect, and no one save the pensioner himself or, in the event of his death, his widow or children, shall be entitled to receive such pension, but the payment to persons laboring under legal disabilities may be made to such persons as the committee may think proper.

No sum of money due or to become due to any pensioner under this feature shall be liable to attachment, levy, or seizure by or under any legal or equitable process whatever, whether the same remains with the relief department or any agent thereof, or is in the course of transmission to the pensioner entitled thereto, but shall inure wholly to the benefit of such pensioner. Should any creditor of the pensioner endeavor to collect the pension by process of attachment, or by any other legal or equitable process laid in the hands or served upon the company or the relief department for the purpose of paying the debt due by the pensioner to such creditor, or any part thereof, all the money due or yet to become due by the department to such pensioner, shall be forfeited to the department, and shall belong to it absolutely, to be dealt with as the committee shall deem proper.

These regulations shall in no way affect any pension heretofore granted to any person admitted to the pension feature of the Baltimore and Ohio Employees' Relief Association.

This pension feature was organized October 1, 1884, and up to June 30, 1900, 589 persons had been pensioned. The company's annual contribution for the period up to July 1, 1900, was \$31,000, but was increased on that date to \$75,000. On June 15, 1901, there were 328 pensioners, costing annually \$61,174. The company has provided sufficient funds to pay the pensions of all persons who have made application therefor, and the total amount paid out since the inauguration of the pension feature has been \$557,753.90.

(C) THE CHICAGO AND NORTHWESTERN PENSION DEPARTMENT.—A pension system was introduced on this road January 1, 1901. In organization it follows very closely the plan of the Pennsylvania system. All employees who have attained the age of 70 and who have been 30 years in the service must be retired with pension, with the exception of executive officers appointed by the board of directors, for whom it is not mandatory. Employees from 65 to 69 years of age, inclusive, may be retired and pensioned in the same way as provided for Pennsylvania Railroad employees. The allowances are also calculated on the same basis. On June 21, 1901, the secretary of the pension board reported that 44 employees had been retired on account of age and 22 by reason of physical disability. The aggregate monthly allowances were \$1,450.25, and the average monthly pension \$21.97. This

company has no relief department, but in the past numerous disabled employees have been carried along on the various pay rolls where their services have been such as to deserve recognition by their employing office. Employees who do not come within the scope of the pension are still cared for in that way.

D. THE ILLINOIS CENTRAL RAILROAD PENSION DEPARTMENT was established April 24, 1901, and began operations July 1, 1901. The Yazoo and Mississippi Valley Railroad Company, which is a separate corporation and operates over 1,000 miles of line independent of the Illinois Central Railroad Company, adopted a similar scheme for pensions, which went into effect at the same time. It is too soon to speak of the results, but the plan of organization of the pension department of the Illinois Central Railroad is outlined in the following circular of its announcement:

#### GENERAL NOTICE

Pursuant to the action taken by the board of directors of the Illinois Central Railroad Company at and subsequent to their meeting held February 21, 1900, in respect to a system of pensions for the purpose of enabling employees of the company who have rendered it long and faithful service to retire when they have attained an age necessitating relief from duty the following rules and regulations governing the organization of a pension department are hereby established:

#### *Rules and regulations*

1. The administration of the pension department shall be by a board of officers to be known as the board of pensions. Such board shall until otherwise ordered consist of Mr. C. A. Beck, Mr. W. J. Hamilton, Mr. C. F. Krole, Mr. William Rushaw, Mr. A. W. Sullivan, Mr. J. F. Wallace, and Dr. J. L. Owens.

2. The office of the board of pensions shall be at Chicago.

3. All communications should be addressed to the secretary of the board of pensions.

4. The board of pensions shall subject to the approval of the president have power to make and enforce rules and regulations for the efficient operation of the pension department, to determine the eligibility of employees to receive pension allowances, to fix the amount of such allowances, and to prescribe the conditions under which such allowances may be paid.

5. They shall make rules for their own government not inconsistent with these regulations, elect a chairman from their own number, appoint a secretary and from time to time as required make reports of their action to the president. The actions of the board of pensions when approved by the president, shall be final and conclusive.

6. The benefits of the pension system will apply to those persons only who have been required to give their entire time to the Illinois Central Railroad Company or to that company and some other railroad company or companies jointly. In cases of such joint employment the pension to be paid by this company shall be estimated alone upon the proportion of average monthly pay received from this company. The pension system will not apply to the law and surgical departments.

7. All officers and employees who have attained the age of 50 years shall be retired. Such of them as have been 10 years in the service shall be pensioned.

8. Locomotive engineers and firemen, conductors, baggage men and brakemen, train baggagemen, and switchmen, bridge foremen, section foremen and supervisors who have attained the age of 60 years may be retired.

9. Such of them as have been 10 years in the service shall be pensioned when retired.

10. Officers and employees between 60 and 70 years of age who have been 10 years in the service and who have become incapacitated may be retired and pensioned.

11. In case an employee between 60 and 70 years of age claims that he is or should his employing officer consider him incapacitated for further service he may make application or be recommended for retirement, and the board of pensions shall determine whether or not he shall be retired from the service.

Physical examination shall be made of employees recommended for retirement who are under 70 years of age, and in respect thereto with the recommendation of the chief surgeon shall be transmitted to the board of pensions for consideration in determining such cases.

12. Retirement shall be made effective from the first day of the calendar month following that in which the persons shall have attained the specified age, or from the first day of a calendar month to be determined by the board of pensions.

13. The terms "service" and "in the service" will refer to employment upon or in connection with any of the railroads operated by the company, and the service of any employee shall be considered as continuous from the date from which he has been continuously employed upon such railroads, whether prior or subsequent to their control or acquisition by the Illinois Central Railroad Company.

14. In computing service it shall be reckoned from the date since which the person has been continuously in the service to the date when retired.

Leave of absence, suspension, dismissal followed by reinstatement within one year, or temporary lay off on account of reduction of force, when made under by other employment, is not to be considered as a break in the continuity of service.

Persons who leave the service shall relinquish all claims to the benefits of pension allowances.

15. The pension allowances authorized are upon the following basis:

For each year of service an allowance of 1 per cent of the average regular monthly pay received for the ten years preceding retirement. Thus by way of illustration: If an employee has been in the service for forty years and has received on an average for the last ten years \$50 per month regular wages, his pension allowance would be 40 per cent of \$50, or \$20 per month.

16. The sum of \$250,000 is hereby set apart as a pension fund, in addition to which the company will in each year make a further appropriation of an amount not to exceed \$100,000, in payment of pension allowances for such year.

Whenever it shall be found that the basis of pension allowances shall create demands in excess of the \$250,000 and an annual appropriation of \$100,000, and as often as such condition may arise, a new basis shall be determined, reducing the pension allowances, may be established to bring the expenditures within the limit of the fund, and the decision of the board of directors in establishing such new basis shall be absolutely conclusive. Notice of such new basis shall be given before the beginning of the year in which it may be decided to put the same into effect.

17. When pension allowances shall be authorized pursuant to these regulations, they shall be paid monthly during the life of the beneficiary, provided, however, that the company may withhold its allowance in case of gross misconduct on his part.

16. In payment of pension allowances, pay rolls, showing the names of those to whom allowances have been made and the amount of such allowances, shall be prepared at the close of each month by each superintendent or other designated officer, who shall certify to their correctness and forward the same to the auditor of disbursements, who will after verification send them to the board of pensions for certification by the secretary and chairman, and thereafter through the usual channels for payment.

17. It shall be the duty of every employing officer to report at once, through the usual channels, to the board of pensions, all employees who in July, August, or September, 1901, shall have attained the age of 70 years, and of those employees specified in rule 7 who shall have attained the age of 65 years, and thereafter, at least three months in advance of the date of retirement, all employees about to attain the requisite age for consideration for a pension allowance.

18. Each officer charged with the duty of preparing the pension rolls must keep himself advised of the whereabouts of employees who have been retired from the service and promptly advise the secretary of the board of pensions, through the usual channels, when any of them cease to be entitled to further pension allowances. When they do not reside within the jurisdiction of the officer of the department in which they were engaged before being retired from the service, such officer shall require satisfactory evidence from such employee, at least once a year, and oftener as may be required, showing that he is entitled to a pension allowance.

19. To the end of preserving direct personal relations between the company and its retired employees, and that they may continue to enjoy the benefit of the pension system, no assignment of pensions will be permitted or recognized.

20. The acceptance of a pension allowance does not debar a retired employee from engaging in other business, but such person can not re-enter the service of the company.

21. No person inexperienced in railway work over 35 years of age, and no experienced person over 45 years of age, shall be re-entered into the service, provided, however, that in the discretion of the president persons may temporarily be taken into the service irrespective of age for a period not exceeding 6 months, and that this period may be extended, if necessary, to complete the work for which such persons were originally employed, provided also, that, with the approval of the board of directors, persons may be employed indefinitely, irrespective of the age limit, where the service to be rendered requires professional or other special qualifications.

22. Neither the action of the board of directors in establishing a system of pensions, nor any other action now or hereafter taken by them or by the board of pensions in the inauguration and operation of a pension department, shall be construed as giving to any officer, agent, or employee of the company a right to be retained in its service, or any right or claim to any pension allowance, and the company expressly reserves its right and privilege to discharge at any time any officer, agent, or employee when the interests of the company in its judgment may so require, without liability for any claim for pension or other allowance than salary or wages due and unpaid.

23. These rules and regulations shall take effect July 1, 1901.

By order of the board of directors

STUYVESANT FISH, *President*

CHICAGO, April 26, 1901

W. G. BRIN, *Assistant Secretary*

**V. Savings Funds.**—The Baltimore and Ohio Railroad has a savings feature together with the pension feature and relief feature as part of the relief department, and the Pennsylvania Railroad Company has a savings fund for its employees. The object of the Baltimore and Ohio is to provide a savings bank for the employees and their near relatives, and to provide a method for loaning them money on easy terms for the purpose of acquiring or improving their homesteads. The object of the Pennsylvania Railroad fund is restricted to the work of an ordinary savings bank.

The *Pennsylvania Railroad Company* established its employees' saving fund under resolutions adopted at a meeting of the board of directors November 16, 1887, and announced to the employees of the road December 19, 1887. The resolutions were as follows:

*Resolved*, That this company will receive, through such of its agents as the board of directors may from time to time designate, such portions of the wages or salaries of the employees as they may desire to leave with the company, and will repay the same with such interest thereon as may from time to time be fixed by resolution of the board and in the manner and according to the methods which shall be in like manner prescribed.

*Resolved*, That the moneys so received shall constitute a fund to be known as the Pennsylvania Railroad Employees' Saving Fund, which shall be in charge of an officer to be designated as superintendent of the Pennsylvania Railroad Employees' Saving Fund, who shall report to the first vice-president.

*Resolved*, That all moneys and securities belonging to this fund shall be kept by the treasurer in a special account under the direction and supervision of the committee on finance, who shall have like supervision of all matters connected therewith, and this company shall be responsible for the faithful repayment of all moneys belonging to the said fund.

*Resolved*, That the rate of interest to be allowed on all deposits shall, until further order of the board, be 4 per cent per annum, and that no change shall be made in the rate of interest allowed without six months' previous notice.

The rate of interest was changed to 3½ per cent to take effect July 1, 1900. The agents at over 100 stations on the lines east of Pittsburg have been designated as depositories of the fund. The following rules and regulations have been adopted to govern this fund:

#### THE PENNSYLVANIA RAILROAD EMPLOYEES' SAVING FUND.

##### REGULATIONS

1. The fund will be in charge of a superintendent appointed by the board of directors of the Pennsylvania Railroad Company.

## APPLICATIONS

2. Freight and ticket agents of the above-named companies at convenient points will from time to time be designated as depositaries, and employees desiring to become depositors can obtain from any of such agents a form of application in which there shall be set forth the applicant's full name, residence, and occupation, and the name and residence of the person to whom, in the event of death, his deposits and the accrued interest due thereon shall be paid. This application will be forwarded by the agent to the superintendent of the fund, and, when properly executed and approved by him, he will send to the agent a deposit book for the applicant in which shall be printed a copy of the regulations, with a statement of the assent of the applicant thereto to be signed in the presence of a witness.

## DEPOSITS

3. Deposits of any sum, in even dollars, not exceeding \$100 in any one month may be made with any freight or ticket agent of the above-named companies who has been designated as a depositary.

4. The agent will record each deposit as soon as made, writing the amount out at length and also in figures, entering date received, and signing his name as agent, with name of station. The deposit book must be brought to the agent each time a deposit is made, that the transaction may be regularly entered therein.

5. Freight and ticket agents designated as depositaries will be supplied with duplex tickets, one of which must be used to report every deposit received; such ticket showing date, name of depositor, number of deposit book, and amount deposited. The colored portion of the ticket must be given to the depositor, who will personally send it to the superintendent of the fund in an envelope which the agent will furnish. It is the depositor's duty to see that the envelope with inclosure is properly sealed and forwarded by railroad service or United States mail.

## INTEREST

6. Interest at a rate to be fixed by the board will be allowed from the 1st of the calendar month after deposit amounts to \$5, and on all subsequent deposits from the 1st of the calendar month after they are made. No change will be made in the rate of interest allowed without 6 months' previous notice.

7. Interest will be earned on the 1st day of January of every year to the credit of the depositors' accounts, and thereafter will form part of the principal.

8. Depositors who shall for the space of 3 years neither add to nor draw from their accounts, nor forward their deposit books that the interest may be entered therein, shall not be entitled to any interest on their deposits after the expiration of said 3 years from the date of the last entry on their books.

9. Interest will cease upon 30 days' notice, when direction has been given by the board to close an account.

10. Depositors whose connection with the companies named has been severed must have their accounts closed within 30 days thereafter, as interest will not be allowed after the expiration of that period.

## REPAYMENT OF DEPOSITS

11. Depositors desiring to withdraw money must give 10 days' notice to the superintendent of the fund in the form of an order obtainable from any of the freight or ticket agents designated as depositaries, which order together with depositor's book the agent will forward to the superintendent, giving the depositor a receipt for the deposit book.

12. Upon receipt of such order and book, the superintendent of the fund will enter the amount to be withdrawn in the deposit book, deducting such amount from the sum on deposit to show the balance after such withdrawal. The superintendent will then prepare and sign an order on the treasurer of the Pennsylvania Railroad Company for the amount to be withdrawn, which, after being approved for payment by the treasurer or assistant treasurer, will be forwarded with the deposit book to the agent designated in the order, and can be obtained by the depositor on surrendering the receipt given him when the book was forwarded to the superintendent.

13. The agent will cash the order on the treasurer or deliver it to the owner, who can obtain the money from any other agent or from a bank in which the company's funds are deposited, on presentation of his book, identifying himself and signing receipt on the order.

14. Orders not called for in 15 days will be returned by agents to the superintendent of the fund, after entering the amounts as deposits in depositors' books on the date of return to the superintendent.

15. The board reserve the right to require 30 days' notice for the withdrawal of the entire amount on deposit in any account.

16. No money will be paid on order delivered except to the person who has the legal right to the deposit, or to his order, who must be attested by a disinterested witness.

17. In the event of a depositor becoming insane or being otherwise incapacitated to act, and in the absence of a legal representative, if the incapacity shall be proven to the satisfaction of the superintendent of the fund he may, upon the approval of the board, pay such proportion of the deposit to the order of some person mutually selected by a near relative or friend of such incapacitated depositor and the superintendent as it may be shown is necessary to meet the pressing wants of said incapacitated depositor or his wife or children, and the receipt of the person so mutually designated shall be a good and sufficient release and discharge for the disbursement of said deposit.

18. Upon the presentation to the superintendent of the fund of satisfactory proof of the death of a depositor the money belonging to him shall be paid over only to the person designated in his application to receive same, or if the person so designated shall not be then living said funds shall be paid either to the heirs or personal representative of the deceased depositor, as the board may determine.

## GENERAL

19. As the saving fund is only intended for the benefit of the employees of the companies aforesaid, deposits will only be received from those who are employees of said companies, and while so employed.

20. The board, on giving 30 days' notice, may order the return of any deposit with accrued interest.

21. The deposit books held by depositors must, when they desire to withdraw money, or whenever required to be balanced, be forwarded to the superintendent of the fund through nearest agent designated as a depositary, who will give depositors receipts for them. On the 31st day of December (or if that date falls on Sunday then on the preceding day) each depositor must forward his deposit book in order that the accrued interest on deposits may be properly entered therein.

22. No person other than those designated are authorized to receive deposits, nor will the company be responsible for any moneys not deposited in strict conformity with these regulations.

23. In case a depositor loses his deposit book, immediate notice thereof must be given the superintendent of the fund, and, after a reasonable time has elapsed in which to notify all concerned of the loss, a duplicate will be furnished and so marked.

The annual report of the Pennsylvania Railroad Company for the year 1900 showed that the balance on hand December 31, 1899, to the credit of the employees' saving fund was \$2,717,709.03. The amount received from depositors during the year was \$754,589.12. The interest allowed on deposits was \$104,597.34. Of these assets \$2,835,000 was invested in securities bearing interest at an average rate of over 3½ per cent. The operating expenses of the saving fund for the year were contributed by the Pennsylvania Railroad Company, and amounted to \$4,953.38. The number of depositors at the close of the year was 6,529, or 141 less than at the end of the preceding year. It is stated that this is due to the fact that the accounts of 319 employees who had left the service of the company, to whose credit small balances were carried, were closed, so that there was really an increase in the number of depositors of 178.

The savings feature of the relief department of the *Baltimore and Ohio Railroad Company* is somewhat more extensive in the aid which it renders. The prospectus of the company states that the object in establishing this feature was "the enchainment of habits of prudence, economy, and thrift by placing within the reach of every employee of the railroad company, upon the simplest and most advantageous terms practicable with proper security, all the benefits derivable from the safest and most liberal savings institutions of the country, and from the best-conducted building societies." The savings fund was inaugurated August 1, 1882, and when the relief department was established, in 1889, this feature was retained with some modifications. The regulations of the relief department relating to the savings fund are as follows:

Any employee of the company, his wife, child, father or mother, or the beneficiary of any deceased members of the relief feature may deposit with any depository designated by the company any sum not less than \$1 nor more than \$100 in any one day, unless otherwise specially authorized by the superintendent.

Parents or others may deposit in the name of any child, such deposit being subject to the order of the parent or other adult, and a minor may deposit in his own name, subject, however, to the order of an adult.

Any person entitled under these regulations who wishes to become a depositor shall execute an application, in which there shall be set forth the applicant's full name, residence, and occupation, and the name and residence of the person to whom, in the event of death, his or her deposits and the profits accrued thereon shall be paid, when executed be shall forward it to the superintendent.

If the application be accepted, a pass-book will be issued, in which shall be recorded each deposit and withdrawal as soon as made, the entry to state the amount in writing and in figures, to be dated and signed by the depositor or depository, as the case may be. This pass-book must be brought to the depository each time a deposit is made or money withdrawn, that the transaction may be regularly noted.

The depositories designated by the company to receive deposits will be supplied with duplex tickets, upon which every deposit must be reported. The depositor must personally send to the superintendent at Baltimore the duplicate ticket in a sealed envelope. The original will be sent to the same address by the depository. Until each deposit is entered on the pass-book by the depository and the duplicate ticket forwarded to the superintendent by the depositor the transaction is not complete.

No persons other than those specifically designated by the company are authorized to receive deposits, nor will this department become responsible for any money not deposited in strict conformity with these regulations. The company guarantees the repayment of all deposits so made, and the payment of interest thereon, under the terms and conditions herein set forth.

On all sums of \$5 and upward that have been on deposit not less than 3 calendar months interest will be paid at the rate of 1 per cent. per annum (until changed by notice) from the 1st day of the month succeeding that in which the deposit was made. No interest will be paid on fractional parts of a dollar or for parts of a calendar month. Three months' notice will be given of any change in this rate of interest.

In addition to the interest guaranteed depositors, the committee may, in their discretion, after the close of any fiscal year, award them dividends from the net earnings of the savings feature, in proportion to the interest credited to their respective accounts for that year.

Interest on deposits will be credited at the end of each fiscal year, and will thereafter form part of the principal.

No interest will be allowed on any account after the expiration of 10 years from the date of the last credit entry of the account, exclusive of entries of interest.

A depositor wishing to withdraw money from the savings feature, must forward to the superintendent an order for the amount on the blank provided for the purpose and obtainable from the superintendent or any designated depository. Upon receipt of such order, a check for the amount, in favor of the payee named in the order, will be forwarded to the depositor in the care of the depository designated in the order, who will deliver the same after entering the amount in the depositor's pass-book.

Checks not delivered in 15 days will be returned by depositories to the office of the superintendent and by him canceled.

The committee may require 30 days' notice on each order for the withdrawal of a sum exceeding one-fourth the entire deposit on which the order is drawn, though under ordinary circumstances this requirement will not be enforced.

No money will be paid on check delivered except to the depositor, or to his or her order, attested by a disinterested witness, and except upon identification of the person, presentation of the pass-book, and entry of the transaction thereon.

Presentation of a depositor's pass-book, together with an order from him in the form prescribed, at the office of the superintendent, shall be conclusive evidence that the person presenting the same is

the payee named in the order, and shall make the delivery of the check and the payment of the money thereon to such a person a valid delivery and payment as against the depositor, without liability thereon on the part of the company or any of its agents.

A depositor who has ceased to be employed by the company may retain his privileges as a depositor, if he then have a balance to his credit of not less than \$50, otherwise, his account must be finally closed within 30 days, and balance, if any, withdrawn.

In case a depositor loses his passbook, immediate notice of the loss must be given the superintendent, and after a reasonable time has elapsed in which to notify all concerned, a duplicate will be furnished, so marked, upon the payment of 50 cents.

The passbooks held by depositors must, whenever required, be forwarded to the superintendent by train mail. Regularly on the 30th day of June (or if that date falls on Sunday, then on the day preceding), each depositor must forward his or her passbook to the office of the superintendent (through the nearest postmaster, who will receipt for it), in order that interest according to deposits may be properly entered thereon.

Any adult employee of the company who is a member of the relief feature and has been continuing in the service not less than 1 year may borrow from the savings feature sums not less than \$100, at the interest rate of 6 per cent per annum charged from the 1st day of the month in which the loan is consummated, upon the terms and under the conditions herein provided.

Any such employee wishing to secure a loan shall make an application in the form prescribed. The application should state particularly the amount of the loan, the purpose for which it is desired, and the property offered as security therefor, and that the applicant agrees to be bound by these regulations.

The superintendent will, on receipt of the application, obtain from the building inspector or other competent person a report on the value of the property offered as security, and from the proper official a report of the applicant's service record, and such other information as may be necessary to show that the applicant's case fulfills all the requirements of these regulations. If the case fulfills all the requirements the superintendent will submit the application and all the information obtained by him to the committee or subcommittee thereof, who will in their discretion, grant or refuse the loan, and whose decision shall be final.

Before any loan will be submitted to the committee it must appear to the satisfaction of the superintendent that the money will be used to acquire or improve a home situated within the limits hereinafter defined, or to free it from debt, and it must further appear from the reports obtained by the superintendent that the amount of the loan does not exceed three-fourths of the market value of the property offered as security, and that the service record of the applicant is good.

Preference will be given to those applicants who have the best service record and to those who will use the loan to acquire or improve a home situated within the limits hereinafter defined, or to free it from debt, and it must further appear from the reports obtained by the superintendent that the amount of the loan does not exceed three-fourths of the market value of the property offered as security, and that the service record of the applicant is good.

The superintendent will promptly notify the applicant of the committee's decision. If the loan be granted it will be subject to the approval of the title by the general counsel of the company, and the applicant must within 60 days forward to the superintendent an abstract of the title and the execution, delivery, and recording of such conveyances and other instruments as the counsel may deem necessary to secure the debt, and the loan will be consummated, and the money will be applied directly to the superintendent for the purposes for which the loan was granted under the conditions herein provided.

The expenses of obtaining the abstract of title, drafting necessary papers, recording deeds, etc., including a fixed charge of \$5 for legal expenses in the department, must be borne by the borrower. All such papers will be filed with the department until the loan is repaid.

Loans not consummated within ninety days from the date of the meeting at which granted can be consummated only if again approved by the committee.

No money will be paid directly to the borrower, but the superintendent will, with the approval of the borrower, pay the purchase money of, or discharge the liens or debts on, the property. In case the loan be granted for the purposes of building on or otherwise improving real estate the superintendent will apply the money to the payment of bills for labor or material approved by the borrower and certified by the building inspector of the department, but no such bills will be paid before the completion of the building or improvements, and the only when it is clearly shown that the amount applicable is sufficient to discharge all the liens, claims, and taxes of the property from all liens, debts, or encumbrances of any kind, and only when the said building inspector has certified that the value of the improved property exceeds by one-third the amount of the loan. Where the loan is found insufficient to meet these conditions it will not be increased, but will be canceled, having been granted only on these conditions precedent.

Every borrower must provide life insurance in the natural death benefit of the relief feature to an amount equal at all times to his indebtedness to the savings feature, in such manner that the benefits payable in case of his death may be available to discharge the said indebtedness. If the borrower cannot under the regulations of the relief feature obtain insurance therein to the amount of his indebtedness he must provide, in the same manner, insurance on his life in some regular life insurance company satisfactory to the superintendent.

The borrower must also keep the improvements on the property taken as security fully insured against fire, in a company approved by the superintendent or designated by the committee, and have the policy or policies thereof assigned in such a manner as the superintendent may direct, so as to protect the interests of the savings feature.

The borrower must promptly pay all taxes, assessments, public dues, and charges levied upon the property taken as security, and present proper receipts therefor to the inspection of the superintendent whenever requested. If he fail to do so, the superintendent may, if he think such a failure likely to impair the security, pay the same and deduct the sum so paid, with legal interest, from the borrower's monthly payments hereinafter required, before crediting the latter upon the principal or interest of the loan.

The amount charged to the borrower's account for money loaned, and for expenses, premiums on life or fire insurance, taxes, or other charges paid on his account must be repaid with interest by payments into the savings feature on the first day of each calendar month, beginning with that following the one in which the loan is consummated, at the rate of not less than \$1.50 for every hundred dollars borrowed, until the principal and interest be paid in full. The monthly payments will, in the option of the superintendent, be applied to the payment of all the other charges in the account, before crediting any part upon the principal of the loan.

To secure the monthly payment of the sums above required, the borrower shall execute an order on the company authorizing it to apply monthly, from the first wages earned by him in each calendar month, the amount of said monthly payments to the credit of his account with the savings feature, which order will be irrevocable during the existence of his indebtedness and shall constitute an appropriation and assignment in advance to the company, in trust for the purpose aforesaid,

of such portion of his wages, having precedence over any other assignment by him of his wages, or of any claim upon them on account of liabilities incurred by him, subject, however, to the assignment contained in his application for membership in the relief feature.

A borrower who earns no wages in any month, or who has left the service, must, at his own risk, make his monthly payments to the treasurer of the company, and should at the same time notify the superintendent.

He must also keep the superintendent advised of his address.

If a borrower fail to make the monthly payments required by these regulations so that 3 such payments are in arrears and unpaid, or if he make default in the payment of any premium for fire or life insurance, or any tax, assessment, or charge required to be paid by him under these regulations, for a period of 30 days after the same becomes due and payable, the whole amount of the principal sum and interest of his indebtedness shall become and be due and collectible at the option of the committee, and the superintendent shall, if so directed by the committee, take all steps necessary to sell and realize on the property held as security for said indebtedness.

Deductions from wages for the monthly payments of borrowers must be entered on the pay rolls opposite the names of the borrowers, respectively, in a separate column, and designated at the foot of the roll as deductions to the credit of the savings feature.

The fact that a borrower has left the service must be noted on the pay roll on which the last payment to him was made.

From the above it will be seen that any employee of the company, his wife, child, father, or mother, or the beneficiary of any deceased employee is permitted to deposit at any designated depository any sum not less than \$1 and not more than \$100 in any 1 day. On any sums of \$5 and upward so on deposit not less than 3 calendar months interest is paid at the rate of 4 per cent per annum from the 1st day of the month succeeding that in which the deposit was made. In addition to this interest, the committee may at the end of any fiscal year award depositors dividends from the net earnings of the savings feature proportionate to the interest credited to their respective accounts for that year. No interest is allowed on any account after the expiration of 10 years from the date of the last credit entered, exclusive of entries of interest. Depositors can withdraw money by forwarding an order on the superintendent, on receipt of which a check for the amount will be forwarded. The rules provide that 30 days' notice is necessary to withdraw a sum exceeding one-fourth of a person's entire deposit, but this rule has never been enforced. A depositor leaving the service of the company and having a balance of not less than \$50 to his credit is permitted to retain his privileges as a depositor. The company assumes the financial obligation of guaranteeing the stability of this fund and the payment of interest at 4 per cent. The practical operation of the fund began August 1, 1892. From that date up to September 30, 1893, \$82,555.35 were deposited and \$18,440.63 loaned. During the whole history of this fund 7,569 accounts have been opened, and 3,204 are still in force. The report for the last fiscal year ending June 30, 1900, showed the amount of deposits as \$569,152.12 and the amount loaned during the year \$357,138.44. The total deposits since the establishment of this fund have been \$1,179,940.55, and the total amount loaned has been \$2,967,131.92. The amount now due depositors is \$1,518,328.08, and the outstanding loans amount to \$990,202.53. The expenses of operating the savings fund are paid from its funds, and from the report for the fiscal year ending June 30, 1900, there was written among liabilities, profit and loss, \$43,783.59. The moneys received from depositors are invested in first-mortgage loans to employees of the company upon terms specified in the regulations as quoted above. These loans are made at the rate of 6 per cent per annum, charged from the 1st day of the month in which the loan is consummated, and are repaid at the rate of 14 per cent monthly, or \$1.50 per month on each \$100 borrowed. The total amount loaned to employees has been expended in building 1,268 houses, buying 1,376 houses, improving 320 houses already owned, and releasing liens on 772 houses. Borrowers are required to keep the property taken as security fully insured against fire in a company approved by the superintendent or designated by the committee. The popularity of the loan feature among employees is due to the fact that the conditions are so much more favorable than those the building associations or other institutions loaning money on weekly or monthly payments offer. The success of the business conducted by this saving and loan department or fund may be judged from the fact that at the close of the fiscal year ending June 30 an extra dividend of 14 per cent was declared to all depositors in the savings feature having accounts bearing interest at that date. This made the rate received 5½ per cent per annum.

#### **§ 15. EMPLOYER'S LIABILITY: COMMON-LAW AND STATUTORY LIABILITY OF CORPORATIONS FOR INJURIES TO THEIR EMPLOYEES; THE FELLOW-SERVANT PRINCIPLE IN LEGISLATION AND COURT DECISIONS.**

**I Historical retrospect.**—The law is and has been for ages that a person is liable for all the natural consequences of his wrongful acts. Questions of liability, in this connection, most often arise in cases involving negligence.

"Negligence is the failure to do what a reasonable and prudent person would ordinarily have done under the circumstances of the situation, or doing what such a person under existing circumstances would not have done." This explanation of negligence was given by Swayne, J., in *Railroad Company v. Jones*.<sup>1</sup>

The law is also firmly settled that one is responsible for the acts of his agent or his servant when the latter is acting within the scope of his employment. This is the common law of England and of this country. The rule is expressed in this terse phrase "*Qui facit per alium, facit per se*." What one does by another he does himself. It goes without saying that where the corporation is the employer and some one is injured by the act of his agent, the corporation is responsible; the corporation in this regard being no different from an individual or a partnership.

It follows that where A is riding on a coach or wagon belonging to B and driven by C, and A is injured because C drove negligently, A can hold C liable, because C was guilty of a wrong. But it is evident, from common experience, that this remedy will not avail A, as the great probability is that C is not worth anything; C, however, being B's agent, A can hold B liable for this injury, and the law will say to B, "You have engaged C to drive your wagon. A was injured by negligence. You must answer for his wrong." This liability does not depend upon whether B was negligent in choosing an incompetent driver. The mere fact of agency is sufficient. This, then, is the state of the law. The reason for the rule is not far to seek. Were the law otherwise, life and limb would not be protected in the present highly developed society, where by far the greater part of the industries are conducted not by the proprietors, but by their servants, who for the most part are irresponsible persons.

It might be stated, however, in order to make the matter perfectly clear, that where the injury for which one complains was caused either in whole or in any degree by negligence of the one injured he can not hold anybody liable, neither the master nor the servant, as he has only himself to blame for the injury. Any negligence of the injured party which is contributed to is called contributory negligence.

This was in mere outline the law with reference to the liability of the master for the act of his servant, when the case of *Priestly v. Fowler* was decided. In this case the servant who was in the employ of a butcher, sued his master for injuries received, because the master directed him to ride on a van belonging to the master, which was overloaded and not in proper state of repairs. In consequence of this the van broke down, and the plaintiff fell and was injured. The court held that he could not recover. The reason for the decision is not clear, being perhaps based on the fact of contributory negligence. The language of the court is: "The plaintiff must have known as well as his master and probably better whether the van was sufficient whether it was overloaded, and whether it was likely to carry him safely." This case is cited because it is probably the first case recorded where the servant assumed the right to sue his master and is generally considered the first case that lays down the rule known as the "fellow-servant rule" and which will be more fully explained presently.

The first case which squarely lays down the rule of law that a master is not liable to his servant for the negligence of a fellow-servant, briefly known as the fellow-servant rule, is *Murray v. S. C. R. R. Co.*<sup>2</sup> In this case the plaintiff, a fireman employed by a railroad company, was injured through the negligence of an engineer of the same train. The court decided that the company was not liable. The ground for the decision seems to be, *inter alia*, that the plaintiff knew that others need to be engaged to conduct a train on which he was and he had equal opportunity with the company to inform himself about the appointments in connection with this train (p. 402).

But the fountain head of all subsequent law interpreting the fellow-servant rule is *Farwell v. Boston, etc., Railroad Company*<sup>3</sup> decided in 1849, Chief Justice Shaw delivering the opinion of the court. In this case the plaintiff, an engineer in the employ of a railroad company, was injured by the negligence of the switchman, whose character he knew, in leaving a switch open. The court decided that the plaintiff could not recover from the railroad company for the injuries received by him on account of the negligence of his fellow-servant. In the opinion the court said: "The general rule is that he who engages in the employment of another \* \* \* in the performance of specific duties and services for compensation, takes upon himself the natural and ordinary risks and perils incident to the performance of such services, and in legal presumption the compensation is adjusted accordingly, and we are not aware of any principle which should except the perils arising from the carelessness and negligence of those who are

<sup>1</sup> 95 U. S., 439, 1877.

<sup>2</sup> 23 M. N. W. 1, 1847, Lord Abinger, C. B.

<sup>3</sup> 1 McMillan (S. C.) 385, 1838.

<sup>4</sup> 4 Metc., 49.

in the same employment. These are perils which the servant is as likely to know, and against which he can as effectually guard as the master."

It is to be noted that in the first case cited, *Fowler v. Priestly*, the servant was in the employ of a butcher, who likely would have at the highest 1 or 2 servants only, and he was likely to know the character of the men who, together with himself, were employed by the common master. Moreover, all the illustrations drawn by the judge who decided that case were from among domestic servants who were thoroughly familiar with each other and who probably could take better precaution against their carelessness than the master could.

In the *Murray* case the plaintiff who was injured chose the engineer who according to his personal knowledge was efficient. They were both on the same train and there may be some reason in saying that when the plaintiff chose to go on that train he could have informed himself on the appointment and insisted on remedy of any defect, or refuse to go.

In the last case decided by Chief Justice Shaw, while the plaintiff knew the switchman through whose neglect he was injured, he was in a different department of the work, running a train, and certainly could not investigate into all departments of the railway service of the company in order to satisfy himself that the appointments were all safe and satisfactory.

Subsequently the fellow-servant rule was so extended as to include all injuries received by employees of railroads because of the negligence of other employees of the same company, irrespective of the department or the grade of service or employment of the employees.

The rule of law was thus stated by Field J., in *Chicago, etc., Railroad Company v. Ross*,<sup>1</sup> "The general liability of a railroad company for injuries caused by the negligence of its servants to passengers and others not in its service is conceded. It covers all injuries to which they do not contribute. But where injuries befall a servant in its employ a different principle applies. Having been engaged for the performance of the specific services, he takes upon himself the ordinary risks incident thereto." (p. 383.) \* \* "Where the service to be rendered requires for its performance the employment of several persons, as in the movement of railway trains, there is necessarily incident to the service of each the risks that the others may fail in the vigilance and caution essential to his safety." In *Holden v. Fitchburg Railroad*,<sup>2</sup> Gray, C. J., says "It is well settled in this Commonwealth and in Great Britain that the rule of law that a servant can not maintain an action against his master for an injury caused by the fault or negligence of a fellow-servant is not confined to the case of two servants working in company or having opportunity to control or influence the conduct of each other, but extends to every case in which the two, deriving their authority and their compensation from the same source, are engaged in the same business, though in different departments of duty."

Perhaps the furthest limit of the fellow-servant rule extant is a case decided in Massachusetts (*Gillshannon v. Stony Brook Ry. Co.*, 10 Cnsh., 228, 1852), in which the plaintiff, who was in the employ of the defendant railroad company, was riding to and from work on one of its trains, and while riding was injured through an accident caused by the negligence of the engineer. The court held that the injury was caused by a fellow employee and that the plaintiff could not recover. In at least one State the statute has extended the fellow-servant rule. In Pennsylvania the act of April 1, 1868,<sup>3</sup> provides that when any person shall sustain personal injuries or loss of life while lawfully engaged or employed on or about the roads, works, depots and premises of a railroad company, or in or about any train or car thereon, of which company such person is not an employee, the right of action and recovery in all such cases against the company shall be such only as would exist if such person were an employee, provided that this act shall not apply to passengers.

Thus then being the state of the law and the severity of the rule being felt in some instances, an exception began to grow up to the working of the rule. The exception is what has since become known as the "vice principal rule." The court in *Prevost v. Citizens' Ice, etc., Company*,<sup>4</sup> speaking through Mitchell, J., thus defined a vice principal: "A vice principal for whose negligence an employer will be liable to other employees must be either, first, one in whom the employer has placed the entire charge of the business, or of a distinct branch of it, giving him not mere authority to superintend certain work or certain workmen, but control of the business or of a distinct branch of it, and exercising no discretion or oversight of his own; or, secondly, one to whom he delegates a duty of his own which is a direct, personal, and absolute obligation, from which nothing but performance

<sup>1</sup> 112 U. S., 377, 382 (1884).

<sup>2</sup> 129 Mass., 268, 271 (1888).

<sup>3</sup> P. L., 38, 1.

<sup>4</sup> 185 Pa., 617, 621 (1898).

can relieve." We are more particularly interested with the first branch of this definition.

This principle is illustrated by the great case of *Chicago, M. & St. P. R. R. Co. v. Ross*.<sup>1</sup> In this case the plaintiff, an engineer, received injuries from a collision which occurred because of the negligence of the conductor who had charge of the train. The court held that the company was liable in damages to the plaintiff as he and the conductor were not fellow-servants. The court said: "There is in our judgment a clear distinction to be made in their relation to their common principal between servants of a corporation exercising no supervision over others engaged with them in the same employment and agents of the corporation clothed with the control and management of a distinct department in which their duty is entirely that of direction and superintendence. A conductor, having the entire control and management of a railway train, occupies a very different position from the brakeman, the porter, and other subordinates employed. He is, in fact, and should be treated as, the personal representative of the corporation, for whose negligence it is responsible to subordinate servants."

In Ohio and Kentucky the same result is arrived at on reasoning analogous to that of Mr. Justice Field in the *Ross* case. In New York the same result was reached in *Breckner v. New York Central R. R. Co.*,<sup>2</sup> where the court held that the negligence of the master mechanic of the company in employing incompetent men was negligence for which the company was liable.

Moreover, the tendency illustrated in the *Ross* case and in decisions of a limited number of State courts was further illustrated by statutes passed in several of the Western States defining who are fellow-servants, so as to limit the operation of the fellow-servant rule. Thus in Ohio the act of April 2, 1890,<sup>3</sup> provides that in an action for negligence against a railroad company for injury resulting from another employee thereof "every person in the employ of such company actually having power or authority to direct or control any other employee of such company is not the fellow servant, but superior of such other employee; also that every person in the employ of such company having charge or control of employees in any separate branch or department shall be held to be superior and not the fellow-servant of employees in any other branch or department, who have no power to direct or control in the branch or department in which they are employed." See also Texas laws of March 10, 1891,<sup>4</sup> which contains practically the same provision as the first part of the act just cited.

Unfortunately the tendency thus indicated received a check from the Supreme Court of the United States, which, instead of following the doctrine of the *Ross* case, at first got around it and finally overruled it. In *New England Railroad Company v. Conroy*, B. L., 27; 20 Supreme Court Rep., 85 (1899), cited at length in Exhibit 4, p. 970 of this report, the court held that a conductor and a brakeman are fellow-servants and the latter can not recover from the company for injuries received because of the negligence of the former.

Thus, then, in brief outline, is the condition of the law on this subject. To appreciate the importance of this question and how intimately it affects railroad employees, it is only necessary to state that on June 30, 1900, there were in the railway service in the United States 1,017,653 employees. During the year then ending 2,550 of these employees were killed and 39,643 injured in such service, or, of those employees, 1 out of every 399 was killed, and 1 out of every 26 was injured.

The law, then, is that where a passenger or a third person is injured by the negligence of any one employed by the railroad company he can recover damages, in a certain measure compensatory of his injuries. Where such a person is killed, his representatives can recover from the company for the loss so incurred.

But where the injured or deceased person happens to be an employee of the railroad company and was injured because of any negligence of a fellow employee, then the fellow-servant rule applies, and excludes compensatory damages to the injured, or damages to the representatives for loss of deceased parent or son. It is no wonder that the workman looks upon this law as extremely harsh and unfavorable to him, savoring too much of the olden times when the workman was considered a serf or slave of his master and could not expect any protection from the law made and interpreted by the master.

The apologetic reasons for the existence of the fellow-servant rule satisfy no one but those who utter them. It is said that the employee assumes the risks of his employment. But the most reasonable interpretation of that rule was given by O'Neill, J., one of the dissenting judges in *Murray v. S. C. R. R. Co.*,<sup>5</sup> as follows:

<sup>1</sup> 112 U. S. 377, 390, 1884, Field, J.

<sup>2</sup> 2 Laus. 506, 1870.

<sup>3</sup> Laws, p. 149, sec. 3.

<sup>4</sup> Laws, 22d leg., p. 25.

<sup>5</sup> 1 McMillan (S. C.), 385, (1841).

"I admit here, once and for all, that the plaintiff, like any other servant, took as a consequence of his contract the usual and ordinary risks of his employment. What is meant by this? No more than that he could not claim for an injury, against which the ordinary prudence of his employer, their agent or himself could provide. Whenever negligence is made out the cause of injury, it does not result from the ordinary risks of employment."

It is said, moreover, that there is a presumption of law that the employer regulates the employee's compensation with these risks in view, including the risks of being injured by a fellow employee. While this reasoning may satisfy the lawyer, who is used to deal with fictions in the law, it certainly can not satisfy the railroad brakeman who is injured, and by this reasoning is barred out of his recovery when he, as well as everyone connected with railroads—in fact, with any kind of employment—knows that this increase in wages commensurate with the increase in risk exists only in the imagination of the courts; and it is a matter of common experience that those engaged in the more hazardous departments of the railway service are underpaid rather than overpaid. As has been aptly said: "The men of foresight who are supposed to bargain for extra compensation in dangerous occupations are seldom found in such occupation at all; it is rather the men who are unable to find any other employment, let alone compel the employer to accede to their own terms." (*Employer's liability in E. & A. N. Y.*, 1899, p. 676.) Then comes the reason of public policy. "It is assumed that the exemption operates as a stimulant to diligence and caution on the part of the servant for his own safety as well as that of his master. But it may be doubted whether the exemption has the effect thus claimed for it. We have never known parties more willing to subject themselves to dangers of life or limb because, if losing the one, or suffering in the other, damages could be recovered by their representatives or themselves for the loss or injury. The dread of personal injury has always proved sufficient to bring into exercise the vigilance and activity of the servant." (*Chicago, etc., v. Ross*, 112 U. S., 379, 383, 1884.) If you add to the doubt thus raised by Justice Field the further fact "that whenever the employer has been made responsible for injuries to his employee, suffered while using due diligence, through the negligence of a coemployee, the public and general convenience, to say nothing about the injured employee himself, has been better served. Why? Chiefly because the employer has been thus induced to exercise greater caution and discretion in the selection of competent and faithful employees; obviously also to his own advantage in the lessening wear, tear, and waste, breakage and damage to his work, ways, or plant." On what then rests the public policy of exempting the employer in such a case when both on reason and experience the public, the employee, and the employer himself are better served by refusing him such an exemption?

Finally, whatever reason there may be in saying, as the courts in *Priestly v. Fowler* say, that in case of domestic servants the injured party himself probably knew the capacity of his fellow-servant better than the master could have known, and so he could take better precaution for his safety than the master could have taken, and whatever reason there may be in saying that when two workmen work side by side on the bench and the injured person was in a position to control the action of the fellow-servant whose negligence caused his injury, that reason can not apply to the extended application of the fellow-servant rule as given in England, in Massachusetts, and in the Federal courts. To hold that the engineer or fireman of a train injured because of the neglect of the switchman in leaving open the switch in any modern large railroad employing thousands of men must suffer for the negligence of the switchman is extending the rule of fellow-servants beyond the shadow of a reason.

**II. Statutory modifications of the fellow-servant rule.**—Such is the condition of the law with reference to the unenviable position of the employees of railroad corporations. The "fellow-servant rule" was not nearly so popular in the communities as the wide extent of the existence of the rule might indicate. In some quarters it has been felt that this law is at best "bad policy." Especially was it unpopular among the working classes, and in particular those whom it affected to the greatest extent—the railroad men, the miners, and the factory hands.

The decisions of the court having permanently engrafted the fellow-servant doctrine upon the common law, it was within the province of the legislatures to change the law by providing a substantial remedy to such employees as suffer under the unjust discrimination against them.

The legislatures then turned their attention to this branch of the law, and a glance at this legislation will be taken. The legislature of Georgia as early as 1855 passed an act which is very simple and direct. It provides as follows: Rail-

road companies are common carriers and liable as such. As such companies necessarily have many employees who can not possibly control those who should exercise care and diligence in the running of trains, such companies shall be liable to such employees as to passengers for injuries arising from the want of such care and diligence.

If the person injured is himself an employee of the company and the damage was caused by another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery of damages.

The legislature of Iowa in 1862 made corporations operating railroads liable to their employees for all damages sustained in consequence of neglect of agents or other employees in connection with the use or operation of any railway, and no contract which restricts such liability shall be legal and binding. The Territory of Montana and the State of Kansas passed similar statutes in 1873 and 1875, respectively.

Wisconsin passed a similar statute in 1875, but it was repealed in 1880. In 1889, however, a new law was passed in this State rendering railroad corporations liable for injuries received to any employee without contributory negligence, either from defect of locomotive, etc., or because of the negligence of any other employee or officer of the corporation.

The most important change wrought by the legislature in this branch of the law was accomplished in England and in Massachusetts, where the fellow-servant rule had the widest application, and where, especially in England, no grade of service nor wide difference of departments served to prevent the operation of the fellow-servant rule. The English employer's liability act was passed in 1880<sup>1</sup> and has since been the model of a great part of the legislation in this country. It was passed in obedience to the urgent needs of the laboring classes that the managers and superintendents and others exercising authority should not be considered fellow-workmen with the injured employee, and that the fellow-servant rule should apply only to those cases where the employee could, by observation or complaint, control the conduct of his coemployee. The act provided relief for personal injuries received by workmen:—

(1) By reason of any defect in the condition of the ways, works, machinery, or plant connected with or used in the business of the employer, or

(2) By reason of the negligence of any person in the service of the employer who has any superintendence intrusted to him, while in the exercise of such superintendence; or

(3) By reason of the negligence of any person in the service of the employer, to whose orders or directions the workman, at the time of the injury, was bound to conform, and did conform, where such injury resulted from his having so conformed; or

(4) By reason of the act or omission of any person in the service of the employer, done or made in obedience to the rules or by-laws of the employer, or in obedience to particular instructions given by any person delegated with the authority of the employer in that behalf; or

(5) By reason of the negligence of any person in the service of the employer who has charge or control of any signal, points, locomotive engine, or train upon a railway, the workman, or, in case the injury results in death, the legal personal representatives of the workman, and any person entitled in case of death, shall have the same right of compensation and remedies against the employer as if the workman had not been a workman of nor in the service of the employer, nor engaged in his work. (Kendall's article, p. 158, *Railway Conductor*, March, 1897.)

This act, however, was far from realizing the benefits that were hoped to be derived from it. Perhaps the chief reasons were the costs of the procedure to recover the damages given by the act and the extreme difficulty in proving negligence, which the act made the basis of recovery. Moreover, the employer can escape liability entirely by letting his work out to a contractor.

The feeling that the employee should get compensation for his injuries received in the course of his employment, not due to his own negligence, whether there had been negligence or not, also the feeling of providing a simpler and less costly mechanism for the operation of the law, found expression in the workman's compensation act of 1897<sup>2</sup> and its amendment of 1900. The act of 1897 provides as follows:

If, in any employment to which this act applies, personal injury by accident arising out of and in course of the employment is caused to a workman, his

<sup>1</sup>See Industrial Commission Report, Vol. XVI, p. 68.

<sup>2</sup>Ibid, p. 71.

employer shall, subject as hereinafter mentioned, be liable to pay compensation in accordance with the first schedule of this act."

The act then provides that the employer shall not be liable if the injuries disabled the workman for less than two weeks; also, if the injury was caused by the serious or willful misconduct of the injured workman; also, that notice of the injury must be given within six months. The act further provides that the contractor shall be liable for the injuries caused to the employee while in the employ of a subcontractor.

A scheme of compensation or insurance may be agreed upon between the workman and employer, which must be filed with the registrar of friendly societies. The act then provides for arbitration of differences. Finally it is declared that the act shall apply to employments "on or in or about railway, factory, mine, quarry, or engineer work, and to employment by the undertakers, as hereinafter defined, on, in, or about any building which exceeds 30 feet in height, and is either being constructed or repaired by means of scaffolding, or being demolished, or on which machinery driven by steam, water, or other mechanical power is being used for the purpose of the construction, repair, or demolition thereof."

The amendment of 1900 extends the remedy of the workmen's compensation act to agricultural laborers. The passing of the English employer's liability act of 1880 gave a great impetus to legislation on this subject in this country. We accordingly find that besides Georgia and Iowa, already mentioned, Alabama in 1885 passed an act practically the same as the English act of 1880. Massachusetts in 1887 passed a similar but more comprehensive statute. At the present time there are 22 States that either in a limited or a more extended degree contain provisions giving remedies to employees injured in the course of their employment in cases where prior to the passing of these statutes they were denied the right to recover. In Mississippi and South Carolina such a remedy is provided for by the constitution in case of railroad corporations, and the legislature of Mississippi has extended the remedy to all corporations.

These statutes have been repeatedly held to be constitutional. Some of the courts have declared that as these statutes are in derogation of the common law, they should be construed strictly, and the remedy contained in them should not be extended beyond the plain provision contained in the statute. Accordingly the supreme court of Massachusetts has decided that an injury received by an employee on an engine in the roundhouse was not within the statute, as an engine in the roundhouse is not on the railroad tracks. Generally, however, the courts have interpreted the statute so as substantially to administer the remedy provided by the statute. In the words of the court in *Mobile, etc., Railway Company v. Holbron*,<sup>1</sup> in its construction, the court should consider its object, have regard to the intention of the legislature, and take a broad view of its provisions commensurate with the proposed purposes.

In *Chicago, etc., Railroad Company v. Rouse* (52 N. E. Rep., 951, 1891), an injury occurred to an employee of the railroad company in Indiana. The person injured brought suit in Illinois, and the court held that he was entitled to the remedy of the Indiana statute, providing a recovery in certain cases to employees of corporations. "We perceive no ground warranting us to declare that the enforcement of the doctrine as enlarged or extended by the Indiana statute, must be regarded as so repugnant to good morals or natural justice, or so prejudicial to the best interests of our people, that we should shut the door of our courts against a suitor who seeks to enforce a right of action which arose under the statute of the sister State."

One of the most important questions arising in connection with the remedy afforded by these statutes is the question of contracting out.

In England the law is that contracts made by the employees releasing their employer from liability arising under these statutes are perfectly valid and enforceable. An employer may therefore waive the benefit under these acts and such waiver will be binding not only against himself, but as well against his personal representatives.

In this country the courts are generally of a contrary opinion, and the rule of law that prevails here is that it is against public policy for an employee to contract in advance to release his employer from the liability created by these statutes. The State of Georgia seems to be the only jurisdiction where the employer can, by contracting with his employee, relieve himself from any liability for injuries that may arise in the future for which the employee was given a remedy by express provisions of the statute.

In many States, however, there is a statutory provision that such contracts shall be void, among them the State of Georgia. In the constitutions of Colorado, Mississippi, South Carolina, and Wyoming provision is made that "any contract

or agreement with any employee waiving the right to recover damages for causing the death or injury of any employee shall be void." A provision similar in effect is made by statute in the following States, viz. Arkansas, Florida, Indiana, Iowa, Massachusetts, Minnesota, Missouri, North Carolina, North Dakota, Wisconsin. These statutes are most salutary, as they put it out of the power of the corporation to compel their men to relieve them from liability by reason of any injury resulting to the employee during his employment.

Since these statutes abrogating the fellow-servant rule have become general in this country, voluntary relief associations have come into prominence and have become very common, especially among large corporations.

In *Ottis v. Pennsylvania Company*, 71 Fed. Rep., 136 (1896), B. L. No. 5, July, 1896, the plaintiff sued the defendant company in the Federal courts in the district of Indiana for injuries received while in the employ of the defendant company. The defendant sets up as a defense the following state of facts: The defendant, together with certain other corporations, formed a "voluntary relief department." Membership is open to the employees of such corporations as form this association. Membership is purely voluntary, but all those who become members contribute monthly certain portions of their wages. The association has for its object the relief of such of its employees as become members, in case of sickness or disability from accident, or the relief of their families in case of the death of any members, by payment to them of definite amounts out of the fund of the association. This fund is formed by contributions from employees as above described and by contributions, when necessary, to make up any deficit by the several companies. All the employees who become members must sign applications for membership and agree, *inter alia*, that the acceptance of the benefits from the said relief fund for injury or death shall operate as a release for all claim for damages against the company. The defendant then avers that the plaintiff became a member of this association and has accepted \$660 from the relief funds for the injuries on which he has now brought suit.

The question presented to the court was whether the contract had the effect of releasing the company. The court held that while it is no doubt true that a railroad company can not relieve itself from its own negligence by any contract entered into for that purpose before the happening of the injury, the present case did not come within that rule. The plaintiff upon being injured had two remedies open to him. He could either pursue the remedy given to him by the law or accept the benefit of the relief fund and thus bind himself by his act to release the company for his claim for damage. The plaintiff, having accepted the benefit of the relief fund, was therefore barred from recovering against the company.

We might add that this decision represents practically the view of all the courts on the subject of these relief associations. It has, however, justly been held in one case that where there is a statute making void any contract entered into between the company and its employees whereby the company is released from liability for injuries received by an employee, that statute applies to the relief associations of this character. The case referred to is *Pittsburg, C. & St. L. Ry. Co. v. Montgomery*, 49 N. E. Rep., 582; B. L., No. 18, September, 1898.

This decision, unfortunately, does not represent the general view of the courts on this subject, several decisions having been rendered holding a contrary view. The State of Iowa has by statute declared that such arrangement shall not operate as releasing the company from its liability. The act of March 8, 1898, provides that no contract of insurance or acceptance of benefit releases from liability.<sup>1</sup>

Perhaps the most reasonable provision is made by the Massachusetts employers' liability act, the sixth section of which provides that where an employee has accepted the benefit from the relief fund of such organization, the employer may prove, in mitigation of damages recoverable by the employee, such proportion of the amount so received by the employee "as the contribution of such employer to such fund or society bears to the whole contribution thereto."

We have here tried to give the condition of the law on the subject of employers' liability in railroad corporations and incidentally in other employments as it exists to-day. One thing impresses itself on one in investigating this subject, and that is that the law is not in its final state. The English workmen's compensation act of 1897 is not final, and may in the near future be extended to all departments of employment, as evidenced by the amendment of 1900, extending the benefits of the act to agricultural laborers.

In this country not quite half of the States have attempted to alleviate the evil of the fellow-servant rule, at least in the more hazardous employment of railroad men.

<sup>1</sup> See text of act, p. 1127 of this report.

It is to be hoped that out of this chaos of legislation and decisions a system will be evolved, fairly meeting the needs and affording a remedy. It is also to be hoped that in the near future other States will fall in line with the States that have attempted by legislation to solve this economic and industrial problem of the labor world.

It is believed that of all the civilized nations the United States have given the least systematic attention to labor legislation. The workman in America has in the past neither needed nor asked so much protection at the hands of his Government as has his fellow workman in Europe, so that, considered as a whole, it is perhaps true that the United States as a nation is less friendly than we suppose in its laws to workingmen, having changed places with England, which occupied that position till she passed the acts of 1880, 1897, and 1900.

The general feeling of railway labor on the one specific point of the liability of its employers for compensation for accidents is frequently and almost unanimously expressed in terms similar to those of the following representative resolutions submitted to the Industrial Commission:

Whereas the common law as applied by our courts in civil actions brought by employees to recover for injuries received through the negligence of coemployees is unfair and unjust, and as there is great need for legislative action to remove the injustices from which we suffer at the hands of our courts in such cases: Therefore,

*Be it resolved*, That we, members of the Brotherhood of the Locomotive Engineers, Brotherhood of the Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, and Order of Railroad Telegraphers, in joint meeting assembled at Carnegie, Pa., on this 16th day of July, 1899, earnestly urge Congress to pass a law giving employees of interstate railroads the same rights to recover for injuries caused by the negligence of coemployees as are now enjoyed by those who are not employees.

*Be it further resolved*, That a copy of this resolution be sent to the President of the United States, the United States Senate, the House of Representatives, and the United States Industrial Commission.

J. D. RAUTH, *Secretary*

#### §16. SAFETY APPLIANCES; LEGISLATION AND ITS ENFORCEMENT.

The great risks of railway employment and the numerous accidents which cause loss of life or limb to railway employees gives the subject of safety appliances its relatively great importance in all discussions of railway labor.

The statistics of railroad accidents have been inquired into with great thoroughness from the beginning of the organization of the Interstate Commerce Commission. The casualties to employees are very much more numerous than those to passengers. The commission in its third annual report gave the following figures for the year ending June 30, 1888:

	Killed.	Injured.
Passengers.....	315	2,138
Employees.....	2,070	20,148
Other persons.....	2,897	3,602
Total.....	5,282	25,888

These reports cover nearly 93 per cent of the total mileage of the country. The third annual report says, speaking of the hazard run by individual employees: "Some estimate of how great this hazard is in the case of one class of employees may be made from the record of the Brotherhood of Railroad Brakemen, an organization that has for one of its objects the insurance of members against death or total disability. During the year 1888 the average membership of this brotherhood was 10,052.5. Insurance has been paid upon 114 deaths and 53 total disabilities, the result of injuries received from railroad cars during that year. In the same time there were only 31 deaths and 6 total disabilities from natural causes. These data are taken from the printed assessment notices of the order. Thus 1 in every 88 of the members of this organization is killed yearly and 1 in 60 suffers either death or total disability. It appears also that a brakeman has only 81 chances in 145, or only 1 in 4.7, of being allowed to die a natural death. Exception may perhaps be taken to this conclusion on the ground that brakemen are mostly young and vigorous men not likely to die from natural causes, but surely this view of the case is not more satisfactory than the other. No record is kept showing the number of lesser injuries received, but if the ratio of killed to wounded is taken at the same as that which, according to the figures quoted above, holds good in accidents to railroad employees over the country at

large, namely, 1 to 9.73, the number of those receiving injuries serious enough to be reported to the commission would be, exclusive of the killed, 1,100, or 1 in 9 of the members of the order. It would appear from this result that, besides running great danger of death, a brakeman will, on the average, be injured once for every 9 years of service. It should be said that this brotherhood includes quite a number of conductors and others whose occupation is less dangerous than that of brakemen, so that the hazard to brakemen is presumably somewhat greater than here shown. It is probable that no occupation followed in this country by any large class surpasses in danger that of the railway brakeman." The commission made special inquiry to find a remedy for this state of affairs. It addressed inquiries to the car building departments of the leading roads to get technical opinions concerning automatic freight-car couplers, and it made inquiry of other well-informed sources concerning the advisability of Federal regulation on the mechanical features of railroad working. The results of this investigation are printed in Appendix 10 to the third annual report of the commission. It found that the Master Car Builders' Association had been active in studying mechanical appliances to meet the requirements of modern railroading, and the report states that any improvement in safety appliances must depend for its success upon uniform action, and in order to accomplish this must secure the approval of the Master Car Builders' Association. The report then called the attention of Congress to the discussion of this subject in the reports of State railroad commissions and to the legislative action already taken by Connecticut in 1882, Massachusetts in 1884, New York and Michigan in 1886, looking to the adopting of automatic couplers such as would meet the approval of their respective State railroad commissions. The Master Car Builders' Association convention in 1887 submitted an elaborate report recommending one of the types of vertical plane hook couplers as the standard of the association. The association took a formal vote upon the standard thus recommended and decided that a two-thirds majority was necessary to secure adoption. Each member representing a railroad was entitled to one vote, and to an additional vote for each thousand cars owned by the railroad. The ballot resulted in the adoption of the proposed coupler by a vote of 474 to 191. The activity of the railroads, however, in fitting their cars with these couplers—the action of the association having no binding force—was not as satisfactory as was generally expected. Some new cars were equipped with the standard coupler, the first cost of which was from \$20 to \$25 a car, while the old form of link and pin cost only \$10 to \$15. The advantage of automatic couplers in the prevention of accidents depended, of course, upon their general adoption, and not upon an occasional car in a train being so fitted. The commission summarized in its reports the situation, as follows: "A few large roads have actually adopted some form of the master car builders' coupler, and are bringing it into use as fast as could be reasonably expected. Many others are experimenting with various forms. A few, principally in New England, are actively opposed to the standard. A very large number mildly favor it, but are waiting for general action. The smaller, poorer, and less progressive roads are generally indifferent to the whole question." Scarcely less important as a means of saving life is the use of automatic air brakes continuous throughout the train and operated principally from the engine, which is almost universal upon passenger cars. The saving to be anticipated from the use of automatic air brakes on freight trains is summed up by the Interstate Commerce Commission, in its third annual report, as follows:

"First. By diminishing the number of collisions and train accidents of all kinds. A freight train running at high speed can be stopped, if fully equipped with continuous brakes, in a distance less than its own length. If hand brakes are relied upon, it will usually run half a mile or more. It is thus, in the first case, subject to the immediate and efficient control of the engineer, who can stop it in a few seconds on the appearance of danger. Collisions are also frequently prevented by the automatic action of continuous brakes, which, in case a train parts by the failure of a coupling, immediately brings both sections to a stand. With hand brakes, and especially on a steep grade, such accidents, which are quite common, often result in a collision between the parts of the broken train.

"Second. The destructive effects of derailment are greatly decreased, since any displacement of cars sufficient to break the air-hose connection between two of them at once sets the brakes throughout the train and brings to a stop, perhaps when as yet only a few cars have had time to leave the track.

"Third. Continuous brakes do away for the most part with the necessity for traversing the tops of moving trains. Under the old system, which is still the general one, men are out on the darkest nights and in the coldest weather, sometimes when the roofs are covered with ice, making their way from car to car, setting or loosing the brakes. The returns to the commission do not show the number of men killed and injured in falling from cars, but an estimate may be made by tak-

ing that proportion of the totals which is usually found to be due to this cause. Such a process gives: Killed, 613; injured, 4,025."

An important statement concerning the supposed carelessness of railroad employees is also given in this report, as follows:

"Nor should much weight be given to the statement sometimes made that employees can not be protected; that they are usually themselves responsible for accidents, being reckless and unwilling to take the precautions that would save them. It need not be claimed for them that they are more cautious than other men, but only that their duties should, when possible, be made such that a reasonable degree of caution will protect them. It is not easy to see that a man whose foot catches in a frog while his attention is concentrated upon effecting a coupling, or who slips from a car on an icy night, is necessarily reckless. There is no reason for supposing that trainmen value their lives less than other people, or are less careful of them. A brakeman is as cautious as a general manager would be with the same duties, the same haste, exhaustion, and exposure. It is surprising that such arguments should have weight with anyone."

No definite recommendations were made to Congress in the third annual report of the Interstate Commerce Commission, although as early as March, 1889, the following resolution was offered by the Hon. George G. Crocker, of Massachusetts, at the first national convention of railroad commissioners held in Washington, and unanimously adopted:

"Whereas thousands of railroad employees every year are killed or injured in coupling or uncoupling freight cars used in interstate traffic and in handling the brakes of such cars, and most of these accidents can be avoided by the use of uniform automatic couplers and train brakes; and

"Whereas the success and growth of the system of heating cars by steam from the locomotive or other single source largely depends on the adoption in interstate traffic of an uniform steam coupler; and

"Whereas these subjects are believed to be of pressing importance, and within the proper scope of the powers of the Congress of the United States, while attempts on the part of the individual States to deal with them have resulted, and must continue to result, in conflicting regulations:

"*Resolved*, That we do respectfully and earnestly urge the Interstate Commerce Commission to consider what can be done to prevent the loss of life and limb in coupling and uncoupling freight cars used in interstate commerce, and in handling the brakes of such cars, and in what way the growth of the system of heating passenger cars from the locomotive or other single source can be promoted to the end that said Commission may make recommendations in the premises to the various railroads within its jurisdiction and make such suggestions as to legislation on said subjects as may seem necessary or expedient."

An increased ratio of casualties for the year ending June 30, 1890, was also reported by the statistician of the Interstate Commerce Commission, and several bills were introduced both in the Senate and House of Representatives, and a hearing was had before the Senate Committee on Interstate Commerce in April and May, 1890. The second and third annual conventions of railroad commissioners both passed resolutions on the subject suggesting that the respective States require by law the adoption of the automatic coupler of the master car-builders' type, and at the third convention a committee was appointed to secure Congressional action in regard to safety appliances. A paper on this subject, prepared by the secretary of the Interstate Commerce Commission, Mr. Edward A. Moseley, is printed as Appendix G in the fifth annual report of the commission. In April, 1892, a bill was introduced into the Senate directing the Interstate Commerce Commission to inquire and report annually to Congress the total number of freight cars engaged in interstate commerce, the number equipped with automatic couplers and continuous brakes, etc., and the progress made in the application of safety appliances. A different bill was passed in the House and both were pending at the time the Interstate Commerce Commission submitted its sixth annual report. This report, however, recommended that Congress take some action to secure uniformity of safety appliances, and a bill pending at this time was passed, approved and became law March 2, 1893. The text of this bill is as follows:

#### THE SAFETY-APPLIANCE ACT.

"AN ACT to promote the safety of employees and travelers upon railroads by compelling the common carriers engaged in interstate commerce to equip their cars with automatic couplers and continuous brakes, and their locomotives with driving-wheel brakes, and for other purposes

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That from and after the first day of January, eighteen hundred and ninety-eight, it shall be unlawful for any common carrier

engaged in interstate commerce by railroad to use on its line any locomotive engine, in moving interstate traffic, not equipped with a power driving-wheel brake and appliances for operating the train-brake system, or to run any train in such traffic after said date that has not a sufficient number of cars in it so equipped with power or train brakes that the engineer on the locomotive drawing such train can control its speed without requiring brakemen to use the common hand brake for that purpose.

"SEC. 2. That on and after the first day of January, eighteen hundred and ninety-eight, it shall be unlawful for any such common carrier to haul or permit to be hauled or used on its line any car used in moving interstate traffic not equipped with couplers coupling automatically by impact, and which can be uncoupled without the necessity of men going between the ends of the cars.

"SEC. 3. That when any person, firm, company, or corporation engaged in interstate commerce by railroad shall have equipped a sufficient number of its cars so as to comply with the provisions of section one of this act, it may lawfully refuse to receive from connecting lines of road or shippers any cars not equipped sufficiently, in accordance with the first section of this act, with such power or train brakes as will work and readily interchange with the brakes in use on its own cars, as required by this act.

"SEC. 4. That from and after the first day of July, eighteen hundred and ninety-five, until otherwise ordered by the Interstate Commerce Commission, it shall be unlawful for any railroad company to use any car in interstate commerce that is not provided with secure grab irons or handholds in the ends and sides of each car for greater security to men in coupling and uncoupling cars.

"SEC. 5. That within ninety days from the passage of this act the American Railway Association is authorized hereby to designate to the Interstate Commerce Commission the standard height of drawbars for freight cars, measured perpendicularly from the level of the tops of the rails to the centers of the drawbars, for each of the several gauges of railroads in use in the United States, and shall fix a maximum variation from such standard height to be allowed between the drawbars of empty and loaded cars. Upon their determination being certified to the Interstate Commerce Commission, said Commission shall at once give notice of the standard fixed upon to all common carriers, owners, or lessees engaged in interstate commerce in the United States, by such means as the Commission may deem proper. But should said association fail to determine a standard as above provided, it shall be the duty of the Interstate Commerce Commission to do so, before July first, eighteen hundred and ninety-four, and immediately give notice thereof as aforesaid. And after July first, eighteen hundred and ninety-five, no cars, either loaded or unloaded, shall be used in interstate traffic which do not comply with the standard above provided for.

"SEC. 6. That any such common carrier using any locomotive engine, running any train, or hauling, or permitting to be hauled or used on its line any car in violation of any of the provisions of this act shall be liable to a penalty of one hundred dollars for each and every such violation, to be recovered in a suit or suits to be brought by the United States district attorney in the district court of the United States having jurisdiction in the locality where such violation shall have been committed, and it shall be the duty of such district attorney to bring such suits upon duly verified information being lodged with him of such violation having occurred. And it shall be the duty of the Interstate Commerce Commission to lodge with the proper district attorneys information of any such violations as may come to its knowledge: *Provided*, That nothing in this act contained shall apply to trains composed of four-wheel cars or to locomotives used in hauling such trains.

"SEC. 7. That the Interstate Commerce Commission may from time to time, upon full hearing and for good cause, extend the period within which any common carrier shall comply with the provisions of this act.

"SEC. 8. That any employee of any such common carrier who may be injured by any locomotive, car, or train in use contrary to the provision of this act shall not be deemed thereby to have assumed the risk thereby occasioned, although continuing in the employment of such carrier after the unlawful use of such locomotive, car, or train had been brought to his knowledge.

"Approved, March 2, 1893."

In pursuance of the authority conferred by this act the American Railway Association, on April 12, 1893, designated the standard height of drawbar for standard-gauge railroads at 344 inches, measured perpendicularly from the tops of the rails to the center of the drawbars, and the maximum variation at 3 inches; for the narrow-gauge railroads, 26 inches in height with a 3-inch variation, measured in the same way as designated. The Commission notified the roads of this

decision and learned that the leading railroads of the country acquiesced promptly in the requirement of the law. The Master Car-Builders' Association also adopted this standard and the Commission expressed the belief that prior to July 1, 1895, (the time fixed by law) all drawbars of freight cars in the United States engaged in interstate commerce would practically be of the prescribed height. The changes required in freight cars by this law affected at least 1,000,000 cars and required a vast outlay of money, in consideration of which fact the law fixed July 1, 1898, as the time when the cars must be provided with automatic couplers and train brakes, and locomotives with drive-wheel brakes, etc.; hand-holds on the sides and ends of each car were required from and after July 1, 1895. The statistics of equipment on June 30, 1892, showed that nearly all passenger locomotives and passenger cars had been fitted with train brakes and over 96 per cent of passenger cars and 22 per cent of passenger locomotives with automatic couplers. The freight equipment, however, showed that 71 per cent of the locomotives and less than 17 per cent of the freight cars used had train brakes, and 24 per cent of the locomotives and 164 per cent of the freight cars automatic couplers. The statistics of casualties at this time showed the greatest hazard for trainmen, which for a single year showed out of a total of 169,360 employed that 1,503 were killed and 16,521 were injured, or about 1 out of every 9 persons employed either killed or injured. This was for the single year ending June 30, 1892. In reference to other classes of employees, the casualties among the switchmen were observed to be exceptionally numerous.

It is interesting to note that this legislation with respect to safety appliances was made with the honest approval and cooperation of the railroad corporations through the country. Owing, however, to the financial depression immediately following this period, the difficulties, largely financial, which many corporations found in bringing their equipment up to this standard, were great; and although the subsequent reports of the Interstate Commerce Commission indicated reasonable progress in the compliance with this law, the commission found it necessary to exercise the discretionary power lodged with it to extend the time, first with respect to the date at which cars should be provided with grab irons and end irons from the 1st day of July, 1895, when section 4 of the act became effective, to the 1st day of December, 1895; and in the case of section 5, providing drawbars of prescribed standard height, from July 1, 1895, to February 15, 1896. Many of the larger roads promised to cooperate with the commission by sending notice to other connections that on and after these dates they would refuse to haul any cars not properly equipped, and the commission reported that on the evening of November 30, 1895, more than 2,000 cars were held by the Reading Railroad Company and an equal number by the Pennsylvania Railroad Company, which they refused to allow to come on to their tracks until the necessary appliances were placed on the cars. The commission also noted with much satisfaction that the statistics for the year ending June 30, 1894, showed a diminution in casualties which was believed to be due to the use of better safety equipment. The safety-appliance legislation was promptly sustained by judicial decision. It was contended that this legislation was special in its character and unjustly discriminating against railroad companies, thereby depriving them of the equal protection of the laws. The Supreme Court of the United States, however, in the case of the Chicago, Kansas and Western Railroad Company v. Pontius (157 U. S., 209), declared that "the hazardous character of the business of operating a railroad seemed to call for special legislation with respect to railroad corporations, having for its object the protection of their employees as well as the safety of the public; that the business of other corporations was not subject to similar dangers to their employees, and that such legislation could not be objected to on the ground of making an unjust discrimination since it met a particular interest, and all railroad corporations were, without distinction, made subject to the same liabilities." The same court also held, in the cases of *Mather v. Rillston* (156 U. S., 39) and *Baltimore and Potomac Railroad v. Mackey* (157 U. S., 72), that the common law made it incumbent upon the promoters of the works of necessity or utility, where such occupation is attended by danger to life, body, or limb, "to provide all appliances readily attainable known to science for the prevention of accidents, and that the neglect so to provide such appliances will be regarded as proof of culpable negligence."

Likewise, later, when the date for the compulsory equipment with automatic couplers and train brake was reached, it was found necessary for the commission to exercise its discretionary power in the extension of time. On July 3, 1897, the commission made a special inquiry as to the progress being made by various railroads to bring themselves within the requirements of sections 1 and 2 of the safety-appliance act of 1893, becoming effective January 1, 1898. Replies were received

from 516 operating roads, reporting 1,167,926 cars as owned by them. Petitions were filed by 294 operating roads, owning a total of 1,164,932 freight cars, asking for an extension of time beyond January 1, 1898. The hearing upon these petitions developed the fact that there were good reasons for granting such extension, and it was granted for 2 years, until January 1, 1900, with respect to both the first and second sections of the act. The cost at that time of equipping a car with the automatic coupler appeared to be from \$18 to \$35, and the statistics showed that, taking the roads of the whole country together, upon January 1, 1898, about 40 per cent of the freight cars owned by railroad companies and used in interstate commerce would still be without automatic couplers and about 60 per cent not yet equipped with train brake; hence it was felt that a 2-year extension of time was not excessive in requiring so great a financial outlay on the part of the roads, especially in view of the recent hard times. The commission also felt that the carriers were actually at that time seriously undertaking the work. The thirteenth annual report, for 1899 (submitted to Congress January 15, 1900), states that in November, 1899, numerous petitions from carriers were filed asking for a further extension of time; but in the hearing of these petitions, on December 6, it was found that the carriers based their claim for further relief upon two grounds: First, that they had acted in good faith, having made great progress in the equipment of their cars and all the progress that under the circumstances could have been reasonably expected; second, that to refuse to extend the time and to put the law into effect on January 1, 1900, would result in the enforced withdrawal from interstate traffic of a large number of freight cars, to the great hardship both of the railways and of the shipping public; also, owing to the state of the iron market at this time, it was difficult for the roads to get the necessary material for the equipping of their cars. The petitioners asked for 1 year's extension; but the commission finally decided to extend the time until August 1, 1900. The statistics of casualties to railroad employees for the year reviewed in the thirteenth annual report of the commission, unfortunately did not show a progressive diminution but rather a slight increase. One employee was killed out of every 349 employed in 1893; 1 killed out of 518 employed in 1898; and the ratio of the injured to those employed was 1 in 13 in 1893, 1 in 22 in 1897, and 1 in 21 in 1898. The explanation of this apparent increase *pari passu* with the progressive development of safety appliances is explained by the Interstate Commerce Commission as follows:

"The causes of the large number of deaths and injuries still resulting to employees while engaged in railway operation are believed to be: (1) The increased percentage of inexperienced men employed since the decrease which resulted from the panic of 1893; (2) the greater number of tons carried per man employed, owing to the use of cars having greater weight and greater weight-carrying capacity; (3) the use of old and inferior cars, owing to the unusually great demands for transportation facilities on all roads and in all sections of the country; (4) the transition from the link-and-pin to the vertical-plane type of coupler."

In the advance sheets of the Thirteenth Annual Report on the Statistics of Railways the following more complete statement of the ratio of killed and injured to number employed, etc., may be found for fiscal years ending June 30, instead of for calendar years, as just noted from the annual reports of the commission:

*Comparative summary showing number of employees, trainmen, and passengers for 1 killed and for 1 injured in the United States, for the years ending June 30, 1900 to 1890.*

Year.	Number of employees for 1—		Number of trainmen for 1—		Number of passengers for 1—	
	Killed	Injured	Killed	Injured	Killed	Injured.
1900 .....	399	26	137	11	2,316,648	139,740
1899 .....	420	27	155	11	2,189,023	151,998
1898 .....	447	28	150	11	2,267,270	170,141
1897 .....	486	30	165	12	2,204,708	175,115
1896 .....	444	28	152	10	2,827,474	178,132
1895 .....	433	31	155	11	2,984,832	213,651
1894 .....	428	33	156	12	1,668,791	178,210
1893 .....	320	28	115	10	1,985,153	183,822
1892 .....	322	29	113	10	1,491,910	173,833
1891 .....	296	30	104	10	1,811,642	178,664
1890 .....	306	33	105	12	1,727,789	203,064

These figures show some slight improvement in the last year for all classes of employees taken together, but little for those in the train service. This is disappointing, of course, to those who hoped to see a marked improvement from the introduction of automatic couplers and train brakes. How much worse the conditions would have been had not the safety-appliance legislation been enacted and enforced can not be estimated. We can only follow the lead of the commission and point to other causes for the high percentage of casualties incident to the railway profession and set ourselves to the task of removing them or curtailing them as much as possible. Before giving the statistics which will show the extent to which the railroads of the country have actually introduced the safety appliances required by law, it may not be amiss to call attention to the demand for additional legislation for the prevention of accidents. The safety-appliance legislation already enacted will, of course, probably show greater results when it is completely in force. Not until all cars and locomotives are properly fitted can a real test of its merits be made. As it is at present a single car, perhaps belonging to some small road not yet equipped with the required appliances, and being hauled in a train, renders inoperative or at least less effective the equipment of all the other cars in the train. It is therefore urgent, as has been recommended to the Industrial Commission in the testimony of several witnesses, that the States be asked to enact a law, similar to the Federal law of 1893, that will reach roads operating lines wholly within the boundaries of a single State.

With this much done, however, there will be a need for further study of the whole situation with a view to securing legislation to cover other causes of accidents. The railroads pretty generally approved the safety-appliance legislation, and now very generally admit its economic value to them, but there were not wanting roads that, for one reason or other, often very good reasons, postponed action, and would have in reality defeated the successful introduction of safety appliances where uniformity was so essential had it not been for the strong hand of the Federal law. Hence there is a necessity for legislation even where the economic interests of the leading railroads dictate the policy the law wants to accomplish.

The extent to which the railroads have already complied with the provisions of the safety-appliance act of 1893 is exhibited in the following statement, showing the total number of cars and locomotives fitted with train brake and automatic coupler for the years 1889 to 1900, inclusive. The figures are taken from the advance sheets of the Thirtieth Annual Report on the Statistics of Railways, published by the Interstate Commerce Commission.

Year	Total equipment	Increase	Equipment fitted with train brake	Increase	Equipment fitted with automatic coupler	Increase.
1900 .....	1,488,501	75,882	1,005,729	197,655	1,404,132	266,413
1899 .....	1,412,619	50,211	808,074	166,812	1,137,719	228,145
1898 .....	1,362,408	28,912	641,262	115,976	909,571	230,819
1897 .....	1,333,466	a 133	525,286	76,432	678,725	133,142
1896 .....	1,333,999	27,339	418,854	86,356	545,583	136,727
1895 .....	1,306,260	a 7,310	362,498	31,506	408,856	51,245
1894 .....	1,313,570	1,836	330,992	31,965	357,621	35,383
1893 .....	1,308,734	60,506	299,027	42,158	322,238	77,901
1892 .....	1,248,228	27,139	256,869	68,537	244,331	75,299
1891 .....	1,221,089	21,282	188,332	39,865	169,035	53,716
1890 .....	1,199,807	101,265	148,827	29,068	115,319	34,809
1889 .....	1,098,602		128,159		80,510	

a Decrease

Detailed summaries of equipment fitted with train brake and that fitted with automatic coupler are given for the single year ending June 30, 1900, for both locomotives and cars, separately, in the succeeding pages of the report; and also itemized territorially for 10 groups of States. From these detailed summaries it may be noted that of the number of cars assigned to the passenger service practically all are fitted with train brake and automatic coupler. Of cars (1,365,531) assigned to the freight service, 445,066 are not fitted with train brake and 57,972 are not fitted with automatic coupler.

For the year ending June 30, 1899, an equally good showing is made for locomotives and cars in the passenger service, practically all being fitted with train brakes, and 6,128 out of 9,894 locomotives and nearly all passenger cars were fitted with automatic couplers.

The freight equipment does not make so good a showing. The figures for the years 1898 and 1899 are as follows:

	1898.	1899
Total number of locomotives .....	20,627	20,728
Fitted with train brake.....	19,414	.....
Fitted with automatic coupler.....	6,229	.....
Total number of cars.....	1,218,826	1,295,510
Fitted with train brake.....	567,409	730,670
Fitted with automatic coupler ..	851,533	1,067,338

Cars owned by private companies and firms used by railways are not included in these returns.

Detailed statistics of the kind of coupler and make of train brake used are also given in the Interstate Commerce reports on the statistics of railways.

The comments on these figures by the Interstate Commerce Commission illustrate further the need of additional legislation to strengthen its hands if it is to cope successfully with the difficult questions to be met in the prevention of accidents. The commission says,<sup>1</sup>

"It appears that out of a total of 1,412,619 total equipment, including locomotives and cars, the number fitted with train brake was 808,074 and the number fitted with automatic coupler was 1,137,719. This shows an increase during the year in train brakes of 166,812 and in automatic couplers of 228,145. The increase in equipment during the year was 50,211, from which it is evident that the railways have made marked advance in the attachment of safety appliances during the year. There remain at the present time but 274,900 cars and locomotives not equipped with automatic couplers and 601,545 not equipped with train brake. It is not, of course, the province of statistics to determine whether or not this constitutes a satisfactory compliance with the safety appliance act of March 2, 1893.

"So far as train brakes are concerned, what the law requires is that a sufficient number of cars should be so equipped that the engineer on a locomotive drawing a train 'can control the train without requiring brakemen to use the common hand brake for that purpose.' So far as couplers are concerned, the law makes it unlawful for the common carrier 'to haul or permit to be hauled on its line any car used in moving interstate traffic not equipped with couplers coupling automatically by impact, and which can be uncoupled without the necessity of men going between the ends of the cars.' One remark, however, seems to be warranted as bearing on this general question. If the extent to which railway equipment is now fitted with train brakes and automatic couplers be considered as a compliance with the safety appliance act, the act itself is not adequate to attain the ends sought, a conclusion which finds support in the fact that casualties on account of railway accidents are greater, both relatively and absolutely, for the year covered by this report than for any year since 1893.

In a very comprehensive and carefully prepared paper read before the World's Railway Commerce Congress, in connection with the Chicago Exposition in Chicago in 1893, Mr. H. S. Haines, vice-president of the Plant System and president of the American Railway Association, reviewed the whole subject of railway accidents, their causes, and the practical safeguards against them. His paper contains many suggestions for other methods of preventing accidents than those already covered by safety-appliance legislation. He says, for example, after a minute analysis of rear collisions: "The general adoption of the absolute block system would have prevented nearly every rear collision that took place between stations in 1892. But on perhaps 80 per cent of the mileage of this country the principal dependence for protection against such collisions is the flagman. Except on roads with very heavy traffic, the establishment of the absolute block system is impracticable, because of the increased cost of operation consequent upon its introduction. On such roads the flagman must still be relied upon, and his usefulness will be greatly enhanced if he be put directly under the engineer's control by whistle signal, and if the engineer be required to rely upon the fusee to preserve the interval of safety for a following train."

Mr. Haines also calls attention to the possibilities of improvement in the adoption of better rules governing trainmen and the securing of uniform rules through the adoption of standard codes by all the roads.<sup>2</sup>

## EXHIBIT 2.

---

### RULES, REGULATIONS, AND RATES OF PAY FOR EMPLOYEES IN TRAIN AND YARD SERVICE ON FOUR SELECTED RAILWAY SYSTEMS.

---

#### UNION PACIFIC RAILROAD COMPANY.

*Schedule of pay for yardmen, in effect November 1, 1898.*

1. **RATES.**—Day work: Foremen, \$70 per month (not including Sundays); overtime, 27 cents per hour.

Helpers, \$65 per month (not including Sundays); overtime, 25 cents per hour.

Night work: Foremen, \$75 per month (not including Sundays); overtime, 29 cents per hour.

Helpers, \$70 per month (not including Sundays); overtime, 27 cents per hour.

Crews working part day and part night will be allowed night rates. In computing overtime, less than 30 minutes will not be counted; 30 minutes or over will be called an hour. When time is not allowed, time slips will be returned promptly, giving reason therefor.

2. **HOURS OF WORK.**—Ten hours will constitute a day in the following named yards, Council Bluffs, Omaha, Grand Island, North Platte, Cheyenne, Laramie, Hanna, Rawlins, Rock Springs, Green River, Evanston, Ogden, Kansas City, Leavenworth, and Denver.

In other yards rates above named will apply for calendar month, 12 hours to constitute a day.

Hours to be arranged by yardmaster or superintendent. One hour for meals will be allowed, ordinarily between 11.30 a. m. and 1 p. m. and 11.30 p. m. and 1 a. m. If required to work later than 12.30 p. m. or 12.30 a. m., 30 minutes for meals will be allowed and compensation for the full hour.

3. **IRREGULAR SERVICE.**—For extra or irregular service yardmen will be allowed one-half day for 5 hours or less; over 5 hours and less than 10 hours, 1 day.

4. **PROMOTION AND RIGHTS.**—Promotion and rights, everything else being equal, will be governed by seniority. The company reserves the right, however, to hire engine foremen outside the ranks of employees should the service, in the judgment of the company, demand it.

Yardmen's rights will date from the time of entering service. They will have the choice of work to which their age entitles them.

5. **SUSPENSION AND DISCHARGE.**—When a yardman is suspended for an alleged fault, no punishment will be fixed without a thorough investigation, at which accused, with an employee of his choice to assist him, may be present. Ordinarily such investigation will be held within 3 days from day of suspension. If found innocent, he will be reinstated and paid for the time lost.

6. **SERVICE LETTER.**—Yardmen leaving the service will be promptly furnished with a service letter.

E. DICKINSON,  
General Manager.

E. BUCKINGHAM,  
Superintendent of Transportation.

*Schedule of pay for trainmen, in effect November 1, 1898.*

1. **RATES OF PAY.**—Assigned runs, monthly rates as per schedule. Unassigned runs, first in, first out; conductors 3 cents, brakemen 2 cents per mile, under allowance herein specified.

2. **TIME AND MILEAGE BEGINS AND ENDS.**—Time and mileage will commence from the hour designated to start on run, and will continue to time of arrival at end of run, as shown in train register. When time is not allowed, time slips will be returned promptly, giving reason therefor.

Trainmen required to do switching, load stock, etc., at main-line district terminals before starting, or when held on duty after arrival, will be allowed overtime in addition to time on the road.

Crews "run around" will be allowed 50 miles, and if not called on duty within 10 hours 100 miles will be allowed.

3. **OVERTIME.**—When the time of a train averages less than 10 miles per hour, overtime will be paid for on that basis at rate of 30 cents per hour for conductors and 20 cents per hour for brakemen.

In computing overtime, less than 30 minutes will not be counted; 30 minutes or over will be called an hour.

4. **SHORT RUNS NOT OTHERWISE PROVIDED FOR IN SCHEDULE.**—Runs of 50 miles or less, 5 hours or less, 50 miles will be allowed; over 5 hours, 100 miles will be allowed.

Runs of over 50 miles and less than 100 miles, 100 miles will be allowed; overtime after 10 hours.

5. **WORK TRAINS.**—In regular work-train service conductors will be paid \$90 and brakemen \$65 per month (not including Sundays). Twelve hours or less will constitute a day's work; overtime after 12 hours. Runs before or after regular working hours will be computed on mileage basis, working hours 7 a. m. to 7 p. m.

Trainmen employed in temporary work-train service will be allowed mileage and overtime as per article 4.

6. **CALLING.**—Trainmen will be called within 14 miles at main-line district terminals, not to exceed 1 hour and 30 minutes before required. The caller will be provided with book showing time and for what trains wanted, in which trainmen will sign their names and time called.

When not used, trainmen will be allowed 50 miles for 5 hours or less and stand first out for more than 5 hours they will be allowed 100 miles and stand last out.

7. **DEADHEADING.**—Freight crews deadheading will accompany their cabooses. The first crew will deadhead and stand out ahead of crew handling train. When on freight trains they will be allowed mileage rates, on passenger trains, one-half mileage rates.

When a conductor is deadheaded without caboose one-half the mileage rates will be allowed.

8. **LIGHT RUNS.**—Light runs with caboose will be paid for at mileage rates.

9. **FREIGHT CREWS HANDLING PASSENGER TRAINS.**—Freight crews handling passenger trains will be allowed mileage rates.

10. **EXTRA SERVICE.**—Assigned crews will be paid for extra service at regular rates for class of service performed, except as specified in schedule of runs.

11. **DOUBLING HILLS.**—When trains are made up with the intention of doubling hills, trainmen will be allowed 10 miles for each double, unless the mileage is more than 10 miles, in which case actual mileage will be allowed. If overtime is made by such double, it will be deducted from the amount allowed for doubling.

12. **ATTENDING COURT.**—Trainmen for attending court or other business in behalf of the company will be allowed full time and necessary expenses.

13. **TIE-UP.**—Trainmen will be considered on duty until they reach end of a run or return to starting point, the idea being not to tie crews up between ends of run to avoid overtime.

14. **RIGHTS.**—Promotion and rights to runs, everything else being equal, will be governed by seniority. Conductors' rights will date from time they are given their own regular crew.

When additional passenger conductors are required, promotion will be made from the ranks of freight conductors. The company reserves the right, however, to hire both freight and passenger conductors outside of the ranks of employees should the service, in the judgment of the company, demand it.

Rights of trainmen will be confined to their respective districts, and on trains running over more than one district each will furnish its proportion of men. The transfer of rights will not be permitted.

Yard employees and passenger brakemen will have no rights in freight service. This rule shall not operate to reduce the rights any trainman now holds.

Crews will be confined to their respective districts, except in case of emergency.

No more trainmen will be retained in service than necessary to move the traffic with promptness.

15. **REST.**—After continuous service of 16 hours, trainmen will be allowed 8 hours for rest before being called to go out, provided they so desire.

16. **SUSPENSION.**—When a trainman is suspended for an alleged fault, no punishment will be fixed without a thorough investigation, at which the accused, with an employee of his choice to assist him, may be present. Ordinarily such investigation will be held within 3 days from date of suspension. If found innocent, he will be reinstated and paid for the time lost.

17. **REDUCING CREWS.**—In reducing the number of crews the youngest crew in service will be suspended. Conductors temporarily suspended will retain their rights as conductors, but will not hold rights as a brakeman over those older in the service.

18. **SERVICE LETTER.**—Trainmen leaving the service will be promptly furnished with service letter.

<sup>1</sup>Similar schedules of runs are given for Wyoming, Kansas, and Colorado divisions.

## SOUTHERN RAILWAY COMPANY.

### RULES AND REGULATIONS.

1. These rates cover all services incidental to the trip. Rates for new runs will be made when necessary, based on rates for similar runs now in effect.

Trips made, including deadheading, to a point for which rate is not named will be allowed rate to first point beyond.

When men are assigned to runs, except where minimum day rates are fixed, and are unable to make the minimum given below within 12 hours after reporting for duty, they will be paid the following for a day's work: Passenger conductor, \$3; flagman, \$1.50; baggage man, \$1.50; porter, \$1. Freight conductor, \$2.80; flagman, \$1.40; white brakeman, \$1.40; colored brakeman, \$1.10.

2. Regular work-train conductors will be paid \$3 per day; flagmen and white brakemen, \$1.50; colored brakemen, \$1.20, 12 hours or less constituting a day's work.

Regular work trains are those provided with camp cars or assigned to specified limits for a longer period than 6 consecutive days.

Extra or temporary work-train service will be paid as follows: Conductor, \$3.25; flagman, \$1.65; white brakeman, \$1.65; colored brakeman, \$1.30 per day, 12 hours or less constituting a day's work. Wood trains will be classed as temporary work trains.

Conductors, flagmen, and brakemen of work trains will be considered on duty every week day, regardless of the weather, except when relieved at terminals. No time will be allowed for Sundays, except when on duty by competent authority.

3. Overtime will be computed and paid on following basis: When trains have been delayed or detained between terminals more than the time that should be used, at 20 miles per hour in case of passenger trains, 10 miles per hour on through freights, and 8 miles per hour on local freights, conductors will be paid 30 cents; flagmen, baggagemen, and white brakemen 15 cents; and colored brakemen and porters 12½ cents per hour. Provided, that runs over 50 miles and under 100 miles shall not be paid overtime until passenger trains have been on the road 6 hours, through freights 10 hours, and local freights 12 hours. Runs of 50 miles or under will be paid on the same basis, viz: Passenger, 3 hours; through freights, 5 hours, and local freights, 6 hours.

Work-trains and switch conductors will be paid 30 cents, flagmen and white brakemen, 15 cents; colored brakemen, 10 cents per hour for time made in excess of 12 hours.

When train crews are called to go to wrecks or washouts they will be paid passenger-trip rates, and overtime rate for all time actually engaged in working at wrecks or washouts.

Overtime in all cases will begin when the excess time is over 30 minutes.

When overtime is not allowed men will be promptly notified.

4. When trains are held out of yard or detained after arriving at terminals, the crew will be paid overtime, and if they are called upon to make up their trains, or do station switching at points at which switch engines are located, they will be paid overtime; but the term "switching" is not intended to cover the setting out of cars nor the taking on of cars at terminals in case of emergency.

5. Yard crews will be allowed 1 hour for meals.

6. For attending court as witnesses for this company, road conductors will be paid \$4; work-train and yard conductors, \$3, flagmen, baggagemen, and white brakemen, \$1.60, and colored brakemen and porters, \$1.10 for each day lost on the road on account of court. The company will also furnish necessary transportation and allow \$1 per day each for living expenses when away from home. The company will be entitled to the certificates for witness fees in all cases.

7. Where callers are employed, crews will be called, provided they reside within 1 mile of yard office. The caller will have a book, in which the men shall register their names and record the time when called. Time will commence 1 hour after they sign caller's book. If trains are annulled after crews are called or notified to be in place, they will be paid overtime until relieved, computed from the time they are called or notified, provided they have reported for duty.

8. When conductors, flagmen, baggagemen, brakemen, and porters are required to deadhead they will be paid one-half of the rates paid on the train on which they travel, as per rule 1.

9. The rights of conductors, flagmen, baggagemen, brakemen, and porters to runs will be determined by their superintendent, record, qualifications, and seniority to govern. No more men will be retained than may be necessary to move the traffic of the road promptly.

Seniority in yard service shall rule in making assignments to yard runs.

10. Conductors, flagmen, baggagemen, brakemen, and porters may claim 8 hours' rest after they have been on duty 12 hours and completed their runs.

Conductors, flagmen, baggagemen, brakemen, and porters shall not be required to go out with a train after they have been on the road 18 hours or more until they have had 10 hours' rest.

11. Conductors, flagmen, baggagemen, brakemen, and porters will not be discharged without an investigation, which will be made, if possible, within 5 days, and in their presence. They will have the privilege of bringing to the investigation to assist them a conductor, flagman, baggageman, brakeman, or porter, as the case may be, of their own selection, provided such person is employed and in good standing on the division. If found blameless, they will be paid for time lost. If discharged, they will be furnished with a written statement showing the cause.

12. No grievance will be entertained unless presented in writing to the superintendent within 30 days after its occurrence. They shall have the right to appeal, provided such appeal is made in writing within 30 days after the superintendent has rendered his decision.

13. Conductors, flagmen, baggagemen, brakemen, and porters who have been discharged, or have voluntarily left the service of the company, and are afterwards re-employed, will rank as new men.

# 918 THE INDUSTRIAL COMMISSION:—RAILWAY LABOR.

14. When called upon for emergency service, conductors, flagmen, baggage-men, brakemen, and porters will be paid overtime rates, as per rule 8, and will not lose their runs unless they return too late for their regular schedule.

15. If, by reason of extra business on any division, additional crews are needed for such division, the youngest conductors, flagmen, baggage-men, brakemen, or porters from other divisions may be transferred to that division. Men so transferred will not lose their rights on their home division, and will be returned to their home division when the conditions justify.

16. When the engines are run light, with or without cabooses, over any portion of the road, a conductor will be furnished when possible. If for any reason a conductor can not be furnished, a flagman will be provided. White men will always be used as pilots.

17. Passenger-train conductors will be selected from the ranks of freight conductors, record, qualifications, and seniority to govern.

Vacancies in the position of freight conductor will be filled by promotion of freight flagmen, when practicable, record, qualifications, and seniority to govern.

18. It is the rule of the company to employ a permanent force of baggage-men, and such men will not be in line of promotion. Baggage-men will be selected from the ranks of road conductors and trainmen.

19. Sixty days' notice will be given of any contemplated reduction in the rates of pay under this schedule.

FRANK S. GANNON,

Third Vice-President and General Manager.

## Schedule of wages and rules and regulations for conductors and trainmen.

[Effective July 1, 1900]

LOUISVILLE AND NASHVILLE RAILROAD.

*Agreement between the Louisville and Nashville Railroad Company and its trainmen, taking effect November 1, 1891, with revised rates in effect May 1, 1900.*

1. There shall be established on each division a board of inquiry, to consist of the superintendent or assistant superintendent (or both), the master of trains and the master mechanic, or his representative (or both), whose duty it shall be to investigate accidents.

In case employees are suspended to appear before this board they will be given a hearing within 5 days, and will receive prompt notice of the result of the investigation. All punishment shall consist of suspension or discharge.

It shall not be necessary to convene the board except for the investigation of accidents.

If the parties punished by the board, or otherwise, desire it, they may appeal, first, through the master of trains to the superintendent, and then through the superintendent of transportation to the general manager.

All appeals must be presented to the superintendent or master of trains within 30 days after the decision of the board shall have been made known.

Should the employees suspended be found innocent, they will be paid for the time the suspension was in effect—conductors \$2.85 per day, and brakemen, baggagemen, and yardmen \$1.75 per day.

To enable the division officers to make investigation, reports must be made to the proper officer at the end of each trip.

2. Road delay time will be allowed conductors and brakemen after the schedule of the train shall have been exceeded 2 hours, at the rate of 30 and 18 cents, respectively, per hour, for every hour and fractional part thereof. When a train has been delayed to exceed 2 hours, the first 2 hours will be counted.

In case schedules are changed on the road, road delay time will be computed from schedule departed on.

Wages shall be computed from 1 hour after the men are called, or the time that the train departs, if earlier.

Road delay time for extra trains shall be arrived at by taking the average time of the schedule trains on the division, passenger or freight, as the case may be, except that on the Pensacola and Atlantic road the schedule of extra freight trains running between terminals shall be computed at the rate of 124 miles per hour.

3. Yard delay time at terminals shall be allowed at the rate of 30 and 18 cents, respectively, per hour, for each hour or fractional part thereof, after a train shall have been delayed within the yard limits beyond 30 minutes. Running time of the train within yard limits shall not be considered.

When delayed immediately outside of the yard limit board, trainmen shall be allowed yard delay time at same rate, when delay exceeds 30 minutes.

(Colored brakemen will be paid for delay time 10 per cent less than white men.)

4. Trainmen will be called not to exceed 1 hour before leaving time of their trains, as at present. The caller shall be furnished with a book, which must be signed by the men, showing the time that they are called, and the time the train is to depart. Failing to respond promptly, whether it is his turn out or not, the party at fault shall be suspended or discharged at the discretion of the master of trains.

When trainmen come in on their runs, and are not able for duty, they must so notify the master of trains or his representative. If, afterwards, on account of sickness they can not go out, they must send a written notice to the master of trains or his representative at least 2 hours before they are needed.

They must not lay off except by permission of an authorized officer, unless they, or a member of their immediate family, are suddenly taken sick, in which event they must give at least 2 hours' notice.

5. When trainmen are called to go out between the hours of 7 p. m. and 7 a. m., and the train is afterwards annulled, they shall be allowed 3 hours, at the rate of 30 and 18 cents per hour, respectively: Provided, they are not notified they will be required for another schedule train within 1 hour. When called to go out at other hours, in case train is annulled, they shall be paid at the same rates per hour; but time shall be computed from 1 hour after they are called until they are notified that train is annulled. Trainmen thus called will stand first out: Provided, it does not interfere with men who have regular runs.

6. For attending court or appearing before proper persons to give evidence, conductors, baggagemen, and brakemen, having regular crews, and yardmen having regular work, shall be paid the amount that they would have made had they performed their usual duties.

This shall not prevent the company from using these men on any run after they are through attending court, and before their regular crews are due to leave.

Other conductors and brakemen shall be paid \$3 and \$2 per day, respectively, computed from the time they leave their homes, or the time they are marked to go out, until they return.

They will be furnished with transportation to and from court. No pay shall be allowed in cases where the time so consumed does not interfere with the men making their regular trips and having 8 hours' rest, if they require it.

7. Conductors and brakemen of wrecking trains shall be paid, respectively, 35 and 20 cents per hour or fractional part thereof, time to be computed from time train starts, or 1 hour after the men are called, until return to starting point.

In case the train is laid up before returning, for the purpose of affording the men necessary time for rest and sleep, such proportion of the time shall be deducted from the whole, and only the actual time on duty will be paid for. A minimum of 6 hours will be allowed, but no mileage will be paid.

8. Conductors and brakemen when deadheading on a freight train will be allowed the rate of pay given the same class of men that are in charge of the train. When deadheading on passenger train they will be paid 14 and eight-tenths of a cent, respectively, per mile for the distance traveled.

When a man is traveling over the road for the purpose of relieving a man who has asked for leave of absence, he will not receive any compensation for the distance traveled.

9. After a continuous service of 16 hours, or more, conductors and trainmen shall be entitled to, and allowed 8 hours for rest at terminals, if they give proper notice of such desire, except in case of wrecks or similar emergencies.

10. Conductors will be notified when time is not allowed as per their trip reports.

11. Any trainman drinking intoxicants on duty or being under their influence on or off duty, will be dismissed from the service of the company.

12. All crews assigned to regular runs at a monthly rate, that are not provided for in the accompanying rate sheets, will be paid extra for all service performed in addition to their regular duties at established rates for class of service performed except regular crews now performing extra duty without compensation.

13. Local grievances and differences of opinion as to construction of this agreement shall be taken up with division officers; failing to be adjusted, they will be referred to the general officers, as per article 1.

G. E. EVANS,  
*Superintendent Transportation.*

Approved:

J. G. METCALFE,  
*General Manager.*

# BALTIMORE AND OHIO RAILROAD COMPANY.

*The following rates of pay and rules for conductors will be effective March 1, 1900.*

## TRANS-OHIO DIVISION.

1. Passenger conductors on runs whose monthly mileage is 5,000 miles or over, \$2.20 per 100 miles. On runs of less than 5,000 miles and over 4,000 miles per month, \$100 per month.

2. Local freight and pick-up runs, 34 cents per mile run. Runs of less than 100 miles will be computed as 100 miles.

3. Through freight, 3 cents per mile run. Runs of less than 100 miles will be computed as 100 miles.

4. Work and wreck trains, \$3 per day of 12 hours or less; all over 12 hours will be paid for as overtime; all over 100 miles to be paid 3 cents per mile.

PHILADELPHIA, MAIN LINE AND PITTSBURG DIVISIONS, AND BRANCHES.

1. Except as hereinafter specified, conductors of passenger trains will be paid \$100 per month, and for all mileage made in any month in excess of 5,000 miles they will be paid extra at the rate of  $2\frac{1}{2}$  cents per mile.

2. South Branch Railroad, \$75 per month; Grafton and Belington district, \$100 per month; Washington County branch, \$95 per month; Washington Junction and Frederick, \$75 per month, with extra time as at present; Frederick and Washington, \$100 per month; Landenburg branch and Philadelphia, \$100 per month; mixed train, Baltimore and Curtis Bay, including yard work, overtime as per rule 19, \$3 per day; Mount Pleasant accommodation, \$90 per month; Confluence and Oakland run, \$85 per month, Berlin branch, \$2.25 per day; Berkeley Springs and Potomac branch, \$77.50 per month; conductors on Mount Pleasant, Versailles, Uniontown, and Pittsburg runs, \$100 per month; Versailles and Pittsburg to remain as at present, \$95 and \$100 per month.

3. Conductors in local freight and pick-up service will be paid \$90 per month, and 34 cents per mile for mileage in excess of 100 miles per day.

4. Unless otherwise specified, conductors in through freight service will be paid 3 cents per mile, 100 miles or less to constitute a day's work; all over 100 miles to be paid for pro rata. Grafton and Clarksburg, round trip \$2.65, overtime after 10 hours; Grafton and Fairmont, round trip \$2.65, overtime after 10 hours; Wheeling to Glover Gap and return, \$3; Grafton to Belington and return, \$2.85; between Glenwood and Wheeling, per trip, \$2.75, overtime after 10 hours; between Glenwood and Benwood, per trip, \$2.85, overtime after 10 hours; Wheeling and Pittsburg division, short coal runs, per hour, 30 cents; Pittsburg, Willow Grove, or Glenwood and Cumberland, per trip, \$4.50, overtime after 15 hours (corrected to 12 hours by order of general manager, July 1, 1900); coal train between Grafton and Flemington, round trip, \$3, overtime after 12 hours; Connellsville to Glenwood and return, \$3.50; coal runs between Glenwood, West Newton, and Smithton, per day, \$3.50; Baltimore and Brunswick, per trip, \$2.50, overtime after 9 hours; Cumberland to Cherry Run and return, including switching, 14 days; between Brunswick and Strasburg Junction—freight one direction, passenger the other—per round trip, \$2.90, overtime as per rule 19; assigned crews between Staunton and Lexington, including necessary switching at terminals, per month, \$90; Harrisonburg and Staunton, including necessary switching at terminals, per month, \$85; Baltimore to Washington and return, \$3, overtime as per rule 19; Brunswick to Washington and return, \$3.56, overtime after 15 hours. Between Martinsburg and Brunswick conductors will be allowed 50 miles, and overtime after 6 hours, per round trip; Brunswick to Mount Airy and return, \$2.35, overtime after 9 hours; Wilmington and Childs, round trip, \$3. If run is extended over L. C. & S. branch, same rate will apply. Short coal runs between Connellsville, Scott Haven, Shaner, or Emblem will be paid mileage as per article 4 and general rule 19. Trains 90 and 91 on Valley division will be paid local rates.

5. Through freights, F. M. & P. district, per day, \$2.85; overtime after 10 hours.

6. Connellsville and Point Marion, or between Connellsville and Cheat Haven, will be paid mileage, as per article 4, and overtime as per rule 19. Coal runs, Fairmont and Beechwood, per day, \$3; overtime after 12 hours.

7. Work and wreck trains, \$3 per day of 12 hours or less; all over 100 miles to be paid 3 cents per mile; 6 hours or less one-half day; more than 6 hours and not more than 12 hours, 1 day.

8. Conductors making a double to either Mount Airy or Washington will stand first out of Brunswick, after crews that are called when they arrive. When it becomes necessary to deadhead cabooses from Cumberland to Brunswick, the last caboose in will be sent and will take the turn they arrive in at Brunswick. From Brunswick to Cumberland the head caboose will be taken and take head turn at Cumberland.

9. Conductors on the following freight runs will continue to do switching as at present, without claim for extra pay, under general rule No. 4.

Grafton and Clarksburg, Grafton and Fairmont, Glenwood and West Newton and Smithton, Fayette County; Mount Pleasant, Hickman Run, Washington County; Berlin Branch, Landenberg Branch, L. C. & S. Branch.

10. Extra runs between Riverside or Mount Clare Junction and Bay View, 30 cents per hour with minimum allowance of 3 hours.

GENERAL RULES.

The following general rules will apply alike to all territory covered in this schedule:

1. Conductors assigned, under monthly rate of pay, to runs that do not run regularly on Sundays will be paid extra for all Sunday or other extra work outside of their assigned run, and when assigned to extra or special service will be paid the regular rate of pay.

2. Unless specially arranged between conductors and their superintendent, conductors in through freight service will run first in first out, except that conductors coming in, and not having made a full day, will stand first out ahead of all conductors not called.

3. When conductors are called and not sent out, they will be paid one-quarter day if not held more than 3 hours, if held more than 3 hours, 30 cents per hour for time held.

4. At all terminal and intermediate points through freight conductors will not be required to make up trains and do switching, when used to do this work they will be paid 30 cents per hour therefor, 35 minutes to be computed as 1 hour; less than 35 minutes will not be counted.

Where time is earned under this rule and overtime is made on same trip the amount of switching time gained will be deducted from the amount of overtime.

5. Conductors attending court or investigations as witnesses (by request of the company) will be paid for all time lost. Those not on regular run will be paid for each calendar day, and when away from home their necessary expenses will be paid.

6. If a conductor is required to change his run and the change necessitates his moving, his family and household goods will be moved free.

7. Conductors reaching terminal stations after 16 hours' continuous service will be allowed 10 hours' rest before being required to go out, except in cases of emergency.

8. So far as business will permit, conductors will be run so as to give them their lay-over at the terminal at which they reside.

9. Whenever practicable trains 546 and 547, 46 and 47, will be given a coach or combination car.

10. The company will not require conductors to retain brakemen who are incompetent or insubordinate.

So far as possible, each conductor will, at all times, be provided with at least one experienced brakeman, and on divisions where there are three brakemen assigned to each crew, at least two of them will be experienced men.

11. Conductors will be eligible to any official position. Conductors accepting one of these positions can hold their rights on the road as conductors, this rule applying only to conductors accepting positions after March 1, 1900.

12. All instructions given to conductors by trammasters or yard dispatchers relative to the movement or disposition of cars between terminals will be given in writing.

13. No conductor will be dismissed or suspended from the service without a fair trial, and all parties must be present at the investigation. Witnesses may be examined separately, but in the event of conflicting testimony those whose evidence conflicts will be brought together. This trial will be held within 7 days of date of occurrence and conductors notified promptly of the result. Conductors will not be suspended pending trial for minor offenses which do not result in serious loss or danger to persons or property. If exonerated from blame, they will be paid for all time lost.

14. Conductors discharged from the service of the company will forfeit all rights previously held unless reinstated within 6 months. If a conductor leaves the service of his own accord, he will, if re-employed, rank as a new man.

15. When the freight traffic on any portion of the road is so light that the conductors in the service are not able to make reasonable wages, and it is necessary to reduce the force, suspensions will be made beginning with the youngest in the service. Conductors suspended from the service under this rule will be given preference over younger men as brakemen and retain their rights as conductors, and will be placed on their train when freight traffic requires an increased force. This rule will also apply to extra passenger conductors. When there is not enough extra passenger running to enable the extra conductors to make reasonable wages, the youngest conductor may run his caboose on freight or take his baggage car and not lose his rights as a passenger conductor.

16. Any conductor called upon to give up his caboose, and take the extra passenger running, who declines to do so, will permanently lose his rights over any conductor who accepts the extra running.

17. Conductors will be in line of promotion. The rights to regular runs and promotion will be governed by merit, ability, and seniority. Freight conductors deprived of their turn as passenger conductors will, upon request, be furnished with a written statement from the superintendent showing the cause of the rejection. All vacancies to be bulletined for 10 days.

18. The company will employ experienced conductors when the good of the service requires it.

19. On all passenger and freight runs occupying more than 12 hours, except as otherwise provided for, overtime shall be paid to conductors at the rate of 30 cents per hour, time to commence 1 hour after being called. Overtime shall not begin until after the expiration of 35 minutes in addition thereto, said 35 minutes to be reckoned as 1 hour.

Conductors living within 1 mile of terminals will be called, as nearly as practicable, 1 hour before the time the train is due to leave, by the train caller, who will be provided with a book, in which the men called will enter their names. This will not apply to conductors on regular runs leaving between 6 a. m. and 10 p. m.

20. Conductors will be notified in writing when time is not allowed as per their time slip, and the reasons for nonallowance given.

21. Conductors deadheading, under orders, on freight trains, will receive full freight rates, and on passenger trains one-half regular rate.

22. Conductors will not be relieved between terminals.

23. The rights of conductors will commence on the day of their promotion, provided they have passed proper examination.

Extra trips in emergencies made by men who have not been examined, will not be considered. Rights of conductors will be confined to their respective districts, and on trains running over two or more districts each district will furnish its proportion of conductors; they will have choice of runs to which their age entitles them, provided they are competent.

When additional passenger conductors are required, promotions will be made from the ranks of freight conductors, as above. This rule will not be construed to reduce the rights any conductor now holds.

24. When a conductor's caboose goes into the shop, or is sent away, for 10 days or more, he will be furnished with another.

25. On main stem, in freight service, conductors promoted, will serve as second-class conductors for a term of 6 months and will receive 35 cents per day less than first-class conductors.

For the B. & O. R. R. Co.:

FREDERICK D. UNDERWOOD,  
*Its Second Vice-President and General Manager.*

For the O. R. C.:

E. E. CLARK, *G. C. C.*  
S. M. TAYLOR, *Chairman.*

BALTIMORE, February 9, 1900.

*General rules applying alike to all territory covered in this schedule, except where otherwise specially mentioned, to take effect November 1, 1899.*

The term "trainmen," used in this agreement, applies to conductors, flagmen, baggagemen, brakemen, and yardmen.

1. Trainmen assigned under monthly rate of pay to runs that do not run daily—and hereafter scheduled to run daily—will be paid at same rate as other runs of the same class that run daily. For extra work done outside of their regular runs they will be paid extra at their regular rate of pay.

2. Unless specially arranged between trainmen and superintendent, trainmen will run first in first out, except that crews coming in and not having made full day will stand first out ahead of all crews not called. Extra trainmen making less than 1 day will remain first out instead of going to the foot of the list. (This rule will not apply to freight service on the Philadelphia division.)

3. When trainmen or yardmen are called and not needed, they shall receive their regular rate per hour at a minimum of one-fourth of a day and stand first out. This shall apply to extra as well as regular men.

4. When through freight crews are required to switch at terminal or other points, they will receive pay at the regular rate per hour, 35 minutes to be considered an hour. When the time used is under 35 minutes, no compensation is to be given.

5. For attending court or when summoned by the proper officer of the company to give evidence, train or yardmen having regular runs will be paid day for day

for the time lost. Extra men will be paid at their regular rates for each calendar day and when away from home their necessary expenses. When investigations are held on lay-over time, regular men attending them will not receive pay. This does not apply to extra men who have no lay-over time.

6. If a train or yardman is required to change his run, and by the change is obliged to move his family and household goods, they will be moved free of charge upon application to his superintendent.

7. Trainmen after a continuous service of 16 hours or more will be entitled to 8 hours' rest, and not be required to go out except in cases of emergency.

8. So far as practicable, crews will be run so as to give them their lay-over at the terminal at which they reside.

9. All train crews shall be provided with a coach, caboose, or combination car attached to rear end of train, except in emergencies.

10. So far as possible, each crew will be provided with 1 experienced brakeman, and on trains where there are 3 brakemen, when possible, 2 of them will be experienced men.

11. Train or yardmen will be eligible to official positions and retain their seniority rights while in the service of the company, the ruling as to the sufficiency of the cause for a change to be vested in the division superintendent.

12. All instructions given to a train or yardman by a trainmaster or yard dispatcher relative to the movement of trains or the disposition of cars between terminals will be given in writing.

13. Train or yardmen will not be suspended or dismissed for accidents or other causes pending trial or decision by the proper officer of the company, at which investigation the parties interested will be notified to appear, and all parties interested may be present at the investigation. Witnesses may be summoned separately, and, in the event of conflicting testimony, those whose evidence conflicts will be heard together.

14. Train or yardmen discharged from the service of the company will forfeit their seniority unless reinstated within 6 months. A train or yardman leaving the service of his own accord forfeits his seniority. A trainman may be given a furlough for 6 months, and at the end of that time may, upon making application to his proper officer, resume his employment without prejudice and without losing his seniority.

15. When the freight traffic is such that the regular train crews do not make 30 days each month for a period of 3 months, crews shall be suspended, beginning with the youngest man in the service. Any conductor suspended under this rule will assume his seniority as brakeman and still retain his seniority as conductor and be placed on his run as additional crews are required. This rule will also apply to extra passenger crews, train and yardmen. When there is not enough extra running to enable the extra crews to make reasonable wages, the youngest conductor may run his caboose on freight or take his baggage car and not lose his right as a passenger conductor, the division superintendent to be the judge of what constitutes reasonable wages for extra crews.

16. When freight districts are consolidated into one passenger district, the men assigned to the passenger runs will be taken from their respective freight districts in accordance with their seniority. The rights of conductors will commence on the day of their promotion. Extra trips made by men who have not passed examination will not count. Rights of trainmen are confined to their respective divisions, and on trains running over two or more divisions each division will furnish its proportion of the crews. Runs will be assigned on the seniority basis, provided senior men are competent. All those entering the service hereafter will gain their rights of seniority as stated above.

17. All train and yardmen will be in line of promotion. The rights to regular runs will be determined by capacity and seniority.

18. When additional conductors are required in the passenger service, promotion will be made from the freight conductors, except as hereinafter provided. When a passenger-train baggageman on lines east of the Ohio River, who has been in such service for a period of 7 years, desires to become a conductor, he can do so upon the following conditions: He is to take service as a brakeman on a local freight train and serve as such 1 year (or 12 full months), at the end of which time he is to be examined, and, if found competent, will be given such a place as conductor to which his seniority entitles him, dating from the whole term of his service as baggageman. When additional baggagemen or passenger brakemen are required, promotion will be made from the freight service. Baggagemen and passenger brakemen will be eligible as freight conductors whenever they are competent.

19. When possible, on all through freight trains, there shall be 7 uniform cars on front and 7 on rear of train.

20. All pilots shall receive conductor's pay.
21. When any train or yardmen are required to attend switches, watch crossings, or do any other work outside of their assigned work, they shall receive their regular road or yard pay.
22. Senior night yard brakemen will be promoted to day yard brakemen; senior day yard brakemen to night yard conductors; senior night yard conductors to day yard conductors.
23. Freight crews running over one or more divisions on passenger schedule will receive their regular pay for same. Passenger crews running on freight over one or more divisions will receive regular freight pay for it. Freight crews dead-heading under orders on freight will receive their full pay; deadheading on passenger trains will receive one-half their freight rates. Passenger crews dead-heading on company's business will be allowed one-half their rates for mileage made.
24. When a vacancy occurs, or when a regular run is established, it shall be advertised by bulletin for 10 days, and then given to the oldest man making application for it in writing to the trainmaster or superintendent. Declining a position will not affect seniority. When a run is discontinued, the crew which has been engaged thereon shall be entitled to any other run that is theirs by seniority.
25. Train or yardmen will not be required to turn sand or coal engines at terminals or intermediate points where hostlers are employed, except in emergencies.
26. When additional freight conductors are required, except as herein provided, a list of the oldest flag or brakemen will be posted for 10 days; objections as to seniority to be heard during that time. At the expiration of 10 days the senior men shall be examined, and, when competent, promoted and provided with a certificate within 10 days thereafter. Should any fail to pass, they shall be first on the list for the next examination; three examinations to be final. In case a conductor is relieved, a flag or brakeman may be used as a conductor. Such cases are emergency cases, and the men so used will hold no permanent rights as conductors.
27. Baggage men handling express matters are not required by the railroad company to transact any business at the city express offices.
28. All passenger crews, except on the Frederick, South Branch, and similar runs, as at present constituted, will consist of conductor, baggageman, and 1 brakeman. Baggage men will not be required to leave baggage cars to act as brakemen, except in an emergency.
29. When train baggage men require assistance in handling baggage, station or train porters will be required to assist them.
30. Passenger crews at terminal stations where shifting crews, hostlers, or car inspectors are located, will not be required to cut or couple hose, shift trains, or turn engines.
31. All arrangements and rules for the manning of trains on each division will be in the hands of the several division superintendents or their representatives, and in case of a failure between the men and them to agree, the matter will be brought to the general superintendent or other managing officer for final adjustment.
32. Members of the Brotherhood of Railroad Trainmen will be furnished with transportation over the Baltimore and Ohio system when properly vouched for in writing.
33. A train or yardman transferred from one division or from one yard to another shall rank as a new man.
34. Train or yardmen who have been suspended or dismissed from the company's service and are reinstated within 6 months will not be compelled to stand a physical examination by the relief department.
35. Trainmen being dispatched from a terminal will not be relieved until they have reached a terminal or returned to the terminal from which they were dispatched.
36. In employing train or yardmen, preference will be given to experienced men.
37. Train or yardmen will not be required to pay damages for accidents done in line of duty.
38. The company will launder white cap covers.
39. Regular crews will be at Camden Station 40 minutes before their departing time. If not there 30 minutes before the time, an extra man will be called to take the run. If between the 30 minutes and the departing time of the train the regular man arrives and the extra man elects to give him the run, there is no objection. Should the extra man decline to give him the run, the regular man misses the trip. This rule will also apply to Philadelphia, except that the time limit there will be 30 and 20 minutes. Trainmen living within a distance of 1

mile of a terminal will be called, as near as practicable, 1 hour before the leaving time of the train by the train caller, who will be provided with a book in which trainmen will record their names. The men shall designate where they are to be called. Trainmen on regular runs leaving between the hours of 8 a. m. and 11 p. m. will not be called.

40. When train or yardmen are suspended, and they are located away from the official headquarters, they will be provided with transportation to and from said points for the purpose of interviewing the proper official regarding their suspension.

41. Passenger crews running extra trains will not be held longer than 16 hours at any terminal. Crews held longer than the above time will be paid at the regular rates per hour for all over 16 hours held.

42. Passenger crews making short trips on excursions, or special trains outside of their assigned runs, making less than 8 hours will be allowed one-half day; over 8 hours to be called a full day at regular rates.

43. When train or yardmen have been in company's service for 6 consecutive months and leave of their own accord, or are dismissed, they will be given a service record by the division superintendent, stating the nature and term of service and the reason for leaving the same.

44. Efforts will be made to furnish employment, suitable to their capacity, to men who are injured in the discharge of their duties.

45. All local cars shall be placed in one train when practicable.

46. A trainman who has been placed in an advanced position for which he proves incompetent may resume his former employment and seniority.

47. Roadmen have no rights in the yards, or yardmen no rights on the road; the road rules to govern yard service where they will apply.

48. Trainmen will be notified in writing when time is not allowed as per their time slip and the reason for nonallowance given.

49. On all districts of the system, except where otherwise specified, 12 hours to constitute a day. Overtime will be paid thereafter pro rata.

50. All districts of 100 miles or less shall be considered as 100 miles, except where otherwise specified. Districts over 100 miles in length shall be paid for at actual mileage.

51. The motors at Baltimore to be classed as yard engines, and when conductors are furnished them they are to be furnished from yard conductors, provided the yard conductor has the capacity to become a motomeer.

52. All runs that are now being paid at a higher scale than that expressed in the schedule of 1893 will remain as now.

This schedule is in effect from its adoption, subject to notification of 30 days by either party thereto of their desire for a change in it.

*Rules of pay and rules for the trainmen, to be effective November 1, 1899.*

PASSENGER.—Philadelphia to Washington. Baggage-men, round trip, \$3; brakemen, \$2.50.

Philadelphia to Baltimore, local run. Baggage-men, per month, \$67.50; brakemen, \$55.

Philadelphia to Baltimore, through runs. Baggage-men, per month, \$65; brakemen, \$55.

Philadelphia, Chester, Wilmington, and Singers runs. Baggage-men, per month, \$55; brakemen, \$50.

Philadelphia division, trains 546 and 547. Baggage-men, per month, \$52.50; brakemen, \$50.

Wilmington to Baltimore and return. Baggage-men, per month, \$52.50; brakemen, \$52.

Washington branch: Baggage-men, per month, \$52; brakemen, \$50.

Metropolitan branch: Baggage-men, per month, \$52; brakemen, \$50.

Washington to Frederick: Baggage-men, per month, \$55; brakemen, \$50.

Baltimore to Frederick and return, Baltimore to Mount Airy and return, Baltimore to Washington and return: Baggage-men, per month, \$50; brakemen, \$50.

Frederick to Frederick Junction and return, Frederick to Washington Junction and return: Brakemen, per day, \$1.75.

Baltimore to Brunswick, trains 19 and 20: Baggage-men, per month, \$50; brakemen, \$50.

Trains 41 and 42: Baggage-men, per month, \$50; brakemen, \$50.

Trains 16 and 17: Baggage-men, per month, \$52.50; brakemen, \$50.

Trains 15 and 17, Martinsburg to Berkeley Springs and to Cumberland: Baggage-men, per month, \$52.50; brakemen, \$54.

Trains 13 and 14: Baggage-men, per month, \$52.50; brakemen, \$55.  
 Curtis Bay branch: Brakemen, per month, \$50.  
 Washington County branch: Baggage-men, per month, \$50; brakemen, \$47.  
 Cumberland to Wheeling or Parkersburg: Baggage-men, per month, \$66.50; brakemen, \$59.  
 Baltimore to Cumberland: Baggage-men, per month, \$66.50; brakemen, \$57.  
 Trains 12 and 53, between Cumberland and Parkersburg: Baggage-men, per month, \$66.50; brakemen, \$59.  
 Cumberland to Grafton, trains 5 and 6: Baggage-men, per month, \$55; brakemen, \$52.50.  
 Trains 71 and 72, Cumberland and Wheeling: Baggage-men, per month, \$53; brakemen, \$50.  
 Trains 4 and 5 on fourth division. Baggage-men, per month, \$55; brakemen, \$55.  
 Trains 56 and 47, Grafton and Parkersburg: Baggage-men, per month, \$57.50; brakemen, \$55.  
 Trains 71 and 72, Grafton and Parkersburg. Baggage-men, per month, \$57.50; brakemen, \$55.  
 Grafton and Belington: Baggage-men, per month, \$50; brakemen, \$50.  
 Pittsburg division: Trains 5, 6, 9, 10, 11, 12, 14, 46, 47, and 49: Baggage-men, per month, \$63; brakemen, \$52.  
 Mount Pleasant accommodations: Baggage-men, per month, \$55; brakemen, \$50.  
 Confluence and Oakland. Brakemen, per month, \$45.  
 Berlin branch: Brakemen, per day, \$1.65.  
 Salisbury branch: Brakemen, per day, \$1.95.  
 Pittsburg, Versailles, Connellsville, Mount Pleasant and Umontown: Pay to remain as at present.  
 West Newton, Pittsburg and Fairmont accommodation: Pay to remain as at present.  
 Trains between Rockwood and Johnstown. Baggage-men, per month, \$63; brakemen, \$52.  
 Versailles and Pittsburg accommodation: Baggage-men, per month, \$57; brakemen, \$53.  
 Wheeling and Pittsburg district: Baggage-men, per month, \$63; brakemen, \$52.  
 Trains 1 and 2, between Morgantown and Pittsburg: Baggage-men, per day, \$2.53; brakemen, \$2.19.

*Rules applying to the Pittsburg division.*

1. When regular baggage-men or passenger brakemen are off duty temporarily for 15 days or longer, the oldest extra baggage-man or brakeman will be entitled to said run.
  2. Trainmen on Wheeling and Pittsburg district will have no right on Pittsburg division and vice versa.
  3. Trainmen on F. M. & P. and Mount Pleasant branches will have no rights on Pittsburg division.
  4. Between Pittsburg and Cumberland and branches will be considered as 1 passenger division.
  5. Three trips between Pittsburg and Versailles to constitute a day's work. On the Chicago and Akron divisions baggage-man will receive 1.2 cents per mile. In addition they will be allowed 50 cents per trip as extra compensation for handling express matter on such trains, as they handle express matter.
- Trains 7, 8, 14, 15, 46, and 47, on Central Ohio and Lake Erie divisions, and trains 103 and 104, on Central Ohio division, and trains 3, 4, 16, and 17, on Lake Erie division, will be paid 1.34 cents per mile. All other trains on Central Ohio, Lake Erie, and Midland divisions will receive 1.3 cents per mile. Rates on Straitsville division will remain as at present.
- Passenger brakemen, west of the river, on runs whose monthly mileage is 5,000 miles or over, \$1.10 per 100 miles.
- On runs of less than 5,000 miles and over 4,000 miles per month, \$50 per month.

*Freight.*

Local freight and pick-up runs on Philadelphia, main line and Pittsburg divisions: Brakemen will receive \$60 per month, and  $2\frac{1}{2}$  cents per mile for mileage in excess of 100 miles per day.

On middle and northwestern divisions, local freight and pick-up brakemen will receive  $2\frac{1}{2}$  cents per mile run; runs of less than 100 miles will be computed as 100 miles.

Through freight brakemen 2 cents per mile run; runs of less than 100 miles to be computed as 100 miles.

Following runs to remain as at present: Salisbury branch, Grafton and Belington, Washington County branch, Frederick branch, Landenberg branch, Valley division, Cumberland and Cherry Run, Brunswick and Washington, and South branch.

Work and wreck trains. Brakemen, \$2 per day. Twelve hours or less to constitute a day's work; all over 12 hours will be paid for as overtime.

Baltimore and Philadelphia Brakemen, per trip, \$2.

Wilmington and Childs, round trip: Brakemen, per day, \$2, if run is extended over Lancaster and Cecil branch, same rate will apply.

Baltimore to Brunswick via main line: Brakemen, per trip, \$1.60; overtime after 9 hours.

Baltimore to Washington and return Brakemen, per trip, \$2.

Baltimore to Shepherd and return: Brakemen, per trip, \$2.

Brunswick to Mount Airy and return Brakemen, per trip, \$1.55

Cumberland to Brunswick Brakemen, per day, \$2.

Grafton to Fairmont and return Brakemen, \$1.80, overtime after 10 hours.

Wheeling to Glover Gap and return Brakemen, per day, \$2.

Grafton to Belington and return Brakemen, per trip, \$1.90.

Between Parkersburg and Grafton Brakemen, per day, \$2.

Grafton to Clarksburg and return Brakemen, per trip, \$1.80, overtime after 10 hours.

Pittsburg to Cumberland Brakemen, per trip, \$3

F. M. & P. local, Brakemen, per day, \$2.

Keystone shift and coal trains Brakemen, per month, \$50 for working days.

Shifting coal, Cumberland to Sand Patch, Brakemen, per day, \$2.

Connellsville to Rockwood and return Brakemen, per trip, \$2.

Short coal runs, Wheeling and Pittsburg district Brakemen per hour, 20 cents.

Coal runs between Glenwood, West Newton, and Smithton Brakemen, per day, \$2.30

Between Glenwood, and Wheeling, and Benwood, pay to remain as at present; overtime after 10 hours.

Connellsville to Glenwood and return Brakemen, per trip, \$2.30.

Crews on work and wrecking trains will be paid half day for 6 hours or less and 1 day for more than 6 and not more than 12 hours overtime in excess of 12 hours.

On main line in freight service, trainmen promoted or hired will serve as second-class men for a term of 6 months, and will receive 20 cents per day less than first-class men.

Brakemen and flagmen will receive overtime for all time on duty in excess of 13 hours from the time they are called, at the rate of 20 cents per hour; 35 minutes or over will be called a full hour, less than 35 minutes will not be counted.

Crews making a double from either Mount Airy or Washington will stand first out of Brunswick, after crews that are called when they arrive.

Crews on the following freight runs will continue to do switching as at present without claim for extra pay under general rule No. 4: Grafton and Clarksburg, Grafton and Fairmont, Fairmont and Morgantown, Glenwood and West Newton and Smithton, Cumberland and Cherry Run, Fayette County branch, Mount Pleasant branch, Hickman Run branch, O. & B. branch, Washington County branch, Berlin and Landenberg branches.

*Yard service—yard rates from March 1, 1900.*

Philadelphia and Wilmington: Conductors, per day, \$2.64; brakemen, per day, \$2.04; conductors, per night, \$2.76, brakemen, per night, \$2.16.

Bay View, Canton, Locust Point, Camden, Mount Clare, and Washington: Conductors, per day, \$2.64, brakemen, per day, \$2.04; conductors, per night, \$2.76; brakemen, per night, \$2.16.

Brunswick, Martinsburg, Cumberland, Keyser, Piedmont, Grafton, Fairmont (road rates), and Clarksburg: Conductors, per day, \$2.64; brakemen, per day, \$2.04; conductors, per night, \$2.76, brakemen, per night, \$2.16.

Parkersburg: Conductors, per day, \$2.50; brakemen, per day, \$1.90; conductors, per night, \$2.50, brakemen, per night, \$1.90.

Pittsburg, Wheeling, and Benwood: Conductors, per day, \$3; brakemen, per day, \$2.28; conductors, per night, \$3.12; brakemen, per night, \$2.40.

Connellsville, Hickman Run, O. & B. S. L., Fayette County and Mount Pleasant branch: Conductors, per day, \$2.82; brakemen, per day, \$2.04; conductors, per night, \$2.94; brakemen, per night, \$2.16.

Bellaire: Conductors, per day, \$2.76; brakemen, per day, \$2.22; conductors, per night, \$2.88; brakemen, per night, \$2.34.

Chicago Junction: Conductors, per day, \$2.76; brakemen, per day, \$2.22; conductors, per night, \$2.88; brakemen, per night, \$2.34.

Zanesville: Conductors, per day, \$2.45; brakemen, per day, \$2.10; conductors, per night, \$2.55; brakemen, per night, \$2.20.

Mansfield: Conductors, per day, \$2.76; brakemen, per day, \$2.16; conductors, per night, \$2.88; brakemen, per night, \$2.28.

Shawnee, Sandusky, North Baltimore, Fostoria, and Deshler: Conductors, per day, \$2.30; brakemen, per day, \$2; conductors, per night, \$2.30; brakemen, per night, \$2.

Chicago and South Chicago: Conductors, day, per month, \$70; brakemen, day, per month, \$65; conductors, night, per month, \$75; brakemen, night, per month, \$70.

Columbus and Newark: Conductors, per day, \$3; brakemen, per day, \$2.28; conductors, per night, \$3.12; brakemen, per night, \$2.40.

Garrett: Conductors, per day, \$2.88; brakemen, per day, \$2.22; conductors, per night, \$3; brakemen, per night, \$2.34.

Cambridge: Conductors, per day, \$2.52; brakemen, per day, \$2; conductors, per night, \$2.52; brakemen, per night, \$2.

#### *General yard rules.*

1. An hour for meals will be allowed between the hours of 11 a. m. and 1 p. m., and 11 p. m. and 1 a. m.

2. Yard conductors will not be required to locate cars. Yard clerks will furnish that information.

3. Twelve hours or less to constitute a day's work; over 6 hours and less than 12 hours shall be considered full 12 hours, pay to be received accordingly. All under 6 hours, pay to be received for one-half day. All hours in excess of 12 to be paid for at regular rates.

4. All crews in yard service will consist of at least one conductor and two brakemen, the division superintendents or general yard masters to be the judges as to number of additional men required to perform the work assigned and secure safety.

Philadelphia division: Yard engines that are double crewed may work alternately weekly, if majority of crews so desire.

Pittsburg division: On Pittsburg division, the yards at Glenwood, Port Perry, McKeesport, and Versailles are to have the Pittsburg yard scale of wages.

Chicago division and Philadelphia division: Yardmen on either of these divisions will hold their rights from time of employment in other yards, in the event of the use of their engines being discontinued by the company. This does not apply to Chicago and Chicago Junction yards.

1. Chicago district: The following designated yards and transfer runs will be known as preferred runs. The oldest men will have choice of runs.

Day yard: Preferred yard and transfer runs:

- No. 1. Early stock yard transfer.
- No. 2. C. B. & Q. and C' & N. W. transfer.
- No. 3. Second stock yard transfer.
- No. 4. Early city transfer.
- No. 5. Second city transfer.
- No. 6. West End train yard.
- No. 7. Wolfe Lake yard.
- No. 8. Bulk engine.
- No. 9. East End train yard.
- No. 10. City coach yard.

#### *Night yard.*

- No. 1. Roundabout
- No. 2. West End train yard.
- No. 3. Wolfe Lake yard.
- No. 4. Stock yard.
- No. 5. East End train yard.
- No. 6. City coach yard.

2. One hour for dinner, between 12 noon and 1.30 p. m. Any crews or parts of crews working 30 minutes or over of the noon hour to receive 1 hours' pay in addition to the 10 hours' pay. Night crews to be handled the same way. One hour for supper, between 12 o'clock and 1.30 a. m.

3. All crews in yard service will consist of one conductor and at least two experienced switchmen; the division superintendent or superintendent at terminal, or general yard master, to be the judge of number of additional men required to perform the work assigned.

4. Any man taken from a crew to do piloting shall receive yard conductor's pay. When switchmen are required to attend switches, watch crossings, or do any other outside work, they shall receive regular switchmen's pay.

5. General yard masters will notify in writing all parties interested when time is not allowed as per time slip and reasons assigned for same. No regular crews shall receive less than 10 hours' pay for any fraction of the day worked. Extra crews called, working 5 hours or less shall receive one-half day; over 5 hours, a full day. Extra crews not making a full day will stand first out. Crews waiting for engine to work with shall receive their regular time, while waiting for engine.

6. All yard and transfer crews starting to work before 7 o'clock a. m. shall be called, when living within 1 mile of yard master's office, 1 hour before time is set for such crew to go to work. When switchmen are called for duty and do not work, they shall receive 27 and 25 cents per hour for the time held, with the minimum of one-quarter of a day.

7. All yard crews doing transfer work will have caboose on rear of train, when practicable.

8. Any crew starting to work at 7 a. m. or 7 p. m., and returning after 10 hours' work, and required to take a train to connecting line, will be allowed 30 minutes for lunch and continuous time allowed.

9. Transfer or yard crews will not be required to double, except in cases of necessity.

10. All yard men shall be governed by strict seniority in regard to preferred runs.

Accepted for the Baltimore & Ohio Railroad Company,

F. D. UNDERWOOD,  
*Second Vice-President and General Manager.*

Accepted for the employees,

D. F. COTTMAN,  
*Chairman General Committee, Brotherhood of Railroad Trainmen.*

## EXHIBIT 3.

### THE PENSION FEATURES OF FOREIGN RAILWAYS.

[Report prepared by and under the direction of Mr. M. Rebenack, assistant comptroller of the Pennsylvania Railroad Company, and secretary of the board of officers of the pension department <sup>1</sup>]

At no time since the inception of the propriety of creating a pension fund, as an auxiliary feature of the existing relief fund of our company, has the great importance of this matter been lost sight of; but, on the contrary, the work has been progressing almost without interruption. With a view to ascertaining, for the information of the members of your committee, and the officers of the company, the practice prevailing generally in relation to pensioning and superannuating railway employees, all available sources bearing upon the subject have been examined and data abstracted. A policy of far-reaching and close inquiry has been pursued relative to the subjects of superannuation, pension, relief, and loan funds, either contemplated, planned, or established, in the interest of employees of railway companies. These researches have been exhaustive, and from a geographical, historical, and descriptive standpoint they exhibit a comprehensiveness in this connection which is obviously essential for the adequate discussion of a scheme of such magnitude and importance. This work of compilation has resulted in the acquisition of authentic and invaluable information concerning the funds already designated, as conducted by or proposed for more than 60 railway companies in various parts of the world. These companies are for the most part representative. Some of them are branches of a main system, but as each line mentioned possesses one or more of the funds recited, it has been given recognition in the study of the question collectively and in detail. That the scope of the work on the line of investigation may be better understood, the different railway companies above referred to are here grouped under the States to which they are accredited, as follows:

*Algeria*.—Western Algeria Railroad.

*Austria*.—Austrian State Railroad; North Emperor Ferdinand Railroad; North-western Austria Railroad; Southern Austria Railroad; Western Bohemia Railroad.

*Australia (British colonies)*.—South Australia Railroad.

*Belgium*.—Belgian State Railroad; Belgian Provincial Railroad; Grand Central Belgium Railroad; Grand-Eccloo Railroad; Hasselt-Maeseyck Railroad.

*Canada (America)*.—Grand Trunk Railway of Canada.

*Denmark*.—Danish State Railroad.

*England*.—Great Northern Railway; London and Northwestern Railway; London and Southwestern Railway; London, Brighton and South Coast Railway; Midland Railway.

*Egypt*.—Egyptian State Railroad.

*Finland*.—Finland State Railroad.

*France*.—French State Railroad; Eastern French Railroad; Southern French Railroad; Western French Railroad; Paris-Lyons-Mediterranean Railroad; Paris to Orleans Railroad.

*Germany*.—German Imperial Insurance Plan.

*Holland*.—Holland State Railroad.

*Hungary*.—Hungarian State Railroad.

*Italy*.—Adriatic State Railroad; Chianti and Florentine Hills Railway; Meridional Railroad; Mediterranean Railroad; Piedmont Railroad; Sicilian Railroad; Sardinian Railroad.

*Netherlands*.—Netherlands Railroad.

<sup>1</sup> This report was prepared upon the basis of years of investigation and study by Mr. Rebenack, who visited Europe several times for this purpose, and is in substance as originally presented to the advisory committee of the relief fund of the Pennsylvania Railroad Company at a meeting held February 12, 1896, when that committee was preparing a pension scheme to submit to the board of directors of the company. It is printed here for the first time through the courtesy of Mr. Rebenack, who has also kindly added a section (G) on the recent organization of the pension department of the Pennsylvania Railroad.

*Norway.*—Norwegian State Railroad.

*Portugal.*—Beira-Alta Railroad; Portuguese State Railroad.

*Roumania.*—Roumanian State Railroad.

*Russia.*—Catherine Railroad; Cural Railroad; Koslov-Varonege-Restov Railroad; Morschauk-Syzran Railroad; Moscow-Brest Railroad; Moscow-Jaroslov Railroad; Orel-Vitebsk Railroad; Orel-Griasi Railroad; Polesie Railroad; Riapsk-Viazma Railroad; Syzran-Viazma Railroad; Samara-Zlatoust Railroad; Transcaucasian Railroad; Tambov-Saratov Railroad; Vistula Railroad; Warsaw-Vienna Railroad.

*Sweden.*—Christiana to Eidsvold Railroad

*Switzerland.*—Gothard Railroad; Jura-Simplon System.

*Turkey.*—Oriental Railroad.

*United States.*—Baltimore and Ohio Railroad, Chicago, Burlington and Quincy Railroad; Pennsylvania Railroad; Philadelphia and Reading Railroad.

#### A. FOREIGN RAILWAY PENSION FEATURES.

The most methodical and thorough exemplification of foreign practice with respect to pensioning was found in a report (printed in the French language, which it was deemed advisable to have translated into English) of the International Railway Congress held at St. Petersburg, Russia, in August and September, 1892. At this congress were present representatives of the leading railway companies of the world. Sixty-seven questions were propounded in this congress which bore exclusively and directly upon the question of pensions, and the replies which they elicited practically constitute an omnium gatherum on the subject. In the following pages these questions will be reproduced seriatim, with a consensus of expression appearing opposite each query, thus briefly and graphically presenting the entire situation for the information of the advisory committee:

##### MEMBERSHIP OR PARTICIPATION IN THE SUPERANNUATION FUND

QUESTION	ANSWER
1. What servants or employees are called upon to subscribe to the funds to receive a pension upon superannuation or retirement?	All the regular or commissioned employees. The maximum admission age is from 35 to 45 years. Incurable disease, in some instances, is specified as a cause of ineligibility. All belong to the same fund.
2. Are inactive (sedentary) employees, and the cost of the active service allotted in the same fund or in separate funds? In the latter case, what are the differences in the workings of the funds?	All belong to the same fund.
3. Are laborers, paid weekly or by the day, admitted to participation in the funds?	Some of the roads have a pension fund for workmen, to which they all belong. Upon being advanced to the commissioned staff they may participate in the fund. Generally speaking, laborers paid daily and weekly are not admitted. Yes, membership is generally obligatory.
4. Is participation obligatory for all the staff possessing the requisite conditions for admission to the benefits of the pension?	He ceases to form a part of the fund. In general, unless the dismissal or resignation was occasioned for crime or discipline, he receives a part or all of his payments into the fund.
5. Does a discharged employee lose all rights resulting from his affiliation? May he continue to participate in the funds by paying the assessments or subscriptions provided?	In one or two companies he may continue to contribute for the benefit of his family. The Paris Lyons-Mediterranean and Western French railroads permit a continuance in the superannuation fund in such cases.
6. Are there any other remarks respecting membership in the superannuation fund?	Generally no observations were made. In two or three instances indefinite remarks were indulged.

##### BENEFITS OF THE FUND

7. Does the principal benefit of the fund consist of a life income to continue during the life of the employee who is admitted to the retired list?	It consists, in the majority of cases, in the payment of an annuity during life to the retired beneficiary, as well as to his widow and minor children at his death.
8. What are the conditions of age and service required for obtaining a pension?	<i>Hungarian State Railroad</i> Eight years' membership, except where total incapacitation results from wounds or bodily injuries resulting from discharge of duties, in which case the right is vested before 8 years' membership. Sixty years of age is the time for regular retirement.

*Belgian State Railroad.*
*[Fund for widows and orphans.]*

1. Husbands shall have been subjected to retentions for at least 5 years, unless the victim of accident in the discharge of his duties.

2. In case of such accident, the marriage must have lasted at least 1 year.

The first condition comprehends granting of pensions to minors under 18 years.

*[Retirement and relief fund for workmen.]*

1. Incapacitation from infirmities after 10 years' contribution at least.

2. Incapacitation from wounds or accidents. In this case the pension is allowed regardless of length of time of contribution.

Sixty years of age, with 10 years' membership, constitutes regular retiring period.

*Belgian Provincial Railroad*

1. Sixty-five years of age.

2. Regardless of age when incapacitation results from wounds or accident consequent upon discharge of duties.

3. Ten years' membership, in case of incapacitation from sickness or infirmities, regardless of age.

*Danish State Railroad*

Ten years is minimum service to entitle to pension, except in case of infirmities or sickness contracted in service.

*French State Railroad*

Fifty-five years of age and 25 years' service.

*Paris-Lyons-Mediterranean Railroad*

Regular retirement at 55 years of age, with 25 years' service.

*Paris to Orleans Railroad.*

Fifty-five years of age, with 25 years' service.

*Western French Railroad*

1. Fifty-five years of age, with 25 years' service.

2. Anticipated retirement, granted by the company, at 50 years of age, with 20 years' service.

3. Retirements for wounds or premature infirmities, which entitle to the number of sixtieths of the mean salary which constitutes the total of the pension, and which is equal to the years of service.

*Eastern French Railroad*

1. Ordinary retirement, at 55 years of age, with 25 years' service.

2. Anticipated retirement, granted by the company, at 50 years of age, with 20 years' service.

3. Discharge retirement, granted at option of the company, to servants of any age whom grave infirmities, duly contracted, place after 20 years' service out of condition for continuance of duties.

4. Annual aid, which the council of administration can, by decisions renewable after each occasion, grant in cases of insufficiency of resources to servants of any age discharged for reasons of health, after completing more than 15 and less than 20 years' service.

*Southern French Railroad*

Fifty-five years of age, with 25 years' service.

*Western Algerian Railroad*

Same as Southern French Railroad.

*Great Northern Railway*

Sixty years of age, except in cases of insanity, sickness, and kindred infirmities, entitles to retirement.

*Merdional Railroad*

[Sedentary force]

Fifty-five years of age and 25 years' membership

[Active force]

1. Fifty years of age and 20 years' membership.
2. Ten years' membership, regardless of age, in case of disability for ordinary cause, or of discharge not inflicted as punishment.
3. Five years' membership, regardless of age, in case of disability contracted in malarious districts.
4. Regardless of age or membership in case of wounds received in service.

*Mediterranean Railroad,*

Same as for Merdional Railroad

*Serbian Railroad*

Sedentary force, 55 years of age and 25 years' service.

Active force, 50 years of age and 20 years' membership only.

*Netherlands State Railroad*

Necessary to have attained in the service of the company the age of 60 years.

*Holland Railroad*

Sixty years of age and 10 years' service.

*Romanian State Railroad*

Ordinarily at 60 years of age and 25 years' membership.

After 10 years' membership alone sundry conditions of disability entitle to pension.

*Finland State Railroad*

Ordinarily at 55 years of age and 30 years' membership.

*Moscow-Brest Railroad*

Pensions are granted in a ratio of the length of service—from 12 to 25 years—based on mensal salary of the member's years of service: 12 years, 25 per cent, 15 years, 45 per cent, 18 years, 45 per cent, 21 years, 55 per cent, 24 years, 80 per cent, 25 years, 100 per cent.

*Vistula Railroad*

Ordinary pension is obtainable only after 12 years' service.

Age of member does not influence pension.

Provision for disablement, provided first payment has been made to retirement fund.

*Warsaw-Vienna Railroad*

Ten years' membership must be obtained in order to be entitled to a pension. Age is not considered.

*Norwegian State Railroad*

Ordinarily, at 65 years of age, every servant has right to pension.

Officer incapable of continuance at duties may obtain a pension after 5 years.

*Christiana to Eidsvold Railroad*

Same as Norwegian State Railroad.

*Gothard Railroad—Relief fund*

Fifty years of age and 25 years' service.

This is a broad question, and may be properly answered in a general way by observing that the different roads reckon the pension upon one or the other of the bases stated in the questions, for the most part, the pension is based on the average

9. Upon what rules is the pension reckoned?

(a) Does the value of the amount contributed by the beneficiary to the fund figure in the rule?

(b) Do the number of years of service figure in the rule determining the pension?

(c) Is the pension based upon the amount of salary the beneficiary received at the time of his being placed upon the retired list or that of the 10 years preceding date of retirement? In this case indicate the proportion allowed between the amount of the last salary and the average salary of the last 10 years and that of the pension applying.

10 Are there minimum and maximum pensions? What are they?

salary received by the beneficiary during his last 5 years of service, and thus calculated in fractional proportions—as, for example, so many sixtieths of said salary equal to the years of service; again, the pension is proportionate to the beneficiary's deposits in the fund, also specific period, as, say, 10 or 25 years, of service is fixed, from which time a fractional allowance is made, this fractional proportion was often tenths, twelfths, or fiftieths, as sixtieths.

*Hungary State Railroad*

Maximum, \$3,000, minimum, \$50

*Belgian State Railroad*

[Widow's fund]

Maximum, \$800, minimum, \$35

[Workmen's fund]

Maximum, 50 per cent of salary, and must not exceed \$500, minimum, \$36

*Belgian Provincial Railroad*

Maximum, 75 per cent of average salary for last 5 years, minimum, \$120

*Danish State Railroad*

[Relative minimum and maximum]

First class, 16 per cent of average salary for last 5 years. Second class, 10 per cent of said salary for last 5 years.

The above is the relative minimum. Maximum, 60 per cent of said salary for all beneficiaries.

*French State Railroad*

Minimum. There is no minimum. Maximum is based on three-fourths of average salary for last 6 years, and must not exceed \$1,200.

*Paris-Lyons-Mediterranean Railroad*

No minimum, maximum, \$2,400

*Paris-to-Orléans Railroad*

No minimum, maximum, three-fourths of average salary

*Western French Railroad*

Minimum for employees, \$100, for widows, \$50. Maximum should not exceed \$3,000.

Facts show that the average sum of 37 pensions liquidated out of 802, in 1887-88-89, was  $\frac{1}{3}$  of average salary, or \$78.80.

*Eastern French Railroad*

[Regular pension]

Maximum, forty-sixtieths of average salary of last 6 years and \$1,200.

Minimum. Married, \$120, unmarried, \$100.

[Anticipated pension]

Maximum, \$1,160.

Minimum. It is relative, and is twenty-five sixtieths of salary of last 6 years.

[Half-pay pension]

Maximum, twenty-four sixtieths and \$960.

Minimum, relative, or eighteen sixtieths.

[Half-pay annual relief]

Maximum, relative, or seventeen sixtieths.

Minimum, relative, or thirteen sixtieths.

*Southern French Railroad*

Maximum, forty-sixtieths of salary and \$1,600. Minimum, not fixed.

*Western Algeria Railroad*

Maximum, \$1,200  
Minimum, undetermined

*Great Northern Railway*

Maximum, \$2,500  
Minimum, undetermined

*Mediterranean Railroad*

Maximum, Absolute, \$1,800 and relative, equal  
to nine-tenths of last salary  
Minimum, Absolute, \$60

*Mediterranean Railroad*

Same as Meridional Railroad

*Sicilian Railroad*

Same as Meridional Railroad

*Sardinian Railroad*

Maximum, not fixed  
Minimum, not fixed

*Netherlands State Railroad*

Maximum, Can not exceed half of average salary,  
or salary of last 5 years of membership  
Minimum, not specified

*Holland State Railroad*

Maximum, two-thirds of average salary  
Minimum, not specified

*Portugal State Railroad*

Maximum, \$466, and can in no case exceed  
three-fourths of average salary of beneficiary at  
time of his retirement  
Minimum, undetermined

*Roumanian State Railroad*

Maximum, based on the average salary of the  
last year of service  
Minimum, not specified, undetermined

*Finland State Railroad*

Maximum, Officers, \$410, widow and minor  
children, \$160  
Minimum, Officers, \$30, widows and minors,  
\$16

*Moscow-Brest Railroad*

Maximum, 100 per cent of average salary after  
25 years' service, and not to exceed \$1,600.  
Minimum, 25 per cent of average salary, granted  
after 12 years' service

*Vistula Railroad*

Maximum, Equals entire salary received by  
beneficiary in the service, always limited to \$2,400  
Minimum, Equals one-fourth of salary

*Warsaw-Vienna Railroad*

Maximum, \$2,400  
Minimum, none

*Christiania to Eidsvold Railroad*

Neither maximum nor minimum

*Gothard Railroad*

Maximum, 60 per cent of \$720  
Minimum, 30 per cent of last annual salary.

11. Is the employee admitted to the benefits of the fund before reaching the age or the period required by the rule?

(a) In case of voluntary resignation?

(b) In case of dismissal?

(c) In case of sickness or disability contracted in the service?

(d) In case of sickness or disability contracted out of the line of duty?

12. How in the four above hypothetical instances are the benefits determined? If the rule consists in the abandonment of an amount by the beneficiary, how is the amount calculated?

#### *Oriental Railroad.*

Neither maximum nor minimum.  
Consensus of expression is in the negative.

No Sometimes is reimbursed on account of deposits in the fund

No.

Not directly, but is generally allowed after a definite period of service, say 10 years

It is not customary, and is never allowed save for very exceptional cases

#### *Hungarian State Railroad*

Incapacitation occasioned by wounds or bodily injuries received in service, before 8 years' participation in fund, entitles to a pension equal to 35 per cent of the last salary, if this share does not reach \$50 the pension is increased to that amount

#### *Belgian State Railroad*

In first two cases the workman loses his rights, hence there is no rule. A pension is allowed whether sickness has been contracted in or out of service

#### *Belgian Provincial Railroad*

One-forti-fifth of average salary for last 5 years multiplied by number of years in the fund

#### *Danish State Railroad*

In case of infirmity or sickness contracted in service before the ordinary minimum of 10 years, beneficiary obtains the pension granted for 10 years' service

Employee who hands in his resignation, or is dismissed because of advanced age, infirmities, or sickness contracted outside of service or under particular circumstances (such as change of position outside of branches, or suppression of post), before 10 years' but after 5 years' service, has a right to the restitution of the entire deposits in the fund

#### *Paris-Lyonns-Mediterranean Railroad*

(a, b, and d) The retentions made in view of retirement are reimbursed in capital, without interest, when there is no pension

(c) The pension is calculated on the same basis as the regular retirement, that is, at the rate of 2 per cent of average salary for each of the years in service, counting for the retirement, and which have been subject to retentions

#### *Paris to Orleans Railroad*

Victims of accidents, when the same occasion complete disability to work, receive a pension that can not be less than \$80.

#### *Western French Railroad.*

In cases (a) and (b) the return of the little superannuation book is the only regulation for the reckoning. In cases (c) and (d) the pension includes a number of sixtieths equal to the years of service

#### *Eastern French Railroad*

In the four hypothetical cases the acquired rights are liquidated by reimbursements of average sum of retentions made on agent's salary and deposited in fund, said retentions being increased by accumulated annual interest at the rate guaranteed by saving fund of Paris to its depositors.

Independently of said reimbursement, which is a right, infirmities or sickness contracted in service are recognized by a voluntary company allowance from the anticipated pension, half pay, and annual relief, or at least a sum, once given, which is great or small according to circumstances.

*Western Algeria Railroad.*

The pension is composed of a certain number of fiftieths of average salary of the last 6 years equal to the number of years of service, without exceeding thirty-three fiftieths.

*Merdional Railroad*

A pension allowance based on years of service, usually 10 and 25 years.

Retentions are refunded when less than 5 or 10 years' service, and for climatic sickness. It is same for most of the Italian companies.

*Portugal State Railroad*

Voluntary resignation. Beneficiary has the right to reimbursement to the extent of two-thirds of sums he deposited in fund.

In case of dismissal he can draw all of said deposits.

In case of infirmity or sickness contracted in service or out, employee is allowed to make his right good.

*Roumanian State Railroad*

Dismissal or resignation. Employees lose all rights.

Infirmities or sickness contracted outside of service. If he has served 10 years, he only has the right of restitution of the retentions he has deposited, without interest.

If he has served less than 10 years, he receives a pension in a particular manner.

*Moscow-Brest Railroad*

Beneficiaries with less than 6 years' service who are compelled by sickness to leave the service receive a temporary subsidy which can not exceed the annual salary at the time of retirement.

*Warsaw-Vienna Railroad*

Voluntary resignation. Infirmities contracted outside of service, two-thirds of his deposits are returned to him.

Infirmity or sickness contracted in service. Receives pension equivalent to six-tenths of his salary when he has not served 20 years, after 20 years, pension is fixed according to general rules.

The foregoing remarks embody the prevailing practices with Continental roads as applicable to this question.

While there is a difference in the practices of the different companies in this relation, it can be safely premised that, in nine cases out of ten, the widow and minor children receive the beneficiary's rights, in varying proportions.

The heirs participate in some cases, and in others the mother and father profit by reversion.

The children must be minors, the period of minority having for a maximum, with the various companies, the years from 13 to 18, the interest of such minors terminating upon their reaching the maximum age, upon marriage, or at death.

The widow must have been married for a definite number of years before the beneficiary's death, she must not marry him after his retirement, and marriage when he has reached advanced years also precludes her rights.

These rights involve pension and indemnity, and restitution of deposits, respectively, according to circumstances.

An abstract of answers of two or three representative European companies to this question, given below, reflect the general status.

*Belgian State Railroad*

## [Pension and relief fund.]

Widow's pension is calculated according to the first 15 years of contribution at the rate of 20 per cent, either of average salary for the last 3 years (if death was caused by sickness), or the last

13. Have the heirs of a beneficiary, deceased before the right to a pension has accrued, any rights to the payments made by the beneficiary? May this right take the shape of a pension for a term of years or that of a sum of money to be paid?

14. How is the pension or this sum of money calculated in the following hypothetical cases:

- (a) If deceased was married with children
- (b) If deceased was married without children
- (c) If deceased was a widower with children
- (d) If deceased was a widower without children, or a bachelor.

salary (if death was result of wounds or accidents during service); 1 per cent is added for each year of participation above 15 years.

Less than 15 years. Pension is established according to the duration of the admissible contribution, in proportion to the indivisible sum of 15 years, in adding 10 per cent of the last salary, without, however, exceeding 30 per cent of the principal.

In case of wounds received during service, or in case of accidents, the sum is increased to 10 per cent.

Regulated as above, the widow's pension is increased 2 per cent of the salary taken as a basis for each child under 13, or if infirm, or for father and mother, without this increase exceeding the sum total of 10 per cent.

For an orphan, three-fifths of the pension the mother drew, or which she would have been entitled to draw.

For 2 orphans, the total of this pension.

For each orphan beyond 3, this pension increases to 2 per cent of the average salary for the last 3 years, or of the last salary, according to circumstances, without exceeding 10 per cent.

Pension of father and mother is regulated on same basis.

If deceased beneficiary was a widower without children, or single, there is nothing more to be done. All the sum remains in the fund.

Minimum of widow's pension is in every case fixed at \$21 a year, and the maximum is 33 per cent of the salary which serves as a basis for the liquidation, if there are no children, 13 per cent of the same salary when there are 5 children or more, and in either case an annual sum of \$320.

#### *French State Railroad*

The sum of the deposits is entirely reimbursed to the widow and children.

#### *Southern French Railroad*

In every case the widow who fulfills the two conditions exacted has a right to half of the reimbursement made by the husband if the latter has deposited for 15 years. If he deposited for more than 15 years she receives a pension equal to twenty-nine one hundred and twentieths of the average salary during the last 5 years' service, if these last years of deposit did not exceed twenty-nine one hundred and twentieths.

#### *Mediterranean Railroad*

To the widow with minor children, three-fourths of the pension of the agent, without minor children, three-fifths, to the minor orphans, one-half if there are 2 or more, one-fourth if only 1.

#### *Warsaw-Vienna Railroad*

In first hypothesis. Widow receives half of the sums deposited by the deceased, the other half goes to the minor children.

Second hypothesis. Total of sums deposited revert to the widow.

Third hypothesis. All the deposits of the deceased are given to his minor children.

Fourth hypothesis. The nearest relations can claim half of the sums deposited on the proof that they are in absolute need of it.

Generally, yes.

The marriage, generally speaking, must have taken place from 2 to 5 years previous to the liquidation of the deceased beneficiary's pension.

With the French companies, yes. With most of the other companies, no.

No.

Generally, they are nontransferable and nonalienable to seizure. In exceptional cases where transfer and seizure are admitted, it can not exceed a specific amount, the universal tendency

15. (a) In case of the death of a beneficiary after being placed on the retired list is the pension acquired by him revertible to his widow and children, and in what proportion?

(b) Does the right of the widow exist without regard to the date of the marriage with the deceased?

(c) Does the right of the widow continue in case of new marriage?

(d) Does the right of the children exist in the case of children of the widow of a beneficiary the issue of a previous marriage?

16. Are the pensions afforded by the funds nontransferable and nonalienable to seizure? What legal precautions will be necessary to render them nonalienable to seizure?

17. Is the beneficiary who may be entitled to a pension authorized to commute it into a sum of money for immediate use or as a capital fund of which he may have the income during his life, and at his death revert to his heirs?

18. In the affirmative upon what basis would the transference of the life pension into a capital sum or into an income with capital reserved be calculated?

19. In the negative, what is the principal reason for declining to transform the life income at the desire of the beneficiary?

20. May the beneficiary at his entry into service or at any time before his retirement make declaration of his intention to apply his deposits to the constitution of a life income with the capital alienated or to an income with the capital reserved? In case of this declaration once made is it fixed or may it be modified by the beneficiary?

21. May the beneficiary at any time have the option of requiring at his retirement a capital sum the equivalent of the life pension?

22. Other than the pension defined in question No. 9 or its equivalent in No. 17 may the fund enter into any other engagement with its beneficiaries?

23. Would it sensibly affect the case if a part of the payments and subsidies were devoted to the funding of a capital of savings whose accumulation would permit in addition to the pension the creation of a flowing capital to be returned to the beneficiaries?

24. If affirmatively, how should this saving be accomplished? Under what conditions and at what period should it be returned to the beneficiaries?

25. Are there any other remarks to make concerning the liability of the funds to the beneficiaries?

being among all companies to protect the annuity in favor of the beneficiary.

Statutory provisions, royal decrees, and other regulations serve to offer ample protection.

Generally, commutation is not authorized.

This question is for all practical purposes disposed of by the answer to the next preceding question.

The answer of one representative company will amply set forth the general sentiment in this relation.

#### *Paris-Lyon-Mediterranean Railroad*

The majority of the staff having no other resource than the pension, and this reduced by one-half their salaries, giving them no more than the bare necessities, they are allowed the most comfortable conditions by which it is necessary to live till the time of their retirement. It is to insure this independence, and to give them every security possible, that the company has repelled the commutation of the life annuity.

Generally, no. The question of commutation governs this point save in one or two instances.

Generally, no. This feature is largely controlled by the question of commutation, already discussed.

Generally, no.

No.

This question is answered only by the Western French Railroad, which states that the savings should be in conformity with the laws and regulations of the State superannuation fund. It is practically answered in the preceding questions.

Generally, none.

### RESOURCES OF THE FUND

#### *Hungarian State Railroad*

26. (a) Is the fund provided by retentions made from the salary and pay of the beneficiaries?

(b) Does it receive besides a contribution on the part of the company or the management (these retentions and contributions being placed at interest)?

(c) Has it other resources, gifts, fines, etc.? What are they?

Fund is provided.

1. By retentions on salaries.

2. By fines imposed on participants.

3. By monthly contributions made by the Government, which are equal to the sum of retentions made on employees.

4. By legacies and donations which are given by everybody.

5. By returns resulting from pension-fund investments.

#### *State of Belgium Railroad*

[Fund for widows and orphans.]

Fund is provided for by retentions on officers and employees regularly named and salaried by the public treasury.

The fund can not be supplied by the public treasury.

[Pension and relief fund for workmen.]

1. Retentions on salaries.

2. Fixed annual subsidy from administration.

3. Entire salary of workmen on leave of absence, for 1 month at least.

4. Half the salary of workmen absent on account of sickness, etc., for 1 month at most.

5. For sake of discipline and punishment, 1 month's salary at most
6. Donations, legacies, gifts, and divers proceeds, which are small.

*Belgian Provincial Railroad.*

Following provisions

- 1 Annual 1 per cent retentions on salaries of participants, whether unmarried, divorced, or widowers, without children
- 2 Annual 5 per cent retention on salaries of married participants, widowers, or those divorced, having one or more children
- 3 A previous deduction on all increase of salary during the first two months
- 4 Gifts and subsidies of the company
- 5 Retentions and fines imposed for disciplinary chastisement
- 6 Of interests produced by the capitals of the fund, and, the case occurring, of premiums which are the result of certain investments
- 7 From the increase of one-half per cent on the retention, when the husband is from 10 to 15 years older than the wife, of 1 per cent if the difference is more than 15 years, and of 1½ per cent if over 20. The retention is increased one-half per cent for each 5 years above 20.
- 8 The annual supplementary retention of 1 per cent on the salaries of married agents is retained during the lapse of time equal to that of their participation as bachelors, widowers, or divorced without children

*Danish State Railroad.*

Following provisions

- 1 Retentions on salaries
- 2 Administration's contribution
- 3 Interests and profits on fund securities

*French State Railroad*

Following provisions

- 1 Fixed 5 per cent monthly retention on fixed salaries, and by a retention of the first twelfth of same salary at time of first appointment, or in case of reinstatement, and on the first twelfth of all ulterior increases.
- 2 Administration subsidy equal to a 5 per cent retention on salaries
- 3 By proceeds of fund investments
- 4 By gifts of different kinds, or the supplementary subsidies furnished by the administration
- 5 By the balance of fines imposed upon the commissioned staff and not distributed for relief by December 31

*Paris-Lyons-Mediterranean Railroad.*

Following provisions

- 1 Monthly 1 per cent retention on salaries (in 1889, \$542,041 13)
- 2 Monthly administration subsidy of 6 per cent on these salaries (in 1889, \$722,681 47)
- 3 Proceeds of investments of fund accruing from the retentions and subsidies (in 1889, \$792,900 22)

*Western French Railroad*

Following provisions

1. Company endowments, 5 per cent on salaries, and a sum equal to the first twelfth of all increase on same
- 2 Proceeds of fund investments
- 3 Voluntary gifts, and fines imposed on staff.

*Eastern French Railroad*

Following provisions:

- 1 By an obligatory monthly retention of 3 per cent on fixed salaries
2. By monthly allowance of company equal to 8 per cent of amount of salaries subject to retentions
- 3 By gifts and legacies made to the fund.
4. By proceeds of investments made of the fund's disposable sums.

*Southern French Railroad*

## Following provisions

- 1 Three per cent on salaries
- 2 No contribution by company
- 3 No resources besides retentions

*Western Algeria Railroad*

- (a) Yes, 3 per cent of the salaries
- (b) Company's deposit equals retentions on salaries
- (c) Gifts and legacies made to the fund

*Great Northern Railway*

- 1 Retentions on salaries of \$400 and less \$400 and above, 24 per cent, under \$400, 1 per cent
- 2 Company's deposit equals retentions
- 3 Interest on disposable fund moneys

*Meridional Railroad*

## Following provisions

- (a) Yes
- (b) Yes
- (c) Proceeds of entrance tickets to stations, as well as gifts and legacies

*Mediterranean Railroad*

Same provisions as Meridional Railroad

*Sicily Railroad*

## Following provisions

- 1 Proceeds of ordinary, 3 per cent, and extraordinary, 14 per cent, retentions
- 2 Monthly contribution by administration, established on basis of retentions
- 3 Gifts and legacies
- 4 Proceeds from fund investments
- 5 Proceeds from sale of tickets in stations
- 6 All other proceeds which could effect it by virtue of the approval by the Government

*Sardinian State Railroad*

## Following provisions

- 1 Five per cent retention on salaries
- 2 Equal contribution by company
- 3 Interest on fund investments
- 4 Half of receipts of tickets in stations
- 5 Gifts and legacies

*Holland State Railroad*

- (a) Yes
- (b) (c) Yes. The board of administration disposes of the excess in the relief fund. Generally this excess is deposited in the pension fund

*Portuguese State Railroad*

- (a) Yes
- (b) Yes
- (c) Yes. All the capital of the fund is placed at interest

*Roumanian State Railroad*

- (a) Yes
- (b) Yes
- (c) Yes, by fines, legacies, and donations

*Finland State Railroad*

- (a) Yes
- (b) The State guarantees a certain contribution to the fund for ten years
- (c) Yes, the interest on the funds loaned, proceeds of fines, etc

*Moscow-Brest Railroad*

- 1 Retentions made on salaries of beneficiaries.
- 2 Annual contributions by the company
- 3 Proceeds of fines
- 4 Interest on fund moneys
- 5 Moneys received from sales of unclaimed

27. (a) Is the amount retained proportional to the pay or salaries of the beneficiaries? What is the proportion?

(b) Does the age of the beneficiary figure in fixing the amount of the retention?

(c) Do married and single pay the same assessment? In the negative, what is the difference?

(d) Does a beneficiary whose salary or pay is increased return to the fund a part of such increase? What is the amount of such quota?

28. (a) Is the intervention of the company or the administration (trudnitsa) conferred by a grant of capital once given?

(b) Otherwise, does the company return to the fund a sum proportional to that which is retained from the pay? What is this proportion?

29. What per cent of the amount of salaries do the united payments by the company and the beneficiaries amount to?

freight and articles found (expenses due the company being deducted).

6. Amount of pensions and unclaimed relief after ten years

7. Gifts.

#### *Vistula Railroad.*

1. Retentions on salaries  
2. Annual deposits by the company.  
3. Amounts received, account of unclaimed merchandise.

4. By a remuneration offered to the company by the municipality of the city of Warsaw for the control of the receipts of custom-house tax

5. By deposits of retentions on salaries belonging to unoccupied positions

#### *Warsaw-Vienna Railroad*

1. Retentions on salaries  
2. Company contributes \$80,000 annually  
3. Proceeds of fines and unclaimed or forgotten articles

#### *Norwegian State Railroad*

1. Contributions of beneficiaries  
2. State contributions

#### *Christiana-Eidsvold Railroad*

1. Contributions of beneficiaries  
2. Company contributions

#### *Galhard Railroad*

1. Annual assessments on members  
2. Initiation fee charged new members  
3. Ulterior deposits at the time of increase of salaries

4. Fines imposed on members

5. Unclaimed articles

6. Current interest of a contribution by the company, which brings 6 per cent of the sum allowed

#### *Oriental Railroad*

[Subsidy fund]

(a) No

(b) Company deposits 75 per cent of the 4 per cent retentions on salaries of participants in the accident fund

Generally, the retention is a fixed, uniform, percentage rate, it is also based on a maximum and minimum salary standard

Generally, no

Generally, yes

For the most part, yes

Company or administration intervention is generally conferred by a fixed monthly or annual deposit. There are possibly two or three roads where capital once given represents said intervention

For the most part the amount deposited by the company or administration is in excess of the percentage of retentions on salaries of beneficiaries, again, it is equal, and said deposit also is an amount sufficient to make the united deposits of company and beneficiaries reach a fixed total.

#### *State of Belgium Railroad*

[Pension and relief fund for workmen]

From 1880 to 1884 these united deposits varied from 1.99 to 5.07 per cent of the salaries paid, of which 3.71 to 3.75 per cent was provided by the ordinary retention

#### *Belgian Provincial Railroad*

10.08 per cent

#### *Danish State Railroad*

First class, about 10 per cent, second class, about 74 per cent.

*Paris-Lyon-Mediterranean Railroad*

Ten per cent (In 1889, \$1,268,722)

*Paris to Orleans Railroad*

Ten per cent

*Western French Railroad*

9.4 per cent

*Eastern French Railroad*

Eleven per cent—8 per cent by the company and 3 per cent by the beneficiaries

*Southern French Railroad*

11.70 per cent

*Western Algeria Railroad*

Ten per cent

*Great Northern Railway*

Contribution of beneficiary added to that of company forms a total of 5 per cent for the first class and 2 per cent for the second class

*Mediterranean Railroad*

10.50 per cent

*Mediterranean Railroad*

10.50 per cent

*Sardinian Railroad*

9.50 per cent

*Sardinian Railroad*

Ten per cent

*Holland State Railroad*

12.24 per cent

*Portuguese State Railroad*

Five per cent, without including deposits made for right of membership

*Adula Railroad*

Minimum percentage is 4 per cent and the maximum 6 per cent. The average per cent has not been given

*Warsaw Vienna Railroad*

About 14 per cent

*Norwegian State Railroad*

Five per cent

*Christiansund-Eidsvoll Railroad*

Five per cent

*Gotthard Railroad*

Nine per cent

*Oriental Railroad*

[Subsidy fund]

Ten per cent

With the majority of companies no such authority or privilege exists. The Danish State Railroad allows a member of the second class to pay the assessments of the members of the first class and thereby secure the pension of the latter class. In the Paris to Orleans Railroad fund, the members have the right to increase their own resources made by the deposits, whether in the pension or saving fund.

30 In addition to the uniform retention from the pay of the beneficiaries, are they authorized to make additional payments with a view of obtaining from the fund special advantages in the shape of increased pensions, saved-up capital, or other?

31. Are there any other observations to make respecting the resources of the fund?

In the pension and relief fund of the Belgium State Railroad employees whose impaired health obliges them to accept a lower position and salary, or causes their temporary removal, may make voluntary payments that will suffice to retain their original membership rights in the fund. The Western French Railroad fund permits of additional deposits in the superannuation fund, with a view to increasing the beneficiary's income or his reserved capital. These are the only exceptions to the rule of nonauthorization.

Generally, no. One or two companies indulge in generalities, their remarks lacking material relevancy.

#### ORGANIZATION AND WORKING OF THE FUND

32. Is the pension fund worked exclusively by the management of the company, or are the beneficiaries included in the working?

This management of the fund differs with the various continental companies. The beneficiaries are admitted in some cases, but usually form a minority. They are elected for a term of 2 or 3 years. The government or the company, however, manages the fund exclusively on some of the large roads, and for the most part dictates the membership to be chosen from among the beneficiaries.

33. If this intervention of the beneficiaries is by means of a delegation, what is the method of the formation of the delegation? Do the delegates participate in fixing the conditions of membership; in fixing the quota of contribution, in determining the amounts and dates of the pension, in regulating the accounts with the beneficiaries whose position is prematurely fixed by reason of dismissal, resignation, or by other reasons, in employing the disposable funds?

The remarks upon the next preceding question are applicable to this one. The general manager of the companies (called director) figures prominently in the committees. It is not uncommon to appoint members from the board of directors. The secretary and treasurer, respectively, find occasional appointment. The committee disposes of all the matters designated in this question. Where the company or administration assumes entire management, they perform the same services as are performed by mixed committees.

34. (a) How are the disposable funds placed?

In State, municipal, and district or local, and company securities, in mortgages, and on safe loans to other institutions.

(b) Does the company or management accept the responsibility of the said funds or does it guarantee a fixed interest?

Generally, yes, but it does not guarantee the payment of any fixed rate of interest.

(c) In the affirmative, what is the interest?

Answer to (b) applies here.

(d) On the contrary, what are the investments of the funds authorized or obtained?

Answer to (a) comprehends this question.

(e) Has the company or management recourse to an official fund or to a private insurance company to which is transferred a whole or a part of the liabilities of the fund?

Generally, no.

35. (a) Is an account of the fund stated annually or periodically?

Yes. These accounts are for the most part prepared annually. In some cases both monthly and annual reports are made out. In two instances a report is submitted every 5 years.

(b) Is this statement of account a simple one, giving the amount in hand and showing

Generally, yes.

1. Amounts received by the fund,

2. Amounts paid out by the fund,

3. The balance to credit?

(c) Or is a balance sheet made out periodically, as in the case of insurance companies, in which appears, besides these amounts

A few of the roads prepare reports embracing the information called for in this question.

1. Assets.—The value of the payments and contributions to be received from the beneficiaries,

2. Liabilities.—The amount of engagements of funds with respect to the beneficiaries?

36. In the last hypothesis, upon what rules are these valuations made?

For illustrative purposes, the practice of one or two companies in this connection will be cited, viz.

#### *Paris-Orleans Railroad.*

The result of the individual account of each agent is annually communicated to him. As to the supplementary incomes to be granted by the company, the capital kept in reserve for this purpose is invested in treasury bonds. Every year an inventory is taken of the company's engagements, according to the age of the surviving pensioners, in applying the mortality table and the tariffs recently published by the national pension fund. The sum of the reserve capital is in conformity with the results of this inventory.

#### *Mediterranean (Adriatic) Railroad.*

The technical balance sheets are made out on the rational basis which characterizes this kind of work. The assets are the accumulated capi-

37. (a) Are these accounts submitted for any approval whatever on the part of the beneficiaries or their delegates?  
(b) Are they published?

38. Does the company or the management accept the guaranty toward the beneficiaries of all the engagements made by virtue of the regulations in return for the amounts contributed or retained?

39. If this absolute guaranty is not stipulated, what has been provided in case the resources of the fund will not permit the continuation of the payment of the pensions acquired? How and in what proportion may these be reduced?

40. (a) How many years has the fund been working?

(b) What is the actual number of beneficiaries?

(c) Does the number go on increasing?

(d) Is it capable of further increase by offer of membership to other classes of employees?

(e) What is the number of pensions?

(f) Does this number continually increase?

(g) Is it likely to increase still more from the fact that the beneficiaries still to come to an age for pension will be likely to be greater than that of probable deaths?

tal, the current value of the probable assessments, and the fines imposed and received from beneficiaries. The liabilities are the actual amount of the life annuities (the probable reversible ones included), as well as the actual amount of the probable engagements falling due to different beneficiaries.

This question was not generally responded to by the companies represented at the international congress.

Generally, yes. They are submitted for ministerial, administrative, or committee approval, respectively, according to circumstances.

Generally, yes, and are distributed among the beneficiaries. Such published accounts, however, usually comprehend a report on the simple operations and state of the fund.

With the French companies the guaranty is, for the most part, fixed and absolute. With the other companies there is, in some cases, an implied guaranty, although it is not stipulated in writing, while in other instances the matter is left for administrative or committee action.

Where the fund resources are inadequate for the liquidation of regularly acquired or received pensions, or will not meet the legitimate operating expenses, one or more, as the case may be, of the following practices obtains with continental companies, viz:

1. By governmental advance without interest.
2. A reduction of existing pensions.
3. Increase of retentions on salaries.
4. Complementary contribution by the company.

Additional company contribution prevails generally. With the French companies, company assistance is generally guaranteed. Reduction of live pensions is not generally countenanced. The use of retentions is not infrequently advocated.

When by any of the above plans an equilibrium is established between the receipts and expenses, all measures looking to relief are withdrawn and cease.

#### *Hungarian State Railroad*

Pension fund has existed since 1870.  
Total number of participating members in 1889 was 8,585.  
Number of beneficiaries goes on increasing.

#### *Belgian State Railroad*

[Fund for widows and orphans.]

This fund was created January 1, 1845. Number of beneficiaries in active service in 1889 was 14,755, of whom 2,474 contributed at rate of 31 per cent, and 12,581 at rate of 3 per cent.

Up to December 31, 1889, the fund granted 1,927 pensions to widows and 208 pensions to orphans. The number of pensions has not increased.

[Pension and relief fund for workmen.]

A fund was instituted October 1, 1838, with relief for its object. In 1845 this institution was changed to a pension and relief fund. On January 1, 1860, the organization was superseded by the present one.

Number of beneficiaries 33,604. It is susceptible of further increase.

Number of pensions up to December 31, 1889, reached 2,321.

#### *Belgian Provincial Railroad*

In operation since January 1, 1889.  
One hundred and thirty beneficiaries.  
Number goes on increasing.  
No pensioners up to time of the international congress in 1892.

#### *Danish State Railroad*

Fund has been working since 1859.  
Number of beneficiaries, about 1,650.  
Pensioned employees, 90.  
Pensioned widows, 150.  
Children receiving subsidies, 160.

*French State Railroad*

In operation since 1883.

Number of beneficiaries, 5,778, continues increasing.

Pensioners, 43, increasing

*Paris-Lyons-Mediterranean Railroad*

In operation since 1856

Number of beneficiaries, 39,669, capable of increase

Pensioners, 8,014, goes on increasing. The progression is rapid enough and does not appear to stop, the deaths of the pensioners not outweighing the new pensioners

*Paris-Orleans Railroad*

Pension features since 1882

Beneficiaries, 17,616

Pensioners, 1,679, susceptible of increase. Number of pensions for liquidation each year is, and will be for several years, greater than that of probable deaths

*Western French Railroad*

Since July 1, 1869

Beneficiaries, 24,102, increasing

Pensioners, 3,826, increasing

*Eastern French Railroad*

Began October 1, 1879

Beneficiaries, 18,863, increasing

Pensioners, 5,163, increasing

*Southern French Railroad*

About 29 years old in 1892

Beneficiaries, 14,672, probable increase

Pensioners, 2,255, probable increase

*Western Algeria Railroad*

Fund has been in operation about 12 years

Beneficiaries, 213, increasing

No pensioners up to time of the International Congress.

*Great Northern Railway*

Been in operation since 1875

Beneficiaries, 4,118, will increase

Pensioners, 96, will increase

*Meridional Railroad*

Pension fund for the Mediterranean railroads, as well as those of the Adriatic and Sicily, has been in operation since January 1, 1890. It was built by a consolidation of the following funds

Upper Italy, created January 1, 1862

Meridional, created January 1, 1869

Roman, created January 1, 1871

Calabro, Sicily, created January 1, 1880.

Beneficiaries in 1890, 14,000, will increase

Pensioners in 1890, 2,400, of which 47 per cent were agents, 28 per cent widows without minor children, 21 per cent widows with minor children, and 4 per cent orphans and families. This number will increase

*Mediterranean Railroad*

Formation same as for Meridional

Beneficiaries in 1890, 23,000, will increase

Pensioners to January 1, 1890, 3,260. The classified percentage of this number of pensioners is the same as with the Meridional. It will increase.

*Sardinian Railroad*

Formed January 1, 1880

Beneficiaries in 1888, 878, increasing

Pensioners in 1890, 23, increasing

<sup>1</sup>In this connection, see accompanying authoritative statement (translated), section B. see pp. 956 et seq., showing the operations of the Western Railroad Company of France for the year 1894.

*Sudman Railroad*

Since January 1, 1882  
Beneficiaries, 184, increasing

*Netherland State Railroad*

In operation since September 1, 1873

*Holland Railroad*

Since January 1, 1845  
Beneficiaries, 931, increasing  
Pensioners, 89, increasing

*Portuguese Railroad*

Since about 1877  
Beneficiaries, 1,933, likely to increase  
Pensioners, 108, increasing.

*Romanian State Railroad*

In operation since July 1, 1888  
Beneficiaries, 1,966, will increase  
Pensioners, 7—4 widows and 3 employees, will increase

*Finland State Railroad*

Since July 1, 1882  
Beneficiaries, 1,920, will increase  
Pensions granted to widows and children of deceased beneficiaries, 123. No beneficiaries pensioned up to 1890, because a membership of fifteen years entitles to pension, whereas the fund had been in operation only eight years

*Moscow-Brest Railroad*

In operation since about 1870  
Beneficiaries, 2,400, increase is possible  
Pensioners, 273, increasing

*Vistula Railroad*

In operation since July, 1887  
Beneficiaries, 2,800 to 3,000  
Pensioners, 117, can not increase

*Warsaw-Vienna Railroad*

In operation since January 1, 1858  
Beneficiaries, 3,621. This number has been stationary for some time  
Pensioners—Employees, 310, and widows, 400, will increase

*Nonnequin State Railroad*

In operation since July 1, 1890  
Four older and smaller funds constituted the fund  
Beneficiaries, 2,000, will increase  
Pensioners, 23, will increase

*Christiana-Fiskerold Railroad*

In operation since 1868  
Beneficiaries, 118, likely to increase  
Pensioners, 26, increasing

*Gothard Railroad*

In operation since January 1, 1879  
Beneficiaries, 260, increasing  
Pensioners, 60, increasing  
Generally, yes

41. (a) Since the organization have change been made in the working of the fund?

(b) Has the rate of assessment been changed?

(c) The rate of the contribution on the part of the company?

(d) The age and conditions of the period of retirement?

(e) The rate of the pensions?

(f) The rate of interest guaranteed upon the properties of the fund?

(g) What are these modifications?

Yes

Yes

In some instances

In some cases

Yes

These are generally presented, but have all been incorporated in the general replies contained in the report. Such data are of an historical character, and are not material in this relation.

No.

42 Are there any other observations to make upon the organization and workings of the fund?

## INFORMATION USEFUL FOR THE FORMATION OF A TABLE OF THE MORTALITY SPECIALLY PERTAINING TO THE CALLING OF RAILWAY SERVICE AND FORMING THE ESSENTIAL BASIS OF PENSION FUNDS

43. What is the total number of officials, agents, employees, and laborers employed on the various staffs?

*Belgian State Railroad*

Forty-nine thousand and thirteen  
Officers and employees, 15,409  
Workmen, 33,604

*Belgian Provincial Railroad*

Two hundred and fifteen

*French State Railroad*

Ten thousand four hundred and forty.  
Sedentary, 928  
Active, 9,512

*Paris-Lyons-Mediterranean Railroad*

About 59,000

*Paris-Orleans Railroad*

Thirty-one thousand three hundred and thirty-three

*Western French Railroad*

Forty-one thousand six hundred, of which 3,600 are women

*Eastern French Railroad*

Thirty thousand eight hundred and forty-two  
Of this number there are 11,979 agents in the administration who do not participate in the pension fund

*Southern French Railroad*

Seventeen thousand and sixty-seven

*Great Northern Railway,*

Twenty-three thousand

*Mediterranean Railroad,*

Forty thousand five hundred

*Mediterranean Railroad*

Forty-eight thousand

*Sicilian Railroad*

Four thousand

*Holland Railroad*

Five thousand one hundred and ten.

*Finland State Railroad*

Two thousand two hundred and fifty.

*Moscow-Brest Railroad*

Eight thousand

*Waisau-Vienna Railroad*

Five thousand six hundred

*Norwegian State Railroad,*

Two thousand one hundred

*Christiana-Eidsvold Railroad*

Four hundred and eighty

*Gothard Railroad,*

Two thousand and seventeen.

44. What is the number of these employees and servants admitted to the benefits of membership in the pension fund?

45. What is the total number of these employees belonging to the inactive (sedentary) service who are beneficiaries (such as officials, employees, clerks, store-keepers, etc.)?

*Oriental Railroad*

One thousand six hundred and seventy-one

This query is answered in the reply to question No. 40 of this presentation

*Belgian State Railroad*

Nine thousand and sixty-nine

*French State Railroad*

Eight hundred and three

*Paris-Orleans Railroad*

Two thousand seven hundred and nineteen

*Eastern French Railroad*

Two thousand two hundred and thirty-five

*Southern French Railroad*

Thirteen thousand and twenty-nine

*Great Northern Railway*

First class, 1,984

Second class, 2,164

*Metropolitan Railroad*

Four thousand six hundred

*Mediterranean Railroad*

Seven thousand seven hundred

*Holland Railroad*

Four hundred and seventy-nine

*Warsaw-Vienna Railroad*

One thousand and eighty-five

*Norwegian State Railroad*

Three hundred and thirty

*Christiana-Eidsvold Railroad*

One hundred and thirty

*Gothard Railroad*

Eighty-two

*French State Railroad*

Four thousand nine hundred and seventy-five

*Paris-Orleans Railroad*

Fifteen thousand one hundred and three

*Eastern French Railroad*

Sixteen thousand six hundred and twenty-eight

*Metropolitan Railroad*

Nine thousand four hundred

*Mediterranean Railroad*

Fifteen thousand three hundred

*Holland Railroad*

Four hundred and fifty-five

*Moscow-Brest Railroad*

One thousand seven hundred and twelve

46. What is the total number of those belonging to the active service who are beneficiaries, such as engineers, firemen, brakemen, train hands, guards and other servants whose professional risk may be considered as special?

47. What is the limit of age prescribed for the entry of servants into the employ?

48. What is the average age of entry into service of these servants?

49. What is the regulation age for retirement?

50. What is the average age of retirement on pension?

51. What is the proportional per cent of those—  
1. Who retire upon reaching the age prescribed?

2. Who retire earlier on account of disability?

3. Who delay retirement on account of continuing in service beyond the prescribed age for retirement?

*Warsaw-Vienna Railroad*

Two thousand five hundred and thirty-six

*Norwegian State Railroad*

One thousand eight hundred and two.

*Christiania-Eidsvold Railroad*

Three hundred and fifty

*Gothard Railroad*

Eight hundred and sixty

It differs with the different companies, but the average is 30 years.

It differs with the several companies, but the average is from 25 to 27 years.

This point is disposed of in question No. 8 of this presentation.

*Belgian State Railroad*

Pension and relief fund for workmen, 62 years

*Paris-Lyon-Mediterranean Railroad*

Between 53 and 55 years

*Eastern French Railroad*

Fifty-eight years

*Southern French Railroad*

Fifty-nine years

*Meridional Railroad*

Sedentary, 58 years

Active, 56 years

*Mediterranean Railroad*

Same as Meridional Railroad

*Holland Railroad*

Sedentary, 60 years

Active, 49 years

*Warsaw-Vienna Railroad*

Fifty-five years

*Paris-Lyon-Mediterranean Railroad*

Regular pensions, 13 per cent

Anticipated pensions, 61 per cent

Delayed pensions, 26 per cent

*Western French Railroad*

Regular, 68.3 per cent

Anticipated, 27.4 per cent

Premature infirmities, 4.3 per cent

*Eastern French Railroad*

Regular, 78.70 per cent

Anticipated, 21.30 per cent

*Southern French Railroad*

1. Twenty per cent

2. Nineteen per cent

3. Sixty-one per cent

*Meridional Railroad*

Sedentary service. Anticipated retirement, 66 per cent, delayed retirement, 34 per cent.

Active service. Anticipated retirement, 52 per cent, delayed retirement, 48 per cent

52. What is the average length of service of those who retire upon pension?

53. What is the average pay received upon entry into service?

*Holland Railroad*

Sedentary service (1) 49 per cent, (2) 20 per cent, (3) 31 per cent

Active service (1) 23 per cent (2) 72 per cent, (3) 5 per cent

This may be safely stated as from 23 to 27 years.

*Belgian State Railroad*

Workmen Limited statistics show that workmen, formerly admitted at the age of 26 years, with an average pay of 40 cents a day, had the same raised to 62 cents at the age of 65 years.

*French State Railroad*

Sedentary service, \$360

Active service \$240

*Paris Lyons-Mediterranean Railroad*

Two hundred and sixty-five dollars

*Western French Railroad*

Two hundred and thirty dollars

*Eastern French Railroad*

Two hundred and seventy dollars

*Southern French Railroad*

One hundred and ninety dollars

*Meridional Railroad*

Sedentary, \$230

Active, \$140

*Mediterranean Railroad*

Same as Meridional Railroad

*Sardinian Railroad*

Two hundred and forty dollars

*Holland Railroad*

Sedentary, \$182

Active, \$155

*Godthard Railroad*

Two hundred and sixty-eight dollars

*Hannoverian State Railroad*

[Workmen's fund]

Average salary for all pensions granted for the years next preceding 1890 was \$219

*Paris Lyons-Mediterranean Railroad*

Average, \$375.03

*Western French Railroad*

Three hundred and ninety dollars

*Eastern French Railroad*

Three hundred and fifty-five dollars

*Southern French Railroad*

Three hundred and fifty dollars

*Meridional Railroad*

Sedentary, \$400

Active, \$200

*Mediterranean Railroad*

Same as Meridional

54. What is the average pay received at the time of retirement?

55. What is the average pay received during the service of an employee, counting the time passed in each grade?

56. What is the average pay upon which the pension is based?

57. What is the proportion at the time of retirement of unmarried, married, married with children, widowers, widowers with children?

58. What is the average age at which employees are married?

59. How many years do the employees in general pass in service from their marriage to their retirement?

60. What is the average age of wives of employees at the time the husbands retire?

61. What is the average number and age of minor children of each employee at the time of retiring on pension?

62. What are the differences that you have been able to observe in the experience of your company between the mortality of employees before retirement upon pension and that which would result from the following tables of mortality, viz.

Depareleux's table, table of the German Railway Union, table issued by the Snilor's Fund of France?

63. The same question respecting the mortality noted among those pensioned by the age limit and that shown by the tables

Same question in remotality among those prematurely pensioned by reason of disability

#### *Holland Railroad.*

Sedentary service, \$425  
Active service, \$305.

#### *Gothard Railroad*

Sedentary, \$486 66  
Active, \$360 06

This question was not generally answered by the companies represented at the International Congress. The reply of the Eastern French Railroad is the only one approaching the purpose of this query, and it was as follows:

Line of business	Average salary
Chief engineer	\$3,413 59
Engineers . . . . .	1,956 41
Chief of clerks . . . . .	1,069 28
Assistant clerks . . . . .	274 76
Employees . . . . .	421 97
Mechanics . . . . .	418 88
Conductors . . . . .	293 33
Brakemen . . . . .	211 70

The amounts are the same as exhibited in the answer to question No. 54 heretofore, relative to the average pay received at the time of retirement.

This question was not generally answered at the Congress. The data from a representative French and Italian company will afford light on the subject, however.

#### *Eastern French Railroad*

Unmarried, 3.39 per cent  
Married without children, 59.78 per cent  
Widowers without children, 8.67 per cent  
Widowers with children, 1.81 per cent  
Married with children, 26.35 per cent  
(Children under 18 years is meant.)

#### *Meridional Railroad*

Unmarried and widowers without children, 14 per cent  
Married without children, 35 per cent  
Married with children, 45 per cent  
Widowers with children, 6 per cent  
(Minor children is meant.)

This question was not generally answered at the congress, but the five companies making replies name ages ranging from 26 to 30 years, which would warrant the assumption of 28 years as the average.

This question was answered by only three companies, whose replies indicate an average of 26 years.

With the French companies, about 52 years, and also with the Italian companies. The other companies did not generally answer the question.

Not generally answered. The replies of three companies show averages of 5, 8, and 12 years, respectively.

The companies represented at the congress did not, for the most part, answer this and the following question. By way of elucidation, the answer of the Paris-Lyons-Mediterranean Railroad (by whom the questions were discussed more fully than by any other company represented) may be aptly submitted. It was substantially as follows, viz.

The study of the mortality of the pensioners rests upon the following considerations:

The retirement of an agent depends, for the most part, on the state of his health or his hardships. An agent retired at 60 years is subject in his sixtieth year to a more rapid mortality than he who before the same age had been in possession of his pension for several years and passed over the period which supervenes for the liquidation of the pension. It is in this way that we have at the same age different rates of mortality for two kinds of pensioners. This specification of particulars, and also the irregularities brought about by the anticipated retirements, which are liquidated quickly during the first years, naturally brings us to a law of redemption of distinct promotions, according to the age at the cessation of duties. At this critical period a surer data can be established, as the mortality follows more regularly

and the construction of a table of life annuities is made by decreasing ages, the calculation only becomes complicated in the approximate ages for retirement, which would not perceptibly increase the work. In this case, the positions being filled by a certain number of employees, only those who are robust are selected, and, consequently, the mortality of the retired men can not be governed by a general demographic law. Experience shows us thus more rapidly than *Département's* table. Obligated to confine ourselves to observations made on the staff of the branch railroads, we can give the result of our inspection made on the first group of our pensioners. If we prolong the table of survivors according to the *pereux* (this is possible, because the group of pensioners noted have passed the average period of 18 years, and have occupied the aforesaid anomalies), we obtain the probable number of pensions which remain to be granted. In combining this amount with that of the life annuities, we estimate that the average life of our first group is about 14 years.

To legitimize the application of *Département's* law and determine the import of the error committed, we apply for each age the annual rate of *Département's* mortality and calculate the average rate by means of the result of these tables. The rate we find is about 7 per cent, which is inferior to the effective rate of the mortality already observed, and we calculate that the average life is somewhat greater. Under these conditions the average life of our first group does not seem to exceed 15 years, the average life at the time of retirement resulting from the table would be between 14 and 17 years. The comparison of the laws of mortality is made by these sums, and without pretending to establish a fixed law with such a restrained observation, we call to mind that this result has been confirmed by other investigations on the pensions granted by large companies.

#### *Western French Railroad*

The number of resignations depends, among other reasons, upon the difficulties, great or small, that the employees leaving the company find in establishing themselves elsewhere. These conditions vary according to the more or less prosperous state of the trades, and commercial, and industrial affairs. A statement summarizing the situation for 1888 and 1889, showed that the dismissed employees who had remained from 1 to 5 years in the service gave a proportionate total of 16.65 per 1,000 in 1881, and 8.75 per 1,000 in 1889.

#### *Southern French Railroad*

Deceased, 127 at 42 years.  
Discharged, 41 at 30 years.  
Passed over, 131 at 28 years.  
Retired, 212 at 29 years.  
Pensions applied for, 93 at 17 years.  
Regular pensions, 393.  
Total, 1,000.

The other companies represented at the Congress did not generally answer the question.

The answer to subqueries (c) and (d) will appear under question No. 50 hereof.

#### *Western French Railroad*

Out of 521 employees retired in 1888 and 1889 there were 510 married (55 being widowers) and 11 bachelors, showing a total of 1,000 retired in the following proportions: 979 married or widowers, 21 bachelors.

#### *Southern French Railroad*

##### *Sixty per cent*

The question was not generally answered.

The above exhibition will serve all practical purposes, as it is representative of statistics on the point discussed.

Where answers were made to this question, they were, for the most part, general, and the consensus of expression is that the pension fund possesses advantages that outweigh any drawbacks that may exist.

61. What is the probable fate of employees entering the service—that is, among 1,000 servants entering the service?

(a) How many, and at what age, are dismissed?  
(b) How many give in their resignation, and at what average age?

(c) How many, and at what average age, retire on pension by reason of sickness or infirmity?

(d) Finally, how many attain the normal age for retirement?

65. As a detail of the previous question, how many retired agents were married or single?

66. Has the management any observations to make on the advantages or inconveniences of pension funds as they are constituted in their respective companies?

67 If the company or the management is not bound by the aforesaid principles or agreements, what answer would it give to the following questions?

(a) Ought the membership of a pension fund to be obligatory or optional?

(b) Should there be one common fund or two funds, of which one would be applied specially to those in the active service, such as engine-men, stokers, guards, etc., whose professional risk is higher?

(c) Ought a pension fund to be managed solely by the management of the company, or by it in company with delegates from among the beneficiaries?

(d) Should the engagement of the company to pay the deductions from pay be absolute or relative and proportional to the resources of the fund?

(e) Should the deductions from pay which support the fund be fixed, or ought the age of the beneficiary to be a factor variable with the value of the undertaking by the fund?

(f) Ought the rate of the pension to be a function of the age of the beneficiary and of the time passed by him in the service of the company, or ought the amount of the assessments paid by each beneficiary appear as a factor?

(g) Should the principal aim of the fund be the establishment of a life pension, which the beneficiaries who arrive at retiring age or are permanently disabled should enjoy, or should the aim be a saving to be realized by each beneficiary of a capital fund which he might dispose of in the form of an income from capital, of which he would have free use upon retirement and to descend to his heirs?

(h) In fund analysis, is it considered that the retirement is for the employee a right implying with it the obligation of contributing to the formation of a whole in devoting to it a portion of his salary, and in submitting himself to rules and to inequalities of advantages, which the application of the rules imply, or do the deductions constitute for the employee a provocative of savings which he will find accumulated at the end of his term of office as a capital liberally increased by the subsidies of the management thereto?

#### Obligatory

Generally, one common fund

The practice varies, although the general trend of expression is in favor of joint management—by the company and the beneficiaries

This engagement upon the part of the company should, according to some of the companies at the congress, be proportionate to fund resources, while with others it is absolutely binding

Life-insurance principles obtain on one or two roads. The consensus of expression is for a fixed retention which has for a basis the salary of the beneficiary

Generally the amount of deposits in the fund by the beneficiary is most favored for this function. Age and years of service also obtain in this connection

Generally, yes

The capital-fund feature has been disposed of in another part of this paper, where it is shown that it is not generally countenanced

Generally it is viewed in the light of a right. A pension, properly speaking, is a recompense for past and faithful service. This recompense becomes a right for those who have conformed to the regular conditions, and it is all the more a right when the feature of obligatory membership and contribution is considered

### B. WESTERN RAILROAD COMPANY OF FRANCE.

#### *Fund for retirement—Operations during the year 1894*

##### PARTICIPATING STAFF.

Total number of agents participating in the new fund for retirement to December 31, 1893 . . . . . 27,584

In 1894

Number of agents, as aforesaid, has increased to . . . . . 1,867

Number leaving has been . . . . . 1,142

Difference in increase . . . . . 725

The number of agents participating in the retiring fund to December 31, 1894, was . . . . . 28,309

#### *Receipts and expenses.*

##### RECEIPTS.

Endowment of the company . . . . .	\$732,262.63
Amount from fines . . . . .	1,002.22
Personal revenue . . . . .	335,611.37
Real-estate revenue . . . . .	40,899.03
Various . . . . .	3,060.01
	<hr/>
	1,112,835.26

##### EXPENSES.

Pensions granted by the fund . . . . .	\$552,626.31
Various . . . . .	3,194.25
	<hr/>
	555,820.56
	<hr/>
	557,014.70

*Pensions liquidated during the year.*

From January 1 to December 31, 1894, 696, of which 378 were for agents, 267 for widows, and 51 for orphans under the age of 18.

The 378 pensions liquidated for agents amounted to \$74,020.20, of which \$47,146 was paid by the retiring fund and \$26,874.20 by the superannuation fund.

The average for each agent is therefore \$195.40, of which \$124.40 is paid by the retiring fund of the company and \$71 by the superannuation fund (including, in case of marriage, the wife's pension) formed by the deposits of the retentions on the agents.

The average salary per agent for the last 6 years has been \$375.30, the age of these agents is 56 years 7 months, and the average years of service 28 years 2 months.

The 267 pensions liquidated for the widows amounted to \$21,622.20, of which the retiring fund paid \$15,151.40 and the superannuation fund \$6,470.30.

The average for each widow is \$81, of which \$56.40 is paid by the retiring fund and \$24.60 by the superannuation fund formed by the deposits of the husbands' retentions.

The 51 pensions liquidated for the orphans under 18 years of age amounted to \$1,811.40, the average for each being \$35.30.

The number of redeemed pensions of the retiring fund of the company known during the same period was 310, namely

205 pensions for agents, amounting to	\$37,428.30
73 pensions for widows, amounting to	4,669.40
32 pensions for orphans under 18, amounting to	823.10

*Recapitulation.*—The fluctuation of the pensions, upon inspection, is as follows:

	Pensions in progress to the end of 1893	Pensions liquidated in 1894	Pensions expiring in 1894	Pensions in progress to the end of 1894

Realty .....	1,269,112.26
Money in the fund or temporarily invested .....	12,470.63
Total .....	9,380,379.14

For the further information of your committee, there will next be introduced excerpts from pension and superannuation features obtaining with railway companies that were not actively represented in the said International Railway Congress at St. Petersburg, in the consideration of the questions submitted under Exhibit A, hereof. This abstracted data, derived from authoritative sources, will be exhibited as follows, viz, first, for the Jura-Simplon Company, marked "C;" second, for the German imperial insurance department, marked "D," and finally, for the English railways, marked "E."

Within the exhibits referred to in the preceding paragraph will be found a veritable compendium of pension features in vogue with European railways. This condensed information, "boiled down" from voluminous compilation, embodies the nucleus of material expression with respect to the various ramifications of the subject treated, only that measure of amplitude of comment being employed as was manifestly consonant with clear and proper presentation.

The earliest pension institution, per Exhibit A of this report, was cradled in continental Europe, in connection with the Belgian State railroads, and it was entitled "Fund for widows and orphans," created January 1, 1845. From this date each succeeding decade marked the birth and establishment of pension institutions throughout Europe generally.

By royal edict issued May 30, 1888, the railway companies of Russia were obliged to form a pension and saving fund for their employees.

The sick-insurance law was the first social-political enactment of the German Empire, and it became effective June 15, 1883. By a supplementary measure, effective January 1, 1893, this sick law was brought into harmony with the other insurance laws against accident, invalidity, and old age. The first accident insurance law, of July 6, 1884, dealt chiefly with industrial enterprises, but served as the foundation for later measures with a wider range. By the law of May 28, 1885, on the extension of the accident and sickness insurance, these laws were made to include the institutions of the inland carrying traffic by land and water, embracing the administration of the post, the telegraph, the railway, the army, and the navy. The invalidity and old-age insurance law was enacted June 22, 1889. This national insurance is compulsory for all wage-workers (professional workmen and laborers on wages), who numbered 12,500,000 in 1892 out of a total State population of 50,000,000.

The next ensuing observations regarding the invalidity and old-age insurance feature of the German imperial insurance department were taken from a compilation by Dr. Zacher, permanent member of the department named, issued in 1893. They will also serve to elucidate the abstracted information bearing upon this feature contained in Exhibit D hereof.

The carrying out of this insurance is intrusted, under state guaranty, to special insurance institutions, whose districts coincide with the communal or State divisions. Every insurance institution possesses the character of a legal person, and is managed on the basis of a statute drawn up by the managing "committee." This committee is composed of at least 5 representatives of both employers and insured (chosen by the directing boards of the sick-relief clubs and similarly constituted bodies). So far as certain prerogatives are not reserved to the committee by law or by statute, the administration is placed in the hands of the "directing board" (composed of communal or State officials), which is invested with the character of a public authority; but it may be determined by statute that besides these officials other persons, particularly representatives of the employers and the insured, may be members of the directing board. Should this, however, not be the case, a "supervising council" may, and in all other cases must, be elected, in which the representatives of both employers and employed take an equal share. This council has the supervision of the directing board and is required to attend to the other business which the statute may prescribe. As local representatives of the insurance institutions, "confidential agents" will be chosen from among the employers and the insured.

## C. JURA-SIMPLON COMPANY PENSION FUND.

1. This fund was established in 1890 by the consolidation of the provident and mutual relief fund of the Swiss-Occidental-Simplon Company and the relief and pension fund of the Jura-Berne-Luzerne Company into the general pension fund of the Jura-Simplon Company.

2. Comparative contributions to the funds of the Swiss companies are shown in the following table:

Pension fund	Contributions in per cent of salary	Paid by	
		Members	Company
Central	9	4	5
Gothard	9	3	6
Jura-Simplon (temporary)	8	4	4
Jura-Simplon (proposed)	8	4	14
Nord-Est	10	5	5
Union Suisse (temporary)	9	14	14
Emmenthal	8	4	4
Lac des Quatre Cantons	9	4	6

3. The Jura-Simplon Company makes the basis figure \$600 (3,000 francs), believing that amount to be more generally representative of membership salaries.

4. Entrance fee of a new member is fixed at 4 per cent of his salary, to be deducted, regardless of age, for the first 4 months.

5. When the salary does not exceed \$600 and an increase occurs, one-half the plus difference between the first month of the increased salary and the last month of the old salary reverts to the fund for six months.

6. The fund does not assume the expense of accidents occurring to its members in the performance of their duties, when said accidents are of such nature that the company may be held accountable therefor.

7. By statutory provision the prescribed pension allowance is from 20 to 70 per cent of the annual salaries after 9 years' service.

8. Every member being at least 55 years of age, and who has been 25 years in the company's service, may demand retirement; and the management may, in such case, arbitrarily retire a member.

9. In case of permanent incapacity the management may also retire a member under 55 years of age and with less than 25 years' service.

10. The company fixes the reimbursement upon leaving the service at 60 per cent of the regular contributions, without interest, and without deduction of reliefs received.

11. Following table, based on a maximum salary of \$600, and an increased percentage indemnity, shows the status of the company.

Will have paid to fund	Receive per Jura-Simplon regulations
First year of service, 4 per cent	\$25 20 per cent salary, \$30
Second year of service, 4 per cent	48 40 per cent salary, \$240
Third year of service, 4 per cent	72 60 per cent salary, \$360
Fourth year of service, 4 per cent	96 80 per cent salary, \$480
Fifth year of service, 4 per cent	120 100 per cent salary, \$600
	Payable indemnity
Sixth year of service, 4 per cent	144 120 per cent salary, \$720
Seventh year of service, 4 per cent	168 140 per cent salary, \$840
Eighth year of service, 4 per cent	192 160 per cent salary, \$960
Ninth year of service, 4 per cent	216 180 per cent salary, \$1,200

## D. GERMAN EMPIRE—INVALIDITY AND OLD-AGE PENSION FEATURES.

1. Object of the insurance is to give the insured a legal claim to pension for invalidity or old age.

2. Invalidity pension will be granted, regardless of age, to every insured person who is permanently disabled (no longer able to earn one-third of his average

wages), also to persons not permanently disabled, but who have been for an entire year unfit for work during disability.

3. Contributory year consists of 47 contributory weeks, which, however, may belong to different calendar years.

4. As a minimum, contributions must have been paid in 5 by 47, or 235 weeks in all, before becoming entitled to claim upon the fund.

5. Old-age pension will be granted, without proof of disability, to all who have completed their seventieth year; waiting time is 30 contributory years, or 30 by 47 or 1,410 weeks' contributions must have been paid before entering upon enjoyment of the pension.

6. Money to pay invalidity and old-age pensions is furnished jointly by the Empire, the employers, and the employees.

7. Empire contributes to each annuity the fixed amount of 50 marks (\$12.50) per annum; it also defrays the expense of the imperial insurance department.

8. Contributions are paid for each calendar week in which the insured remains in an employment or service subject to the insurance.

9. Collection of contributions may be committed to sick-relief clubs, local authorities, or to special receiving offices.

10. For the purpose of fixing contributions for each contributory period, the insured are divided into four wage classes, according to their yearly earnings:

Class 1, up to 350 marks (\$87.50).

Class 2, up to 550 marks (\$137.50).

Class 3, up to 850 marks (\$212.50).

Class 4, above 850 marks.

11. For first contributory period of 10 years the following weekly contributions have been fixed by law on the basis of insurance statistics:

Class 1, 14 pfennigs (3½ cents).

Class 2, 20 pfennigs (5 cents).

Class 3, 24 pfennigs (6 cents).

Class 4, 30 pfennigs (7½ cents).

12. As to amount of annuities, the old-age pension is made up of the above-mentioned State subsidy of 50 marks and an increased rate for each contributory week, as follows:

Class 1, 4 pfennigs (1 cent).

Class 2, 6 pfennigs (1½ cents).

Class 3, 8 pfennigs (2 cents).

Class 4, 10 pfennigs (2½ cents).

Hence the old-age annuity amounts to

Class 1, 106.80 marks (\$26.70).

Class 2, 135 marks (\$33.75).

Class 3, 163.20 marks (\$40.80).

Class 4, 191.40 marks (\$47.82).

13. Invalidity pension consists of State subsidy of 50 marks, and a fixed amount of 60 marks (\$15), increased for each contributory week:

Class 1, by 2 pfennigs (one-half cent).

Class 2, by 6 pfennigs (1½ cents).

Class 3, by 8 pfennigs (2 cents).

Class 4, by 13 pfennigs (3¼ cents).

14. Height of invalidity therefore depends on number of weekly contributions paid in, and on the respective wage class; after the first 5 contributory years it amounts to, in—

Class 1, 115.20 marks (\$28.80).

Class 2, 124.20 marks (\$31.05).

Class 3, 131.40 marks (\$32.85).

Class 4, 141 marks (\$35.25).

And after a lapse of 50 contributory years:

Class 1, to 157.50 marks (\$39.38).

Class 2, to 251.40 marks (\$62.85).

Class 3, to 321.60 marks (\$80.40).

Class 4, to 415.80 marks (\$103.95).

Or in the fiftieth calendar year:

Class 1, to 162 marks (\$40.50).

Class 2, to 266.40 marks (\$66.60).

Class 3, to 344.40 marks (\$86.10).

Class 4, to 448.20 marks (\$112.05).

15. Pensions are paid monthly in advance and can not be pawned or sequestered.

**E. ENGLISH RAILWAY SUPERANNUATION AND PENSION FUNDS.**

Under this caption will be briefly presented the salient features of said funds as operated in connection with the following railway companies located in England, viz:

1. London and Northwestern Railway Company.
2. London and Southwestern Railway Company.
3. London, Brighton and South Coast Railway Company.
4. Great Eastern Railway Company.
5. Great Western Railway Company.
6. Midland Railway Company.

**LONDON AND NORTHWESTERN RAILWAY COMPANY—SUPERANNUATION FUND.**

1. The fund was established March 31, 1853.
  2. Membership consists of salaried officers.
  3. "Salaried officer" means officer or servant of the company remunerated by an annual salary in contradistinction to weekly wages or any other form of remuneration than an annual salary.
  4. Contribution by members is 24 per cent on their actual salaries.
  5. Company contributes a sum equal to the payments of the contributing members.
  6. Ages of admission to service: Minimum, 20 years; maximum, 40 years.
  7. Retirement at 65 years of age with 10 years' membership.
- The superannuation allowance is, for 10 and not over 17 years, three-twelfths of average salary for that time; 17 and not over 24 years, four-twelfths of average salary for that time; 24 and not over 31 years, five-twelfths of average salary for that time; 31 and not over 38 years, six-twelfths of average salary for that time; 38 and not over 45 years, seven-twelfths of average salary for that time.
- Persons under 65 years of age, who shall have been contributing members for 10 years or upward, shall, provided they are incapacitated by infirmity of body or mind (not the result of their own misconduct) from performing their usual duties, be entitled to superannuation on the above scale.

Retirement at 60 years of age with 10 years' membership affords 25 per cent of average salary; 11 years' membership, 26 per cent; 15 years' membership, 30 per cent; 20 years' membership, 37 per cent; 25 years' membership, 43 per cent; 30 years' membership, 48 per cent; 35 years' membership, 51 per cent; 40 years' membership, 61 per cent; 45 years and upward, 67 per cent.

Bona fide incapacitation, duly certified to, although the invalid or disabled person is under 60 years of age, provided he has been a contributor for 10 years, entitled to 25 per cent of annual salary for superannuation.

Lump sum, not to exceed 5 years' payments of the annual allowance to which the member is entitled, may be made in lieu of superannuation payments.

Employees leaving service because of reductions or alterations in the establishment, receive back the whole of their contributions.

Members resigning of their own accord receive back one-half of their own contributions.

Dismissal from service for fraud or dishonesty results in forfeiture of contributions and benefits in the fund, at the discretion of the committee.

Contributions are deducted pro rata.

Association is managed by a committee, three members of which are named by the board of directors and three by the contributing members.

Participation is obligatory.

**LONDON AND NORTHWESTERN RAILWAY COMPANY—PROVIDENT AND PENSION SOCIETY.**

1. Established as a combined society January 1, 1889.
2. Embraces members receiving weekly wages.
3. Participation obligatory.
4. Minimum admission age, 18 years, maximum admission age, 45 years.
5. Incapacitation before attaining 60 years of age, after 20 years' contribution, entitles to half pension.
6. Retirement at 65 years of age, with 25 years' membership—2 classes: (1) Pays 4 cents a week and gets weekly pension of \$2.50; (2) pays 2 cents a week and gets weekly pension of \$1.75.

7. Upon incapacitation of members between 60 and 65 years the fund extends to them the pension provided for members retiring at 65 years with 25 years' membership.

8. Company's contribution must not exceed \$15,000 per annum.

Addendum: From the "Report and state of accounts of December 31, 1894," it appears that the number of members contributing for pension benefits on that date (and reference is now made to the Provident and Pension Society of the company) was

At corresponding date in 1893.....	30,769
At corresponding date in 1894.....	29,846

Increase .....	923
----------------	-----

Number of members pensioned to December 31, 1893.....	171
Pensioned during 1894.....	84

Number of pensioners deceased or pensions commuted.....	255
	43

Number in receipt of pension December 31, 1894 .....	212
--	-----

#### LONDON AND NORTHWESTERN RAILWAY COMPANY.—LOCOMOTIVE DEPARTMENT PENSION FUND.

1. The members were such as were engaged at weekly wages in the locomotive department of the company, excepting members transferred to the salary list who were over 40 years of age, or were otherwise ineligible for the officers superannuation fund, and who were allowed to remain members of this fund if they so elected.

2. Objects of the fund:

(a) To provide pensions for its members, qualified by age or circumstances, on retiring from the service.

(b) To grant annuities to its members retiring from the service through lengthened sickness or permanent incapacity for attending to duties, before pension could be claimed under the rules.

(c) To provide for those of its members who at the time of the establishment of the fund were 55 years of age and upward, a gratuity on retirement from the service, or the payment of a sum to their representatives in the event of death occurring while such members were in the service.

3. There were four distinct divisions of the fund:

(a) *Foremen's division*.—Entitled to claim a pension on retiring from the service after attaining 60 years of age and had contributed 4 shillings 6 pence per month in advance.

(b) *Running division*.—Eighteen years of age and upward, who were entitled to claim a pension upon retiring at 60 years of age, and of whom there were 2 classes:

First class. Persons rated at 4 shillings per day and upward who had contributed 2 shillings 2 pence per month in advance.

Second class. Persons rated at 4 shillings per day who had contributed 1 shilling 6 pence per month in advance.

(c) *Workshop division*.—Included all classes of weekly servants and workmen not specifically mentioned for the foremen's, running, or aged men's divisions. They were entitled to claim a pension upon retirement from service after reaching 65 years. They were in 2 classes, viz:

First. Rated at 25 shillings per week and upward and had contributed 1 shilling 5 pence per month in advance.

Second. Under 25 shillings, contributed 1 shilling per month.

(d) *Aged men's division*.—Was to be a temporary division, composed of all persons who at the time of the fund's establishment were 55 years or more of age, and should pay back to the age of 40, or, if they were not in the service at that time, then to the age at which they joined the service, the premiums specified for members of the 3 other divisions, according to their positions in the service, to secure a gratuity on retirement or an allowance at death.

4. Company contributed to the fund a sum equal to 9 pence per month for every foreman enrolled, and 44 pence per month for every other member, irrespective of class or division, but not less than £2,500 in the aggregate. The company's contribution was not to exceed £4,000 per annum.

5. A member after reaching the qualifying age of his division, and on retiring from the service, claimed a pension in accordance with the following scale, viz:

## FOREMEN'S DIVISION.

Membership when under 25 years of age, 25 shillings a week.  
 Membership between 25 and 30 years of age, 23 shillings a week.  
 Membership between 30 and 35 years of age, 20 shillings a week.

## RUNNING DIVISION.

Divided into two classes, which, for the three stages above named under foremen's division, were:

	First class, per week	Second class, per week
	<i>s</i> <i>d</i>	<i>s</i> <i>d</i>
Under 25 years of age	13 0	9 0
Between 25 and 30 years of age	11 0	8 0
Between 30 and 35 years of age	10 0	7 0

## WORKSHOP DIVISION.

	First class, per week	Second class, per week
	<i>s</i> <i>d</i>	<i>s</i> <i>d</i>
Joining under 25 years	13 0	9 0
Joining between 25 and 30	12 0	8 0
Joining between 30 and 35	11 0	7 8
Joining between 35 and 40	10 0	7 0

6. Incapacity (except for member of old-age division) at any time within 25 years of joining the fund, and after 6 months' absence from duty entitled such member to receive back the whole of his payments to the fund, also payments made by the company on his behalf, as a retiring gratuity, either in one sum or by weekly installments as he may elect.

7. After 25 years' membership (except in old-age division) incapacitation entitled to a pension equal to such proportion as they would have been entitled to at 60 or 65 years of age, respectively, as their membership bears in completed years to the number of years they would have contributed as members had they continued to work to the age at which they could have properly claimed a pension.

8. Permanent disablement, under 25 years, entitled to refund of their own contributions and those of the company made on their behalf (except in old age division); retirement for the same cause after 25 years' service entitled to a pension equal to such proportion of the amount they would have been entitled to at 60 or 65 years, as their length of membership bore in completed years to the number of years they would have contributed as members had not disablement taken place and they had continued to work until regularly entitled to claim a pension.

9. Members entitled to a pension had the option of accepting either the regular allowance or a lump sum in lieu thereof.

10. Prohibitive age for admission to running division, 35 years.

Prohibitive age for admission to workshop division, 40 years.

NOTE.—This fund was dissolved by a vote of the members in 1889.

## LONDON AND SOUTHWESTERN RAILWAY COMPANY.

This company has both a superannuation and a pension fund, which possess the same attributes as to operation as have been ascribed to the same funds in connection with the London and Northwestern Railway.

The superannuation fund was formed May 1, 1864.

The following data was secured from the fund's report for the year ended June 30, 1894, viz:

Income	\$83,740
Expenditures	14,795
	----- \$68,945
1893:	
Income	70,215
Expenditures	15,990
	----- 54,225
Total	14,720

# 964 THE INDUSTRIAL COMMISSION:—RAILWAY LABOR.

1894:		
Contributing members . . . . .	\$1,330	
Annuityants . . . . .	48	
		1,378
1893:		
Contributing members . . . . .	1,234	
Annuityants . . . . .	48	
		1,282
Increase of membership, 1894 . . . . .		96

By means of the two funds, superannuation and pension, each officer and clerk is placed in position to receive at 60 years of age, with not less than 40 years' service, a retiring allowance not exceeding 75 per cent of his average salary during the whole of his service, and at 65 years, with not less than 40 years' service, a retiring allowance not exceeding the full amount of said average salary during such service, intermediate ages and lesser periods of service being provided for upon a proportionate scale of allowances.

## LONDON, BRIGHTON AND SOUTH COAST RAILWAY

### SUPERANNUATION FUND

1. Membership consists of all principal officers, their assistants and clerks, station masters, booking clerks, ticket collectors, guards, policemen, signalmen, pointsmen, permanent-way superintendents, inspectors and timekeepers, locomotive and carriage foremen, and engine drivers, whose age, upon admission to the company's service, does not exceed 40 years.

2. Participation is compulsory.

3. Where a member is required to leave the service, save for fraud and dishonesty, he receives back his payments to the fund, with interest at the rate of 4 per cent per annum.

4. Dismissal for misconduct only, not involving dishonesty, entitles member to receive the amount of his contributions only, without interest.

5. Dismissal for fraud or dishonesty entails loss of fund benefits.

6. Voluntary resignation, under honorable conditions, entitles to refund of payments to the fund, without interest.

7. Retirement at 60 years of age, after 10 years' contribution, 25 per cent of average salary; 15 years' contribution, 30 per cent of average salary, and so on, at the rate of 1 per cent increase per year, until after 35 years' subscription a member would (being 60 years of age) be entitled to receive, as the maximum superannuation, 50 per cent of his average salary while contributing to the fund.

8. Officers and servants in the service at the time of this fund's establishment, and who had remained in it uninterruptedly for more than 10 years, were, upon joining the fund, entitled to an extra superannuation allowance on the following scale, viz:

Ten to fifteen years of past service, additional superannuation of 2½ per cent on average salary; 15 to 20 years, 5 per cent; 20 to 25 years, 7½ per cent; 25 years and upward, 10 per cent. This additional allowance was chargeable to the company's benevolent fund.

9. Contributory features correspond with those obtaining with like funds on the other English railways.

10. Sole management and direction is vested in the directors.

## GREAT EASTERN RAILWAY COMPANY.

### SUPERANNUATION FUND.

This fund was formed in 1878. It is operated on lines correspondent with those of like funds with the other English railway companies.

### PENSION FUND.

The pension fund of this company does not differ materially from other similar English railway funds.

## GREAT WESTERN RAILWAY COMPANY.

## SUPERANNUATION FUND.

This fund moves on the principles common to similar funds with other English railways. A few features may be mentioned by way of emphasis:

1. Salaried officers and clerks under 40 years of age must join, and continue as members during their continuance in the company's service.
2. When 40 years or over, and under 60, admission may be effected by making back payments to the regulation admission age.
3. Membership contribution, 2½ per cent.
4. Company contributes like amount.
5. Retirement from service after reaching 60 gives, by way of superannuation, an allowance for the remainder of life for every year of membership, equal to one-fiftieth of maximum salary during that period, not, however, to exceed two-thirds of such maximum salary.

## SERVANTS' PENSION FUND.

Entrance fee is 6 cents a week, and such extraordinary amounts as the company may order.

Company gives an amount equal to the ordinary contributions of the members.

Pension at 55 years of age, after 30 years' membership, \$2.50 per week, with 25 cents added for each 5 years over 30.

## ENGINEERS AND FIREMEN'S SICK AND SUPERANNUATION FUND.

Entrance fee ranges from \$5 to \$10, according to age, payable in installments within 26 weeks. The dues are, First class, 37 cents per week, second class, 25 cents per week.

	First class.	Second class.
Death or permanent disability, or retiring at 60.	\$400.00	\$300.00
Superannuation at 60, per week for life.	3.00	1.87

## MIDLAND RAILWAY COMPANY.

## SUPERANNUATION FUND.

This fund was established in February, 1870.

Next below is statement taken from report for year ended January 31, 1894, showing number of contributing members and superannuated members, and those that joined, left, or died during the year.

	Contributing members	Superannuated members
Number of members on Feb. 1, 1893	9,867	84
Entered under 28 years of age and retired at 60	325	
Entered over 28 years of age and retired at 60	33	
	6,225	
Less died during year	37	7
Less left during year	108	
	145	
	6,080	77
Superannuated during year (1 being under 60)	611	614
Superannuation commuted by single payment in each case (both under 60)	2	
Number of members on Jan. 31, 1894.	6,664	91
	a Less	b More

From the time when members were entitled to claim superannuation (February 1, 1880), the average age at time of superannuation of the 102 members who were, when superannuated, over 60, was 66½ years; and of 52 (including 7 whose pensions were commuted), who were at the time of superannuation under 60, was 46½ years.

The Friendly Society of this company has a superannuation feature, and paid on that account in 1894, £2,005 10s.

## F. CONCLUSION.

The table next subjoined will show the extent of governmental ownership of railways in the leading States of Europe, as well as private ownership in the same relation:

State	Total mileage	Mileage owned by State	Mileage owned by private companies
Austria-Hungary...	17,619	7,041	10,575
Belgium .....	2,810	2,018	792
Canada .....	11,588	1,459	13,129
Denmark .....	1,289	992	297
Egypt .....	1,225	1,225	...
France .....	21,618	13,652	17,966
Germany .....	26,971	23,848	3,123
Great Britain and Ireland...	20,325	...	20,325
Holland .....	1,630	873	757
Italy .....	8,106	5,272	2,834
Norway .....	971	929	42
Portugal .....	1,344	565	829
Russia .....	19,640	8,663	11,637
Spain .....	6,708	...	6,708
Sweden .....	5,254	1,770	3,484
Switzerland .....	2,082	...	2,082
Turkey (Europe) .....	901	...	901

The above mileage is based on statistics collated in the years 1891, 1892, and 1893.

It may be remarked that in Colombia, Great Britain and Ireland, Mexico, Paraguay, Peru, Spain, Switzerland, Turkey, United States, and Uruguay governmental ownership and operation do not obtain. In Egypt and Nicaragua the governments own and operate practically all their railways. In the following States governmental ownership and operation are partial, viz: Argentina, Australasia, Austria-Hungary, Belgium, Brazil, Canada, Cape of Good Hope, Chile, Denmark, France, Germany, Guatemala, India, Japan, Norway, Portugal, Russia, and Sweden. In the following States the governments own part of the railways, but do not operate any, leasing all the mileage to private companies, viz: Greece, Holland, and Italy.

Adams, in *The Railroad Problem*, observes: "On the one side \* \* \* are the systems of the English-speaking race, based upon private enterprise and left for their regulation to the principles of \* \* \* the laws of competition and of supply and demand. On the other side \* \* \* are the systems of continental Europe, in the creation of which the State assumed the initiative, and over which it exercises constant and watchful supervision."

An examination of the foregoing statements relating to the practice of foreign railways will show, among other things, that in the principle underlying the foundation of foreign railway pension funds there is unmistakable homogeneity. On the other hand, there will be found manifest dissimilarity in the elements that enter into their composition and *modus operandi*. The latter condition is mainly brought about by governmental management and control of railways in some of the States, the sumptuary laws of these States differing and thus creating varied managerial and economic bases.

In the face of this array of accumulated information on the subject we feel constrained to regretfully state that, owing to the distinctive and autonomous characteristics of the contemplated pension auxiliary for the employees of the Pennsylvania Railroad Company, it would be impracticable to assimilate for its establishment and administration the ascertained practices of existing railway pension institutions. It is therefore suggested that your committee will find it advantageous and expedient, if not absolutely necessary, to work in the future, as in the past, upon lines mainly and directly influenced by company requirements and relief department conditions. In a word, while the spirit of foreign practice in this relation reflects material for general discussion and action, the literal attributes of this practice must be rejected as being incompatible for and inapplicable to requirements for said auxiliary organization.

Having paved the way for your committee's intelligent conception of foreign procedure with respect to superannuating and pensioning railway employees, it will now be appropriate to make some comments upon the characteristics that

will be part of or incident to the contemplated pension fund for our company's employees.

The terms superannuation and pension are, in popular acceptance, one and the same as to effect. They do produce, it must be admitted, a similar result, i. e., a pension. There is, however, this difference in practice between the two, namely: Superannuation, abstractly speaking, implies advanced age, the age so referred to being, in fact, such as precludes either further or effective service by the employee thus classified; again, superannuation is applied abroad to the staff and employees of the higher grades. The simple pension feature, as such, as embodied in all foreign railway pension institutions, embraces the so-called working classes.

Superannuation, therefore, is the desideratum with the contemplated auxiliary fund. But the idea comprehends superannuation in its broadest sense and most liberal application; it eliminates all lines of distinction between employees, and will, in its administration, take in all employees, from the highest to the lowest grade.

#### G. ORGANIZATION AND PLAN OF THE PENSION DEPARTMENT OF THE PENNSYLVANIA RAILROAD COMPANY.

After the presentation of this report to the advisory committee of the relief department at their meeting, held February 12, 1896, statistics were obtained showing what would be the probable financial results to the different relief funds if the plans of superannuation were carried out, based on different percentages of the wages earned by employees and their contributions account of membership in the relief fund. This action culminated in a plan being submitted to the president of the company which he presented at a meeting of the board of directors, held on the 1st day of May, 1896, when the subject of a superannuation fund was referred to a special committee of the board of directors for examination and report. At a meeting of this special committee, held May 25, 1896, the plan for retiring employees, members of the relief fund, and placing them on a superannuation list was considered, which, with the probable financial results to the different relief funds, was referred to the president of the company, who expressed himself as being satisfied as far as the members of the relief fund were concerned, but suggested that inasmuch as he had to meet the question from a broader standpoint, he would like to take the matter up after similar statistical information in regard to all employees in the system had been prepared.

Accordingly data as to date of birth and age of each employee, length of service, rate of pay, etc., were obtained from the various departments, and information as to the cost of pensioning all employees at certain ages over 55 years, on a basis similar to that recommended for the relief-fund members, was submitted to the special committee under date of January 18, 1897, with the recommendation that inasmuch as the interest on the moneys set aside by the relief funds for superannuation purposes would not be a sufficiently large fund upon which a satisfactory basis for granting an allowance to a superannuated employee could be established, certain contributions be made by the companies annually, for the purpose of granting to all employees, whether or not members of the relief funds, allowances aside from those to be granted to members of the fund; in other words, that a separate and distinct fund be established for the benefit of all employees of the company, and be maintained by a fixed amount contributed entirely by the company, such allowance to be based on their rate of pay and length of service; that it provide for the arbitrary retirement of all employees at the age of 70 years, and such other employees between the ages of 65 and 69 years, inclusive, who had rendered thirty or more years of service, and were physically incapacitated for performing further service. The result was that the vice-president in charge of the operating department, the general manager, and the assistant comptroller were authorized to confer with such officers in the service as they might select to formulate a general plan on that basis for a pension fund, and report their recommendations to the special committee. In pursuance of this authority, under date of March 18, 1897, a meeting was held by those appointed by the special committee on superannuation and the operating officers, when it was decided, as the subject was, in matter of detail, an entirely new one to the operating officers, to defer discussion until certain statistical information could be prepared, and until they could more thoroughly acquaint themselves with the general views of employees.

After careful investigation and preparation of considerable statistical information from the data compiled as to the ages and length of service of employees of the company, showing the amount necessary to be contributed by the various companies to pension all of its employees 70 years of age and over, and such of

those 65 to 69 years of age, inclusive, thirty or more years in the service and physically incapacitated for performing further service, on the basis of different percentages, a plan to retire such employees upon the basis of an allowance of 1 per cent of the average wages for each year of service was finally agreed upon.

It was necessary in the computation of these statistics, from the standpoint of expense to the company, to also ascertain what basis the relief fund surplus would have to adopt for its superannuation fund, as the relationship of one to the other necessarily required that they should be in harmony. After careful consideration of the relief fund statistics the basis of 1 cent for each month of membership according to class was adopted, as it appeared to be the only one that could be utilized with the funds available, which fund represents the interest upon the surplus moneys of the relief funds accumulated after each 3-year period, against which there can be no liability under the operations of the fund after that period.

A meeting was held November 18, 1898, between the transportation officers of the company and the 3 officers appointed to confer with them, as to the advisability of a pension plan on the lines which were subsequently finally adopted by the company, and the consensus of opinion was, that the scheme as submitted, with some slight modifications, was a good one, and if it should be placed in effect would meet with general favor, that it would improve the service, and is preeminently a necessity on account of the position in which the company is placed by having such a large number of employees of advanced years who are physically incapacitated from performing efficient service, besides tending to improve the esprit de corps of the service.

The results of this conference were embodied in a report to the special committee of the board, together with the plan, and they received careful consideration at their meeting held June 28, 1899, when a favorable recommendation was then made to the president of the company, giving in detail the matured plan of the proposed pension fund, and suggesting that it be conducted as a separate department, under the direct supervision of a board of officers, consisting of the 4 vice-presidents, the general manager, and assistant comptroller of the company.

In August, 1899, the president signified his approval of the scheme, and the subject was presented through the special committee to the board of directors of the Pennsylvania Railroad Company on October 9, 1899, when the proposition in general was approved, the board of officers appointed, and the plan referred to them to be placed in proper shape, in order that it might be ready to take effect January 1, 1900.

The board of officers having prepared the necessary organization, regulations, records, etc., to carry out the scheme, reported to the board of directors of the Pennsylvania Railroad Company, and they on December 13, 1899, finally adopted the plan and the regulations for the government of the fund, which action was subsequently concurred in by the boards of directors of the companies now associated in the administration of the department, and is as follows:

First. All officers and employees of the company, who are required by the organization to give their entire time to the service of the company, who shall have attained the age of 70 years, or who, being between the ages of 65 and 69 years, inclusive, shall have been thirty or more years in the service of the company, and shall then be physically disqualified, shall be relieved and placed on the pension roll.

Second. Subject to ratable reduction so that the entire annual expenditure for pension allowances by the 5 companies above named shall not at any time exceed the aggregate sum of \$300,000, pensions shall be allowed upon the following bases:

Third. For each year of service 1 per cent of the average monthly pay for the 10 years preceding retirement. Thus, by way of illustration: If an employee has been in the service of the company for 40 years and has received on an average for the last 10 years \$40 per month in regular wages, his pension allowance would be 40 per cent of \$40, or \$16 per month.

Fourth. Pension allowances shall be paid monthly, and shall terminate on the death of the beneficiary.

Fifth. No pension allowance shall be paid to any officer or employee for a period during which he may be receiving accident or sick benefits from the relief department.

Sixth. The acceptance of a pension allowance shall not debar the beneficiary from engaging in other business, but such persons can not reenter the service.

Seventh. The pension department shall, under the supervision of the president, be in charge of a board of officers, consisting, until otherwise ordered, of the vice-presidents, the general manager, and the assistant comptroller of the Pennsylvania Railroad Company. The board of officers shall be appointed annually by the

boards of directors of the several companies, and shall, subject to the approval of the said boards, make and enforce regulations for the government of the department.

Eighth. No action which shall now or hereafter be taken in connection with the origin or furtherance of a pension department or plan shall be held or construed to give any officer, agent, or employee a right to be retained in the service or become entitled to pension allowances; but, on the contrary, each company may discharge any officer, agent, or employee at any time, when in its judgment the interests of the company so require, without liability for pension or for other allowances save only salary or wages then earned and unpaid.

#### AGE LIMIT

No person shall be taken into the service of the company who is over 35 years of age; except that, with the approval of the board of directors—

First. Former employees may be reemployed within a period of 3 years from the time of their leaving the service.

Second. Persons may, irrespective of age limit, be employed where the service for which they are needed required professional or other special qualifications, but

Third. Persons may be temporarily taken into the service, irrespective of age limit, for a period not exceeding 6 months, subject to extension, when necessary to complete the work for which engaged.

By order of the board of directors.

## EXHIBIT 4.

### A. COURT DECISIONS ON EMPLOYERS' LIABILITY IN RAILROAD CASES, 1895-1900.

[As abstracted in the Bulletins of the United States Department of Labor, No. 1, November, 1895, to No. 31, November, 1900.]

NOTE.—The decisions here quoted are either the entire reports or abstracts of reports which appeared in the Labor Bulletin, a bimonthly publication of the United States Department of Labor. The reference B. L. No. —, and date refers, in each case, to the bulletin of the United States Department of Labor, and usually in the text of the report itself a reference may be found to the legal periodical in which the case is officially reported.

The cases are arranged under the following groups:

1. Decisions illustrating the interpretation of the common-law liability
2. Decisions affirming the fellow-servant rule and the principal of employee assuming the risk
3. Decisions interpreting and defining the vice-principal rule
4. Decisions interpreting specified statutory extensions of common law liability or limitation of fellow-servant rule
5. Decisions on power to contract for release of liability

The classification of the decisions has been made with considerable difficulty for the benefit of those who wish to follow the trend of judicial opinion on one or more specific phases of employers' liability legislation. Of course many of the decisions relate to more than 1 of the 5 topics chosen, in such cases it is put under only the one to which it chiefly refers.

#### I.—DECISIONS ILLUSTRATING THE INTERPRETATION OF COMMON-LAW LIABILITY.

[From B. L. No. 3, March, 1896.]

ELKINS *v.* PENNSYLVANIA RAILROAD COMPANY, 33 Atlantic Reporter, page 74.—The supreme court of Pennsylvania decided, October 7, 1895, that the company was responsible for injuries to one of its trammens, through defects in the steps of a freight car, while acting as one of a crew sent to a shipper's yards to shift cars preparatory to their being taken into the company's trains. The point of Judge McCullon's decision is that a man acting under orders from the company, although in the yards of another corporation, is entitled to the same rights respecting the liability of the company that he would be entitled to were he working in the yards of the company or upon its lines of track.

[From B. L. No. 5, July, 1896.]

SAN ANTONIO AND ARANSAS PASS R. R. CO. *v.* HARDING et al., 33 Southwestern Reporter, page 373.—In the district court of Harris County, Tex., judgment was rendered awarding \$16,000 damages against the San Antonio and Aransas Pass Railway Company in favor of Laura Harding and others, the widow and minor children of Edward Harding, who was killed in a collision between the engine in which Harding was engineer and another engine used in switching in the company's yard at Waco, Tex. The case was carried, on appeal by the company, to the court of civil appeals, which tribunal affirmed the judgment of the district court by decision rendered November 28, 1895.

The circumstances under which Harding was killed were as follows: Deceased was an engineer in the service of the company, in charge of a train going from Yoakum to Waco, and was under the control of the train master at Yoakum. In the company's yard at Waco was a regular yard crew, consisting of a night yard-master or foreman, a yard engineer or "hostler," a fireman, and other employees, and these were engaged in switching cars in the yard with engine No. 53. This yard crew was under the immediate supervision of one Hall, the

foreman, who had no control over Harding. When engine No. 53 was taken to the yard to be used in switching cars its lamp was in a defective and leaking condition and was found empty. It was refilled and relighted by the yard engineer and fireman, who, it seems, had not been notified of its defective condition. The evidence was sufficient to show that when Harding arrived in sight the defective lamp had gone out, and nothing was done to give Harding notice of the switching engine's presence on the track upon which he was approaching, or to prevent a collision, except that when he had approached so close that he had not time to stop and avoid the danger, the yard engineer gave him a signal with his lantern to stop, and then endeavored to back the switch engine out of the way, but was prevented from doing so by the number of cars already occupying the side tracks. Deceased failed to discover the switching engine because of the absence of the headlight, and received no other sufficient warning. A collision ensued, which resulted in his death.

In delivering the opinion of the court of civil appeals Judge Williams said:

"As negligence of the defendant in failing to exercise proper care to see that the headlight was in good condition was one of the causes contributing to the death of Harding, defendant is liable, even if it were true that the negligence of employees who were fellow-servants of the deceased also contributed. There can be little doubt that, if the headlight had been kept in proper condition, it would have continued to burn, and would have notified Harding of the presence of the switch engine in time to have enabled him to avoid danger. No other cause for the extinguishment of the light is suggested by the evidence but that the oil had leaked out and that none remained to feed the light. The company is responsible for the omissions of servants, to whom it left the performance of the duty of seeing after the condition of the lamp.

"Under our fellow-servants' act the employees working with the switch engine were not the fellow-servants of Harding. (Laws of 1893, p. 120.) The employees in the yard, under the supervision and control of the yard master, were in a different department from engineers running trains on the road, under the supervision and control of the train master at another place. It is contended that the two engineers were in the common service of the company, were in the same department, were of the same grade, and were working together at the same time and place, and to a common purpose, and, therefore, come within the definition of 'fellow-servants' as given in the statute. If this were conceded, we do not think it could relieve appellant, even if no negligence but that of its servants were shown, because the collision can not be said to have resulted from the negligence of the yard engineer alone. If he was guilty of negligence, the foreman was also guilty, and the fact that the negligence of a fellow-servant merely contributes to the injury does not relieve the company, if its own negligence, or that of its employees who are not fellow-servants with the injured employee, also contributes. But we are not prepared to concede that the 'hostler' was a fellow-servant under the statute. In a sense, as stated by one of the witnesses, the 2 engineers were in the same department—the 'motive-power department,' but this has reference to the divisions of its service into branches made by the company. Under its regulations servants may be in the same department as named by it, and yet in different departments as intended by the statute. Such questions must be determined by the relations which the employees actually bear to each other, and not by the mere names that are given by the company to the different branches of the service.

"Nor do we think that the engineers were, in the meaning of the statute, 'in the common service,' or that they were 'working together to a common purpose.' Their superiors, to whose authority they were subjected, were vice principals of the corporation, and stood to the servants under their control in the relation of master. This the statute expressly declares, and this provision, we think, enables us to determine what is meant by the words 'departments,' 'common service,' and 'common purpose.' As pointed out in the Ross case (112 U. S., 389; 5 Sup. Ct., 184), there is a line of decisions holding that employees are in the same department, and in a common employment, only when they are subject to the same immediate supervision and control. This view had not generally prevailed, and was not adopted by the courts in this State, and it seems to us, from the whole of the statute, that it was intended to substantially adopt it. The servant having control of others is first declared to stand in the relation of master to those under him, and then, in defining the relation of other employees to each other, it is provided that, in order to be fellow-servants, they must be in the common service, in the same department, of the same grade, working together at the same time and place, and to a common purpose. The servants subjected to the control of different supervisors are thus treated as being in separate departments and dif-

ferent service. When we consider that many authorities, including some of the later opinions of our supreme court, had expressed the view that sound reason for the existence of the rule as to fellow-servants could only be found in cases where the employees were so situated with reference to each other as to be enabled to exercise over the conduct of each other that watchfulness regarded as essential to the efficiency of the service and the safety of the public, we see that the legislature has adopted that view, and intended to enforce it, in the provisions referred to. Under our construction of the statute, none of the employees in the Waco yard were fellow-servants with Harding, unless, indeed, in the performance of his duties, he became temporarily subject, while operating in the yard, to the supervision of the yard foreman. Then he might be considered for the time a fellow-servant with the others, subject to the same authority, but not with the foreman himself."

The court in its charge gave to the jury all of the provisions of the statute, leaving them only to apply the evidence. Contention is made that the rule applicable when one servant is intrusted with control of others should not have been given, because there was no evidence to support it. As before noted, there is evidence tending to show that engineers, while in the yards, were subject to the control of the yard-master, and, if for no other reason than to prevent confusion in the minds of the jury, it was not improper for the court to tell them that even in that view Harding could not be a fellow-servant with the yard-master. We think it evident that Harding on the occasion in question never became subject to the authority of the yard-master, but it could have done no harm for the court to inform the jury that if he did they were not fellow-servants. If we are correct in our view, that none of the employees in the yard were fellow-servants of the deceased, then, even if the court committed error in defining those who might be fellow-servants, it is immaterial.

While this verdict is large, and may be for a greater amount than this court would allow if trying the case, it is not so clearly excessive as to authorize us to disregard the opinion of the jury and of the court below. In refusing to reverse such verdicts, we are not to be understood as approving them, but simply as adhering to the rules governing appellate courts in such matters.

[From B. L. No. 5, July, 1896.]

PENNSYLVANIA CO. v. FINNEY, 42 Northeastern Reporter, page 816.—This action was brought by Michael Finney, administrator, against the Pennsylvania Company to recover damages for the killing of the plaintiff's intestate, Patrick J. Finney, a brakeman in its employ. A judgment was rendered in favor of the plaintiff, and the defendant appealed from the superior court of Allen County, Ind., where the trial was had, to the supreme court of the State. From the evidence it appeared that the decedent was 22 years old and had been in the employ of the defendant for 6 months as a brakeman on a freight train; that near Columbia City the defendant maintained a water plug so near its track that a person descending a passing car on that side could not avoid it; that decedent was familiar with its location, and had passed it almost daily during his employment; that it was a part of his duty to go to the top of a tram while passing through a station; that, after having passed through Columbia City, he walked to the rear of a car, with his back to the plug, while within 200 feet of it, and, without looking around to ascertain the attendant danger, began to descend the car ladder and was carried against the plug; that he had no orders to descend at that particular time, but attempted to do so of his own volition. In the opinion of the supreme court, delivered by Judge Jordan, January 29, 1896, the following statements are made:

"Considered in the light of the law which must control the case at bar, we are of the opinion, under the facts, that the jury was not authorized in finding a verdict in favor of the appellee. Assuming, without deciding, that the appellant was chargeable with actionable negligence in maintaining the water crane in the manner and in the condition shown, still there is an absence of evidence showing freedom from contributory negligence upon the part of the deceased in the matter of which appellee complains. The rule is settled that the plaintiff in such a case as this must affirmatively show by the evidence, not only negligence upon the part of the master, but freedom therefrom upon the part of the servant. The freedom from fault or negligence upon the part of the latter being under the law an essential element in the cause, which must be found to exist in order to warrant a recovery, a failure to establish the same results in defeating the action; and when the evidence in the record fails to prove this material fact, the judgment, upon appeal to this court, must necessarily be reversed."

After reviewing the facts in the case the court uses the following language.

"We may affirm that appellee's decedent did not, under the facts, observe his

surroundings, or exert the care required of him under the law; and hence, in the eye of the latter, he was chargeable with contributory negligence, and the allegations in the complaint, to this extent, at least, are not sustained by the evidence. As we have heretofore stated, the accident occurred as the deceased was attempting to descend to the caboose upon his own volition, and not under or by any direction of the appellant. We are unable to discover in this cause any evidence in the record from which a reasonable inference can fairly arise that appellee's decedent was in the exercise of due and ordinary care at the time of the fatal accident. The jury was not authorized, arbitrarily, without evidence, to infer the absence of contributory negligence upon the part of the deceased servant. The judgment is reversed and the cause is remanded, with instructions to the lower court to sustain the motion for a new trial."

[From B. L. No. 5, July, 1896.]

PENNSYLVANIA CO. v. McCANN, 42 Northeastern Reporter, page 768.—The following are the facts in this case: McCann, who was a brakeman in the service of the Pennsylvania Railway Company, in attempting, in the State of Pennsylvania, to board one of its moving cars, put his foot in a stirrup that was suspended from the sill of the car and used as a step in mounting the car. The stirrup yielded to the pressure of his foot, causing him to be thrown under the car, whereby a wheel of the locomotive, which was backing, ran over one of his legs, inflicting the injury of which he complained. The railroad company was operating a line running from Youngstown, in Ohio, to a point in the State of Pennsylvania. Suit was brought against the railroad company in the court of common pleas in the State of Ohio. After the evidence had been presented for McCann the attorneys for the railroad company moved the court to take the case from the jury and to render a judgment in their favor, which was done. McCann then carried the cause to the circuit court in Mahoning County, Ohio. The circuit court reversed the judgment rendered in the court below on the sole ground that the act of April 2, 1890 (87 Ohio Laws, p. 149), was applicable, by force of which the fact that the stirrup was defective made a prima facie case of negligence against the railroad company.

The railroad company then brought the case on error to the supreme court of Ohio, which court on January 21, 1896, gave its decision affirming the judgment of the circuit court. From the opinion of the court, read by Judge Bradbury, the following is quoted:

The only question arising upon the record of sufficient importance to be worthy of extended consideration is whether the act of general assembly of this State, passed April 2, 1890 (87 Ohio Laws, p. 149), is applicable to the case or not, the injury complained of having been sustained beyond the limits of this State. The second section of the act in question prescribes the effect that shall be given to evidence which establishes a defect in the locomotives, cars, machinery, or attachments of certain railroads, in actions for injuries to its (their) employees, caused by such defects, and declares that when such defects are made to appear, the same shall be prima facie evidence of negligence. There can be no doubt respecting the general power of a State to prescribe the rules of evidence which shall be observed by its judicial tribunals. It is a matter concerning its internal policy, over which its legislative department necessarily has authority, limited only by the constitutional guaranties respecting due process of law, vested rights, and the inviolability of contracts. The rules of evidence pertain to the remedy, and usually are the same, whether the cause of action in which they are applied arises within or without the State whose tribunal is investigating the facts in contention between the parties before it. Nor is it material, in this respect, whether the parties are residents or nonresidents of the State. The law of evidence in its ordinary operation is no more affected by one of these considerations than the other. No extraterritorial effect is given to a statute creating a rule of evidence by the fact that the rule is applied to the trial of a cause of action arising in another State, or to the trial of an action between parties who are nonresidents. If the tribunal of a State obtains jurisdiction of the parties and the cause, it will conduct the investigation of the facts in controversy between them according to its own rules of evidence, which is simply to follow its own laws within its own borders. The second section (of the act in question), in forbidding the use of defective cars and locomotives by railroad companies, refers to them as 'such corporations,' manifestly including every corporation owning or operating a railroad any part of which extends into this State.

"Here, again, the prohibitive language employed is broad enough to include acts or conduct occurring in other States. In the subsequent clause of the second section of the act, wherein the general assembly sought to prescribe the rule of

evidence before referred to, applicable to the trial of actions in the courts of this State brought by employees of railroad companies on account of injuries sustained by reason of defective cars, locomotives, machinery, or attachments, it approached the question of procedure in our judicial tribunals, over which, as we have seen, the authority of the general assembly is practically supreme. This clause of the statute is purely remedial, and should receive a liberal construction. The language employed by the act in this connection is consistent with a legislative purpose to extend the remedy to all actions of the character named in the act against all railroad companies, and no sufficient reason has been assigned for limiting its operation to causes of action that arose within the State. Indeed, it would be somewhat anomalous to prescribe to the courts of the State rules of evidence depending upon the question whether the cause of action arose within or without the State; and an intent to create this distinction should not be imputed to the legislative power unless it is fairly inferable from the language it has used. The language is as follows: 'And when the fact of such defect shall be made to appear in the trial of an action in the courts of this State brought by such employee or his legal representatives against any railroad corporation for damages on account of such injuries so received, the same shall be *prima facie* evidence of negligence on the part of such corporations.' This language contains nothing indicating a purpose to confine the rule of evidence it creates to causes of action that should rise in this State. On the contrary, it expressly extends the rule to 'any action in the courts of this State brought by such employee \* \* \* against any railroad corporation.' In fact, the language is comprehensive enough to apply the rule to a railroad company in this class of actions, whether any part of its line extended into Ohio or not; and if the courts of our State should acquire jurisdiction over the person of a railroad company whose line lay wholly without the State, no reason is perceived why the rule should not be applied. Judgment affirmed."

[From B. L. No. 6, September, 1896.]

ATCHISON, TOPEKA AND SANTA FÉ RAILROAD COMPANY *v.* BUTLER, 43 Pacific Reporter, page 767.—This was an action brought by Alice E. Butler against the railroad company to recover damages for the death of her husband, Elmer E. Butler, a switchman in the defendant's yards at Dodge City, Kans., on August 5, 1890. There was a judgment for the plaintiff, and the defendant brought the case up on error from the circuit court in Ford County, Kans., to the supreme court of the State. Said court rendered its decision February 8, 1896, and affirmed the judgment of the lower court. The evidence showed that Butler was one of a switching crew, consisting of an engineer and fireman on the engine, a foreman, named Bleaker, a switchman named Martin, and himself. The general course of the railroad where they were working was east and west, and there was two side tracks or switches south of the main track, the first one branching from Bridge street east, being called the "river track," and the other branching from it east of Bridge street, being called the "house track," extending to the freight warehouse. The switch east of Bridge street could be so adjusted as to throw cars from the main track either onto the river track or the house track. On the occasion of the casualty the engine was attached to the west end of the way car which had 5 or 6 cars attached to the east of it on the river track, which were to be pulled out upon the main track, and the car farthest east thrown onto the house track to be coupled to some cars standing near the warehouse, after which the others were to be thrown back onto the river track. Butler was on the car that was to be thrown onto the house track, and it was kicked eastward by the engine and other cars, Bleaker pulling the pin and Martin turning the switch, and after the car passed him turning it back again so as to throw the other cars upon the river track, Bleaker again pulling the pin which coupled the way car to the rest of the train, which was kicked back upon the river track and overtook the one on which Butler was riding on the house track before it had gone far enough to clear it from those following on the river track, and the car farthest east struck the north-west corner of the one upon which Butler was riding with a force which knocked him off, and he was run over and killed. The complaint alleged the killing of Butler on account of the negligent and careless management of the engine and cars by the railroad company through its agents and servants. Chief Justice Martin delivered the opinion of the supreme court, and used the following language therein:

"In the parlance of railroad switch yards, when a car running or standing on one track is struck by a car or cars in motion on another before the two tracks have sufficiently diverged to admit of the cars clearing each other they are said to 'corner;' and it was a collision of this nature, between cars running in the

same direction, upon different tracks, that caused the death of Elmer E. Butler. Such an occurrence can hardly take place without the fault of one person or more.

"Before Butler's car got far enough on the house track to clear, it was struck by the train on the river track. Had his car run a little faster or the train on the river track a little slower, the collision would not have occurred; and the real question was whether the fault was that of Butler or of the men in the management of the train that was set upon the river track. The jury have found, in substance, that those in the management of the train were in fault, and that Butler was not; and we think the evidence is sufficient to justify their verdict. It tended to show that the train was kicked down upon the river track with great force before Butler's car had time to get out of the way. It is possible that Butler may have turned the brake wheel without setting the brake, and this sooner than he should have done, but common prudence would dictate and the rules of the company required that cars should not be 'cornered'; and, before a train is set upon a track, those in the management of it should use reasonable diligence to see that it will clear the car or cars on another track. Reliance is placed by the railroad company upon the fact that those in the management of the train after Butler's car had been cut off thought it had sufficient momentum to take it beyond the clearing post, and we doubt not that they were correct. But they did not give it time. It was still running when it was struck, and perhaps in two or three more seconds it would have been out of the way, but the other cars were hurled down upon it on the other track; and we can not say that this was not negligence. The evidence tends to show that Butler was upon the top of the car at or near the brake, and looking toward the east, where it was his duty to couple to others at or near the warehouse. In this position he probably did not see the clearing post, nor knew the exact location of his car with reference to it; and, after the train was uncoupled from the way car, it was not in the power of any of the crew to check it, and if Butler noticed it no signal from him would have been of any avail. Upon the whole, there was no material error in the case, and the judgment must be affirmed."

[From B. L. No. 8, Jan. 1897.]

LAKE ERIE AND WESTERN RY. CO. v. CRAIG, 73 Federal Reporter, page 612.—Action was brought in the United States circuit court for the western division of the northern district of Ohio by Frank B. Craig against the railroad company to recover damages for injuries received in the railroad yard at Lima, Ohio, while acting as foreman of night-switching crew. Said injury was caused by his catching his foot in a frog which was unblocked, and thus being unable to get out of the way of cars which were being pushed or "kicked" up a switch. A judgment was rendered for Craig, and the railroad company brought the case on writ of error to the United States circuit court of appeals, sixth circuit, and said court rendered its decision January 30, 1896, and reversed the judgment of the lower court. In the opinion of said court, delivered by Circuit Judge Taft, among the questions decided, was the following:

"The liability of the defendant railroad company was asserted by the plaintiff on the ground that it had failed to block a railroad frog in its yard at Lima, in violation of a statute of Ohio passed March 23, 1888 (85 Ohio Law, 105), requiring all railway corporations operating railways in the State to block or fill such frogs, for the safety of their employees, and imposing a punishment for failure to do so. We have already held, in *Railroad Company v. Van Horne* (16 C. C. A., 182; 69 Fed., 139), that the effect of this statute is to make a failure by a railroad company to comply with it negligence, as matter of law. This is the ruling of the supreme court of Ohio in construing an analogous statute enacted to compel mine owners to adopt safety appliances for their employees. *Krause v. Morgan* (Ohio 'sup.') 40 N. E., 886. The statute does not, however, prevent the master, in such cases, from escaping liability, if the employee injured by the master's noncompliance with the statute is himself guilty of contributory negligence. This is expressly ruled by the supreme court of Ohio in the case cited, where, after an elaborate review of the authorities in other States, Judge Speer, speaking for the court, sums up its conclusions as follows:

"While the statute, as we construe it, does not make the operator of the mine absolutely liable to a party injured by an explosion of gas, where the operator has not complied with the statute, such conduct is negligence per se; and the employer can not escape liability by showing that he took other means to protect the workmen, equally efficacious. Proof of failure to obey the statute is all that is necessary to establish negligence on the part of the operator, but the statute

does not change the well-established rule that, where one has been guilty of negligence that may result in injury to others, still the others are bound to exercise ordinary care to avoid injury."

"This was the view which the trial court took of the statute, and it was correct."

[From B. L. No. 6, Sept. 1896.]

UNION PACIFIC RY. CO. v. O'BRIEN, 16 Supreme Court Reporter, page 618.—This was an action brought by Nora O'Brien against the Union Pacific Railway Company in the circuit court for the district of Colorado to recover damages for the death of her husband, John O'Brien, who was in the employment of the railway company as a locomotive engineer, and was killed by the derailment of his engine. The evidence showed that at the time of his death O'Brien was bringing a freight train from Como, Colo., to Denver, and was running through that part of the mountains known as "Platte Canyon;" that the line of the railway followed the course of the South Platte River, and that there were numerous cuts thereon, caused by the intersection of the line with the spurs projecting from the foothills along which the line was built; that the locomotive was derailed by reason of sand and gravel which had been deposited on the track to a depth of some 7 or 8 inches and to the extent of from 10 to 20 feet; that this deposit was in a cut, approached by a curve to the left, and then curving to the right as the track entered the cut—a double curve; that the river bank of the cut was about 7 or 8 feet high, the other bank being much higher and very steep, sloping back up the mountain side; that down the upper bank ran a narrow gully, which in rainy weather brought down water, carrying sand and disintegrated rock; that this gully had had an outlet into the river before the track was constructed across it; that there was no opening or culvert under the railroad track through which the water and material brought down could escape; that a small ditch ran alongside the roadbed, but if the water coming down was greater in quantity than this ditch could carry, then the surplus would run over and upon the tracks of the railroad, and that rain had fallen the evening previous to the accident, and the water, rushing down the gully, had deposited this mass of sand and gravel upon the track. There was some evidence that the gully was narrow, crooked, and concealed by the hills.

The court refused to give certain instructions asked by the defendant to the jury, and the defendant excepted. The court then charged the jury at large, leaving to them the issues of negligence on the part of the company in not properly constructing the track, in that no outlet was provided for the water which would be liable to come down on the track and deposit sand and other obstructions thereon, and of contributory negligence.

The court advised the jury, among other things, that as the road at the place where the accident occurred was built across the mouth of a gulch, and from all the circumstances it would seem that it would have been practicable to make a culvert under the track at that place, keeping open the channel toward the river, through which the sand might have washed out, and in that manner obstruction might have been avoided, if they believed from the evidence, taking into consideration the size of the requisite opening and the quantity of sand and gravel coming down through the gulch, and all the circumstances, the track might have been built at reasonable expense so as to avoid the possibility of the sand coming upon the track and obstructing it, they were at liberty to find that the company was negligent in respect to the manner of building the track at that place; and, also, that, independently of the testimony on that subject, the jury, having regard to the testimony before them, the situation of the road, and the topography of the ground, the gulch coming down in the way described by the witnesses, might on their own judgment and knowledge of such matters determine in their own minds "whether it was practicable to make a culvert there, with reasonable cost, which would have the effect of carrying away the sand and gravel so it would not be an obstruction upon the track."

To these parts of the charge defendant excepted.

The jury found in favor of the plaintiff, and, judgment having been entered on the verdict, the railroad company carried the case to the circuit court of appeals for the eighth circuit, which affirmed the judgment. The railroad company then brought the case upon writ of error to the Supreme Court of the United States, which rendered its decision March 9, 1896, and affirmed the judgment of the lower courts.

The opinion of the court was delivered by Mr. Chief Justice Fuller, who, in the course of the same, used the language quoted below:

"The general rule undoubtedly is that a railroad company is bound to provide suitable and safe materials and structures in the construction of its road and appurtenances, and if, from a defective construction thereof, an injury happen to one of its servants, the company is liable for the injury sustained. The servant undertakes the risks of the employment as far as they spring from defects incident to the service, but he does not take the risks of the negligence of the master itself. The master is not to be held as guaranteeing or warranting absolute safety under all circumstances, but it is bound to exercise the care which the exigency reasonably demands in furnishing proper roadbed, track, and other structures, including sufficient culverts for the escape of water collected and accumulated by its embankments and excavations.

"It is the duty of the company, in employing persons to run over its road, to exercise reasonable care and diligence to make and maintain it fit and safe for use; and where a defect is the result of faulty construction which the employer knew, or must be charged with knowing, it is liable to the employee, if the latter use due care on his part, for injuries resulting therefrom.

"There are cases in which, if the employee knows of the risk, and the danger attendant upon it, he may be held to have taken the hazard by accepting or continuing in the employment, but this case, as left to the jury under the particular facts, is not one of them. The engineer was entitled to rely upon the company as having properly constructed the road, and to presume that it had made proper inquiry in respect of latent defects, if there were any, in the construction, for such was its duty, and he can not be held to knowledge of the danger lurking in this narrow seam in the mountain side by whose inequalities its sinuosities were hidden. We agree with the circuit court of appeals that the circuit court properly instructed the jury in this regard, and that no error was committed in allowing the jury to consider the evidence in the light of their own judgment and knowledge, taking into consideration all the facts bearing on the defective construction in question. Judgment affirmed."

[FROM R. L. NO. 8, LAMBERT, 1897.]

HOUSTON AND T. C. RY. CO. v. STRYCHARSKI, 35 Southwestern Reporter, page 851.—This was an action brought in the district court of Harris County, Tex., by M. Strycharski, to recover damages for injuries received while in the employ of the Houston and Texas Central Railway Company. Judgment was rendered for the plaintiff and the company appealed to the court of civil appeals of the State, which rendered its decision March 26, 1896, and affirmed the judgment of the lower court. The plaintiff, one of whose duties it was to fill the water tanks of cars, placed a ladder against a car standing with others on the track, and stood upon it, holding a hose, through which the water ran into the tank in the car through a hole in the roof. While so engaged, a switch engine approached the stationary cars, unobserved by plaintiff, and struck the rear car with sufficient force to upset the ladder and throw the plaintiff to the ground. There was no provision, by rule or otherwise, for the giving of notice before a coupling was made, the employees being expected to look out for such dangers and protect themselves; but plaintiff testified that on all previous occasions he had been warned, and had time to get out of danger before the cars were struck. Before this occasion, however, he had been engaged either in the Pullman sleeper, after its return to the main track, or in the coaches, cleaning closets, and the coupling had been made from the front. His exposure was different, on the night he was injured, from what it had previously been. His immediate superior, when giving him instructions about supplying the car with water, gave him no information or warning as to the change to be made in the manner of coupling, nor had he ever told him of it, or of the requirement that employees must look out for their own safety. The opinion of the court, delivered by Judge Williams, contains the following:

"Plaintiff for many years had been in the service of this company, in different capacities, and had worked in the neighborhood of the depot at Houston, where he was hurt. About a week before he had received his injuries he was changed from his then occupation of cleaning stationary cars standing in sheds and on the tracks, and was put to perform the service in which he was hurt. This consisted, in a general way, of filling with water the tanks and cleaning out the water-closets in the cars of incoming and outgoing trains. His own evidence and that of his superior, Bloxson, who had the power to employ and discharge such servants, and was the representative of the company, show that his previous experience was not sufficient to qualify him, without further instructions, for the new work, and that, in his new situation, there were risks which were not incident to

his old, against which ordinary care for his safety required warning from the superior.

"In view of the verdict of the jury, we conclude that by the change in the method of handling the cars on the night in question, plaintiff was exposed to a danger of which he was ignorant, and which his experience did not enable him to foresee; and that Blossom knew, or, by ordinary care, could have known it; and that such care would have required him to notify plaintiff of such danger; and that, in omitting to do so, he was guilty of negligence, which helped to cause plaintiff's injury. We further conclude that plaintiff was not guilty of negligence in failing to discover his danger before he was hurt, and that he did not assume the risk resulting from the absence of the regulation (for giving notice of danger), as he supposed there was one.

"From these conclusions of fact, it results that plaintiff became entitled to recover of the receiver damages for his injuries. When the servant is inexperienced in the work which he is doing, and, with the knowledge of the master, is exposed to a danger of which he is ignorant, it is the duty of the latter to warn him; and when he fails to do so, and injury results to the servant, the master is liable. It is also the duty of the master, when engaged in a complex business, such as that in which the services of plaintiff were engaged, to adopt definite rules and regulations for the safety and protection of the employees. As plaintiff, under the evidence now before us, was situated so that he could not reasonably protect himself by watching out for the return of the switch engine with the cars attached, some method of warning was absolutely necessary for his safety, and the failure of the employer to provide for it entitles plaintiff to compensation for his injuries."

[From B. L. No. 9, March, 1897.]

*YORK v. CHICAGO, MILWAUKEE AND ST. PAUL RY. CO.*, 67 Northwestern Reporter, page 574.—This was an action brought in the district court of Jones County, Iowa, for damages for the death of John Graham, an engineer, who was fatally injured in a collision of two freight trains. A verdict was rendered for the defendant, and the plaintiff appealed the case to the supreme court of the State, which rendered its decision May 26, 1896, and affirmed the judgment of the lower court. Damages were sought upon the ground, among others, that the surgeon of the railroad company, who was employed and paid by said company to treat its injured employees, as an act of charity or humanity, wrongfully and negligently moved Graham, against his protest, from the place to which he had been taken when injured to a hotel, which act, it was claimed, contributed to produce his death. Upon this point, in its opinion, delivered by Judge Kinne, the supreme court used the following language.

"It is not claimed that Dr. Adair was not a skillful physician, or that defendant did not exercise due care in employing him, but the claim is made that he acted wrongfully and negligently in doing as he did. We understand the rule to be well settled by a large number of cases that, under such circumstances, the defendant is not liable for acts of negligence of the physician who is employed to treat gratuitously its injured employees."

[From B. L. No. 9, March, 1897.]

*MISSOURI, KANSAS AND TEXAS RY. CO. v. FERCH*, 36 Southwestern Reporter, page 487.—Action was brought in the district court of Grayson County, Tex., by F. F. Ferch to recover damages for personal injuries incurred while he was in the employ of the above-named railroad company. A judgment was rendered for Ferch, and the railroad company appealed the case to the court of civil appeals of the State, which rendered its decision May 20, 1896, and reversed the judgment of the district court.

The material facts in the case are as follows: Ferch was injured by a pile driver crushing his hands while he was placing a ring around the head of a pile to keep it from splitting, which was one of his duties. The accident was not due to negligence on his part or on the part of his coemployees, but to defects in the pile-driving machine, which could have been discovered and remedied by the exercise of ordinary care. The pile-driving gang to which he belonged had been for a long time in the employ of the railroad company; but about two months before the accident occurred it had been ordered to report to the chief engineer of a construction company, which was an independent contractor for the railroad company, and it was still in the service of the construction company when the injury was received. The names of the members of the gang were carried on the rolls of the railroad company, and they were paid with its checks, and some of the

evidence seemed to show that Ferch had no knowledge that a change had been made in original employment and that he was in the employ of a master other than the railroad company. There was other testimony, however, to the effect that the members had all been notified of the change of employment by the foreman, and the railroad company claimed that as Ferch was not in its employ when the accident happened, but in that of its independent contractor, it could not be held liable in damages. Upon this point the supreme court, in its opinion, which was delivered by Chief Justice James, used the following language.

"While it can not be doubted that if the machine and crew went into the independent service of the contractor, and subject to its sole direction and control, with knowledge on the part of the crew of the change, appellant would be absolved from the duties that apply to the relation of master, still we think it equally clear that the employer can not relegate his employee to the service of another, under circumstances that do not charge the employee with notice of any change, and thereby escape the obligations of master. The servant can not be held to have ceased being such where he is continued in his ordinary work, and no knowledge is imparted to him of any change in the relations between him and his employer. According to the rule just mentioned, the original employer continues to sustain the relation of master, and (without any reference to the question of his liability to third persons, and without reference to the contractor's liability), in our opinion, it follows that the servant may look to him for the performance of those duties that result from the relation of master, among which was reasonable care in keeping safe the machinery at which he worked."

[From B. L. No. 9, March, 1897.]

ATCHISON, TOPEKA AND SANTA FE R. R. Co. v. PENFOLD, 45 Pacific Reporter, page 574.—Action was brought in the district court of Atchison County, Kans., by Wm. H. Penfold against the railroad company above named to recover damages for injuries received while in the employ of said company and through its negligence. A judgment was rendered for Penfold, and the company carried the case on writ of error to the supreme court of the State, which rendered its decision July 11, 1896, and affirmed the decision of the district court.

The facts of the case are, in brief, as follows: The plaintiff, in the performance of his duties, undertook to go down the ladder of a car, and the end of one of the rounds of the ladder upon which he stepped, being unfastened and displaced, gave way and he fell to the platform below and was injured. The defective car belonged to the Missouri Pacific Railway Company, but was for the time being in the possession of the defendant company, the Atchison, Topeka and Santa Fe. The negligence alleged was that of the company in whose possession the car was in not inspecting it, and said company alleged in defense that as it did not own the defective car, and consequently had no right to repair it, it could not be required to inspect it.

The supreme court in its opinion, delivered by Judge Johnson, held the contention of the defendant company to be unsound, and the syllabus of said opinion, which was prepared by said court, is given below.

"It is the duty of a railroad company to inspect cars owned by or received from another company which the employees of the former are required to handle or use, where there is time and opportunity to do so, and it will be liable to its employees for injuries resulting from defects in such cars which an ordinary inspection would have discovered.

"It will not be excused for failure to perform that duty because such cars are only used for a brief time or carried a short distance, nor will the mere fact that the company is not required to repair such defects relieve it from the obligation to inspect."

[From B. L. No. 9, March, 1897.]

CHICAGO, ROCK ISLAND AND PACIFIC R. R. Co. v. McCARTY, 68 Northwestern Reporter, page 633.—Action was brought by Patrick McCarty in the district court of Douglas County, Nebr., against the above-named railroad company to recover damages for personal injuries sustained while in the employ of said company. The evidence showed that McCarty was a member of a construction crew; that they had loaded a train of flat cars with earth on the day of the accident; that Butler, the foreman of the crew, concluded to send the men with the train to unload it when it arrived at its destination; that just as the train started he ordered McCarty to get aboard, and that McCarty, in endeavoring to board the train, slipped and fell and was injured by the train passing over one of his feet, causing amputation. Upon these facts a judgment was rendered for McCarty,

in the district court, and the railroad company carried the case on writ of error to the supreme court of the State, which rendered its decision October 26, 1896, and reversed the judgment of the lower court.

The opinion of the supreme court was delivered by Judge Irvine, and in the course of the same he used the following language:

"The argument of the railroad company, stated in a condensed form, is that there is no obligation resting upon a master to exercise greater care for a servant's safety than the servant is himself required to exercise; and that, if it was negligence for Butler to command McCarty to board the train while it was in motion, it was contributory negligence for McCarty to obey the order, it being neither alleged nor proved that the danger was not as apparent and as well known to McCarty as to Butler.

"Our conclusion, after a consideration of the subject, is that it is a harsh and unreasonable rule which charges a servant, when commanded to perform an act by his master, with the duty of at once determining whether or not the act can be safely performed, and then performing it at his peril or refusing to perform it at the expense of losing his employment. The risk incurred by obeying a negligent command of the master is not one ordinarily incident to the servant's employment, and is not an assumed risk, because negligence on the part of the master is not presumed to be a feature of the employment. It is true that, where ample time exists for examination and reflection, a servant may not, beyond a certain limit, continue in the service, performing dangerous acts, except at his own risk; and it is this consideration which governs the cases holding that the continued use of defective appliances without protest, and a promise by the master to remedy them, discharges the master from liability. With the case, however, of a command given suddenly, which must be obeyed immediately or not at all, a different question is presented. The servant is confronted with a new danger, one not contemplated when he entered the employment, and one not made a part of it by continued use. The servant has certainly, in the first place, a right to presume that the master gave the command advisedly and in the exercise of due care. If the servant disobeys, he forfeits his employment; and, even though he be aware of the danger, whether or not it is negligence for him to obey depends upon circumstances. The act may be so foolhardy, so clearly entailing disaster, that the only reasonable course is to disobey. The test of negligence is in such cases, as in others, whether or not a man of ordinary prudence so situated would obey or refuse. In many cases a man of ordinary prudence, compelled to decide instantly, even though aware of the existence of danger, would prefer obedience, and would take the risk. It is not true, however, because the servant in such case may not be guilty of negligence in obeying, that it follows necessarily that the master was not negligent in giving the order. In the first place, reflection and the exercise of discretion is the business of the master, and not of the servant. It is the duty of the master to determine what shall be done, and how. In general the duty of the servant is merely to obey, and even when the command is given suddenly and without previous reflection, as in this case, the master, charged with the power of discretion, has imposed upon him the duty of rightly directing and safely directing. Of course, a sudden exigency may arise which would relieve the master of any imputation of negligence in requiring, under such circumstances of exigency, a dangerous act to be suddenly performed. But here the failure to command McCarty to board the train before it started was not due to any sudden exigency, but apparently to mere inattention on the part of the foreman, and a failure by him to conceive the idea of sending men with the train until the last moment. It was not McCarty's duty to go with the train in the absence of a specific order for that purpose; and, under the circumstances, we think there was evidence to support a finding that Butler was negligent in giving the command and McCarty was negligent in obeying it.

"The district court gave the following instruction: 'It is in general the duty of an employee to obey the orders of his superior, and, in the absence of knowledge or means of knowledge to the contrary, he may presume it safe for him to do so. However, he may not obey blindly and without regard to his personal safety; for it is incumbent on him to protect himself by the exercise of such care and diligence as the circumstances require. But when he receives an order which must be obeyed immediately or not at all, and when he has no time or opportunity for considering the situation, or the danger, if any, of a compliance with the order, he may rely on the skill and judgment of his superior, unless to obey the order would be reckless, rash, or foolhardy on his part. If to obey would be so dangerous as to indicate that the employee had abandoned all care and consideration for his own safety, then obedience would be negligence in itself, which, if it contributed to the injury, would prevent a recovery.'

"We think there was error in this instruction. The performance of an act by an employee not within the usual line of his duties, and in obedience to a command given instantly and under circumstances permitting no deliberation, is not the assumption of a risk ordinarily incident to the employment, and is therefore not one of the assumed risks of servants. The right to recover for injuries sustained in the course of performing such acts depends upon ordinary considerations of negligence and contributory negligence. The test of negligence is whether a man of ordinary prudence would so conduct himself under the circumstances, and therefore the master is in such case only liable for the consequences of a command which a person of ordinary prudence would not have given under the circumstances, and which a man of ordinary prudence would have obeyed under the circumstances. In stating the law to the jury the court should have borne in mind this test. But the instruction we have quoted departs from the rule in several respects.

"In the first place the first sentence was erroneous in implying that, as a matter of law, McCarty had a right to presume that it was safe for him to obey this command. Where the danger is not known or obvious, as the instruction states, the servant might presume the act safe because it was commanded. But here the danger was as apparent to him as to the master, and there was no basis in the evidence for summing the case on the theory that the danger was not known or susceptible of knowledge.

"In the second place, according to the instruction, the servant would be excused in obeying the order unless obedience would be 'reckless, rash, or foolhardy.' This can only mean that, in order to charge a plaintiff with contributory negligence in such cases, his act must not only be one which an ordinarily prudent man would not perform, but must be one which no man except a reckless, rash, and foolhardy man would perform. In other words, instead of holding up to the jury as a test of conduct that of a man of ordinary prudence, it raises before them as a type the conduct of a man reckless and foolhardy, and excuses contributory negligence if not within the line of conduct that such a man would pursue.

"Finally, this erroneous idea is emphasized by the last sentence of the instruction, by which it is plainly implied that obedience to the command would not constitute negligence unless the circumstances were such as to indicate that the servant had abandoned all consideration for his own safety. This last sentence, to a certain extent, explains the previous one; and the combined effect of the two is to state to the jury that the servant might recover if the circumstances were such that any man, however imprudent, however careless, might have performed it, provided he kept in view the slightest consideration for his safety. In the respects indicated the instruction fails essentially to propose to the jury the true test of negligence, to wit, the conduct of a man of ordinary prudence under the circumstances. Reversed and remanded.

[From B. L. No. 9, March, 1897.]

SPENCER ET AL. v. BROOKS, 25 Southeastern Reporter, page 480.—Action was brought in the city court of Atlanta, Ga., by J. F. Brooks against Samuel Spencer and others, receivers of the Richmond and Danville Railroad Company, to recover damages for injuries received while in the employ of said receivers as a brakeman on said railroad. A judgment was given for the plaintiff, and the defendants brought the case before the supreme court of the State on writ of error. Said court rendered its decision January 27, 1896, and affirmed the judgment of the lower court.

The facts of the case are sufficiently shown in the opinion of the supreme court, which was delivered by Chief Justice Simmons, and the following is quoted therefrom.

"Brooks, a minor, was employed by the receivers of the Richmond and Danville Railroad Company as brakeman on a freight train, and while so employed sustained serious personal injuries by reason of his being run into by the train when engaged in opening the 'knuckle' of the bumper of a car, under the direction of the conductor of the train, preparatory to coupling that car to others belonging to the train. By his next friend he sued the receivers for damages, alleging negligence on the part of the defendants and the conductor, and recovered a verdict for \$1,500. The defendants made a motion for a new trial, the grounds of which are set out in the reporter's statement, and to the overruling of the motion they excepted.

"1. It is complained that the court erred in excluding, when offered in evidence by the defendants, a contract in writing between the plaintiff and the Richmond

and Danville Railroad Company, whereby the plaintiff agreed to be bound by a rule of the company prohibiting brakemen from going between cars for the purpose of coupling or uncoupling, etc., and agreed to waive liability of the company to him for any results of infraction of the rule. There was no error in excluding this contract. It was not a contract with the receivers, but one entered into with the company prior to the receivership. When the company ceased to operate the road and the receivers took charge of it the latter were not bound to retain the employees of the former, and the contracts of the company with its employees were not binding on the receivers unless adopted by them; nor in the absence of such an obligation on the part of the receivers were such employees bound to abide by the terms of any contract entered into with the company. The contract in question, therefore, was not necessarily binding between the plaintiff and the receivers, and there was no evidence showing any adoption of it as between them, either directly or by implication.

"2, 3 It was complained that the trial judge, in his charge to the jury, erred in assuming that the conductor was the alter ego of the defendants on the occasion in question, thereby excluding the theory of the defendants that they were fellow-servants, and that the company was, therefore, not liable for any injury resulting from the negligence of the conductor. Ordinarily, the conductor of a train has control of its movements, and brakemen connected with the train are, while engaged in coupling cars to the train at stations, subject to his orders and under his control; and he is not, when directing the movements of the train and giving orders to the brakemen and engineer in connection therewith, a fellow-servant of such employees, within the meaning of the rule as to fellow-servants, but is a vice-principal of the master. The evidence in this case discloses nothing which would take it out of the general rule above stated. It shows that the conductor was in fact directing and controlling the movements of the train, and that the plaintiff and the engineer were acting under his orders at the time of the injury. The instructions complained of were, therefore, not improperly based upon the assumption that the plaintiff and the conductor were not fellow-servants."

[From B. L. No. 9, March, 1897.]

BALTIMORE AND OHIO R. R. CO. *v.* HENTHORNE, 73 Federal Reporter, page 631.—One Charles Henthorne, a brakeman in the employ of the Baltimore and Ohio Railroad Company, was injured in a collision. He brought suit against the railroad company in the United States circuit court for the northern district of Ohio, and judgment was rendered in his favor for \$15,000. The railroad company brought the case on writ of error before the United States circuit court of appeals for the sixth circuit, which court rendered its decision April 11, 1896, and sustained the judgment of the lower court.

In the opinion of said court, delivered by Circuit Judge Taft, of the numerous points decided one seems to be of special interest, and the language of the judge thereon is given as follows:

"There remains to consider only the objection to the charge with respect to the measure of damages. The charge of the [lower] court, as we interpret it, directed the jury to consider as one element of damage the loss of the plaintiff in his earning capacity by reason of his bodily injuries, and to reach the loss of his earning capacity by estimating as near as they could his probable yearly earnings during his entire life, and to give him a sum that would purchase him a life annuity equal to the difference between the amount which he would have earned each year if he had not been injured and that which he could earn each year in his injured condition. We see no objection to this measure; indeed, we think it technically accurate."

[From B. L. No. 17, July, 1898.]

STUCKE *v.* ORLEANS RAILROAD CO., 23 Southern Reporter, page 342.—This action was brought by Frederick W. Stucke against the company above named, a street railroad company operating in the city of New Orleans, in the civil district court of the parish of Orleans, La., to recover damages for personal injuries received by him while in the employ of said company. The evidence in the case showed that one Willoz, the foreman of the defendant company, having in charge the repairs of its rolling stock, etc., had directed the plaintiff to go into the pit and make some repairs on a car; that one Lasker was directed to accompany him; that with that end in view Lasker was sent to the plaintiff's house to summon him to come to the car house, and one John Villa was ordered to see that the plaintiff and Lasker did the work according to directions; that they went to work in the pit, and that

on the morning of May 18, 1896, car No. 16 was moved from the shed to the pit track and carried to the pit, and while there the plaintiff painted it, top and bottom; that when this work had been completed said car was taken away and car No. 17 took its place upon the pit track for the purpose of undergoing some repairs; that the plaintiff was at once set to work making repairs upon one of the brakes, when, immediately, car No. 8 came into the shed and, passing through an open switch which had been carelessly and negligently left open by John Villa, entered upon the pit track and came into collision with car No. 17, causing it to run over the plaintiff's leg and to crush it so badly that it had to be amputated, that plaintiff was wholly unaware of the danger he was in while at work in the pit, that he had been put to work there by the orders of the defendant's foreman, in an emergency and upon the spur of the moment; that he had never worked in the pit previously, and that he had not been advised by any officer or employee of the company of the risks and dangers of the situation and employment.

Judgment was rendered for the plaintiff and the defendant company appealed the case to the supreme court of the State, which rendered its decision January 24, 1898, and sustained the judgment of the lower court.

The opinion of the supreme court was delivered by Judge Watkins, and the syllabus of the same was prepared by the court and reads as follows:

"1. An invitation from the master or proprietor to come upon dangerous premises, without apprising him of the danger, is just as culpable, and an injury resulting from it is just as deserving of compensation in the case of a servant as in any other.

"2. A man can not be understood as contracting to take upon himself risks which he neither knows, nor suspects, nor has reason to look for, and it would be more reasonable to imply a contract on the part of the master not to invite the servant into unknown dangers than one on the part of the servant to run the risk of them.

"3. Whether invited upon the premises by the contract of service or by the calls of business or by direct request is immaterial; the party extending the invitation owes a duty to the party accepting it to see that, at least, ordinary care and prudence are exercised to protect him against dangers not within his knowledge and not open to observation.

"4. The servant assumes the risks of such hazards as are apparently incidental to an employment intelligently undertaken, and those only.

"5. A superior is presumed to know what may endanger the person or life of an employee in the discharge of the duties of his employment, and is bound to specially warn him of the nature of the danger, unless said employee well knew of the existence and extent of the hazard or risk and willingly exposed himself to it.

"6. If the negligence of the master caused or contributed to the injury of his servant, the former is liable to the latter, notwithstanding the negligence of a fellow-servant likewise contributed thereto.

"7. When an injury is caused partly by the negligence of a fellow-servant, and partly by the failure of the master to provide the servant a reasonably safe place at which to work, the negligence of the fellow-servant will not exonerate the master.

"8. When the service to be rendered requires for its performance the employment of several persons, there is necessarily incident to the service of each the risk that the others may fail in the exercise of the caution that is essential to their mutual safety.

"9. Consequently there is implied in the contract of service in such case that each servant takes upon himself the risks arising from the negligence of the other while in the common employment, always provided that the master is not negligent in the selection or retention of the fellow-servant of either, or in providing him a reasonably safe and suitable place at which to work, and reasonably suitable tools and materials with which to work.

"10. It is necessary, in order to constitute a fellow-service within this rule of jurisprudence, that the servants should be fellow-laborers in the same work or the same department of a common employment."

[From B. L. No 9, March, 1897.]

MISSOURI, KANSAS AND TEXAS RY. CO. *v.* YOUNG, 45 Pacific Reporter, page 963.—Action was brought in the district court of Labette County, Kans., by James S. Young to recover damages for personal injuries alleged to have been sustained while in the employ of the railroad company above named. Judgment was rendered in his favor, and the railroad company brought the case on writ of

error to the court of appeals of the *Stâte*, which rendered its decision June 13, 1896, and affirmed the judgment of the lower court.

The opinion of the court was delivered by Judge Johnson, and in it the court laid down certain general principles on the relative duties of employers and employees. The syllabus of said opinion was prepared by the court, and the following, showing the principles above referred to, is quoted:

"Where a person seeks employment in any line of business where there is danger, he assumes the risk and hazard ordinarily incident to such employment. By accepting the employment, he represents himself as competent to perform that kind of work, and that he will not be guilty of negligence in and about the performance of the same. He owes to his employer vigilance and care in the execution of the undertaking; and where he has been guilty of negligence, contributing to his injury personally, he can not recover for such injury.

"It is the duty of the master to furnish his servant with a safe place to perform the work he undertakes to do, and to provide him with such tools and instrumentalities with which to do the work as are reasonably safe. If the master performs all that is required of him under the law, and the servant is injured by accident or through lack of proper care on his part, the master is not liable for such injury; but if the master fails to furnish the servant with a safe place to perform his work, or fails to furnish him with suitable and reasonably safe instrumentalities with which to perform his work, and the servant is injured by reason of the master's failure, then the master is liable, unless the servant, knowing the defective condition of the tools, uses them without complaint; then he waives his right to damages.

"It is the duty of the railroad company to furnish its employees with reasonably safe tools and implements with which to perform their work, and also to exercise reasonable care and diligence to see that the tools and instrumentalities furnished by it to the employees are kept in such state of repair and safe condition for which the employees are required to use them. Where the railroad company has furnished, in the first instance, such reasonably safe tools and implements to the employee, to be used in the performance of the work he undertakes to do, and the tools become worn, or some latent defect exists, of which the company has no knowledge, or which, by the exercise of ordinary care and diligence, it could not have discovered, and the employee using the same has the same means of knowing the condition of the tools that the company has, and the tools are by each considered reasonably safe, and the employee is injured by the use of the tools, it is a mere accident or misfortune for which the company is not liable."

[From B. I. No. 9, March, 1897.]

WRIGHT v. SOUTHERN PACIFIC CO., 46 Pacific Reporter, page 374.—Action was brought in the district court of Weber County, Utah, by James A. Wright against the railroad company above named to recover damages for personal injuries received while in the employ of said company. Judgment was rendered for the plaintiff, and the defendant appealed the case to the supreme court of the State, which rendered its decision September 23, 1896, and reversed the judgment of the lower court solely upon the ground that the jury in said court disregarded the instructions of the judge thereof in fixing the amount of damages. With this exception, all the important points raised by the defendant were decided in the plaintiff's favor.

The opinion of the supreme court was delivered by Judge Bartch, and the syllabus of the same, which was prepared by the court, contains a clear statement of the facts in the case and the points decided. The following is quoted therefrom:

"The plaintiff received the injury complained of while in the employ of the defendant, and while acting in the capacity of switchman in the defendant's yards. The engine used in moving the cars was operated without a fireman, the engineer performing the duties of fireman himself. This fact was known to the plaintiff, who continued to work without making any complaint to defendant or to any of its agents. The engine was defective, and required more attention because thereof. Defendant had rules which required switchmen to give signals to the engineer, and to see that the signals were observed and obeyed, before going between the cars, and to abstain from going between them while in motion, for the purpose of coupling or uncoupling them. But these rules were constantly violated, not only by the plaintiff, but also by the yardmaster, as well as the other switchmen. On the occasion of the accident the plaintiff gave the engineer the signal to stop, which was obeyed, and then went between the cars to pull the pin, but being unable to do so he stepped out and gave the 'slow back up' signal, and, without waiting to see if the signal was obeyed, went between the cars to uncouple them

while in motion. The engineer, by a quick movement, bumped the forward cars against the back one. The plaintiff's foot was caught under the brake beam. He then gave the signal to stop, which not being observed, he was dragged a distance of two or three car lengths until he fell, when several trucks passed over and crushed his leg below the knee, causing the injury complained of. When the last signal was given the engineer was in the act of replenishing the fire, and therefore failed to observe and obey it. Plaintiff's leg was amputated above the knee, and he has been unable to wear an artificial leg. Evidence was introduced tending to show that the accident would not have occurred had there been a fireman on the engine at the time of the accident. *Held*, that the nonsuit was properly denied; that plaintiff's knowledge of the fact that defendant operated its engine without a fireman was not of itself sufficient to preclude a recovery; that such a result would not follow unless the want of a fireman caused the operation of the engine to be so obviously dangerous that a man of ordinary care and reasonable prudence would refuse to act as switchman. The plaintiff had the right to rely, at least to some extent, upon the judgment of the defendant's agents, who deemed it safe for the engineer to perform the work of a fireman.

"An employee as switchman assumes the perils and risks ordinarily incident to such employment, including the hazards which observation would bring to his knowledge; but he does not assume the perils occasioned through the negligence of his employer, nor is he bound to anticipate and comprehend all the perils to which he might possibly be exposed because of a want of a sufficient number of employees to perform the service in safety.

"The employer has the right to adopt rules for the conduct of business and safety of the employees, but, in order that such rules may avail the employer in a suit for damages for injuries resulting from a breach thereof, they must not only have been known to the employee but also their observance must not have been waived by the employer.

"Where a certain rule of the employer, though established for the safety of the employee, has been habitually disobeyed since its inception, or for a long period of time, in the presence or to the knowledge of the employer, without an attempt to enforce it, or has been disregarded in such manner and for such length of time as to raise the presumption that it was done with his knowledge and approval, the rule will be regarded as abrogated or waived.

"Evidence of a customary disregard of the rule of a railroad company by its employees, with the knowledge and approval of the agents of the company, is competent as tending to show that the rule was abrogated or waived.

"Where the negligence of the employer and that of a fellow-servant combine to produce an injury to a servant the employer will be liable in damages to the injured servant."

[From B. L. No. 9, March 1897.]

ILLINOIS CENTRAL R. R. CO. v. HILLIARD 37 Southwestern Reporter, page 75.—This was an action to recover damages for personal injuries. From a judgment for the plaintiff in the circuit court of Hickman County, Ky., the defendant appealed the case to the court of appeals of the State, and said court rendered its decision September 30, 1896, and affirmed the judgment of the lower court.

The opinion of the court of appeals, which was delivered by Judge Lewis, contains a full statement of the facts in the case, and reads as follows:

"E. V. Hilliard was employed as conductor of a freight train of appellant, Illinois Central Railroad Company, which left Mound Station, of that State, October 5, 1893, going southward. But just before reaching Clinton, Ky., the train, moving at about the rate of 5 miles per hour, broke apart, and Hilliard, being on top of the cars, thereupon started to descend to the ground on a ladder fixed at the end of one of the cars, when a round thereof, as he grasped it, gave way, in consequence of which he fell, and one of his hands was so crushed by a wheel as to necessitate amputation. It is not contended that he was, under the circumstances, out of his proper place, or negligent, or outside his line of duty, in attempting to descend in the manner and time he did so. Nor is there dispute about his fall and injury resulting from insecure fastening of the round which he had to take hold of in order to descend. The questions, therefore, are whether the railroad company was guilty of actionable negligence; and if, or although, it was, whether Hilliard, as conductor, was guilty of such contributory negligence as that but for it the fall and injury would not have occurred. And those questions involve an inquiry as to the respective and relative duties of the two parties. As the lower court instructed the jury, it was the duty of the company to provide and keep in good and safe condition the ladders attached to the several cars; and, as it further instructed, if at the time plaintiff was hurt the ladder in question was in an

unsafe condition, and defendant knew it, or by the use of ordinary care could have known it, in time to have put same in a safe condition, and the injury resulted from such condition of the ladder, then plaintiff was entitled to recover, unless plaintiff knew, or by exercising ordinary care could have known, that the ladder was in such condition.

"Defendant asked but the court refused to give the following instruction: 'That the car inspector of the defendant and the plaintiff, as conductor of the freight train upon which the accident happened, were fellow-servants engaged in the same line of service as to the inspection of the cars in said train, and though the jury may believe from the evidence that said inspector was guilty of negligence in the inspection of said cars, yet they can not find for plaintiff unless they believe said negligence was gross negligence.' That instruction was properly refused, because abstract and misleading. In the first place, the person employed at Mound Station to inspect each car of a train and ascertain if it is in a safe condition was not a fellow-servant of plaintiff in the sense of being upon a common footing and agents of each other. They acted in different spheres, and neither could or was required to know whether the other was properly doing his duty. In the second place, it would have been improper to require the jury to believe that the inspector was guilty of gross negligence. The simple inquiry was, as they had been instructed, whether the company, through its inspector, used ordinary care in examining the cars, so as to ascertain whether the ladders attached to each were in a safe condition, for it was the legal duty of the company to guard against every source of danger that it could, by the exercise of that kind and degree of care, foresee and prevent. And while a railroad company can not be required to insure the safety of a train, it is bound to make a reasonable, proper, and careful examination of each car. The evidence in this case shows that the bolt which held the defective round of the ladder was so rusted and worn that the top slipped off when plaintiff grasped the round. And the jury might have reasonably concluded that the inspector could and would, by using proper and reasonable care, have discovered the fact; and, having failed to do so, the legal liability of the company was fixed. On the other hand, the conductor, while required to examine the condition of a train before taking charge of it, could not be reasonably required or expected to make such close and minute examination as to discover a latent defect. If the ladder had been detached or out of place, it would have been the plaintiff's duty to have discovered it. There is plainly a difference in the degree and character of examination of cars required of the inspector, who is employed for that special purpose, and that required of a conductor. If there was not, there would be no use for an inspector. Perceiving no error of law on the trial of this action, the judgment is affirmed."

[From B. L. No. 12, September, 1897.]

GOWEN *v.* BUSH, 76 Federal Reporter, page 349.—Action was brought by William N. Bush against Francis Gowen, sole receiver of the Choctaw Coal and Railway Company, in the United States court for the Indian Territory, to recover damages for personal injuries sustained by reason of an explosion in a coal mine located at Hartshorne, in the Indian Territory, which was operated by Gowen in his capacity as receiver. Judgment was rendered for Bush, and the defendant appealed the case to the United States circuit court of appeals for the eighth circuit, which court rendered its decision October 5, 1896, and affirmed the judgment of the lower court.

The opinion of the circuit court of appeals was delivered by Circuit Judge Thayer, and the following, which sufficiently states the facts in the case, is quoted therefrom:

"The first error that has been assigned for our consideration is that the trial court erred in failing to direct a verdict for the defendant below. The argument in support of this assignment is founded upon the claim that there was no evidence before the jury tending to show that the defendant had been guilty of any violation of duty or that he was in any respect negligent. We think, however, that this point is untenable and should be overruled. The record discloses that there was evidence before the jury which tended to show that the plaintiff was a miner of some ten years' experience, who had always been accustomed to work in mines that did not generate gas in explosive quantities, that he had been induced by an agent of the receiver by the name of Gabe Gideon to come from Calhoun, Mo., where he resided, to Hartshorne, in the Indian Territory, for the purpose of taking service in a new mine at that place which had recently been opened by the receiver and was being worked both by night and by day, and that he had only arrived at said mine and taken service therein about three days before the

explosion occurred; that representations were made to him at his home in Missouri, by the receiver's agent, for the purpose of inducing him to come to Hartshorne, to the effect that the mine at that place was free from gas and was perfectly safe, and that similar representations were made to him by the assistant superintendent of the mine after his arrival at Hartshorne, before he went to work. There was further evidence tending to show that the mine in question did generate explosive gas in considerable quantities; that this fact was known to the agents of the receiver who had immediate charge and supervision of the mine; and that the plaintiff was seriously injured by an explosion of gas in the mine, which took place about the middle of the third night that he worked therein, before he had become acquainted with its condition and the dangers incident thereto. As there was testimony before the jury tending to establish these facts, it is manifest that the court would have erred in withdrawing them from the consideration of the jury on the theory that they constituted no proof of culpable negligence. The doctrine is well settled and elementary that it is a master's duty to notify his servant of any hidden defect in the place where the latter is expected to work which increases the ordinary risks of the employment, and to advise him of any latent danger which may attend the doing of any work which the servant is called upon to perform, provided the defect or the danger in question is known to the master and is unknown to the servant. A master violates his duty and is guilty of culpable negligence whenever, without warning, he exposes his servant to a risk of injury which is not obvious and was not known to the servant, provided the master himself was either acquainted with the risk or in the exercise of ordinary care ought to have been acquainted with it. In the present case there was evidence which at least tended to show that the defendant not only failed to warn the plaintiff of the known presence of gas in the mine in such quantities as might cause an explosion, but that the plaintiff was thrown off his guard and not led to expect the presence of gas in dangerous quantities by the assurance of those who employed him that the mine was safe and free from gas. We think, therefore, that the evidence above referred to made a case which entitled the jury to decide whether the defendant was in fact negligent, and whether his negligence was the proximate cause of the plaintiff's injuries.

"In this connection it will be as well to notice another error which is assigned to the action of the trial court in admitting testimony concerning the representations that were made to the plaintiff at his home in Calhoun, Mo., by Gabe Gideon, the receiver's agent, to the effect that the mine where the plaintiff and his associates were expected to work was safe and free from gas. It is claimed by the plaintiff in error that the proof of these representations was inadmissible for the reason that Gabe Gideon had no authority to make them. It is not denied that he was authorized by the receiver to go to Calhoun, Mo., and solicit the plaintiff and some other miners to come to Hartshorne for the purpose of obtaining employment; neither is it denied that his expenses for making that trip were paid by the receiver. The objection to the testimony is that he was not authorized to make a hiring contract, nor to make representations as to the condition of the mine in which the men would be expected to work. We think that this objection to the testimony is untenable. It being conceded that Gabe Gideon was authorized by the receiver to induce or solicit the plaintiff and other miners to go to Hartshorne for the purpose of obtaining work, and that his expenses in making the trip were paid by the receiver, it follows, we think, that it was within the apparent scope of the agent's authority to make representations touching the condition of the mine. Laborers who were thus solicited to go some distance from their place of residence into an adjoining state in pursuit of a job would naturally desire to know something about the character of the work at that place, the wages that they would probably earn, and, if they were to work in a mine, they would doubtless desire to know something about the condition of the mine and the risks that they would be likely to incur in working in it. They would naturally assume that the agent of the employer was authorized to give information with reference to such matters. We think, therefore, that the representations made by the agent touching the condition of the mine, as a means of inducing the plaintiff and others to go to Hartshorne, were within the apparent scope of the agent's authority, and that they were admissible against the employer, even though he had not expressly authorized the agent to make them. It is a well-known rule that a principal is always bound by the acts of his agent that are within the apparent scope of the agent's powers, although such apparent powers may have been limited by secret instructions of the principal that were not communicated to those with whom the agent dealt \* \* \* It results from what has been said that we find no material error in the proceedings of the trial court, and the judgment of that court is accordingly affirmed."

[From B. L. No. 12, September, 1897.]

LOUISVILLE, NEW ALBANY AND CHICAGO RY. CO. v. BATES, 45 *Northeastern Reporter*, page 108.—Action was brought in the circuit court of White County, Ind., by Alonzo G. Bates, administrator, to recover damages from the above-named railroad company for the death of his intestate. Judgment was rendered for him, and the railroad company appealed the case to the supreme court of the State, which rendered its decision November 11, 1896, and reversed the judgment of the circuit court.

The opinion of the court was delivered by Chief Justice Monks, and in the same he laid down certain legal principles which are quoted below:

"Appellee's intestate, while in appellant's service as brakeman, was killed when in the act of coupling cars upon appellant's road, and this action was brought to recover damages therefor, upon the ground that his death was caused by appellant's negligence. After issue was joined, the cause was tried by a jury and a special verdict rendered.

"The special verdict shows that appellant received a car from another company at Frankfort, Ind., for transportation over its lines, and that appellee (appellee's intestate) was injured while attempting to couple the same to a locomotive on appellant's road. The first question presented is as to the liability of railroad companies to employees for injuries occasioned by a defect in foreign cars received only for transportation over its lines. It is the duty of a railroad company to exercise ordinary care in furnishing reasonably safe cars and other appliances, and also to exercise ordinary care by inspection and repair to keep them in reasonably safe condition, so as not to unreasonably expose its employees to unknown and extraordinary hazards. The railroad company is not required to furnish cars or appliances that are absolutely safe or to maintain them in that condition. The company is not an insurer of the safety of the employee against injury. The company is not liable for injuries caused by hidden defects of which it has no knowledge and of which it could not have known by the exercise of ordinary care. The master is only charged with the knowledge of that which by the exercise of ordinary care he would have discovered. He is not required to resort to tests that are impracticable or unreasonable and oppressive, or which would be incompatible with the proper furtherance of business, and which are only required to insure absolute safety. If the duty of inspection has been performed with ordinary care, and a defect is found afterwards to exist, but not discovered at the time, the master is not liable for an injury caused thereby, unless he had knowledge of such defect. The duty of a railroad company as to foreign cars received in regular course of business for transportation over its lines is that of exercising ordinary care in inspecting the same to see if they are in reasonably safe condition of repair, and, if found to be out of repair, to put them in a reasonably safe condition of repair, or notify its employees of the condition of such cars. Appellant, therefore, owed its employees the duty of making the proper inspection of the car in question, and either repairing or giving notice of its defects, if any were found. The inspection which a company is required to make of such a car is not merely a formal one, but should be made with ordinary care; that is, the inspection should be such as the time, place, means, and opportunity, and the requirements and exigencies of commerce will permit. If the company has used ordinary care to secure competent inspectors, and inspection is made with ordinary care, under the circumstances, taking into consideration the time, place, means, and opportunity for inspection, and the defects, if any are discovered, are repaired or due notice thereof given to the employee, the duty resting upon the company is discharged. It is not liable for injuries caused by hidden defects which could not be discovered by such inspection as the exigencies of the traffic will permit. The company receiving such foreign car is not bound to repeat the tests which are proper to be used in the original construction of the car, but may assume that all parts of the car which appear upon ordinary examination to be in good condition are in such condition. It would seem that if such car were old, dilapidated, or obviously defective, ordinary care would require a more careful inspection than if there was nothing unusual in its appearance. A railroad company is not negligent in receiving and passing over its lines cars different in construction from those owned and used by itself, if the same are not so out of repair or in such a defective condition as can be discovered by ordinary care.

"In making an inspection it is the duty of the inspector to use the usual and ordinary tests, and such tools as persons of ordinary prudence use, if any, under like circumstances. No man is held to a higher degree of skill or care than a fair average of his trade or profession, and the standard of due care is the conduct of the average prudent man. If the inspection is made in the usual and ordinary way—the way commonly adopted by those in like business—it can not be said that it was done negligently."

[From B. L. No. 9, March, 1897.]

**BREWER v. TENNESSEE COAL, IRON AND RY. CO.**, 37 Southwestern Reporter, page 549.—Action was brought in the circuit court of Marion County, Tenn., by Lewis Brewer against the company above named to recover damages for injuries sustained while in its employ. In the declaration filed by the plaintiff he alleged that it was his duty to stop all cars loaded with ore at a certain place in the company's stock house on a trestle about 25 or 30 feet above the floor; that a piece of timber about 18 inches wide and 6 inches thick had been placed parallel with and between the tracks on said trestle for servants and employees of the company to walk on while handling the cars; that said timber had been worn off by unloading ore on it until it was not more than 2 or 3 inches wide on top and defective, unsafe, and unfit for anyone to walk on; that he and others had notified the company shortly before the accident of the condition of the timber, that the company, by its agent, promised to replace it and ordered plaintiff to continue the work, which he did, rather than lose his job and relying upon the promise to repair; that one afternoon, in attempting to step from a car on to the timber his foot slipped off and he fell through the trestle into the iron ore below, and that from this fall he was severely injured. The defendant company demurred to this declaration, and the circuit court, in its decision, sustained the demurrer and dismissed the suit. The plaintiff appealed the case to the supreme court of the State, which gave its decision November 13, 1896, and affirmed the decision of the lower court.

The opinion of the supreme court was delivered by Chief Justice Snodgrass, and the following is quoted therefrom:

"It will be noticed that the declaration does not aver a defect in the walkway used any more apparent to the master than to the servant himself, or one which required special or expert skill to detect. It was a plain and obvious defect, equally within the observation and knowledge of both. It is also to be observed that there is no averment that the plaintiff was led to continue his services with the company on account of promise to repair, but only that he did not decline to work because of fear of losing his job, and that he did continue it, relying upon the express promise of defendant to repair the walkway. It is further to be noticed that there was no promise to repair in any given time, nor is it averred how long before the accident had the promise been made. The true rule on that subject is thus stated by Mr. Bailey in his work on 'The Master's Liability for Injuries to Servant' (p. 208): 'It must appear that the servant was led to continue his employment by the master's promise that the defect complained of should be removed. Where the servant does not complain upon his own account, and continues in the employment, with full knowledge of the risk, he can not recover of the master, because the latter, when the defective condition is called to his attention by the servant, gives assurances, which do not induce the servant to remain, that the defect should be remedied.' \* \* \* When there has been a promise to repair or obviate defects, and the servant has received an injury, after such promise, caused by the defect, the question then becomes one of ordinary care on the part of the employee—whether, relying upon such inducement held out by the employer, a prudent workman would take the risk, as well as whether there were reasonable grounds at the time of the injury for expecting the employer would remove the defect." \* \* \*

"Our cases, so far as they have gone, are in accord, *Railroad Co. v. Smith* (9 Lea, 685) and *Telephone Co. v. Loomis* (87 Tenn., 504) holding that the exercise of ordinary care is essential on the part of the servant, and that the master can not be charged with his imprudence and rashness. Neither, however, involved the doctrine of protest against the use of defective tools or machinery, and neither are they intended, nor is this, to hold that in doubtful conditions, or in a case where the servant has a right to rely upon the superior judgment of the master, the master might not be held liable, but only in plain cases, as averred in the declaration, of a defect perfectly known to both servant and master, and where it is rashness to use the walkway, and the servant can not put upon the master a liability for its use upon an indefinite promise of repair. If the plank was 18 inches wide, and had been worn until it was but 2 or 3 inches, as averred, it is clear that whatever danger might have existed in its use was perfectly apparent, and therefore one who used it must take the risk. Judgment of the circuit court is affirmed."

[From B. L. No. 12, September, 1897.]

**PENNSYLVANIA R. R. CO. v. SNYDER**, 45 Northeastern Reporter, page 559.—The original action was brought by Jesse Snyder against the Pennsylvania Railroad Company and the Lake Shore and Michigan Southern Railway Company in

the court of common pleas of Lucas County, Ohio, to recover damages for injuries received while in the employ of the last-named company as a switchman. The injury was caused by a defective car owned by the Pennsylvania Railroad Company and delivered by said company to the Lake Shore and Michigan Southern Railway Company to be transported on its line to Detroit or some other point. Snyder attempted to climb onto the car, under direction of the conductor of the train of which it was a part, while said train was in motion, and, owing to the defective condition of said car and the ladder on the end thereof, he was unable to retain his hold and was violently thrown onto the track and severely injured. During the trial of the case the plaintiff, Snyder, dismissed the action against the Lake Shore company, and the cause proceeded upon the issues between him and the Pennsylvania company. The trial resulted in a verdict and judgment for the plaintiff, which judgment was affirmed by the circuit court of Lucas County, to which the case was appealed by the railroad company. The railroad company then carried the case on writ of error to the supreme court of the State, which rendered its decision December 1, 1896, and affirmed the judgments of the lower courts.

The opinion of the supreme court was delivered by Chief Justice Willhams, and the syllabus of the same, which was prepared by the court, is given below:

"1. Where companies controlling connecting lines of railway transport over their respective lines loaded freight cars of the other under a traffic arrangement by which they share the earnings, and one company delivers to the other, to be transported over its line, a car that is so defective in its equipments as to be dangerous to handle, which should have been inspected and repaired before being so delivered, and in consequence of such defective condition of the car an employee of the latter company receives an injury while handling it in the course of his employment, the negligence of the former company in delivering the car for transportation without proper inspection and repair is the proximate cause of the injury, although the employer company should also have made an inspection of the car when it was received, and was negligent in that duty. The negligence of the latter company, while contributing to produce the injury, is not an independent cause, breaking the casual connection between the injury and original negligence of the company furnishing the car for transportation, and either company, or both, may be held responsible, at the election of the party injured.

"2. The company delivering the car to the other company should anticipate that employees of the latter would go upon and handle the car, and thereby be exposed to the danger of receiving injury, as a natural and probable consequence of its defective condition, and owes to such employees the duty of using reasonable care to discover and remove its dangerous defects before it is so delivered. The services of such employees being necessary to accomplish the transportation intended, the delivery of the car for that purpose amounts to an invitation to them to go upon and handle the car in the course of their employment, and an assurance that they could safely do so.

"3. When a person, without his fault, is placed in a situation of danger, he is not to be held to the exercise of the same care and circumspection that prudent persons would exercise where no danger is present; nor can it be said that, as a matter of law, he is guilty of contributory negligence because he fails to make the most judicious choice between hazards presented, or would have escaped injury if he had chosen differently. The question in such case is, not what a careful person would do under ordinary circumstances, but what would he be likely to do, or might reasonably be expected to do, in the presence of such existing peril, and is one of fact for the jury."

[From B. L. No. 12, September, 1897.]

ATCHISON, TOPEKA AND SANTA FÉ R. R. CO. *v.* SLATTERY, 46 Pacific Reporter, page 941.—Suit was brought in the district court of Sedgwick County, Kans., by M. Frank Slattery against the railroad company above named to recover damages for injuries sustained while in the employ of said company. He was employed as a yard clerk, and when injured was riding on a switch engine from one part of the yard to another, said engine colliding with a push car, which was upon the side of the track, and a portion of said push car caught his foot and so injured it that amputation of a part was necessary. Judgment was rendered for the plaintiff, Slattery, and the defendant company carried the case on writ of error to the supreme court of the State, which rendered its decision December 5, 1896, and affirmed the judgment of the district court.

The opinion of the supreme court was delivered by Judge Johnson, and the following, showing the decision of the court upon one particularly interesting point, is quoted therefrom:

"It is further contended that Slattery assumed an obviously dangerous position on the footboard of the switch engine, and that he was riding there in violation of one of the rules of the company. The rule is: 'No person will be permitted to ride on an engine except the engineman, fireman, and other designated employees in the discharge of their duty, without a written order from the proper authority.' While he appears to have no written authority to ride, he doubtless was warranted in doing so by the well-established custom of the yards and by the sanction and approval of those in charge of them. In fact, in the present instance, he was directed by the foreman to step upon the engine and ride down to the end of the yards for the purpose of finding and marking certain cars. For several years he had ridden back and forth upon the engine, and the yardmaster, his superior officer, had directed him to go upon the engine whenever it would take him to his work faster than he could get there by walking. He had ridden on the engine in the presence of the superintendent, and apparently with his sanction and approval. Ordinarily the willful disobedience of a rule should be held to constitute negligence; but where the rule is habitually disregarded, and a different course has long been pursued by employees, with the knowledge and approval of the managing officers of the company, the rule must be regarded as inoperative. We can not hold, as a matter of law, from the testimony, that Slattery was guilty of contributory negligence."

[From B. L. No. 12, September, 1897.]

*ERSLEW ET UX V. NEW ORLEANS AND NORTHEASTERN R. R. CO.*, 21 Southern Reporter, page 153.—Action was brought in the civil district court of the parish of Orleans, La., by William Erslew and wife against the above-named railroad company to recover damages for the death of their son, an employee of said company. Judgment was rendered for the plaintiffs and the defendant company appealed the case to the supreme court of the State, which rendered its decision December 11, 1896, and sustained the judgment of the lower court. The evidence showed that an electric street-car company had put up a guy wire which crossed over the track of the railroad company, that when the accident occurred the plaintiff's son, who was a brakeman in the service of the railroad company, was on a freight car which was being propelled rapidly along the street, and, just as he arose from his brake, his head struck the guy wire above mentioned and he was knocked off the car and so injured that he soon after died.

The opinion of the supreme court was delivered by Judge Watkins, and the syllabus of the same, which was prepared by the court, contains the following language:

"1. It is negligence on the part of an electric street-car company, in the construction and establishment of its plant, to so place one of its guy wires over the track of a steam railway company as not to afford sufficient space for the latter's trains to easily and conveniently pass without risk of danger and injury to its servants and employees.

"2. It is negligence on the part of the steam railway company to permit an electric street-car company to so construct and maintain over its tracks a guy wire that it will endanger the lives of its servants and employees.

"3. If an employee of the steam railway company knew, or ought reasonably to have known, the precise danger to him of the guy wire of the electric street-car company, in the course of his employment, and saw fit, notwithstanding, to continue in it, he might be held to have assumed the extraordinary risk as well as the ordinary risks of his service. But this consequence must rest upon positive knowledge or reasonable means of positive knowledge of the precise danger assumed."

[From B. L. No. 13, November, 1897.]

*TEXAS AND PACIFIC RY. CO. V. BARRETT*, 17 Supreme Court Reporter, page 707.—Action was brought in the district court of Tarrant County, Tex., by one Barrett against the above-named railway company to recover damages for personal injuries sustained while he was in the employ of said company. Said case was removed, on the application of the railway company, to the United States circuit court for the northern district of Texas. Judgment was rendered for the plaintiff, Barrett, and the defendant company carried the case on writ of error to the United States circuit court of appeals for the fifth circuit, by which court said judgment was affirmed. The defendant company then brought the case on writ of error before the United States Supreme Court, which rendered its decision April 19, 1897, and also affirmed the judgment of the circuit court.

The opinion of the Supreme Court was delivered by Chief Justice Fuller, and the following, quoted therefrom, sufficiently shows the facts in the case and the reasons for the decision:

"On the trial there was evidence tending to show that Barrett, while in the employment of the company as foreman in charge of a switch engine, and at work in the company's yard, was injured by the explosion of another engine, with which he had nothing, and was not required to have anything, to do, and which had been placed by the foreman of the roundhouse on a track in the yard, with the steam up, to take out a train; that the boiler of the locomotive, at the time it exploded, and for a considerable time before that, was and had been in a weak and unsafe state, by reason of the condition of the stay bolts, many of which had been broken before the explosion, and some of them for a long time before; that there were well-known methods of testing the condition of stay bolts in a boiler engine; and that, if any of these tests had been properly applied to this boiler within a reasonable time before the explosion, the true condition of the stay bolts would have been discovered.

"The circuit court instructed the jury, at defendant's request, 'that the master is not the insurer of the safety of its engines, but is required to exercise only ordinary care to keep such engines in good repair, and, if he has used such ordinary care, he is not liable for any injury resulting to the servant from a defect therein not discoverable by such ordinary care; that the mere fact that an injury is received by a servant in consequence of an explosion will not entitle him to a recovery, but he must, besides the fact of the explosion, show that it resulted from the failure of the master to exercise ordinary care, either in selecting such engine, or in keeping it in reasonably safe repair; and that a railway company is not required to adopt extraordinary tests for discovering defects in machinery, which are not approved, practicable, and customary, but that it fulfills its duty in this regard if it adopts such tests as are ordinary in use by prudently conducted roads engaged in like business, and surrounded by like circumstances.'

"And thereupon further charged that a railway company is bound to use ordinary care to furnish safe machinery and appliances for the use of its employees, and the neglect of its agents in that regard is its neglect; that it is not bound to insure the absolute safety thereof, nor to supply the best and safest and newest of such mechanical appliances, but is bound to use all reasonable care and prudence in providing machinery reasonably safe and suitable for use, and in keeping the same in repair; that 'by ordinary care is meant such as a prudent man would use under the same circumstances; it must be measured by the character and risks of such business, and where such persons, whose duty it is to repair the appliances of the business, know, or ought to know by the exercise of reasonable care, of the defects in the machinery, the company is responsible for their neglect; that 'if the jury believe from the evidence, under the foregoing instructions, that the boiler which exploded and injured the plaintiff was defective, and unfit for use, and that defendant's servants, whose duty it was to repair such machinery, knew, or by reasonable care might have known, of such defects in said machinery, then such neglect upon the part of its servants is imputable to the defendant, and if said boiler exploded by reason of said defects, and injured the plaintiff, the defendant would be responsible for the injuries inflicted upon the plaintiff, if plaintiff in no way, by his own neglect, contributed to his injuries;' but that 'the burden of the proof is on the plaintiff throughout this case to show that the boiler and engine that exploded were improper appliances to be used on its railroad by defendant; that, by reason of the particular defects pointed out and insisted on by plaintiff, the boiler exploded and injured plaintiff.' The burden is also on plaintiff throughout to show you the extent and character of his sufferings, and the damages he has suffered by reason thereof. You must also be satisfied that plaintiff was ignorant of the defects in the boiler that caused its explosion, if the evidence convinces you that such was the case; and that he did not by his negligence contribute to his own injury.'

"We think that these instructions laid down the applicable rules with sufficient accuracy and in substantial conformity with the views of this court as expressed in *Hough v. Railway Co.*, 100 U. S. 218, etc. Judgment affirmed."

[From B. L. No 15, March, 1898.]

PITTSBURG AND WESTERN RY. CO. *v.* THOMPSON, 82 Federal Reporter, page 720.—This case was brought before the United States circuit court of appeals for the sixth circuit upon writ of error directed to the circuit court of the United States for the eastern division of the northern district of Ohio. Said writ was obtained by the above-named railway company, against whom a judgment had been rendered in the lower court in a suit for damages brought against the company by Samuel M. Thompson, guardian of Frank H. Wakelee, who had been injured while in the employ of the railway company as a brakeman. The decision of the United States circuit court of appeals was rendered October 5, 1897, and the judgment of

the lower court was affirmed therein. In its opinion said court construed the second section of an act of the Ohio legislature passed April 2, 1890, regulating the liability of railroad companies for injuries of employees, which section reads as follows:

"It shall be unlawful for any such corporation to knowingly or negligently use or operate any car or locomotive that is defective, or any car or locomotive upon which the machinery or attachments thereto belonging are in any manner defective. If the employee of any such corporation shall receive any injury by reason of any defect in any car or locomotive, or the machinery or attachments thereto belonging, owned, and operated, or being run and operated by such corporation, such corporation shall be deemed to have had knowledge of such defect before and at the time such injury is so sustained, and when the fact of such defect shall be made to appear in the trial of any action in the courts of this State, brought by such employee, or his legal representatives, against any railroad corporation for damages on account of such injuries so received, the same shall be *prima facie* evidence of negligence on the part of such corporation."

The following is the language used in the opinion of the United States circuit court of appeals, delivered by Circuit Judge Linton, in regard to the above-quoted section:

"Propositions Nos. 2, 5, 6, 7, and 8 presented different phases of the question of the presumption as to the proper inspection of cars and machinery coming upon one road from another, and of the discharge of duty by inspectors. Each of these requests was faulty in totally ignoring the Ohio statute of April 2, 1890, the second section of which provides that it shall be unlawful for any railroad company to knowingly or negligently use or operate any defective car, and that, in actions by an employee for an injury by reason of such defect, the company shall be deemed to have had knowledge of such defect, and that this presumption shall stand as *prima facie* evidence of negligence on the part of the company. (87 Ohio Laws, p. 149.) This act was construed by the supreme court of Ohio in *Ry. Co. v. Erick*, 51 Ohio St., 116, 37 N. E., 128, the court saying:

"The presumption of knowledge of the defect before and at the time of the injury is, by this statute, chargeable to the company; and this statutory presumption can not be overcome by proof of facts which only raise a presumption that the company did not have such knowledge. Competent and careful inspectors are presumed to properly inspect the cars and their attachments, but such presumption would not overcome the statutory presumption of knowledge of defects before and at the time of the injury. It would take an actual and proper inspection, or its equivalent, to overcome the statutory presumption of knowledge of such defects. It will be noticed that this section of the statute also provides that, in the trial of a personal-injury case against a railroad company, the fact of such defect in its cars or their attachments shall be *prima facie* evidence of negligence on the part of such corporation. It will be noticed that it is not the servants or such as are fellow-servants that are deemed guilty of negligence, but the corporation itself. In such case, when the plaintiff has shown that he was injured and that such injury was caused by defect in the cars or their appliances, the statute raises the presumption of negligence on the part of the company, and the burden of proof is thrown upon the company to overcome the *prima facie* case of negligence thus made by the statute."

"There was no direct evidence that this car was ever inspected by this company, and the question as to whether such an inspection was ever, in fact, made by the plaintiff in error was submitted to the jury, who found that no inspection was made when received by the defendant company. The statutory presumption of negligence was therefore not overcome. The judgment must be affirmed."

[From B. L. No. 15, March, 1898.]

TEXAS AND NEW ORLEANS R. R. CO. *v.* BINGLE, 42 Southwestern Reporter, page 971.—Application was made to the supreme court of Texas for a writ of error to the court of civil appeals of the first supreme judicial district of the State to bring the case of Bingle against the Texas and New Orleans Railroad Company, in which a judgment for Bingle had been affirmed by the court of civil appeals, before it. Said application was refused and the railroad company made a motion for a rehearing on the same, and the supreme court rendered its decision November 29, 1897, and overruled said motion. The original action had been brought by Bingle to recover damages from the railroad company for injuries incurred while he was in its employ.

In its opinion, delivered by Chief Justice Gaines, the supreme court stated certain principles of the common law, as follows:

"The servant, by entering the employment of the master, assumes all the ordi-

nary risks incident to the business, but not those arising from the master's neglect. It is the duty of the master to exercise ordinary care to furnish him a safe place in which to work, safe machinery and appliances, to select careful and skillful coworkers, and, in case of a dangerous and complicated business, to make such reasonable rules for its conduct as may be proper to protect the servants employed therein. The servant has the right to rely upon the assumption that the master has done his duty; but if he becomes apprised that he has not, and learns that the machinery is defective, the place unnecessarily dangerous, or that proper rules are not enforced, he assumes the risk incident to that condition of affairs, unless he informs the master, and the latter promises to correct the evil. In this latter event, so long as he has reasonable grounds to expect, and does expect, that the master will fulfill his promise, he does not, by continuing in the employment, assume the additional risk arising from the master's neglect. If he then be injured by reason of that neglect, he may recover, provided it be found that a man of ordinary prudence, under all the circumstances, would have encountered the danger by continuing in the service. This we understand to be the rule in the English courts. It is the rule in the Supreme Court of the United States, and is supported by the weight of authority."

[From B. L. No. 16, May, 1898.]

EAST ST. LOUIS CONNECTING RY. CO. v. EGGMAN, 48 Northeastern Reporter, page 981.—This was an action on the case brought by E. J. Eggman as administrator of the estate of Joseph T. Newland, deceased, against the above-named railway company for negligently causing the death of his intestate. Upon trial in the city court of East St. Louis, Ill., the plaintiff recovered a judgment for \$3,500. On appeal to the appellate court of the fourth district the judgment was affirmed, and the railway then appealed to the supreme court of the State, which rendered its decision December 22, 1897, and affirmed the judgment of the lower courts.

The facts in the case and an interesting point of the decision are given in that part of the opinion of the supreme court which is quoted below:

"The declaration charges that, while the deceased was in defendant's employ as a carpenter constructing a dam near or under defendant's track on the bank of the Mississippi River in East St. Louis, the defendant's employees in charge of one of its engines attached to freight cars, negligently and carelessly ran the same upon him, thereby injuring him so that he died. It is charged that he was not a fellow-servant with those in charge of the engine, and that he was in the exercise of due care for his own safety. The negligent acts charged against the servants controlling the engine are that it was being run at a rate of speed exceeding 6 miles per hour, contrary to an ordinance of the city of East St. Louis, and that, in violation of a like ordinance, it was being run without ringing a bell upon the same; these acts of negligence being within the city limits of the city of East St. Louis and causing the alleged injury. We shall only notice a few of the points urged here for reversal.

"The first of these in natural order is that the declaration states no cause of action, and therefore the trial court erred in overruling the defendant's motion in arrest of judgment. The ground of this position is that the ordinance which the defendant is charged in the declaration with having violated was only intended to protect the public against the danger of moving trains and locomotives at public places, and could have no legal application, as between the railroad company and its employees, to locomotives being run in the company's private grounds. This same question was presented for decision in *Railroad Co. v. Gilbert* (157 Ill., 354, 41 N. E., 724) and decided adversely to the contention here urged. That case was cited and followed in *Railroad Co. v. Eggman* (161 Ill., 155, 43 N. E., 620). We have given due consideration to the argument urging the overruling of these decisions, but find no sufficient reason for so doing. The power of the municipality to pass the ordinance as reasonably tending to protect persons against injury is not seriously questioned, and we can see no good reason for holding that a person should be deprived of that protection merely because he is at the time an employee of the company, working in its yards or other private grounds."

[From B. L. No. 20, January, 1899.]

MIDDLE GEORGIA AND ATLANTIC RAILWAY COMPANY v. BARNETT, 30 Southeastern Reporter, page 771.—This suit was brought in the superior court of Putnam County, Ga., by Mrs. Lucinda C. Barnett against the above-named railway

company to recover damages for the death of her minor son, a brakeman in the employ of said company.

The plaintiff alleged negligence on the part of the defendant in that it had left an open drain under a track in one of its yards where cars had to be coupled and uncoupled and switched back and forth. The evidence offered by the plaintiff tended to show that the deceased, while engaged in the discharge of his duties as brakeman, and without fault on his part, stepped into this drain at night, and was run down and killed by a moving train of the defendant. The defendant denied that the drain contributed to the death of the deceased, and claimed that, if it did, it was one of the risks incident to the business which was assumed by him when he entered into the employment, and that therefore the defendant was not liable. A judgment was rendered for the plaintiff, and the defendant brought the case on writ of error before the supreme court of Georgia, which rendered its decision May 26, 1898, and sustained the judgment of the lower court.

The opinion of the court was delivered by Presiding Justice Lumpkin, and from the syllabus of the same, which was prepared by the court, the following is quoted:

"The rule of law that an employee takes the risks usually incident to the work in which he is employed does not exempt the master from liability for the death of a servant resulting from the negligent failure of the master to furnish the servant with a safe place in which to work, if, at the time his death was occasioned, he was free from contributory negligence."

[From B. L. No. 19, November, 1898.]

**BUSSEY v. CHARLESTON AND WESTERN CAROLINA RAILWAY COMPANY**, 30 South-eastern Reporter, page 477.—The plaintiff, Bussey, an employee of the above-named railway company, was injured, as he claimed, on account of the negligence of said company in furnishing unsafe appliances. He sued the company for damages, and on trial in the common pleas circuit court of Edgefield County, S. C., a judgment was rendered in his favor. The railway company appealed the case to the supreme court of the State, which rendered its decision June 29, 1898, and affirmed the judgment of the lower court.

Several interesting points of law as laid down by the court in its decision are given below in the language used by Judge Gary, who delivered the opinion of the court:

"The third exception imputes error as follows, to wit: '(3) In charging the jury, at one portion of his charge, in connection with the defendant's ninth request, as follows: "That the plaintiff was in the employ of this railroad company for certain purposes, and he must exercise, as any prudent man must, his faculties for ascertaining and determining whether there is danger, and whether it is necessary—whether he is required by the obligation of his contract—to incur that danger; and, if he is not so required, if the jury are satisfied that he is not required to incur the danger, and still, in disregard either of his own knowledge of the danger or the warning of others, he still remains in the place of danger, then that constitutes negligence on his part; and so I charge you on that proposition." And at another time in charging, as requested by the plaintiff, as follows: "The law places the duty on the master, and not on the servant, to exercise due care and diligence to ascertain whether the appliances furnished are safe and suitable. And a servant has the right to assume, without inquiry or without examination, that the appliances furnished him are safe and suitable." The effect of these conflicting instructions being to leave the jury in doubt, and uninstructed, as to whether the plaintiff, under the circumstances of this case, was bound to exercise any care in determining whether it would be safe for him to act as he did act at the time of the accident."

"It will be observed that the only error of which this exception complains is that the effect of the two instructions was to leave the jury in doubt, and uninstructed, as to whether the plaintiff was bound to exercise any care in determining whether it was safe for him to act as he did at the time of the accident. When the language contained in the first quotation set forth in the exception is analyzed, it will be seen (1) that the plaintiff was required to exercise ordinary care in determining whether there was danger; (2) that he was required to exercise ordinary care in determining whether it was necessary, under the obligations of his contract, to incur that danger; and (3) that if, in disregard either of his own knowledge of the danger, or the warning of others, he still remained in the place of danger, then that would constitute negligence on his part. Not only did the presiding judge charge the jury as to the care which the plaintiff was bound to exercise under the circumstances, but he charged the law too favorably to the defendant. It is the duty of the master to provide suitable machinery and appli-

ances, and to keep them in proper repair. The employee has the right to assume that the master has discharged his duty in this respect, and is not bound to exercise care in ascertaining whether the master has so acted. When, however, the employee has knowledge or receives warning that the master has not furnished suitable machinery, or that it has not been kept in proper repair, so that it has become dangerous, and he continues to use the same after such knowledge or warning, then it is a question to be determined by the jury whether, under the circumstances, the employee failed to exercise ordinary care and prudence, and was thereby guilty of negligence. The circuit judge is only allowed to charge that there is negligence on the part of the employee when but one inference can be drawn from the conduct of the employee. In all other cases the question of negligence is to be determined by the jury. In this case more than one inference could reasonably be drawn from the testimony, and the presiding judge charged too favorably to the defendant in saying that the facts mentioned in the exception, if found to be true, would constitute negligence. Inferences to be drawn from the facts are ordinarily for the consideration of the jury. The instructions mentioned in the exceptions relate to distinct principles, and are not inconsistent.

"The sixth exception alleges error as follows: '(6) In charging the jury as follows: "While it is true that a servant who enters the employment of another assumes the ordinary risks of business, this would not include the risks of working with unsafe appliances; for the master is bound to supply his servants with sound and safe appliances, and to keep the same in sound and safe condition;" thus instructing the jury, in effect, that the master was bound in law to guaranty the soundness and safety of all machinery he furnishes his employees. And this instruction to the jury, defendant submits, is further erroneous in that it did not take into consideration latent defects in machinery, but was calculated to lead the jury to believe that so far as any defects in machinery are concerned, whether patent or latent, an employee takes no risk with reference thereto.' The charge stated in general terms a correct proposition of law, and, if the defendant desired that the presiding judge should have charged more specifically, it had the right to present requests to that effect. Furthermore, when this part of the charge is considered in connection with the other parts of the charge it will be seen that the presiding judge did not, in effect, instruct the jury that the master was bound in law to guaranty the soundness and safety of the machinery furnished an employee.

"The seventh exception complains of error as follows: '(7) In charging the jury, as requested in the ninth request, that the constitution of 1895 enlarged the rights of the employees of railroad companies to recover for injuries, as therein stated, and in defining such request to the jury as he did.' The ninth request is as follows: '(9) That the constitution of this State of 1895 has enlarged the rights of an employee of a railroad corporation as to his remedies for any injury suffered by him from the acts or omissions of said corporation or its employees, and he now has the same right to recover for an injury as other persons not employees have, when the injury results from negligence of a superior agent or officer of the corporation, or of a person having a right to control or direct the services of a party injured; and if the jury find from the evidence that the plaintiff was injured while in the service of the defendant, and that at such time he was working under the direction of a servant of the defendant who had the right to control or direct the services of the plaintiff, and that the injury to the plaintiff resulted from the negligence of such servant of the defendant, then the plaintiff would be entitled to recover.' His honor said: 'I charge you that. It means that if the negligence of this superintendent, and his agents, of this railway company caused the injury, that was negligence of the railway company itself. The principal is liable for the negligence of his agent in the course of his employment. Waiving the objection to the exception on the ground that it is too general for consideration, we see no error in the ruling of the presiding judge.

"The eighth exception alleges error as follows: '(8) In charging as requested in the tenth request, and thus making it obligatory on the jury to include the matters therein mentioned, in assessing plaintiff's damage.' The tenth request is as follows: '(10) If the jury find for the plaintiff, then he would be entitled to recover for all actual damages which he has sustained, and this would include loss of time, nurses, as well as for bodily pain and anguish of mind induced by the hurt, and all damages, present and prospective, which are naturally the proximate consequences of the act done and the injuries received, not only present loss, or that which has already occurred, from the incapacity of the injured party to attend to his ordinary pursuits, and expenses which he has incurred for other necessary outlays, but as only one action can be brought, and only one recovery had, it is proper to include in the estimate of damages compensation for whatever it may be reasonably certain will result from future incapacity in consequence of

his injury. So, also, his loss of capacity for work or attention to his ordinary business must be included, whether it be physical or mental, present or prospective.' Waiving the objection to this exception on the ground that it is too general, we see no error in the charge.'

[From B. L. No. 17, July, 1898.]

CHICAGO, BURLINGTON AND QUINCY RAILROAD CO. v. KELLOGG, 74 Northwestern Reporter, page 151.—This action was brought by George Kellogg against the above-named railroad company to recover damages for personal injuries received while an employee of said company. A judgment was rendered for Kellogg in the district court of Phelps County, Neb., and the railroad company carried the case on writ of error to the supreme court of the State, which rendered its decision March 3, 1898, and affirmed the judgment of the lower court.

The opinion of said court was delivered by Chief Justice Ragan, and the facts in the case and the important reasons for the decision are shown in the following quotation therefrom:

“The first argument is that the petition does not state a cause of action. Kellogg in his petition in substance alleges that on the 7th of August, 1892, he was a station agent of the railway company at Bertrand, Nebr.; that it was his duty as such agent to set the brakes on cars left by passing trains on the side tracks at that station, to prevent the wind blowing the cars off the side track onto the main line; that about 10 o'clock in the evening of said date he went upon a car standing on a side track at his station for the purpose of setting a brake thereon, and that as he turned the brake a wire, which connected the brake chain with the brake rod, broke, precipitating him from the car on the bumpers thereof, and injuring him; that he had no knowledge of the defective condition of the brake, that the company had negligently permitted this brake to become and remain out of repair, in this, that the chain which connects the brake with the brake rod should be fastened to the latter by a half-inch iron bolt, that this had been lost out, and someone had connected the rod and chain with a wire which was wholly unfit for that purpose. It is now insisted that this petition does not state a cause of action, because it does not allege that the company knew that the brake was out of repair, had been improperly repaired with a wire, or that it had been in that condition for such a length of time that the company should be charged with notice of its defective condition. We think this argument untenable. It is the duty of a master, at all times, to furnish his servants with tools and appliances reasonably safe and fit for the purposes for which they are designed, and if a servant, where the defect of an appliance is not obvious, and where he has no knowledge of such defect, and is not charged with the duty of knowing such defect without negligence on his own part, is injured while attempting to use in the service of the master a tool or appliance designed for the work in hand, the master is liable for such injury. Since it was not the duty of the station agent to inspect this brake, nor to repair it if he found it defective, and since he did not know that the brake was out of order, he had the right to presume that it was in proper condition and reasonably fit for the purposes for which it was intended; and the general allegation that the railroad company had been guilty of negligence in permitting the brake to become and remain out of repair, coupled with the other allegations of the petition as to the plaintiff's duty, and his want of knowledge of the defective condition of the brake, rendered the petition invulnerable to demurrer.

“A second argument is that the judgment can not stand because Kellogg's injury resulted from the negligence of a fellow-servant. It is true that, in the absence of a statute, the general rule is that a master is not liable to one servant for an injury which he has sustained through the negligence of a fellow-servant. In this case the evidence shows that the railroad company has in its employ, at various stations along its road, car repairers or inspectors whose duty it is to inspect the cars of the company, the wheels and brakes, and other appliances thereof, and if a brake is found out of order, to repair it. The evidence does not disclose that it was the duty of the station agent (Kellogg) to inspect the cars that came to his station, nor, should he discover that a car or an appliance thereof was out of order, that it was his duty to repair it. In the case at bar, if we are to consider that the verdict of the jury includes a finding that Kellogg, the station agent, was not a fellow-servant of his coemployee, the car repairer or inspector, the evidence in the record justifies that finding, and if, from the admitted facts, it is for us to say, as a matter of law, whether the station agent and the car repairer or inspector were fellow-servants, then we answer that they were not.

“The master's liability in a case like the one at bar does not rest upon an exception

to the general rule that a master is not liable to one servant for an injury caused to the latter by the negligence of a fellow-servant. It rests upon the principle that it is the duty of a master to furnish the servant tools and appliances reasonably fit and safe for the performance of the duties required of the servant; and if the master delegates to a servant the selection, inspection, and furnishing of these tools and appliances, such a servant then stands in the place of the master, and such servant's neglect in the premises is the master's neglect. Or, applying the rule to the case at bar, the common master delegated to the car inspector the duty of inspecting and repairing these brakes. That car inspector then, in that matter, stood in the place of the railway company itself, and the car inspector's relation to the station agent was not that of a fellow-servant, but of vice principal. Judgment affirmed."

[From R. L. No. 18, September, 1898.]

HESSE v. COLUMBUS, SANDUSKY AND HOCKING RAILROAD CO., 50 Northeastern Reporter, page 354.—Action was brought by Gertrude Hesse against the above-named railroad company in the court of common pleas of Perry County, Ohio, to recover damages for the death of Neil Hesse, an employee of said company, and of whose estate she was the qualified administratrix. From a judgment in her favor the case was appealed to the circuit court of Perry County, which reversed the judgment of the court of common pleas. She then carried the case, on writ of error, to the supreme court of the State, which rendered its decision March 22, 1898, and sustained the decision of the circuit court. It was alleged by the plaintiff in her petition that on the 4th of January, 1896, and prior thereto, Neil Hesse was employed as a fireman on the defendant's locomotive No. 35; that said company, in violation of its duty, negligently and carelessly provided him with a defective and unsafe locomotive, which, while being so used by him, in consequence of its weak and defective condition, and without fault on his part, exploded, whereby he was immediately killed. Said petition did not allege that Hesse was ignorant of the defective condition of the engine.

One of the reasons upon which the circuit court reversed the judgment of the court of common pleas was that "the petition does not state a cause of action." Upon this point Judge Shauck, in the opinion of the supreme court, which was delivered by him, speaks as follows:

"The general rule is established in this State and elsewhere that in an action by a servant against his employer for an injury resulting from the latter's negligence in furnishing machinery or appliances, about which the servant is employed, the plaintiff must allege that he was ignorant of the defect from which the injury resulted; or that, having knowledge of such defect, he informed the employer, and continued in the service, relying upon his promise to remedy the defect. This requirement is not answered by an averment that the injury occurred without fault of the plaintiff. Acquiescence with knowledge is not synonymous with contributory negligence. One having full knowledge of defects in machinery with which he is employed may use the utmost care to avert the dangers which they threaten. The servant must be required to communicate to his employer such knowledge as he may have of defects in machinery or appliances about which he is employed, or the law will not be administered according to the reason which is its life. Fully justified by considerations of policy, the courts require of railway companies with respect to their patrons and the public the exercise of that high degree of care which is commensurate with the dangers of their operation. To the end that such care may be exacted from them, they are, with obvious propriety, charged with knowledge of such defects as are or might be discovered by the senses of their officers and employees. It is with like propriety that the communication of such knowledge is required from all with whose knowledge they are chargeable.

"But the most confident contention of counsel for the plaintiff is that the act of April 2, 1890 (87 Ohio Laws, 119), releases the employee of a railroad company from this general rule. The act applies to railroad corporations only. Reliance is upon the second section of the act, which is as follows:

"SECTION 2. It shall be unlawful for any such corporation to knowingly or negligently use or operate any car or locomotive that is defective, or any car or locomotive upon which the machinery or attachments thereto belonging are in any manner defective. If the employee of any such corporation shall receive any injury by reason of any defect in any car or locomotive, or the machinery or attachments thereto belonging, \* \* \* such corporation shall be deemed to have had knowledge of such defect before and at the time such injury is so sustained, and when the fact of such defect shall be made to appear in the trial of any action in the courts of this State brought by such employee, or his legal rep-

representatives, against any railroad corporation for damages, on account of such injuries so received, the same shall be prima facie evidence of negligence on the part of such corporation."

"The act, by its terms, affects the rules of evidence. It does not affect the duty of the employee, nor the rules of pleading with respect to it. In the cases to which it applies it raises against the corporation a prima facie presumption of negligence from evidence showing that the employee received an injury by reason of a defect in the car or locomotive, or the machinery or attachments thereto belonging. In *Coal Co. v. Norman* the general rule governing cases of this character is stated: 'The servant, in order to recover for defects in appliances, must establish three propositions, (1) That the appliance was defective; (2) that the master had, or should have had, notice thereof, (3) that the servant did not know of the defect.' The force of the statute under consideration is wholly expended in relieving the servant of the duty of establishing the second of these propositions. His duty with respect to the first and third remains wholly unaffected."

[From B. L. No. 18, September, 1898.]

HOLMES v. SOUTHERN PACIFIC CO., 52 Pacific Reporter, page 652—Action was brought in the superior court of the city and county of San Francisco, Cal., by Lillian Holmes, administratrix of the estate of William E. Holmes, deceased, to recover damages for the death of decedent. The evidence showed that Holmes, while in the employ of the company above named and while engaged in the line of his duty in coupling some cars, was caught between them and crushed so as to cause his death. From a judgment for the plaintiff and an order denying a new trial the defendant company appealed to the supreme court of the State, which rendered its decision March 24, 1898, and reversed the judgment of the superior court.

Upon one point of some interest the opinion of the supreme court, which was delivered by Judge Temple, reads as follows.

"Counsel have argued at considerable length the effect of a certain rule made by defendant, and to which the attention of the deceased was called at the time of his employment. Rule 215, among other things, provides that 'employees are enjoined before coupling cars or engines to examine and know the kind and condition of the drawhead, drawbar, link, and coupling apparatus. \* \* \* Sufficient time is allowed and may be taken by employees in all cases to make the examination required. Coupling by hand in all cases is strictly forbidden when a stick or proper implement can be used to guide the link,' etc. Upon the trial plaintiff introduced testimony to the effect that the rule had been not only habitually but universally disregarded; and also the following, brought out on cross-examination: 'Q. Do you know anything about the use of a stick to guide the link into the drawbar?—A. They say some people use them, but I would laugh at them if I saw them using them.' Q. It is used for the purpose of coupling it from between the cars and guiding the link into the place instead of using the hand?—A. You might think so, but it is utterly impossible. Q. What is it used for?—A. They can not make a coupling; they might say it in the books, or any book, but they can not do it. Q. So far as your experience is concerned?—A. Yes; or anyone else.' Upon this the defendant asked the court to charge the jury, as matter of law, 'that the rule was reasonable, and that employees have no right to judge of the reasonableness of the rule, but must obey it as long as they remain in the employ of the company, and the fact that the rule may be impracticable and not observed does not excuse the employee who is injured by its nonobservance from negligence. Therefore, if you believe from the evidence that if William E. Holmes had followed the rule of the company and used a stick to make the couplings he would not have been injured, then the mere fact that the rule was impracticable or not observed will not excuse the negligence of Holmes in not following the rule.' The court refused this instruction, and the ruling is assigned as error. If the rule was utterly impracticable, or rendered so by the mode and conditions under which service was required, and the servant is injured because not following an impracticable rule, and can not, therefore, maintain an action for damages, then the rule is plainly not for the protection of the servant, but of the employer. It is a provision relieving the employer from the obligations imposed upon him by law to use ordinary diligence in furnishing safe appliances with which to work and safe conditions for the performance of the service. So far as the rule has that effect it is against public policy and void. The employer is conclusively presumed to know how the service is habitually performed. Where the usual mode is departed from, the presumption would not prevail; and to make such a rule as this of any avail, even if not otherwise objectionable, the work must be so con-

ducted that the servant may take the precautions prescribed, otherwise it is only a provision against the liability of the employer, and not a rule designed for the protection of the servant. The court, therefore, did not err in refusing the instructions asked."

[From B. L. No. 18, September, 1898.]

*TERRE HAUTE AND INDIANAPOLIS RAILWAY CO. v. WILLIAMS*, 50 *Northeastern Reporter*, page 116.—Judgment was obtained in the appellate court of the third district of Illinois in a suit brought by Cora M. Williams, administratrix of the estate of James C. Williams, deceased, to recover damages for the death of said Williams, an engineer in the employ of the above-named railway company. Said company carried the case on writ of error to the supreme court of the State, which rendered its decision April 21, 1898, and affirmed the judgment of the lower court. The court decided that a railroad company is liable for damages resulting from the death of an engineer, caused by the collision of his engine with cattle which had strayed on the track, in the absence of a fence or cattle guard required to be maintained by section 63 of chapter 114 of the revised statutes of 1891, and that while the statute was primarily intended for the benefit of the owners of live stock, it is to be presumed that the legislature intended to protect life as well as property by said law. The section above referred to reads as follows:

"Every railroad corporation shall, within six months after any part is open for use, erect and thereafter maintain fences on both sides of its road or so much thereof as is open for use, suitable and sufficient to prevent cattle, horses, sheep, hogs, or other stock from getting on such railroad, except at the crossings of public roads and highways, and within such portion of cities and incorporated towns and villages as are or may be hereafter laid out and platted into lots and blocks, with gates or bars, at the farm crossings of such railroad, which farm crossings shall be constructed by such corporation when and where the same may become necessary, for the use of the proprietors of the lands adjoining such railroad; and shall also construct, where the same has not already been done, and thereafter maintain at all road crossings now existing or hereafter established, cattle guards suitable and sufficient to prevent cattle, horses, sheep, hogs, and other stock from getting on such railroad; and when such fences or cattle guards are not made as aforesaid, or when such fences or cattle guards are not kept in good repair, such railroad corporations shall be liable for all damages which may be done by the agents, engines, or cars of such corporation, to such cattle, horses, sheep, hogs, or other stock thereon, and reasonable attorney's fees in any court wherein suit is brought for such damages, or to which the same may be appealed; but when such fences and guards have been duly made and kept in good repair, such railroad corporation shall not be liable for any such damages, unless negligently or willfully done."

From the opinion of the supreme court, delivered by Judge Craig, the following, showing the facts in the case and the reasons for the decision, is quoted:

"At the station of Tabor, where the accident happened, the railroad track was not fenced, and there was no cattle guard where the public highway crosses the railroad, to prevent cattle from passing upon the track. Tabor is not an incorporated town or village, and it was not laid out into lots or blocks. The place consisted of a post-office, a grain elevator, one dwelling, and several corncribs. On the night of the accident cattle strayed from an adjoining farm, and in the absence of a fence or cattle guard they passed upon the railroad track, where they were struck by the engine attached to a freight train. The engine was thrown from the track, and Williams, the engineer, killed. The theory of the plaintiff is that the failure of the railroad company to fence its track and erect a cattle guard at or near the place where the collision occurred, to prevent cattle from passing upon the track, was the direct cause of the accident and of the death of the engineer, and, on account of the failure of the railroad company to discharge the duty imposed by law, it is liable. On the other hand, it is claimed that the statute requiring a railroad company to fence its track and erect cattle guards was not passed for the protection of passengers or employees, but was erected solely to provide a remedy for the owner of horses, cattle, or other stock which might be killed on account of the failure of the railroad company to fence its track or erect suitable cattle guards. The statute seems to impose an absolute duty on railroad companies to erect and maintain fences along their rights of way and to construct and maintain cattle guards at road crossings, except in such portions of incorporated cities, towns, and villages as are laid out into lots and blocks. (*Hurd's St.*, c. 114, § 62.) It is true that the statute contains a provision that if such fences or cattle guards are not made or kept in good repair, such railroad corporation shall be liable for all damages which may be done by the agents,

engines, or cars of such corporation, to cattle, horses, sheep, hogs, or other stock thereon, but this provision can not be held to exclude all other liability which may arise from the failure of the railroad company to fence and put in cattle guards, as required by law. It may be that the statute was primarily intended for the benefit of the owners of stock when their stock was killed on the railroad track, but at the same time the statute was doubtless intended for the benefit of all classes of persons who might need protection. The person whose business requires that he should take passage as a passenger on a train has a deeper interest in having the track protected from obstructions of every character than the owner of stock. So, also, the employee on a railroad train has a deep interest. The lives of the passenger and employee are alike at stake when the railroad is not properly protected from obstructions which are likely to be upon the track where it is not properly fenced. It is, therefore, unreasonable to suppose that the legislature would provide a law for the protection of property and make no provision whatever for the protection of life.

"We are satisfied that a fair and reasonable construction of the statute required the railroad company to fence its track and construct cattle guards, and for a failure to do so it is liable to an employee who may have been injured through its failure to perform a duty thus imposed by law."

[From B. L. No. 19, November, 1898.]

*SOUTHERN PACIFIC CO. v. MAULDIN ET AL.*, 46 Southwestern Reporter, page 650.—This action was brought by Joseph C. Mauldin against the above-named railroad company in the district court of Harris County, Tex., to recover damages for injuries received while in the employ of said company. The train on which he was engineer was derailed, said derailment being caused by an open switch, and his hip was dislocated. Being treated by an incompetent physician, furnished by the railroad company, the dislocation was diagnosed as a strain of the muscles, and when its true nature was discovered, upon his being removed to the company's hospital at Houston, it was too late to reduce the dislocation and he was rendered a cripple for life. The company, while calling in a local physician for immediate treatment, was anxious to remove him to their hospital at once, but he refused to go until too late, and preferred to and did remain under the care of the physician first called to attend him for 3 weeks, when it was too late to help him. A judgment was rendered for the plaintiff in the district court on the sole ground that the defendant company was liable for the results of the incompetency of the physician it had called in to attend him. The railroad company carried the case on writ of error to the court of civil appeals of the State, which rendered its decision May 12, 1898, and reversed the decision of the lower court.

The opinion of the court of civil appeals was delivered by Judge Pleasants, and the syllabus of the same reads as follows:

"1. A railroad company which contracts to furnish its employees medical service in case of accident is not liable for damages resulting to an employee by his being treated for sprained muscles instead of a dislocated hip, the servants of the company having used ordinary care in calling the physician they did at the time he was injured, and he having refused to go to the company's hospital for treatment, though requested, and though it was the rule that all injured should be taken there as soon as practicable.

"2. A railroad company, by retaining a portion of the monthly wages of each employee for medical services, obligates itself to furnish such services as are practicable and reasonable, to each of them, when sick or injured."

[From B. L. No. 24, September, 1899.]

*FELTON v. BULLARD*, 91 Federal Reporter, page 781.—In the United States circuit court for the northern district of Ohio a judgment was rendered in favor of one Bullard, in an action brought by him against one Felton, the receiver of a railroad within the State of Ohio, to recover damages for the death of Edward McCarn, a brakeman in the employ of Felton. Felton carried the case upon a writ of error before the United States circuit court of appeals, sixth circuit, which court rendered its decision May 15, 1899, and sustained the judgment of the lower court.

The opinion of the court of appeals was delivered by Circuit Judge Lurton, and the following, quoted therefrom, contains a statement of the facts in the case and the principal points of the decision:

"Edward McCarn, a brakeman in the service of the plaintiff in error [Felton], was killed, while descending from the top of a moving car, by reason of the defective character of a grab iron, which broke off and threw him beneath the wheels.

This grab iron was attached to the end of a foreign car, which belonged to the Grand Trunk Railway Company, which had been received the day before from a connecting railway company. The grab iron was of the usual construction, and had been attached to the end of the car, in the usual way, by two screws, each of from 3 to 4 inches in length, one being at each end of the iron. An examination after the accident disclosed the fact that one of these screws was badly rusted, and had long been broken, so that it supported one end of the iron by a stub only one-half inch in length which rested in wood much decayed. The screw at the other end appeared to have been freshly broken or wrenched in two; a part being pulled out with the grab iron when it came off the car. That this defective grab iron was the direct cause of the death of the intestate was not disputed. It constituted an attachment upon a car at the time being operated by the receiver upon a line of railway within the State of Ohio.

'The Ohio act of April 2, 1890 (p. 149, acts of 1890), so far as it bears upon the facts of this case, furnishes a rule of law which must govern its disposition. The second section of that act makes it unlawful for any railway corporation to knowingly or negligently use or operate any car that is defective, or upon which any attachment thereto belonging is defective. It also provides that, if an employee of any such corporation shall receive any injury by reason of any defective attachment thereto belonging, the corporation 'shall be deemed to have had knowledge of such defect before and at the time such injury was so sustained,' and that, when the fact of such defect shall be made to appear by such employee or his legal representatives in an action against any such railroad corporation for damages on account of such injuries so received, the same shall be 'prima facie evidence of negligence on the part of such corporation.' This section of this statute recognizes no distinction between the liability of a railway company for injuries sustained by its employees through the operation of defective cars owned by such corporation and injuries sustained from defects in foreign cars. The statute applies to cars 'owned and operated, or being run and operated, by such corporation.' The liability is the same in either case. How, then, may this prima facie evidence of corporate negligence be rebutted? Prior to the passage of this act the decisions of the supreme court of Ohio were to the effect that a railroad company was not liable to a brakeman for the negligence of a car inspector, it being held that the brakeman and the inspector were fellow-servants. The third section of this act changes the law of fellow-servant in the cases to which it applies. That section provides that: 'In addition to the liability now existing by law, that every person in the employ of such company, actually having power or authority to direct or control any other employee of such company, is not the fellow-servant but superior of such other employee; also that every person in the employ of such company, having charge or control of employees in any separate branch or department, shall be held to be the superior and not fellow-servant of employees in any other branch or department who have no power to direct or control in the branch or department in which they are employed.'

"This section would seem to have no bearing upon the case now to be decided, inasmuch as the inspector employed by the receiver had no subordinates, and had no power 'to direct or control any other employee' of the receiver. He was sole inspector, with no power of direction or control and no assistants. The situation is, therefore, unique. The inspector, under the decisions of the Ohio courts, which doubtless constituted a part of 'the now-existing law' referred to in this section, was the fellow-servant of the brakeman. This 'now-existing law' is not changed by this section, except in so far as specifically provided by this enactment. Conceding, therefore, that the third section has no application to the peculiar facts of this case, we reach the inquiry as to the effect of the second section, which creates a statutory presumption of corporate knowledge of the defect from evidence of its existence and an injury sustained by an employee engaged in operation of such defective car. Is that prima facie case rebutted by evidence that the railroad corporation had furnished a sufficient and competent inspector? This question finds its answer in the case of *Railway Co. v. Erick* (51 Ohio St., 146-162, 37 N. E., 128). One of the questions in that case arose upon the refusal of the trial court to instruct the jury that if the company had employed a competent inspector, whose duty it was to carefully inspect all cars and their appliances before they were permitted to go out, the company would not be liable if he neglected to make such inspection. This in various forms was refused. The supreme court held that the presumption of knowledge of the defective condition of the car in question, raised by the proof of the defect and injury, under the second section of the act of April 2, 1890, was not rebutted by proof of the employment of a competent and sufficient inspector. Upon this question the court said:

"The presumption of knowledge of the defect, before and at the time of the

injury, is, by the statute, chargeable to the company; and this statutory presumption can not be overcome by proof of facts which only raise a presumption that the company did not have such knowledge. Competent and careful inspectors are presumed to properly inspect the cars and their attachments, but such presumption would not overcome the statutory presumption of knowledge of defects before and at the time of the injury. It would take an actual and proper inspection, or its equivalent, to overcome the statutory presumption of knowledge of such defects. It will be noticed that this section of the statute also provides that, in the trial of a personal-injury case against a railroad company, the fact of such defect in its cars or their attachments shall be prima facie evidence of negligence on the part of such corporation.

Aside from the effect to be given to the second section of the act of 1890, we hold that the duty of inspecting foreign cars is a duty due from the master to his servant, and that the master is responsible to the servant for all defects which would be disclosed by a reasonably careful inspection. The well-known course of business pursued by carriers in this country involves so large a use of foreign cars as to make it inadmissible that any distinction should be recognized between the duty of caring for the safety and protection of employees engaged in operating such cars and that exacted in respect to cars owned or controlled by the carrier. Employees can no more be said to assume the responsibility for injuries due to the defective condition of foreign cars than they can be said to assume the risk arising from defects in domestic cars which might have been discovered by proper inspection. In the one case as much as in the other the inspector is discharging the duty of the master to his servants, and for his negligence in this particular the master is responsible. The question is one of general and not local law, unless controlled by statute. It is therefore a question for the courts of the United States to decide upon their own judgment as to the common law controlling the question.

The rule which we deduce as having the support of the weight of authority and reason is that a railroad company owes to its servants engaged in handling or operating foreign cars the legal duty of not exposing them to dangers arising from defects which might be discovered by reasonable inspection before they are admitted into its trains.

This rule was approved and applied in *Railroad Co. v. Mackey* (157 U. S., 72-91, 15 Sup. Ct., 491). In concluding a discussion of the question, the court, speaking by Justice Harlan, said:

"We are of opinion that sound reason and public policy concur in sustaining the principle that a railroad company is under a legal duty not to expose its employees to dangers arising from such defects in foreign cars as may be discovered by reasonable inspection before such cars are admitted into its trains."

In the later case of *Railway Co. v. Archibald* (170 U. S., 655-669; 18 Sup. Ct., 777) the Supreme Court again had under consideration the duty of a railroad company to its servants in respect to foreign cars, and followed the doctrine announced in the case of *Railroad Co. v. Mackey*, cited above, saying:

"That it was the duty of a railroad company to use reasonable care to see that the cars employed on its road were in good order and fit for the purposes for which they were intended, and that its employees had a right to rely upon this being the case, is too well settled to require anything but mere statement. That this duty of a railroad as regards the cars owned by it exists also as to cars of other railroads received by it, sometimes designated as foreign cars, is also settled."

That this duty is not discharged by merely furnishing an inspector competent to discharge the duty is very clear, and that this was the holding in both the cases decided by the Supreme Court of the United States, and cited above, is most apparent from an examination of the facts in the cases, as well as from the language employed by the court in considering the duty as one identical in character with that resting upon the master in respect to the inspection of his own cars before admitting them into its trains. That the master is responsible for the negligence of such an inspector, and that the inspector is not the fellow-servant of those operating such foreign cars, is the necessary conclusion from the character of the duty.

The inspector testified that he did inspect this car upon the day it was received, being the day before the happening of the accident. But it is manifest that his testimony is not based upon any memory of this particular car, but depended upon his habit and the record made of cars inspected. Did he in truth and fact test this particular grab iron by any means likely to disclose its weakness? The condition of the screw supporting one end, and of the wood into which it was screwed, was such, as disclosed by examination after the accident, as to make it obvious that any strain thrown upon that end would disclose the weakness with

which it was attached. Did the inspection made involve any strain upon the weak end of this grab iron? If the inspection made did not involve such a physical test as was feasible and calculated to disclose just such an infirmity as existed, would not a jury be warranted in finding either that no physical test at all was made, or that, if made, it was so carelessly made as to be useless? The circumstances were such as that it was not error to take the opinion of the jury. Let the judgment be affirmed."

[From B. L. No. 19, November 1898.]

*CHAMBERLAIN v. PIERSON*, 87 Federal Reporter, page 420.—This action was brought by one Pierson, an express messenger in the employ of the Southern Express Company, against one Chamberlain, the receiver of the South Carolina Railway Company, to recover damages for injuries sustained by him while traveling on a train of the said railway company in the performance of his duty as an employee of the above-named express company. One of the defenses set up by the railway company was that an agreement had been made between the railway company and the express company to the effect that all the employees of the express company who traveled on the trains of the railway company in the course of their employment as such employees should be transported at their own risk, and that hence the plaintiff had no cause of action. At the trial of the case in the United States circuit court for the district of South Carolina a judgment was rendered for the plaintiff, Pierson, and the case was appealed by the receiver to the United States circuit court of appeals for the fourth circuit, which rendered its decision May 17, 1898, and affirmed the judgment of the lower court, holding that the plaintiff, having no knowledge of the agreement or contract between the companies, was not bound thereby.

The opinion of the circuit court of appeals was delivered by District Judge Paul, and the following language is quoted therefrom.

"The second, third, fifth, sixth, and seventh assignments of error will be considered together. They are all made upon the theory that Pierson, the plaintiff in the court below, was bound by the contract between the railroad company and the express company; that he was on the railroad train by virtue of the contract; that by said contract he was regarded as an employee of the defendant, the railroad company; and that by said contract he was accorded free transportation at his own risk. The position taken by counsel for the railroad company, and insisted upon in the instructions asked on behalf of the company, was that the plaintiff was not entitled to recover, even though the evidence showed that the injury which he suffered was caused by the negligence of an agent of the defendant, who was not a fellow-servant of the plaintiff. The learned judge of the trial court held (what we regard as a correct announcement of the law) that if the plaintiff was injured by reason of the negligence of the boss track minder and his gang, the railroad company was responsible to him, whether he was regarded as a passenger, or was bound by the contract between the two companies, or was an employee of the railroad company; that the boss track minder and his gang were not fellow-servants of the plaintiff, if he was to be treated as an employee of the railroad company; and that their negligence was not one of the risks he assumed, if he assumed any risks. The discussion of this feature of the case presents the question: Was the plaintiff below, as a messenger of the express company, bound by the contract between the railroad company and the express company to assume all risks to life and limb to which he was exposed in performing his duties on the train, as an express messenger? He was not a party to the contract, never ratified it, and in his testimony, when asked if he knew of this provision of the contract, 'that the said parties of the first part hereby recognize as its employees all officers, agents, and servants of the second part,' etc., and you were accorded free transportation at your own risk?' answered, 'If I had known that, I wouldn't have gone.' The authorities cited by defendant's counsel to sustain the contention that the plaintiff was bound by the contract between the railroad and the express company are based on the theory that the party affected by the contract had knowledge of its provisions and acquiesced in its terms.

"The view of the trial judge was that notwithstanding the plaintiff, under the contract between the railroad company and the express company, should be considered an employee of the railroad company, and accorded free transportation at his own risk, yet the railroad company was liable if the injury to the plaintiff was caused by the negligence of an agent of the defendant who was not a fellow-servant of the plaintiff. That the plaintiff, an express messenger, was not a fellow-servant of the track minder and those under him, is not questioned. If it be conceded, as claimed by the railroad company, that the contract between it

and the express company accorded the plaintiff free transportation at his own risk, yet it is well established that such a contract will not relieve the railroad from responsibility for an injury resulting from the negligence of its agents. One of the earliest decisions of the Supreme Court on this question is *Railroad Co. v. Derby*, (14 How. 467). In this case the plaintiff below was president of another company and a stockholder in the road on which he was riding. He was on the road by invitation of the president of the company—not in the usual passenger cars, but on a small locomotive car used for the convenience of the officers of the company—and paid no fare for his transportation. The railroad company defended on the ground that no cause of action can arise to any person by reason of the occurrence of an unintentional injury while he is receiving acts of kindness which spring from mere social relations, and as there was no contract between the parties, express or implied, the law would raise no duty as between them, for the neglect of which an action can be sustained. The Supreme Court said: "The liability of the defendants below for the negligent and injurious act of their servant is not necessarily founded on any contract or privity between parties, nor affected by any social relation, or otherwise, which they bore to each other."

"*Railroad Co. v. Lockwood* (17 Wall., 357), is a leading case on this subject. The court there held: (1) That a common carrier can not lawfully stipulate for exemption from responsibility, when such exemption is not just in the eye of the law. (2) That it is not just and reasonable, in the eye of the law, for a common carrier to stipulate for exemption from responsibility for the negligence of himself or his servants. (3) That these rules apply both to carriers of goods and carriers of passengers for hire, and with a special force to the latter. (4) That a driver traveling on a pass, such as was given in this case, for the purpose of taking care of his stock on the train, is a passenger for hire."

"In *Waterbury v. Railroad Co.* (17 Fed., 671) the doctrine is thus stated (syllabus). "The right which a passenger by railway has to be carried safely does not depend on his having made a contract, but the fact of his being there creates a duty on the part of the company to carry him safely. It suffices to enable him to maintain an action for negligence if he was being carried by the railroad company voluntarily, although gratuitously, and as a matter of favor to him."

"The principles recognized in the cases we have cited, and in numerous other decisions, were correctly applied by the judge who presided in the court below. The plaintiff Pierson, as an express messenger, was rightfully on the train of the defendant, in the performance of duties which the railroad company had, by its contract with the express company, agreed that he should perform, and which, the contract states, were 'for the mutual benefit and account of the parties thereto.' Whatever his relation to the railroad company—whether that of a passenger or employee—he had a right to maintain an action for any injuries he suffered by reason of the negligence of the defendant company, its agents and servants. We find no error in the rulings of the court below, and the judgment of the court is affirmed."

[From B. L. No. 18, September, 1898.]

**TEXAS AND PACIFIC RAILWAY CO. v. ARCHIBALD**, 18 Supreme Court Reporter, page 777.—This action, commenced in a state court, was removed to the circuit court of the United States for the eastern district of Texas. The action was brought by Archibald, the plaintiff, to recover damages from the above-named railway company for an injury received while engaged as a switchman in its employ. The primary cause of the plaintiff's injury appeared to be the defective condition of two cars belonging to the Cotton Belt Railway Company. The tracks of the Texas and Pacific Railway Company and of the Cotton Belt Railway Company both entered the city of Shreveport, La., where the accident occurred, and were connected. The above-mentioned cars were turned over to the Texas Pacific Railway Company to be filled with oil, and then to be returned to the Cotton Belt Railway Company. On trial by a jury in the circuit court there was a verdict for Archibald, and the judgment entered by the court on said verdict was subsequently affirmed by the United States circuit court of appeals for the fifth circuit, to which the case had been carried on a writ of error. The railway company then brought the case on writ of error before the United States Supreme Court, which rendered its decision May 23, 1898, and affirmed the judgments of the lower courts.

From the opinion of the Supreme Court, which was delivered by Mr. Justice White, the following is quoted:

"That it was the duty of the railway company to use reasonable care to see that the cars employed on its road were in good order and fit for the purposes for

which they were intended, and that its employees had a right to rely upon this being the case, is too well settled to require anything but mere statement. That this duty of a railroad, as regards the cars owned by it, exists also as to cars of other railroads received by it, sometimes designated as foreign cars, is also settled. (*Railroad Co. v. Mackey*, 157 U. S., 87, 15 Sup. Ct., 491.) Said the court in that case: 'Sound reason and public policy concur in sustaining the principle that a railroad company is under a legal duty not to expose its employees to dangers arising from such defects in foreign cars as may be discovered by reasonable inspection before such cars are admitted to its train.' This general duty of reasonable care as to the safety of its appliances resting on the railroad, the instructions in question proposes to limit by confining its performance solely to such foreign cars as are received by a railroad 'for the purpose of being hauled over its own road;' in other words, the proposition is that, where a car is received by a railroad only for the purpose of being locally handled, the railway, as to such local business, is dispensed from all duty of looking after the condition of the cars by it used, and may, with complete legal impunity, submit its employees to the risk arising from its neglect of duty. To this length the proposition plainly goes, as is shown by its context, and is additionally illustrated by the argument at bar.

'The argument wants foundation in reason, and is unsupported by any authority in reason, because, as the duty of the company to use reasonable diligence to furnish safe appliances is ever present, and applies to its entire business, it is beyond reason to attempt by a purely arbitrary distinction to take a particular part of the business of the company out of the operation of the general rule, and thereby to exempt it, as to the business so separated, from any obligation to observe reasonable precautions to furnish appliances which are in good condition. Indeed, the argument by which the proposition is supported is self-destructive, since it admits the general duty of the employer just stated, and affords no reason whatever for the distinction by which it is sought to take the case in hand out of its operation. The contention is without support of authority, since the cases cited to sustain it are directly to the contrary.

'The theory upon which in the argument at bar it is claimed that the cases cited overthrow the very doctrine which in truth they announce is based upon the use of the words in the *Mackey* case, 'admitted into its train.' Taking this as a premise, it is said the duty of a railroad to exercise reasonable diligence to furnish safe appliances exists only as to cars 'admitted into its train'—that is, cars which it receives and transports in one of its trains—and does not obtain as to cars which it receives and handles in its yards for local purposes only. It is obvious from a mere casual reading of both the *Mackey* case and the New York cases relied upon that the duty on the part of the railroad which they inculcate applies to all cars used by the road in its business.

'The elementary rule is that it is the duty of the employer to furnish appliances free from defects discoverable by the exercise of ordinary care, and that the employee has a right to rely upon this duty being performed; and that while, in entering the employment, he assumes the ordinary risks incident to the business, he does not assume the risk arising from the neglect of the employer to perform the positive duty owing to the employee with respect to appliances furnished. An exception to this general rule is well established, which holds that, where an employee receives for use a defective appliance, and with knowledge of the defect continues to use it without notice to the employer, he can not recover for an injury resulting from the defective appliance thus voluntarily and negligently used. But no reason can be found for and no authority exists, supporting the contention that an employee, either from his knowledge of the employer's methods of business or from a failure to use ordinary care to ascertain such methods, subjects himself to the risks of appliances being furnished which contain defects that might have been discovered by reasonable inspection. The employer, on the one hand, may rely on the fact that his employee assumes the risks usually incident to the employment. The employee, on the other, has the right to rest on the assumption that appliances furnished are free from defects discoverable by proper inspection, and is not submitted to the danger of using appliances containing such defects because of his knowledge of the general methods adopted by the employer in carrying on his business, or because by ordinary care he might have known of the methods, and inferred therefrom that danger of unsafe appliances might arise. The employee is not compelled to pass judgment on the employer's methods of business, or to conclude as to their adequacy. He has a right to assume that the employer will use reasonable care to make the appliances safe, and to deal with those furnished relying on that fact, subject, of course, to the exception which we have already stated, by which, where an appliance is

furnished an employee, in which there exists a defect known to him, or plainly observable by him, he can not recover for an injury caused by such defective appliance, if, with the knowledge above stated, he negligently continues to use it. In assuming the risks of the particular service in which he engages the employee may legally assume that the employer, by whatever rule he elects to conduct his business, will fulfill his legal duty by making reasonable efforts to furnish appliances reasonably safe for the purposes for which they are intended; and, while this does not justify an employee in using an appliance which he knows to be defective, or relieve him from observing patent defects therein, it obviously does not compel him to know or investigate the employer's modes of business under the penalty, if he does not do so, of taking the risk of the employer's fault in furnishing him unsafe appliances."

[From B. I. No. 18 September, 1898.]

*GREENLEE v. SOUTHERN RAILWAY CO.*, 30 Southeastern Reporter, page 115.—This case was heard by the supreme court of North Carolina, having come before it on an appeal from the superior court of McDowell County, in said State, where judgment had been rendered in favor of the plaintiff, Stephen Greenlee, who had brought suit against the above-named railway company for damages for personal injuries incurred while in its employ. The evidence showed that the plaintiff, a laborer in the railroad yard, was injured while attempting to couple two cars, said cars not having been equipped with safety or self-coupling devices.

The supreme court rendered its decision May 26, 1898, and affirmed the judgment of the lower court. Its opinion, delivered by Judge Clark, reads as follows:

"In any aspect of this case the defendant is liable, whether the plaintiff was or was not guilty of contributory negligence, for the negligence of the defendant in not having self-couplers, and in not sending a man to couple cars at all was a continuing negligence which existed subsequent to the contributory negligence, if there had been any, of the plaintiff, and was the proximate cause—the causa causans—of the injury. Six years ago, in *Mason v. Railroad Co.* (111 N. C., 482, at page 487; 16 S. E., 698, at page 699), the court, in considering 'whether the defendant company was negligent in failing to provide what is known as the Janney, or some improved coupler which would obviate the necessity under any circumstances of going between the ends of cars in order to fasten one to another,' said: 'We think that the time has arrived when railroad companies should be required to attach such couplers \* \* \* on all passenger cars, \* \* \* and the new couplers have now become so cheap, as compared to the value of the lives and limbs of servants and passengers, that it is not unreasonable to require that they provide them on peril of answering for any damage which might have been obviated by their use.' While the court declined, on account of the expense, to hold that the same was true at that time as to freight cars, it added, 'Doubtless, the day will soon come' when it would be negligence not to attach them to freight as well as passenger cars. Congress so thought, and passed an act (27 Stat., 531) requiring self-couplers and air-brakes to be placed on all cars, freight as well as passenger, by January 1, 1898, and this had been complied with as to 'over 60 per cent of the freight cars,' besides nearly all passenger cars, operating in interstate commerce, by that date.

"In *Wittsell v. Railway Co.* (120 N. C., 557, 27 S. E., 125), the above citation from *Mason v. Railroad Co.* was approved, and the court held that, while it was not negligent to fail to provide the latest improved appliances, a railroad company was liable for any injury caused by the failure to use approved appliances that are in general use. The railroad companies have of late procured from the Interstate Commerce Commission an extension, till January 1, 1900, of the time by which self-couplers should be placed upon all freight cars used in interstate service; but this was for their accommodation, and did not, and could not, relieve them from the legal liability incurred for injuries caused by their failure to provide 'suitable appliances in general use' where the use of such would have prevented the injury. It only relieved them from the penalty provided in that act.

"The eleventh annual report (1897) of the Interstate Commerce Commission, issued by authority of the United States Government, and based upon the reports of the railroad companies themselves, shows (page 80) that of railroad employees (leaving out passengers altogether), 1,861 were killed and 29,969 were wounded in the year ending June 30, 1896, being greater loss than in many a battle of historic importance. Of the trainmen, this report (page 130) shows that nearly 1 in 9 had been killed or wounded that year—total of over 17,000. Of these casualties, it is officially stated, 229 were killed and 8,457 were wounded in this single particular of coupling and uncoupling cars. As those figures are reported by the corporations themselves, it is not probable that they are overstated. If the rail-

roads not reporting to the Interstate Commerce Commission (because not engaged in interstate carrying) should be added, the figures of killed and wounded from this cause would doubtless be largely increased. By these figures for the last year reported nearly 9,000 men had been killed and wounded in coupling and uncoupling cars. As the corporations on their own motion or under compulsion of Congressional action and judicial decision, have adopted self-couplers on the passenger cars and on 'over 60 per cent' of the freight cars, it will be seen how many thousands of lives and bodies have been saved thereby; but that still nearly 9,000 men should in one year be killed or wounded 'coupling and uncoupling' the freight cars which up to June 30, 1896, still requires that duty, for lack of self-couplers, is the highest proof of the duty of the courts to enforce liability for failure to provide self-couplers in every case where an injury occurs from that cause. That nearly 9,000 men should still be killed and wounded in one year for failure to furnish appliances which are so widely in use and which would entirely prevent such accidents, points out the duty of the courts.

"In *Whitsell's case* (120 N. C., at page 562, 27 S. E., at page 127), this court says: 'If an appliance is such that the railroads should have it, the poverty of the company is no sufficient excuse for not having it.' But in fact this defendant reports that this railroad has issued bonds and stocks for \$76,557 per mile. (N. C. R. R. Com. Report, 1896, at page 246.) This is presumed to have been paid in by its issuing the bonds and stocks, and hence it should be able to furnish appliances which will protect its employees from such injuries as this, and should be held liable for failure to do so, for the Interstate Commerce Commission report shows the self-couplers can be added for \$18 per mile. In a large majority of the states, as well as by the Federal Government, railroad commissions have been created to supervise and regulate the charges and the conduct of these corporations. The courts will be very derelict in their duty if they do not enforce justice in favor of employees as well as the public.

"Six years ago this court said it would soon be negligence per se whenever an accident happened for lack of a self-coupler. Congress has enacted that self-couplers should be used. For their lack this plaintiff was injured. It is true, the defendant replies that the plaintiff remained in its service knowing it did not have self-couplers. If that were a defense, no railroad company would ever be liable for failure to put in life-saving devices, and the need of bread would force employees to continue the annual sacrifice of thousands of men. But this is not the doctrine of 'assumption of risk.' That is a more reasonable doctrine, and is merely that when a particular machine is defective or injured, and the employee knowing it continues to use it, he assumes the risk. That doctrine has no application where the law requires the adoption of new devices to save life or limb (as self-couplers), and the employee, either ignorant of that fact, or expecting daily compliance with the law, continues in service with the appliances formerly in use. The defendant, after notice of 6 years from this court, and with notice of the act of Congress, and also from the general adoption of self-couplers, that it should use them, was guilty of negligence in failing to do so. The injury to the plaintiff could not have occurred save for the failure of the defendant to comply with its duty in this regard, and the court below should have held it liable to the plaintiff upon the defendant's own evidence."

[From B. L. No. 22, May, 1899.]

*WRIGHT v. SOUTHERN RAILWAY CO.*, 31 Southeastern Reporter, page 652.—This case was heard in the supreme court of North Carolina, before which it had been brought on appeal from the superior court of Rowan County, where a judgment had been rendered for the defendant in a suit brought by R. L. Wright, as administrator of Wilson Williams, deceased, as plaintiff, against the above-named railway company, to recover damages for the death of the plaintiff's intestate, an employee of the company. The supreme court rendered its decision November 28, 1898, and reversed the judgment of the lower court.

The opinion of the supreme court, delivered by Judge Clark, reads, practically in full, as follows:

"The death of the plaintiff's intestate occurred prior to the act of 1897 (inadvertently printed among the Private Laws of that year, chapter 56), which provides that in actions against railroad companies for death or injuries sustained by an employee the negligence of a fellow-servant shall not be a defense. Therefore the doctrine in force prior to that statute applies. The court charged the jury that, if they found that 'the death was caused by the negligence of the section master in not providing the road with sound ties,' to answer the second issue, 'Yes.' That issue was, 'Was the injury and death of plaintiff's intestate caused by the negligence of a fellow-servant?' This instruction was specifically

excepted to and is clearly erroneous. It is the duty of the master, the corporation, to furnish a safe roadbed. It is not within the scope of the duty or the powers of the section master to provide cross-ties. The plaintiff's intestate (a brakeman) and the section master were fellow-servants within the scope of their duties. The failure to provide a safe roadbed, or material for it—such as sound ties, or good rails, and the like—is the negligence of the corporation and not of the section master. Indeed, when this case was here before (122 N. C., 959; 80 S. E., 348), the court said: 'If the defendant, by having proper appliances (air brakes) and a good roadbed could have avoided the injury to the intestate, it is liable.' That it is the negligence of the master not to have a safe roadbed, and that this duty can not be shifted off on a subordinate, as the fellow-servant of an employee who is injured or killed, is almost universally recognized. *Pleasants v. Railroad Company* (121 N. C., 492; 28 S. E., 267), instead of being an authority for the defendant, clearly concedes that it was the duty of the railway company to keep its roadbed in safe condition, and that it could not delegate this duty to a servant so as to exempt the company from liability to an employee for injury caused by a defective roadway.

"It is true that on the first issue, 'Was the injury and death of plaintiff's intestate caused by the negligence of the defendant?', the court charged the jury, 'if they found it was caused by reason of a defective roadbed, or of the cross-ties being defective or rotten, they should answer the first issue, "Yes,"' but added, 'This is subject to instructions on second issue,' and on the second issue he instructed the jury erroneously, as above pointed out, that they might find that 'the failure to provide cross-ties was the fault of a fellow-servant,' a section master. These instructions are contradictory, and, if the jury took the latter view as law, they necessarily would find, as they did on the first issue, that the railroad company was not guilty of negligence."

[From B. L. No. 21, March, 1899.]

*WABASH RAILROAD CO. v. KELLEY*, 52 *Northeastern Reporter*, page 152.—In an action brought by F. M. Kelley against the above-named railroad company to recover damages for injuries received while in its employ, and also for malpractice of a physician employed in its 'hospital department,' and heard in the circuit court of Dekalb County, Ind., a judgment was rendered for him for the malpractice and for the defendant company as to the original injuries caused by an accident on its line. The railroad company appealed the case to the supreme court of the State, which rendered its decision December 15, 1898, and affirmed the judgment of the lower court. The evidence showed that the plaintiff, Kelley, was a fireman employed on one of the company's freight engines; that while engaged in his duties cleaning his engine he slipped and fell from a defective step on the engine and the wheels ran over and crushed one of his feet; that the company had a system whereby it deducted certain amounts from the wages of its employees and agreed therefor to furnish them with medical attendance and treatment in case of injuries from accident; that as part of this plan it had established a hospital department and employed surgeons; that the plaintiff was taken to a hospital and treated by said surgeons; that several amputations were performed on his leg; that the second of these was wrongly performed by a Dr. Higgins, one of the company's surgeons, and that the said doctor was afterwards discharged by the company on the ground of his indulgence in drugs.

The opinion of the supreme court was delivered by Judge Howard, and the following is quoted therefrom:

"The sufficiency of the complaint is questioned under various assignments of error. The defect indicated is that it appears from the complaint that the company exacted from appellee (Kelley), without his written consent given, a part of his wages, to be used for the maintenance of a hospital, contrary to the provisions of sections 2300, 2301, Revised Statutes, 1894.

"Said sections are as follows.

"SECTION 2300. It shall be unlawful for any railroad company or corporation operating railroads in Indiana to exact from its employees, without first obtaining written consent thereto in each and every instance, any portion of their wages for the maintenance of any hospital, reading-room, library, gymnasium, or restaurant.

"SEC. 2301. Any paymaster, auditor, or employee of any company so exacting from its employees such sums of money, shall, upon conviction thereof in any circuit court having competent jurisdiction, be fined not less than one hundred dollars nor more than five hundred dollars, as the court may decree.

"Appellant has retained appellee's money, and has placed the same in its

treasury as a part of its funds for the care of its sick and disabled employees; but contends that, as appellee did not give his written consent to such retention, he has, therefore, by reason of appellant's said wrongdoing, no right to the benefit which appellant promised him in return for the money so exacted. We do not think the complaint shows any agreement on the part of appellee to violate the statute in question. It is alleged, simply, that the appellant had undertaken, as a part of the contract of employment, to provide surgical and medical attendance and care to the appellee, as the same should be rendered necessary by casualty and accident, and to treat him for injuries received while in its service; that, consequently, on the happening of appellee's injury, appellant was in duty bound to furnish him such medical and surgical services, and that appellant, recognizing its said duty, did send appellee first to the Emergency Hospital at Detroit, and then to the hospital at Peru, to receive the care and attention originally promised. Such undertaking to provide surgical and medical care is not, by the statute (sections 2300 and 2301, above), made void as a part of the contract of service. The provision of the statute is that it shall be unlawful for a railroad company 'to exact from its employees, without first obtaining written consent thereto in each and every instance, any portion of their wages for the maintenance of any hospital, reading-room, library, gymnasium, or restaurant.' If the appellant did, indeed, exact any such contributions without the written consent of appellee, which does not appear from the complaint, that was not a wrong for which appellee can be held liable. It was the act of appellant, and it is a familiar principle that one can not take advantage of his own wrong. As to the deductions from appellee's wages, it appears from the complaint that appellee had no voice in the matter, but that appellant had for 7 years, the period of appellee's service, deducted and taken from his monthly wages the sum of 50 cents per month, with which to reimburse and recompense itself for expenses and charges incurred or rendered necessary in treating or providing surgical and medical treatment for plaintiff. It would be strange, indeed, if appellant, while retaining this money, could now claim that appellee had no right to the promised benefit from the money so retained, for the reason only that appellant had no right to so retain it. Even if such unlawful retaining by appellant could, in any way, be considered as a contract on the part of appellee, still, as said in 9 Am. and Eng. Enc. Law, 910, 'an innocent party defrauded by a guilty one may have redress as to him.' The law is aimed at the wrongdoer. So it was said in *Stockwell v. State*, 101 Ind. 1: 'The general rule is that contracts in violation of law are void, but this rule will not be extended and applied to a case like this, so as to enable the wrongdoer to take advantage of his own wrong against an innocent party.' It is not shown here, either in the complaint or by the evidence, that the appellee was guilty of any violation of the statute in suffering a part of his wages to be retained by the appellant.

The first reason given to show that the court erred in overruling the motion for a new trial is substantially the same as that urged against the sufficiency of the complaint; that is, that, under the statute above cited, appellant had no right, without appellee's written consent, to make deductions from his wages, in order to reimburse itself for care given or to be given to him in case of sickness or accident. We think we have shown this reasoning to be unsound. Appellant may not thus visit its own wrong upon the head of appellee. Appellee's evidence showed that he worked for the company 7 years; that he was hired by one Sternberg, who employed and discharged men and directed them in their work; that when the first pay car came along, Sternberg explained the matter of deducting monthly amounts from his wages, saying: 'The company's surgeons and physicians would treat me and all my nursing would be done, and that they had trained nurses, and that they could take care of the men better at the hospital than any man could be taken care of at home. I told him I never had been sick any, and I would rather not pay the hospital fee and run my own chances and take care of myself. He said, if I worked for the company I would have to pay it. If I didn't want to pay it I would have to quit working for the company. \* \* \* I didn't make any kick about it after that, and it was always taken out of my wages.' To the same effect was the company's book of rules, which was introduced in evidence. The first rule set out in the book of rules is as follows: '(1) In order to provide a fund for the support of a hospital and the care of the sick and injured employees, a deduction will be made on the pay rolls from the pay of each employee as follows: Where the pay of an employee amounts to \$50 or more per month a deduction of 50 cents will be made; where the pay of an employee amounts to less than \$50 per month a deduction of 35 cents will be made. The above deductions will be made in all cases where the employee is in continuous service or has worked as many as 15 days in such month.' We do not think anything further is needed

to show that appellant had assumed an obligation to care for its injured employee, and that it can not now thrust that obligation aside under the plea that it had no right, under the statute, to take from the employee, without his written consent, a part of his wages, monthly, during his 7 years' service. If the company should feel that, by reason of the violated statute, it could not conscientiously carry out its promise to care for the appellee, then it ought, at least, in compliance with the dictates of the same good conscience, return, with interest, the money which it had so persistently retained from his wages.

Here the court considers certain evidence heard on the trial, and concludes that it was sufficient to warrant the jury in deciding, as they did, that Dr. Higgins was guilty of malpractice, and that the company, through Dr. Morehouse, its chief surgeon, was negligent in failing to remove Dr. Higgins after learning of his habits and consequent inefficiency, and then continues as follows:

"Counsel finally contended that, even if malpractice on the part of Dr. Higgins and failure on the part of Dr. Morehouse to remove him after learning of his inefficiency are shown by the evidence, yet appellant is not liable, for the reason that it is shown that the hospital system is managed by a board of trustees, consisting of the vice-president, the general manager, and the assistant secretary of the Wabash Railroad Company, and all general officers of the road, and members of the executive department; and also because the funds for the support of such hospital system are made up of deductions from the wages of the employees of the company, which funds, it is said, are confided to the management of said trustees. We think that, even from what has already appeared from the record, a much closer relation is shown between the company and its hospital system than counsel would have us understand. From the moment the employee begins work until his treatment in the hospital on account of sickness or accident, the hospital department, as we think is shown to be as closely connected with the administration and management of the road as any other department of the company's business. Everything is superintended and directed by the company, the hospital officers acting and reporting precisely as officers of other divisions of the company's affairs.

"The evidence, all considered, shows clearly that the property of the medical department, quite the same as the property of any other department of the road, is wholly under the control and management of the company, and that, although the funds for its support are drawn from the wages of the employees, they are but nominally in the hands of the trustees named, and are so held by them merely for the convenience and advantage of the company. So far as the trustees act in relation to such property, they act as officials of the company. The company undertook to care for its disabled employees out of moneys derived from their own monthly wages, and the plan devised for the hospital department has been contrived as the means of carrying out that undertaking. Whatever defects may be found in the plan adopted, or in the manner in which it has been conducted, it appears, on the whole, to be a wise and praise-worthy undertaking. It would, however, be a great wrong to hold that the obligation to comply with the duty so assumed by the company could be lightly thrust aside by laying it upon the shoulders of the officials who, under the direction of the company, are placed in charge of the several hospitals and relief system established by the company itself. Here, as in *Railway Co. v. Sullivan* (111 Ind., 83; 40 N. E., 138), the appellant company, having undertaken to provide its injured and sick employees with medical and surgical assistance, was bound to exercise reasonable diligence in the selection and retention of its physicians and other attendants. This reasonable diligence included, of course, the duty to supervise the work of its hospitals, and to discharge any appointees who, although reasonably competent at the time of their appointment, had, on account of the use of intoxicants and narcotics, or for other causes, since become incompetent. This was particularly the case where the incompetency of the surgeon in chief had become notorious in the community, so that the appellant's supervising officials must have, or at least ought to have, known it. Having found no available error in the record, the judgment is affirmed."

[From B. L. No. 23, July, 1899.]

CLEVELAND, CINCINNATI, CHICAGO AND ST. LOUIS RAILWAY CO. *v.* BAKER, 91 Federal Reporter, page 224.—August Baker, a brakeman in the employ of the above-named railway company, was injured while attempting to uncouple two moving cars, and he alleged that the injury was caused by the failure of the company to equip its cars with grab irons or hand holds, as required by chapter 196, acts of 1892-93 (act of Congress of March 2, 1893, 27 Stat., 531). He sued the company for damages and judgment in his favor was rendered in the United States

circuit court for the southern district of Illinois. The railway company then carried the case on writ of error to the United States circuit court of appeals for the seventh circuit, which rendered its decision January 3, 1899, and reversed the judgment of the lower court.

The principal point of the decision and the reason therefor are clearly set out in the opinion of the court of appeals, which was delivered by Circuit Judge Wood, who used the following language therein.

"The substance of the charge is that the injury was caused by the failure of the company to equip its cars used in interstate commerce with grab irons, or hand holds, as required by the act of Congress of March 2, 1893 (27 Stat., 531). Section 4 of the act declares it 'unlawful for any railroad company to use any car in interstate commerce that is not provided with secure grab irons or hand holds in the ends and sides of each car for greater security to men in coupling and uncoupling cars.' The eighth section, transposed to make its meaning more clear, provides that an employee injured by a car not properly equipped, 'although continuing in the employment of such carrier after the unlawful use of such locomotive, car, or train had been brought to his knowledge,' 'shall not be deemed thereby to have assumed the risk thereby occasioned.'

"Proceeding on the assumption that the defendant in error was acquainted with such irons and their uses, did ordinary prudence require him, when he observed that the foremost of the cars, which he was about to uncouple, was not equipped therewith, to refrain from going between the cars while in motion, or at least to take extra precautions against danger, or was he permitted, under the act of Congress, to act as if the irons were there? We are of opinion that this question is substantially the same as if the railroad companies voluntarily and without legislative requirement had been accustomed to use grab irons, and cars without them were known to be defective, and correspondingly more dangerous to one attempting to couple or uncouple them. The meaning of the act is that, by remaining in his employment, the servant does not assume the risks generally incident to the absence of such irons, but not that in a particular case of voluntary action, with full knowledge of the situation, the character of the act is not to be determined according to all the facts and circumstances. The known absence of the grab irons was a circumstance in this case which the jury should have been directed to consider in determining whether the defendant in error was guilty of contributory negligence, or intended to assume the risk of the attempt to uncouple. A contrary construction of the act would permit a brakeman to take the risk of coupling or uncoupling cars not supplied with hand holds under circumstances of extreme and well-understood danger, with the conscious purpose of holding the company responsible for the result. The judgment is reversed, with direction to grant a new trial."

[From B. L. No. 25, July, 1899.]

DENVER AND RIO GRANDE RAILROAD Co. v. SIPES, 55 Pacific Reporter, page 1093.—Action was brought by Hattie Sipes against the above-named railroad company to recover damages for the death of her husband, who was killed at nighttime by the derailling of an engine upon which he was employed by the railroad company in the capacity of fireman. The proximate cause of the accident was the absence of a red light, in the cupola of the caboose of a freight train which it was the duty of the conductor to have placed there. The freight train stood on a side track and the switch in front of it was open. The deceased was employed on the engine of a passenger train which was approaching, and which, had the red light been displayed in the cupola of the caboose of the freight train, would have stopped. As said light was not displayed, through the negligence of the conductor of the freight train, the passenger train kept on and was derailed by the open switch. The defendant company claimed that the negligence of said conductor, which was the proximate cause of the accident, was the negligence of a fellow-servant of the deceased, and that, therefore, the company was not liable. The plaintiff claimed that it was the duty of the company to furnish said red light, and that it could not delegate this duty to an employee so as to escape liability for injuries resulting from failure to perform said duty. This view was the one taken by the district court of Arapahoe County, Colo., where the case was heard, and a judgment was rendered in favor of the plaintiff. The company appealed the case to the supreme court of the State, which rendered its decision January 9, 1899, and sustained the decision of the lower court.

Judge Gabbert delivered the opinion of the supreme court, and in the course of the same used the following language:

"It is the duty of an employer to make reasonable efforts to keep machinery and appliances used by his employees in suitable condition for use. This is one of the

duties which he is bound to perform, and can not be delegated so as to exonerate him from liability to an employee who is injured by the negligence of a coemployee, charged with the performance of such duty, in failing to do so; for the employee so charged is the representative of the employer and not a co-servant with the one who sustains an injury by the negligent performance of such duty, and the act or omission of the employee in this respect is that of the employer, irrespective of the grade of the employee whose negligence caused the injury. If the negligence of the master is the proximate cause of an injury to an employee, he is not relieved from responsibility because the negligence of a coemployee contributed to such injury."

The judge then spoke of the red light which should have been displayed on the freight train, and continued in the following words:

"This was one of the appliances which the company was bound to furnish for use upon its freight trains. It delegated this duty to the employees using such light. They were required to keep it in good order and ready for use; and their failure to do so, or ask for or obtain another, during the time the regular one was being repaired, was the act of appellant, in so far as other employees might be affected by such neglect. The judgment of the district court is affirmed."

[From B. E. No. 23, July, 1899.]

*Troxler v. Southern Railway Co.*, 32 Southeastern Reporter, page 550 — On March 21, 1899, the supreme court of North Carolina rendered a decision in the above-entitled case to the effect that the failure of a railroad to use automatic couplers in general use on its freight cars is negligence per se. Action has been brought by S. H. Troxler against the above-named railway company to recover damages for injuries received by him while in its employ. In the superior court of Guilford County, N. C., a judgment was rendered in his favor, and the defendant company appealed.

In its opinion, affirming the judgment of the superior court and delivered by Judge Clark, the supreme court used the following language:

"The plaintiff was injured in attempting to couple cars of the defendant on which there were no automatic car couplers, but in lieu thereof skeleton draw-heads of unequal height. The court below held that the absence of automatic couplers in general use was negligence per se, and refused to submit an issue whether the injury was not caused by the negligence of a fellow-servant, and refused to instruct the jury, as prayed, that the plaintiff was guilty of contributory negligence if he could, by proper care, have coupled the cars by hand without accident.

"The duty to furnish proper and safe appliances is that of the common master, and injury caused by their absence can not be attributed to the negligence of a fellow-servant. It has been heretofore held in *Greenlee v. Railway Co.* (122 N. C., 977, 30 S. E., 115) (Department of Labor Bulletin, No. 18, page 738) that failure of a railroad company to equip its freight cars with modern self-coupling devices is negligence per se, continuing up to the time of an injury sustained by an employee in coupling cars by hand, and renders the company liable, whether such employee was negligent in the manner of making the coupling or not. The same ruling has been previously made as to the duty of furnishing automatic car couplers on the passenger trains in *Mason v. Railroad Co.* (1892) (111 N. C., 482, 16 S. E., 698). Where the negligence of the defendant is a continuing negligence (as the failure to furnish safe appliances in general use, when the use of such appliance would have prevented the possibility of the injury), there can be no contributory negligence which will discharge the master's liability.

"The failure to provide necessary appliances is the causa causans. The defendant, however, frankly asks us to reconsider and overrule *Greenlee's* case. The case was the expression of no new doctrine, but the affirmation of one as old as the law and founded on the soundest principles of justice and reason, to wit: That when safe appliances have been invented, tested, and have come into general use, it is negligence per se for the master to expose his servant to the hazard of life or limb from antiquated and defective appliances which have been generally discarded by the intelligence and humanity of other employers. This must be so if masters owe any duties to their employees and unless economy of expenditures on the part of the railroad management is to be deemed superior to the conservation of the lives and limbs of those employed in their operation.

"As these appliances have been patented and more or less in use for over 30 years, it should not have required an act of Congress to enforce their universal adoption. Failure to adopt them, after being so long and widely known and used, was negligence in the defendant upon the principles of the common law. The

act of Congress imposing a penalty for failure to add the appliances after January 1, 1898, in nowise affected the right of any employee to recover for damages sustained by the negligence of any railroad company to attach them. The action of the Interstate Commerce Commission in extending the date at which such act should come into force (by virtue of authority given in the act) could not set aside the principle of law, that failure to adopt such appliances was negligence per se, nor have any other effect than to postpone the date at which the United States Government would impose the prescribed penalty upon all railroads engaged in interstate commerce failing to equip all their cars with automatic couplers—a penalty which is imposed irrespective of whether any accidents occur from such failure or not.

"We can not reverse our ruling in *Greenlee's case*, and it is negligence per se in any railroad company to cause one of its employees to risk his life or limb in making couplings which can be made automatically without risk. No error."

[From B L No. 26, January, 1900.]

*TEXAS MIDLAND RAILROAD v. TAYLOR*, 53 *Southwestern Reporter*, page 362.—Suit was brought by Eliza L. Taylor to recover damages for the death of her husband, one John W. Taylor, caused, as alleged, by the negligence of the defendant company above named, in whose employ as a locomotive fireman Taylor was when killed. The evidence showed that Taylor was leaning out of the cab of his engine while the train was running over a certain track, trestle, and bridge, and that while thus engaged he was struck by a part of the bridge and killed. In the district court of Hunt County, Tex., a judgment was rendered in favor of the plaintiff, and the defendant company appealed the case to the court of civil appeals of the State, which rendered its decision May 13, 1899, and affirmed the judgment of the lower court. The company then applied to the supreme court for a writ of error, but such action was refused.

The opinion of the court of civil appeals was delivered by Chief Justice Finley, and the following is taken therefrom:

"We have carefully considered the evidence as contained in the statement of facts and announce these conclusions of fact as authorized therefrom: (1) The bridge and track were defective in construction, and not in a proper state of repair, and this constituted negligence on the part of the company and caused the death of John W. Taylor, who was the husband of appellee; (2) the facts do not show that the deceased husband was guilty of contributory negligence; (3) the evidence justified the finding of the jury, and we conclude that the deceased did not know of the defective condition of the bridge and track; (4) the deceased was at his post of duty at the time he received the fatal injury through the negligence of his employer."

Applying familiar principles of law to the foregoing facts, the husband of appellee, without fault or negligence on his part, having received injuries resulting in his death caused by the negligence of appellant, appellee was entitled to recover such pecuniary damage as she suffered from the death of her husband. We find no error in the judgment, and it is therefore affirmed.

[From B L No. 26, January, 1900.]

*GULLIN v. PATTEN AND SHERMAN RAILROAD COMPANY*, 44 *Atlantic Reporter*, page 361.—This was an action on the case brought in the supreme judicial court of Maine against the above-named railroad company to recover damages for personal injuries sustained by the plaintiff while employed as a brakeman upon the track of the defendant company at Sherman Junction. The plaintiff alleged that in attempting to take certain cars situated at said junction upon the line of a connecting railroad, and while uncoupling cars, having pulled the pin, the train still moving, he tried to step out from between the cars and in so doing caught his left foot in the flare of the main rail and a guard rail, which was not filled or blocked, and received an injury to the foot which necessitated the amputation of a large portion of it. The jury returned a verdict for the plaintiff, and the defendant filed a general motion for a new trial, which was granted in a decision rendered June 2, 1899.

The opinion of the court was delivered by Judge Emery, and the syllabus of the same, which is marked "official," is in the following words:

"1. St. 1889, c. 216, requiring each railroad company to fill or block the frogs and guard rails on its track before January 1, 1890, does not require a railroad company, organized and constructing its railroad after that date, to fill or block its frogs and guard rails before allowing trains to be operated over its tracks. Such company is entitled to a reasonable time for compliance with that statute.

"2. A brakeman who has worked as section man and brakeman for two years on a railroad where the frogs and guard rails were not filled or blocked must be presumed to appreciate the danger of getting his foot caught in such frogs and guard rails while stepping about and over them.

"3. Such a brakeman, having occasion to work as brakeman on the trains of his employer while passing over another railroad just constructed (since January 1, 1890), can not rightfully assume that the frogs and guard rails of the new railroad are filled or blocked, and hence dismiss all thought of them from his mind.

"4. If such brakeman, under such circumstances, continues to work without requiring the frogs and guard rails to be filled or blocked, he must be held to have waived the right and to have assumed the risk of injury from stepping into them.

"5. For such a brakeman, under such circumstances, to move about over frogs and switches while coupling and uncoupling cars, even in moving trains, without taking any thought of the frogs and guard rails or as to where he may be stepping, is negligence on his part contributing to the catching his foot in them."

[FROM B. L. No. 9, JANUARY, 1900.]

*POOL v. SOUTHERN PACIFIC COMPANY*, 58 Pacific Reporter, page 326.—In the district court of Weber County, Utah, a judgment was rendered in favor of the plaintiff in a suit brought by Malola Pool, administratrix of Joseph Pool, against the above-named company to recover damages for the death of said Joseph Pool, caused, as alleged, by the negligence of the defendant company and its servants while the deceased, as an employee under the direction of the defendant, was engaged in repairing a car. The defendant company appealed the case to the supreme court of the State, which rendered its decision July 3, 1899, and affirmed the judgment of the lower court.

The opinion of the supreme court was delivered by Judge Baskin, and the syllabus of the same, which was prepared by the court, sufficiently shows the facts and decision in the case and reads in part as follows:

"2. Under the rule that the contract of employment imposes upon the master the implied obligation not to expose the servant to dangers which the master, by the exercise of reasonable care, skill, and prudence, could avert, evidence which shows that deceased, a car repairer, was directed to repair a car standing on a track other than a repair track; that he went under the car for the purpose of making repairs as directed, that no danger flag was placed on the car being repaired; and that, while the deceased was so employed, an engine and caboose, under the direction of K., the foreman of the switchmen in the train department, who had actual knowledge of deceased's position under the car, were backed against the car, resulting in the injury and death of the deceased, clearly shows that defendant did not properly discharge the duties which he owed to the deceased under the contract of employment and was guilty of gross negligence.

"3. Among the implied duties imposed by the contract of employment upon the master are that he shall provide reasonable and suitable means and appliances to enable the servant to do his work as safely as the hazard incident to the employment will permit, and that he will provide a suitable and reasonable safe place for doing the work to be performed by the servant.

"4. The master can not escape liability for injuries inflicted upon his servant for a negligent discharge of these duties by intrusting their performance to another. These duties are personal duties of the master, which can in no way be delegated so as to relieve him from responsibility. A failure to perform these duties, or any negligence in their performance, is the negligence of the master, for which he is liable. Such negligence is not a hazard necessarily attendant upon the occupation of the servant, nor is it one which he, in legal contemplation, is presumed to risk in the service of the master.

"5. When the nature of the business is such as to require it, the law imposes upon the master the duty of making and promulgating suitable rules to promote the safety of his employees.

"6. When the nature of the employment of car repairer is so hazardous as the evidence herein disclosed, the duty is imposed upon the master of making and promulgating a rule requiring the placing of danger flags upon cars when repairers are under them, and forbidding any coupling to be done by a locomotive while they are so engaged.

"7. A laborer in the car shops of a railroad corporation and the foreman of the switchmen in the train department are not fellow-servants.

"8. Even if the injury complained of was directly caused by the act of a fellow-servant, if the chances of its occurrence would have been greatly less if the defendant had faithfully performed the duties it owed deceased, and its negligence in this regard contributed to the injury, the defendant is liable.

## 1016 THE INDUSTRIAL COMMISSION:—RAILWAY LABOR.

"9. It is only when the negligence of the plaintiff clearly appears from the evidence that a trial court is justified in withdrawing the question of contributory negligence from the jury; and, where the place where the deceased was ordered to work was not necessarily or inherently dangerous, he had a right to presume that he would not be exposed to unnecessary danger, and that defendant had used proper care to render the place where he was to work reasonably safe, and the fact that he, in obedience to the order of the foreman in charge of repairs, went to work under the car, beneath which he was fatally injured, does not establish contributory negligence."

[From B. L. No. 25, November, 1899.]

**SMITH v. ST. LOUIS AND SAN FRANCISCO RAILWAY COMPANY ET AL.**, 52 South-western Reporter, page 378.—Suit was brought against the above-named railway company and its receivers by William H. Smith, a locomotive fireman, to recover damages for injuries incurred by him while in the employ of said company. In the circuit court of Newton County, Mo., a judgment was rendered in his favor and the defendant company appealed the case to the supreme court of the State, which rendered its decision July 12, 1899, and reversed the decision of the lower court. The grounds of said reversal were various, but the most important point decided was that an action against a railroad company, accruing before the appointment of receivers, can not be maintained against the receivers without first obtaining consent of the court appointing such receivers.

Judge Marshall, who delivered the opinion of the supreme court, spoke as follows upon the above point:

"This proceeding against the receivers appointed by the circuit court of the United States for the eastern district of Missouri is without any permission or authority from that court, and hence can not be maintained. The cause of action did not arise or accrue while the receivers were in charge and conducting the business, and, therefore, the plaintiff does not come within the provisions of the act of March 3, 1887 (21 Stat., p. 551), providing that a receiver may be sued without the previous leave of the court in respect of any act or transaction of his in carrying on the business.

"The accident complained of occurred on the 20th of October, 1893, and the receivers were not appointed until December 23, 1893. Receivers are officers of court to hold and manage property which is in the registry of the court, and persons having any claim to property so situated must submit their claims to the court that has obtained jurisdiction over the res, and the court will not permit its officers to be sued in any other tribunal without its consent. This is not only a law of comity among courts, but it is a jurisdictional necessity, for it is manifest that 2 courts could not, acting separately, successfully manage the property or harmoniously distribute it.

"The petition does not aver that the consent or the permission of the United States circuit court to sue its receivers was asked or obtained before this action was begun, and there is a total lack of any evidence of such steps having been taken. The action can not, therefore, be maintained, and the judgment against the receivers, or, as amended, that the judgment against the company be certified to the receivers, is reversed."

[From B. L. No. 26, January, 1900.]

**NARRAMORE v. CLEVELAND, CINCINNATI, CHICAGO AND ST. LOUIS RY. CO.**, 96 Federal Reporter, page 298.—This action was brought in the United States circuit court for the western division of the southern district of Ohio to recover damages for personal injuries sustained by the plaintiff, one Narramore, while in the employ of the defendant company as a switchman in its railroad yards at Cincinnati, Ohio. While the plaintiff was attempting to couple two freight cars his foot was caught in an unblocked guard rail, and in his effort to extricate it his right hand was crushed between the drawheads of the cars and injured so badly as to require amputation. Plaintiff had been in the defendant's employ for 7 months. He had 9 years' experience as a railroad man. There were a great many guard rails and switches in the yard where he worked. With the exception of a few, where experimental blocks were used, the company did not use blocks in either its guard rails or switches. The plaintiff relied on the statute of Ohio, passed March 23, 1888, being sections 9822 and 9823 of the Revised Statutes, seventh edition. The sections read as follows:

"SECTION 9822. Every railroad corporation operating a railroad or part of a railroad in this State, shall, before the first day of October, in the year eighteen hundred and eighty-eight, adjust, fill, or block the frogs, switches, and guard rails

on its track, with the exception of guard rails on bridges, so as to prevent the feet of its employees from being caught thereon. The work shall be done to the satisfaction of the railroad commissioner.

"SECTION 9823. Any railroad corporation failing to comply with the provisions of this act shall be punished by a fine of not less than one hundred dollars nor more than one thousand dollars."

The defendant company was operating the railroad at the time of the passage of the act and had been continuously operating it since. Upon the above showing, at the close of the evidence, the court directed the jury to return a verdict for the defendant company on the ground, that as the failure of the company to block its switches was obvious, the plaintiff must be held, notwithstanding the statute, to have assumed the risk of injury therefrom, and such a verdict having been rendered, judgment for the company was entered thereon. The plaintiff then appealed the case to the United States circuit court of appeals for the sixth circuit, which rendered its decision July 5, 1899, and reversed the judgment of the lower court.

The opinion of the court was delivered by Judge Taft, who, in the course of the same, used the following language:

"In the absence of the statute, and upon common-law principles, we have no doubt that in this case the plaintiff would be held to have assumed the risk of the absence of blocks in the guard rails and switches of the defendant. His denial of knowledge of the fact that the particular guard rail causing the injury was unblocked is entirely immaterial. In such a case the authorities leave no doubt that the servant assumes the risk of the absence of the blocks, and the employer can not be charged with actionable negligence toward him.

"The sole question in the case is whether the statute requiring defendant railway, on penalty of a fine, to block its guard rails and frogs, changes the rule of liability of the defendant and relieves the plaintiff from the effect of the assumption of risk which would otherwise be implied against him. We have already had occasion to consider in a more or less direct way the effect of the statute. In these cases we held that the failure on the part of a railway company to comply with the statute was negligence per se. A further consideration of the statute confirms our view. The intention of the legislature of Ohio was to protect the employees of railroads from injury from a very frequent source of danger by compelling the railway companies to adopt a well-known safety device. It was passed in pursuance of the police power of the State, and it expressly provided, as one mode of enforcing it, for a criminal prosecution of the delinquent companies. The expression of one mode of enforcing it did not exclude the operation of another, and in many respects more efficacious, means of compelling compliance with its terms, to wit, the right of civil action against a delinquent railway company by one of the class sought to be protected by the statute for injury caused by a failure to comply with its requirements. Unless it is to be inferred from the whole purview of the act that it was the legislative intention that the only remedy for breach of the statutory duty imposed should be the proceeding by fine, it follows that upon proof of a breach of that duty by the railway company, and injury thereby occasioned to the employee, a cause of action is established. In this case there can be no doubt that the act was passed to secure protection and a newly defined right to the employee. To confine the remedy to a criminal proceeding in which the fine to be imposed on conviction was not even payable to the injured employee or to one complaining, would make the law not much more than a dead letter.

"Does a knowledge on the part of the employee that the company is violating the statute and his continuance in the service thereafter without complaint, constitute such an assumption of the risk as to prevent recovery? Assumption of risk is a term of the contract of employment, express or implied from the circumstances of the employment, by which the servant agrees that dangers of injury obviously incident to the discharge of the servant's duty shall be at the servant's risk. In such cases the acquiescence of the servant in the conduct of the master does not defeat a right of action on the ground that the servant causes or contributes to cause the injury to himself; but the correct statement is that no right of action arises in favor of the servant at all, for under the terms of the employment the master violates no legal duty to the servant in failing to protect him from dangers the risk of which he agreed, expressly or impliedly, to assume. The master is not, therefore, guilty of actionable negligence toward the servant. This is the most reasonable explanation of the doctrine of assumption of risk.

"If, then, the doctrine of the assumption of risk rests really upon contract, the only question remaining is whether the courts will enforce or recognize as against a servant an agreement, express or implied on his part, to waive the per-

formance of a statutory duty of the master imposed for the protection of the servant and in the interest of the public, and enforceable by criminal prosecution. We do not think they will. To do so would be to nullify the object of the statute. The only ground for passing such a statute is found in the inequality of terms upon which the railway company and its servants deal in regard to the dangers of their employment. The manifest legislative purpose was to protect the servant by positive law, because he had not previously shown himself capable of protecting himself by contract; and it would entirely defeat this purpose thus to permit the servant 'to contract the master out' of the statute.

Judgment reversed, at costs of the defendant, with directions to order a new trial."

[From B. L. No. 27, March, 1900.]

GALVESTON, HOUSTON AND SAN ANTONIO RY. CO. *v.* HUGHES ET UX., 54 Southwestern Reporter, page 264.—Edward P. Hughes and wife brought suit in the district court of El Paso County, Tex., to recover damages for the death of their son, W. E. Hughes, who was killed while in the employment of the above-named railroad company. A judgment was rendered for the plaintiffs, and the company appealed the case to the court of civil appeals of the State, which rendered its decision November 1, 1899, and affirmed the decision of the district court.

The opinion was delivered by Judge Fly, and from the same the following, sufficiently stating the facts in the case, is quoted:

"The deceased, an inexperienced young man, whose inexperience was known to appellant, applied for and obtained from appellant employment in its switch yard in El Paso. About 2 hours after his employment deceased, while performing the duties incumbent upon him, got his foot fastened in an unblocked frog and was run over and crushed in such a manner by appellant's cars that he died.

"The testimony clearly demonstrated that deceased had been in the employ of appellant about 2 hours at the time of his death; that he was inexperienced and unacquainted with the dangers of his employment, and that appellant knew of his inexperience. The rule is:

"If there are any dangers, either latent or patent, of which the master has knowledge, either actual or presumed, which the employee, either from his youth, inexperience, want of skill, or other cause, does not, or is presumed not to, understand or comprehend, they must be made known to him by the master, and this duty of the master is the same as to the machinery or appliances used or to be used by him. It is presumed that the master, or the person placed in charge of a hazardous business or department thereof, is familiar with the dangers, latent or patent, ordinarily accompanying the business which he has in charge. The obligation is not discharged by informing the servant generally that the service in which he is engaged is dangerous, and more especially is this so when the servant is a person who neither by experience nor by education has, or would be likely to have, any knowledge of the perils of the business, either latent or patent. In such case the servant should be informed not only that the service is dangerous, but of the perils of a particular place and the particular or peculiar dangers that attend the service, if any." (Bailey, Mast. Liab., pages 111, 112.)

"Ordinarily a person who accepts employment from another assumes all ordinary risks incident thereto and can not recover for injuries resulting therefrom; and doubtless, in the absence of knowledge on the part of the employer of an applicant for employment coming within the exceptions furnished by youth, inexperience, or want of skill, the employer could assume that he was not within the exceptions, and would not be under obligations to warn him of the dangers incident to his employment; but in this case appellant knew deceased was inexperienced, and its yard master recognized the necessity of instructing him as to the work, but for some reason failed to do it.

"It was in proof, and we find, that unblocked frogs and guard rails are dangerous to persons working in switch yards, and that this was unknown to deceased and was known to appellant, but it gave no warning to deceased, although it knew him to be inexperienced. The evidence was sufficient to establish negligence on the part of appellant, and that deceased was not guilty of contributory negligence."

[From B. L. No. 27, March, 1900.]

NORFOLK AND WESTERN RAILWAY COMPANY *v.* STEVENS, 34 Southeastern Reporter, page 525.—Action was brought in the hustings court of Roanoke, Va., by Charles R. Stevens, administrator of the estate of Joseph Stevens, deceased, to recover damages from the above-named railroad company for the death of said Stevens while in its employ as a locomotive fireman, caused by the negligence of

the Phoenix Bridge Company which was putting in a new bridge over a river under a contract with the railroad company. A judgment was rendered for the plaintiff, and the defendant company carried the case upon writ of error before the supreme court of appeals of the State, which rendered its decision November 16, 1899, and reversed the judgment of the lower court upon the ground, among others, that where it is the custom of railroad companies to have certain work, not essentially hazardous, done by independent contractors, and ordinary care is used in the selection of such contractor, the railroad company can not be held responsible for injuries resulting to its employees through the negligence of such independent contractor, since the railroad company is not an insurer of the safety of its employees, but is bound only to exercise ordinary care for their safety.

The opinion of the court, delivered by Judge Keith, reads, upon this point, as follows:

"It is shown in the evidence that it is the general custom of railroad companies to construct bridges as was done in this case, and that it is not an essentially hazardous undertaking; that while it requires care to substitute a new bridge for an old one without the interruption of traffic, with ordinary care it may be done with entire safety. It further appears that the Phoenix Bridge Company is an established and reputable concern, largely engaged in such work, and has the confidence of the business public. As we have before said, the contract between the bridge company and the railroad company seems carefully to have guarded, as far as human foresight could do, against the dangers incident to the work. If the bridge company had complied strictly with its contract the accident would not have occurred. It was due to the removal of the false work before a sufficient number of rivets had been put into the new bridge to sustain the train that undertook to pass over it. But the railroad company is not responsible for the negligence of the Phoenix Bridge Company. It is responsible only for its own negligence and that of its agents and employees, while the Phoenix Bridge Company was an independent contractor.

"The railroad company is not an insurer of the safety of its employees. It is bound by law only to exercise ordinary care for their safety, no matter how hazardous the business may be in which the servant is engaged, and the degree of care in the particular case is to be ascertained by the general usages of the business."

[From B. L. No. 3, November, 1900.]

NEW ORLEANS AND NORTHEASTERN RAILROAD CO. v. CLEMENTS, 100 Federal Reporter, page 415.—One E. T. Clements was night foreman in the switch yards of the above-named railroad company at Meridian, Miss. About 10 o'clock at night certain flat cars of another road arrived in the yards and were inspected by the regular inspectors, after which Clements had an engine attached thereto and started to move them. After they had started and were moving slowly, he observed that a brake was set on one car, and, climbing on the next car, he started to step from one to the other—reaching forward and taking hold of the brake wheel as he did so. The nut was gone from the top of the brake rod and the wheel came off, causing him to fall between the cars, and he was run over and his arm crushed. He brought suit against the railroad company for damages, and in the United States circuit court for the southern district of Mississippi a judgment in his favor was rendered. The railroad brought the case before the United States circuit court of appeals for the fifth circuit, upon a writ of error, and said court rendered its decision February 28, 1900, affirming the judgment of the lower court.

Circuit Judge Pardee delivered the opinion of the court of appeals, and after reciting and commenting upon certain instructions and charges which the railroad company requested the court to give to the jury and which the court refused to do he continued in the following language:

"The rule sought to be presented by these instructions and charges is that, while it is the duty of the railroad company to make proper inspection and look after the condition of cars that it calls upon its employees to use, when the railroad company has appointed proper and capable inspectors, and provided by its rules that these inspectors shall make due and proper inspection, and the inspectors have made inspection, then the duty of the railroad company is performed, and no negligence can be imputed to the company because the inspection has not been thorough and complete."

At this point the judge cites and quotes from numerous decisions of the courts, and then continues as follows:

"In the light of these decisions, we understand the law to be that, as to patent defects in machinery furnished by railroad companies for the employees to use,

the railroad companies are insurers in all cases where the employee, by reason of his employment or the circumstances of the case, has no full opportunity, before using the machinery in question, to observe and note the patent defect; and the rule is the same with regard to all defects that can be discovered on proper examination and inspection.

In the present case the defendant in error (Clements) was not called upon by his duty to make any particular inspection of the cars turned over to him after the regular inspection. As to the particular defect which resulted in his injury, the proof is clear that although the defect was patent, and could and would have been readily noticed by any employee called ordinarily to use the same, the defendant was called upon to use it at night, in an emergency, and without opportunity to examine or inspect the same. It may be, as counsel for plaintiff in error argued, that he knew that the car had lately come in from another road, that after he reached the platform of the car he could, with the slightest movement of his hand, or instantaneous movement of his lantern, have discovered the condition of the brake (that is, the absence of the nut), and that upon that discovery he could have used the brake ("let it off") in such a way that he would not have been injured. But the trouble is, he had no opportunity to examine the condition of the brake with his hand, or by any movement of the lantern. In the line of his duty, he was climbing on top of the car as it was moving, and he reached for and caught the brake to support himself preparatory to using the same; and to say, under such circumstances, that he should have made a preliminary inspection, is contrary to both reason and authority. On the whole case—and we have examined it with great care—we are constrained to hold that the record shows no reversible error on the trial, and the judgment must be affirmed.

## II. DECISIONS AFFIRMING FELLOW-SERVANT RULE AND THE PRINCIPLE OF EMPLOYEE ASSUMING THE RISK.

### 1.—DECISIONS ILLUSTRATING THE RULE THAT THE EMPLOYEE ASSUMES THE RISKS OF HIS EMPLOYMENT.

[Abstract from report in L. B. No. 2, January, 1896.]

In the case of *SHACKLETON v. MANISTEE AND NORTHEASTERN RAILROAD COMPANY* (64 Northwest Reporter, page 728) the supreme court of Michigan decided, October 22, 1895, that under the conditions of the case the railroad company was not answerable for the death of an employee who while in the discharge of his duty was thrown from a way car and killed, by reason of the absence of a handrailing which had been removed from the car. This decision was based upon the fact that the employee took out the car without protest to the proper officer of the road, in accordance with the rules of the road, although he had asked a workman to fix the car and had been told by one of his superior officers to get the car fixed. Notwithstanding, he continued in the use of the car, without protest, until he was killed. In the language of the opinion of the court, "the most that can be said is that the company might have been negligent in not repairing the car sooner, but such negligence was open to the observation of the deceased and he saw fit to continue in the use of the car. He made no objection to using it in its crippled condition, he gave no notice to anyone in authority which would indicate to defendant that he refused to take the risk, which was as apparent to him as to anyone connected with the road."

[Abstract from report in B. L. No. 1, May, 1896.]

In the case of *SKIDMORE v. THE WEST VIRGINIA AND PITTSBURG RAILROAD COMPANY*, the supreme court of appeals of West Virginia reversed, November 29, 1895, the judgment of a lower court awarding damages to a section hand who was engaged in clearing away a wreck, under the supervision of a section boss, and was injured in moving a tender whose dangerous position was not known to the section boss when ordering the work done. The decision of Judge English (23 Southeastern Reporter, p. 713) laid down the following principles:

"Where foreman and his assistants have equal knowledge of the danger accompanying an act about to be done, even if the foreman requests its performance, and injury ensues to the assistant, the employer can not be made liable. Notwithstanding the request, the assistant can comply or not, as he chooses, and if he does comply he takes his chances of the peril surrounding the situation.

"It is only when the servant is ignorant of the impending danger, and the

employer is not, and the employer fails to warn the servant of such danger, that the master's liability attaches.

"When one enters upon a service he assumes to understand it and takes all the ordinary risks that are incident to the employment; and where the employment presents special features of danger, such as are plain and obvious, he also assumes the risk of those.

"Where the danger consists in some latent defect, which is not apparent by the use of ordinary diligence on the part of the master, and a servant performing his work is thereby injured, when he had the same chances of observation as the master, no liability attaches to the master."

[From B. L. No. 12, September, 1897.]

REESE *v.* WHELENG AND ELM GROVE R. R. Co., 26 Southeastern Reporter, page 204.—Action was brought in the circuit court of Ohio County, W. Va., by William L. Reese against the railroad company above named to recover damages for injuries received while in the employ of said company. The evidence showed that at the time of the accident the plaintiff was riding in a standing position on a truck which was being pushed forward by an engine, and that the truck, through some defect either in itself or in the track, was derailed and the plaintiff was injured, that the plaintiff had knowledge of the defect in the track, and also that the plaintiff had been warned of the danger of riding on said truck in a standing position. A judgment was rendered in the circuit court in favor of the plaintiff, and the defendant company carried the case, on writ of error, to the supreme court of appeals of the State. Said court rendered its decision November 18, 1896, and reversed the judgment of the circuit court. Its opinion was delivered by Judge English, and from the syllabns of the same, which was prepared by the court, the following is quoted:

"1. When a servant enters into the employment of a master, he assumes all the ordinary hazards incident to the employment, whether the employment be dangerous or otherwise.

"2. When a servant willfully encounters dangers which are known to him, the master is not responsible for an injury occasioned thereby.

"3. An employer does not impliedly guarantee the absolute safety of his employees. In accepting an employment, the latter is assumed to have notice of a patent risks incidental thereto, or of which he is informed, or of which it is his duty to inform himself, and he is also assumed to undertake to run such risks.

"4. Where an employee of a railroad company is being carried on a construction train to his home from his work by the railroad company, without any agreement or compensation therefor, and voluntarily takes a position standing on a small truck which is being pushed forward by the engine, contrary to repeated warnings of those in charge of the train as to the danger of so doing, and he is injured by reason of the derailment of the truck, if his riding in that position is the proximate cause of his injury, the railroad company is not responsible for his injuries thereby occasioned."

[From B. L. No. 12, September, 1897.]

OLIVER *v.* OHIO RIVER R. R. Co., 26 Southeastern Reporter, page 441.—Suit was brought in the circuit court of Wood County, W. Va., by Clifton Oliver against the above-named railroad company to recover damages for personal injuries received while in the employ of said company. Judgment was rendered for the plaintiff, and the defendant carried the case, on writ of error, to the supreme court of appeals of the State, which court rendered its decision December 9, 1896, and reversed the decision of the lower court.

The opinion of the supreme court of appeals was delivered by Judge English. The syllabns of the same was prepared by the court, and contains a clear statement of the different points of the decision, and for the understanding of the same a statement of the facts in the case is not necessary. The following is quoted from the syllabus.

"1. The measure of a master's duty to his servant is reasonable care, having relation to the parties, the business in which they are engaged, and the exigencies which require vigilance and attention. He is not a guarantor of the safety of his servant.

"2. The master's duty is to make and promulgate proper rules. It is not required that the master should see to it personally that notice comes to the knowledge of all those to be governed thereby. If there is due care and diligence in choosing competent servants to receive and transmit the necessary orders, the

negligence by them in performing it is a risk of the employment that the coemployee takes when he enters the service.

"3. Where an employee of a railroad company has knowledge of any danger connected with his employment which may be avoided by the use of ordinary care, and appreciates the danger to which he exposes himself, if he continues in such employment after such knowledge without protest or complaint on his part or promise on the part of such railroad company that such danger shall be removed, he will be held to have assumed the risk of such danger and to have waived all claims for damages in case of injury.

"4. When a servant enters into the employment of a master he assumes all the ordinary risks incident to his employment, whether the employment is dangerous or otherwise; and if a servant willfully encounters dangers which are known to him or are notorious, the master is not responsible for any injury occasioned thereby."

[From B. L. No. 13, November, 1897.]

SWANSON *v.* GREAT NORTHERN RY. CO., 70 Northwestern Reporter, page 978.—Action was brought in the district court of Hennepin County, Minn., by Jacob Swanson against the above-named railroad company to recover damages for injuries received while in its employ. The evidence showed that plaintiff, a section hand, was put to work on a large hill from which defendant was removing gravel; that he was ordered up the slope of this hill to assist other workmen in loosening the material, that it might fall down to the bottom of the pit, there to be loaded upon cars by a steam shovel, and that in some way from the sliding of the earth he was injured. The defendant company filed a demurrer to the complaint on the ground that the complaint failed to state a cause of action, and the district court issued an order overruling the demurrer. From said order the railroad company appealed to the supreme court of the State, which rendered its decision May 10, 1897, and reversed the order of the lower court.

The opinion of the supreme court was delivered by Judge Collins, and contains the following language:

"It is the universal rule that in performing the duties of his place, a servant is bound to take notice of the ordinary operation of familiar natural laws, and to govern himself accordingly. Failing to do so, he takes the consequences. He can not charge such consequences upon the master, when he can see that which is open and apparent to a person of ordinary intelligence.

"The progress of the work necessarily changed the character of the place and enhanced the danger, and under such conditions it has never been held that it is the absolute duty of the master to furnish the servant a safe place in which to work.

"Any man of ordinary capacity would know that, as a place to work in, the slope of a gravel pit is more or less dangerous, especially when the work is to loosen the material, that the laws of gravitation may operate, and precipitate such material to the bottom of the pit. The work of plaintiff and his associates was to release the gravel and earth, to cause it to break away, and to slide or fall down; and they should, and undoubtedly did, realize that the sliding or falling was attended with danger to any person in the way. The only difference in the danger to be apprehended and guarded against between the falling of gravel or earth from overhead because of an excavation, and its falling or sliding because released or loosened upon the face of a slope, is merely one of degree. The complaint failed to state a cause of action, and the demurrer should have been sustained. Order reversed."

[From B. L. No. 20, January, 1899.]

DELAWARE, LACKAWANNA AND WESTERN RAILROAD COMPANY *v.* VOSS, 41 Atlantic Reporter, page 221.—This case was heard in the supreme court of New Jersey on a demurrer to the declaration of the plaintiff, one Theodore Voss, in an action brought by him against the above-named railroad company. The decision of the court, sustaining the demurrer to the first count of the declaration and overruling the demurrer to the third count, was rendered September 22, 1898.

The opinion of the court was delivered by Judge Lippincott, and the following, sufficiently showing the facts and the decision in the case, is quoted therefrom:

"In this case separate demurrers are filed to the first and third counts of the declaration. The action is one by the plaintiff to recover damages of the defendant for personal injuries inflicted while the plaintiff was in the employment of the defendant in its freight coal yard at the terminus of its railroad at the Hudson River, in Jersey City. The first count of the declaration avers that at the

terminus of this railroad the railroad company had a coal yard appurtenant to the railroad and used in connection with the distribution of coal carried by the railroad company to the various points of unloading, by means of tracks laid in the said yard, over which the cars carrying coal were transferred. It avers that in January, 1896, the plaintiff was a servant of the defendant in this yard, and that it was a part of his work or duty to go upon the coal cars standing in said yard and get coal to be used in the said business of operating its railroad. One averment of negligence in this count is that the defendant suffered and permitted, in the operation of its yard, 'its cars to be kicked with great force and violence across this yard, that is to say, to be driven across by giving them an impetus and detaching them.' So far as this averment, standing alone, is concerned, the impetus and the detachment of the cars was the manner in which the work of the yard was done by the coemployees or co-servants of the plaintiff in the employment of the defendant, whose negligence in this respect, even if it be conceded to exist, would not form a basis for an action for injuries arising by reason of such negligence. The negligence of a co-servant is a risk assumed in the common employment. But the count of the declaration obtains its force from the further averment of negligence of the defendant in operating its roads, which is couched in these words, 'to wit, and of its negligence and carelessness in failing to make and enforce reasonable and proper rules and regulations for the guidance of its employees in the operation of its said yard,' and again changing it with 'negligence and carelessness in failing to make and enforce reasonable and proper rules and regulations for the guidance of its employees in its said business.' There is no averment whatever setting forth in what respect the failure to make reasonable rules and proper regulations was the cause of the injury to the plaintiff. Even if such averment had been contained in this count of the declaration, still it is clear that in the work of the operation of this yard and the business carried on therein the plaintiff assumed all the risks of the negligence of his co-servants as incidental to this class of employment, and therefore the gravamen of the count, in so far as the liability of the defendant is concerned, is in the averment that the company failed to establish certain general rules for the guidance of its employees or servants in their relations to each other in the work being carried on in this yard. This count of the declaration is framed upon the general idea that it was the duty of the defendant as master, to make and enforce rules and regulations for the operation of its yard. I think it is sufficient to say that in the law no such legal duty existed upon the part of the defendant. Risks which are incidental to the employment, risks which are obvious, and those arising from the negligence of co-servants, and those created by the want of reasonable care in the exercise by the servant when he enters or continues in the service; for such there can not, in reason, be any legal duty resting upon the master to establish rules and regulations to protect the servant. The general averment of the failure to exercise reasonable care to make and establish or enforce rules and regulations furnishes no basis of liability against the master.

"There is no principle of law compelling the establishment of rules by which the work of the master shall be done by the servant. The great danger to the master would be the establishment of rules and regulations for the conduct of his business the operation of which might result in risks not contemplated by the parties and involve serious discussion as to their reasonableness. The master is not bound to make any such rules, but is entitled to have his liability to his servant for the dangers of the work determined by the application of the general principles of law regulating and governing the relation of master and servant to each particular cause or case of injury as it arises and to the system or manner in which his business is operated or conducted. The demurrer to the first count of the declaration is sustained, with the costs."

[From B. L. No. 24, September, 1899.]

**SELDOMRIDGE v. CHESAPEAKE AND OHIO RAILWAY CO.**, 33 *Southeastern Reporter*, page 293.—Walter Seldomridge, a fireman in the employ of the above-named railway company, while under an engine, engaged in cleaning out an ash pan, was injured, and died as a result thereof. Some cars were pushed by another engine against the one that Seldomridge was under, causing it to run over him and cut off both his legs. Action was brought against the railway company by C. A. Seldomridge to recover damages for the death of Walter Seldomridge, and in the circuit court of Summers County, W. Va., a judgment was rendered in his favor. The railway company then carried the case upon writ of error to the supreme court of the State, which rendered its decision April 22, 1899, and reversed the judgment of the lower court.

The opinion of the court was delivered by Judge Brandon, and the syllabns of

the same, which was prepared by the court, lays down those principles of the law which were applicable to the case, as follows:

"2. An employer is not bound to furnish the most approved and safest appliance, nor provide the best method and means of work for employees, and if the same are in use by him, and can be with reasonable care used with safety, it is all that can be required of the employer.

"3. An employee accepts service subject to risks incidental to it, and when the appliances or means or methods of work are known to the employee he can make no claim upon the employer to change them. He accepts them as they are, and if injured therefrom he can not recover damages.

"4. When an employee willfully encounters danger known to him, or patent or open to be seen and known, he can not recover damages from his employer for injury therefrom.

"5. When an employee assents to occupy the place prepared for him and to incur the dangers to which he will be exposed thereby, having sufficient intelligence and knowledge to enable him to comprehend them, it is not a question whether such place might, with reasonable care and expense, have been more safe. His assent has dispensed with that part of the master's duty to make it so. Having consented to serve in the way and manner in which the business was being conducted, he has no proper grounds of complaint, even if reasonable precautions have not been taken.

"6. An employee can not recover from his employer for injuries received by reason of an accident which could have been averted by the employee's proper and prudent discharge of his duties, nor can his personal representative in such case, if death ensue, maintain an action for damages by reason thereof."

[From B. L. No. 21, September, 1899.]

PENNSYLVANIA CO. *v.* EBAUGH, 53 Northeastern Reporter, page 763.—In the circuit court of Marion County, Ind., Philip K. Ebaugh recovered a judgment for damages in a suit brought by him against the above-named company for injuries received while attempting to couple cars while in the service of said company as a brakeman on one of its freight trains. Said injuries were alleged to have been caused by the negligence of the conductor of the train. The company appealed the case to the supreme court of the State, which rendered its decision May 10, 1899, and reversed the judgment of the lower court on the ground of error of said court in refusing to give certain instructions to the jury, as requested by the defendant company.

Judge Hadley delivered the opinion of the supreme court, and in the course of the same he used the following language:

"It is a rule of universal acceptance by the courts of this country that an employee assumes all the ordinary dangers of his employment which are known to him, or which, by the exercise of ordinary diligence would have been known to him. It is alike the duty of the employer and employee to be diligent in the discharge of their reciprocal duties for the avoidance of personal injury to the latter; and both are alike bound to know, and will be chargeable as knowing, all facts and conditions that a person of ordinary caution and prudence, in a like situation, would have discovered. Neither may close his eyes or carelessly neglect observation and inquiry for the safety of the employee and find immunity on the ground that he did not have actual knowledge of the danger. In such cases constructive knowledge has the same force and effect as actual knowledge."

[From B. L. No. 31, November, 1900.]

LEAZOTT *v.* BOSTON AND MAINE RAILROAD CO., 45 Atlantic Reporter, page 1084.—Suit was brought by Victor Leazott against the above-named railroad company to recover damages for injuries incurred while in its employ. The accident occurred in the State of Massachusetts, and was occasioned by the breaking of a brake rod, which had a defect in it that had existed for some time, but was not readily discoverable by the plaintiff. The car to which the rod was attached belonged to another railroad company and had been received by the Boston and Maine at Worcester, Mass. The default and negligence complained of was the failure of the defendant company to inspect the brake when the car was received by said company. In the supreme court, sitting in Hillsboro County, N. H., where the case was heard, a verdict was rendered in favor of the plaintiff, and the case was carried before the law term of said court upon exceptions. The decision of said court was rendered July 28, 1899, and the exceptions were sustained and a judgment rendered for the defendant company. From the opinion of the court, delivered by Judge Young, the following is taken:

"The rights of parties in actions of tort are so far governed by the *lex loci* that whatever would be a defense to an action where the cause arose is a defense here. Inspection was the only duty which the law of Massachusetts imposed upon the defendants for the plaintiff's benefit in respect of this car, and they performed this duty if they furnished competent, sufficient, and suitable inspectors, acting under proper superintendence, rules, and instructions. The defendants' habitual neglect to inspect the brakes on cars which they received from connecting lines was the only evidence of their failure to perform this duty, and while this is evidence of the defendant's negligence, it is not of itself sufficient to establish their liability, for the burden is on the plaintiff to show all the facts necessary to constitute his cause of action, and one of these facts is that the accident was not caused by a risk which he assumed when he entered the defendant's employment. A servant assumes the risk arising from all the ordinary dangers of his employment, of which he either knows or might have known by the exercise of due care; and this includes any risk arising from the negligent performance of the master's duties, if the servant knows of this danger and voluntarily remains in the master's employment. Upon this point the law is the same both in this State and in Massachusetts.

"The plaintiff was familiar with his work and with the defendant's system of inspection. He knew that they never made any test to discover the strength of brake rods on foreign cars. The danger from insufficient brake rods on cars of this kind is so apparent that no man of ordinary prudence could fail to see and appreciate it; and the plaintiff, by voluntarily remaining in the defendant's employment after he knew of this danger, must be held to have assumed the risk. Verdict set aside. Judgment for the defendants."

## 2. DECISIONS ILLUSTRATING THE FELLOW-SERVANT RULE.

[Abstract from report in L. B. No. 2, January, 1896.]

The supreme court of Indiana reversing the decision of the circuit court of Sullivan County, decided October 16, 1895, in the case of *MARGARET C. TOHILL v. EVANSVILLE AND TERRA HAUTE RAILROAD COMPANY*, that the plaintiff was not entitled to recover damages for the death of her husband, who was killed on duty as engineer in the employ of the railroad company in a collision between his train and another which was being run as an extra. It was claimed that the engineer of the regular train who was killed was not notified of the running of the extra train. The supreme court held, however, that the proximate cause of the collision was the negligence of those in charge of the extra trains whose operatives were fellow-servants of the unfortunate engineer and hence that the railroad company was not responsible for the accident.

[Abstract from report in L. B. No. 3, March, 1896.]

Chapter 24, acts of 1891, of Texas, entitled "Fellow-servants," provided in section 2 that "all persons who are engaged in the common service of such railway corporations and who, while so engaged, are working together at the same time and place to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other; provided that nothing herein contained shall be so construed as to make employees of such corporation, in the service of such corporation, fellow-servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants." This chapter was repealed by chapter 91 of the acts of 1893, which reenacted practically the section quoted, but extended its scope to include the employees of receiver, manager, or person in control of any railway corporation, as well as the employees of any railway corporation. This legislation was reviewed by the court of civil appeals of Texas, November 6, 1895, in the case of *SAN ANTONIO AND ARANSAS PASS RAILWAY COMPANY v. KELLER* (32 South-western Reporter, page 847). Keller was awarded damages amounting to \$5,000 by the district court of Bexar County for injuries received in a collision due to the negligence of employees who were not fellow-servants under the limitations of the act of 1891; and the superior court held that the repeal of this act by the law of 1893 and its practical reenactment with enlarged scope did not destroy the binding force of the limitation of the meaning of "fellow-servants" imposed by the act of 1891.

[Abstract from report in L. B. No. 4, May, 1896.]

MISSOURI, KANSAS AND TEXAS RAILWAY COMPANY *v.* WHITTAKER, 33 Southwestern Reporter, page 716.—The court of civil appeals of Texas reversed, November 23, 1895, the judgment of a lower court relating to damages to a boiler washer in the company's employ, for injuries sustained through the negligence of a hostler employed by the company. The decision held that under section 2 of chapter 24 of the general laws of 1891 of Texas, reenacted in section 2, chapter 91, of the general laws of 1893, limiting the construction of fellow-servants, a hostler, whose duty it is to bring the engines into the roundhouse and take them out, and the boiler washer, whose duty it is to clean the boilers of the engines, are both under the orders of the roundhouse foreman, and that they are without authority over each other; hence, they are fellow-servants, neither of whom is entitled to recover damages from the common employer for injuries sustained through the negligence of the other. Judge Finley, in delivering the decision of the court, quoted section 2 of the fellow-servant act, as follows:

"That all persons who are engaged in the common service of such railway corporation, and who while so engaged are working together at the same time and place to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other; provided that nothing herein contained shall be so construed as to make employees of such corporation, in the service of such corporation, fellow-servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants." The decision of the court then stated:

"At common law employees who serve the same master, labor under the same control and to a common purpose, and derive their authority and receive their pay from the same general source, are fellow-servants, although they be of different grades or labor in different and distinct departments of service. Our statute now fixes the relation of fellow-servant, as to railway employees, only between those who serve the same master, are of the same grade, are working together at the same time and place to a common purpose, in the same department, and neither being intrusted with superintendence or control over his fellow-employees. If they are of different grades, or different departments of service, or one is intrusted with the power to superintend or control his fellow-employees, then, under the statute, the relation of fellow-servant does not exist.

"In the case before us for determination unquestionably the plaintiff and the hostler were serving the same master, at the same time and place, to a common purpose, were of the same grade, and neither had superintendence or control over fellow-employees. Were they in the same department or service? They were both employed by the foreman of the roundhouse, they were under the same special control, their duties called them to the same place of service at the same time, and their labors alike related to engines while they were not in actual service upon the road. The hostler brought the engines into the roundhouse and carried them out when necessary. The plaintiff cleaned out the boilers to make the same ready for further service. They were clearly in the same department. It is not necessary that they should be doing exactly the same kind of work and getting the same compensation therefor to be servants of the same grade or to be employees in the same department."

[From L. B. No. 5, July, 1896.]

CENTRAL R. R. CO. OF NEW JERSEY *v.* KEEGAN, 16 Supreme Court Reporter, page 269.—In an action brought by one Keegan against the Central Railroad Company of New Jersey judgment was rendered in favor of Keegan upon the verdict of a jury awarding him damages for injuries sustained by him while acting as brakeman in the employ of the railroad company, the injuries having been caused by the negligence of one O'Brien, who was foreman of a drill crew, of which Keegan was a member, which was employed in the company's yard at Jersey City, N. J., in taking cars from the tracks on which they had been left by incoming trains and placing them upon floats by which they were transported across the North River to the city of New York. The negligence of the foreman, resulting in the injury to Keegan, consisted in his failure to place himself or someone else at the brake of certain backwardly moving cars, so that there was no one to check their motion by applying the brakes, in consequence of which the rear wheel passed over Keegan's leg, who, while in the performance of his duty, had caught his right foot in the guard rail of a switch, and was thereby prevented from moving out of the way of the cars.

The case was carried by the railroad company to the United States circuit court of appeals for the second circuit, where two judges, sitting as the court, differed in opinion upon questions of law, and certified the two following questions to the Supreme Court of the United States for instructions, to enable them to render a proper decision: "(1) Whether the defendant in error (Keegan) and O'Brien were or were not fellow-servants; and (2) whether, from negligence of O'Brien in failing to place himself or someone else at the brake of the backwardly moving cars, the plaintiff in error, the railroad company, is responsible."

The United States Supreme Court, through Mr. Justice White, decided, December 23, 1895, that Keegan and O'Brien were fellow-servants, and that the railroad company was not responsible for the injuries sustained by the former through the negligence of the latter; but Mr. Chief Justice Fuller, Mr. Justice Field, and Mr. Justice Harlan dissented.

The following extract is taken from the opinion in the case.

"We held in *Railroad Co. v. Baugh* (119 U. S., 368; 13 Sup. Ct., 914) that an engineer and fireman of a locomotive engine running alone on a railroad, without any train attached, when engaged on such duty, were fellow-servants of the railroad company; hence that the fireman was precluded from securing damages from the company for injuries caused, during the running, by the negligence of the engineer. In that case it was declared that 'prima facie, all who enter the employment of a single master are engaged in a common service, and are fellow-servants. All enter in the service of the same master to further his interests in the one enterprise.' And while we in that case recognized that the heads of separate and distinct departments of a diversified business may, under certain circumstances, be considered, with respect to employees under them, vice-principals or representatives of the master, as fully and completely as if the entire business of the master was by him placed under the charge of one superintendent, we declined to affirm that each separate piece of work was a distinct department, and made the one having control of that piece of work a vice-principal or representative of the master. It was further declared that 'the danger from the negligence of one specially in charge of the particular work was as obvious and as great as from that of those who were simply coworkers with him upon it. Each is equally with the other an ordinary risk of the employment,' which the employee assumes when entering upon the employment, whether the risk be obvious or not. It was laid down that the rightful test to determine whether the negligence complained of was an ordinary risk of the employment was whether the negligent act constituted a breach of positive duty owing by the master, such as that of taking fair and reasonable precautions to surround his employees with fit and careful coworkers, and the furnishing to such employees of a reasonably safe place to work, and reasonably safe tools or machinery with which to do the work; thus making the question of liability of an employer for an injury to his employee turn rather on the character of the alleged negligent act than on the relations of the employees to each other, so that if the act is done in the discharge of some positive duty of the master to the servant, then negligence in the act is negligence of the master, but if it be not one in the discharge of such positive duty, then there should be some personal wrong on the part of the employer before he is liable therefor.

"The principles thus applied in the case referred to are in perfect harmony with the rules enforced by the supreme court of the State of New Jersey, within whose territory the accident happened which gave rise to the present controversy.

"In *O'Brien v. Dredging Co.* (33 N. J. Law, 291; 21 Atl., 324) the court (of New Jersey) said: 'Whether the master retain the superintendence and management of his business or withdraws himself from it and devolve it upon a vice-principal or representative it is quite apparent that although the master or his representative may devise the plans, engage the workmen, provide the machinery and tools, and direct the performance of the work, neither can, as a general rule, be continually present at the execution of all such work. It is the necessary consequence that the mere execution of the planned work must be intrusted to workmen, and, where necessary, to groups or gangs of workmen, and in such case that one should be selected as the leader, boss, or foreman to see to the execution of such work. This sort of superiority of service is so essential and so universal that every workman, in entering upon a contract of service, must contemplate its being made use of in a proper case. He therefore makes his contract of service in contemplation of the risk of injury from the negligence of a boss or foreman, as well as from the negligence of another fellow-workman. The foreman or superior servant stands to him, in that respect, in the precise position of his other fellow-servants.'

"Applying the principles announced by this court and the supreme court of

New Jersey to the facts in the case at bar, it is clear that O'Brien and Keegan were fellow-servants. O'Brien's duties were not even those of simple direction and superintendence over the operations of the drill crew. He was a component part of the crew, an active coworker in the manual work of switching, with the specific duty assigned to him by the yard master of turning the switches. He was subordinate to the yard master, who had jurisdiction over this and other drill crews; and it was the yard master who employed and discharged all the workers in the yard, giving them their general instructions and assigning them to their duties. O'Brien's control over the other members of the drill crew was similar to the control which a section foreman exercises over the men in his section; and following its constructions of the decisions of this court in the Baugh and Hamby cases, the circuit court of appeals for the eighth circuit has held that a section foreman is a fellow-servant of a member of his crew, and that one of the crew injured by the negligence of the foreman could not recover. (*Railway Co. v. Waters*, 70 Fed., 28.)

"In *Potter v. Railroad Co.* (136 N. Y., 77; 32 N. E., 603) employees of a railroad company, while switching cars in the company's yard, under the direction of a yard master, shunted a number of cars on to a track so that they collided with a car being inspected, and caused the death of the inspector. It was claimed that proper and reasonable care required that there should have been a brakeman on the front of the cars, to control in an emergency their motion, when detached from the engine. In the absence of proof to the contrary, the court presumed that competent and sufficient servants were employed, and proper regulations for the management of the business had been established, and observed: 'It is quite obvious that the work of shifting cars in a railroad yard must be left in a great measure to the judgment and discretion of the servants of the railroad who are intrusted with the management of the yard. The details must be left to them, and all that the company can do for the protection of its employees is to provide competent co-servants and prescribe such regulations as experience shows may be best calculated to secure their safety.'

"We adopt this statement as proper to be applied to the case at bar. A personal, positive duty would clearly not have been imposed upon a natural person, owner of a railroad, to supervise and control the details of the operation of switching cars in a railroad yard; neither is such duty imposed as a positive duty upon a corporation; and if O'Brien was negligent in failing to place himself or someone else at the brake of the backwardly moving cars, such omission not being the performance of a positive duty owing by the master, the plaintiff in error is not responsible therefor.

"The conclusions determine both questions certified for our decision, and accordingly the first question is answered in the affirmative and the second in the negative."

[From B. L. No. 7, November, 1896.]

*SOUTHERN PACIFIC CO. v. MCGILL*, 14 Pacific Reporter, page 302.—Action was brought in the district court of Pima County, Ariz., by William McGill against the Southern Pacific Company to recover damages for injuries sustained while in the employ of said company. Judgment was rendered for McGill, and the company appealed the case to the supreme court of the Territory of Arizona, which affirmed the judgment of the lower court. The court, however, granted a rehearing, and as a result of the same rendered a decision February 10, 1896, reversing the judgment of the lower court. The facts of the case were as follows:

McGill, hereinafter referred to as "the plaintiff," was a section foreman in the employ of the defendant company. He was directed by the roadmaster to go to a point on the track, 6 or 7 miles west of the section, called "Pantano," and there to grade and lay a track in order to raise an engine which had been derailed. He went there with his men and tools and worked part of a day, when the civil engineer in charge directed him and his men to get on the work train. They did so, and the train started, and had not gone over three-quarters of a mile when it collided with a passenger train and the plaintiff was seriously injured about the head. The charge was made in the complaint that Barrett, the conductor of the work train, ran the train negligently, and with want of care and attention to his duty, and so caused the accident.

The opinion of the supreme court was delivered by Chief Justice Baker, and contains the following:

"The following instruction was given to the jury for the plaintiff: 'The court instructs the jury that the conductor of a railway train, who commands its movements, directs when it shall start, at what station it shall stop, and has the general management of it, and control over the persons employed on it, represents the

railway company, and is not a fellow-servant with a section foreman in the employ of said company. If the jury believe from the evidence that John Barrett was the conductor of the train upon which plaintiff was, and had the powers just stated regarding such train, the court instructs the jury that Barrett was not a fellow-servant with the plaintiff.

"This instruction was not altered, changed, or modified by instruction subsequently given, and, being objected to and duly assigned as error, constitutes the pivotal point in the case. There is an endless diversity of opinion upon this 'fellow-servant' doctrine in the decisions of the various courts in this country. The cases are too numerous to cite, and it would be an idle effort to attempt to reconcile or distinguish them. I can do no better than to deduce one or two propositions applicable to the facts at bar, which the decided weight of all the cases authorizes.

"(1) A person entering upon the service of a corporation assumes all the risk naturally incident to his employment, including the dangers which may arise from the negligence of a fellow-servant.

"(2) That the master's liability does not depend upon gradations in the employment, unless the superiority of the person causing the injury was such as to make him principal or vice-principal.

"(3) The liability of the master does not depend upon the fact that the servant injured may be doing work not identical with that of the wrongdoer. The test is, the servant must be employed in different departments, which in themselves are so distinct and separate as to preclude the probability of contact and of danger of injury by the negligent performance of the duties of the servant in the other department.

"In the case at bar the plaintiff and Barrett, the conductor, were brought together at the same time and place, and closely associated in the discharge of their respective duties. The very work which the plaintiff engaged to do necessitated the constant use of a train, such as the one in use at the time of the collision—to transport laborers, tools, materials, supplies, etc., to the place of operations; and he must be held to have contemplated its use when he accepted the employment. He was at work when riding upon this train in going to and from the point where the wreck occurred, just as much as he was when he was actually engaged in raising the derailed engine. Both he and the conductor were engaged in a common purpose and object—the clearing of the track and the raising of the fallen engine.

"The labors of both contributed to and were intended to effect that immediate and present result. Both had a common master. That there was some gradation—some difference in the work of the two—is not the test. The departments must be so distinct and separate within themselves as to preclude the probability of contact and of danger to one servant in one department by reason of the negligence of another servant in another department. This can not be said of the plaintiff's and Barrett's employment.

"The plaintiff's labors constantly exposed him to the dangers of running and moving the work train, and he must be held to have assumed the risk of such dangers.

"The giving of instructions quoted was reversible error, since, upon the facts, the conductor of the work train and the plaintiff were fellow-servants. The judgment is reversed and a new trial is ordered."

[From B. L. No. 7, November, 1896.]

NORTHERN PACIFIC R. R. CO. v. PETERSON, 16 Supreme Court Reporter, page 843.—This action was commenced by Peterson in the United States circuit court for the district of Minnesota, fourth division, to recover damages for injuries sustained while in the employ of the railroad company. The facts in the case were as follows:

The plaintiff, a day laborer, was employed on an extra gang, amounting in numbers to 13 men, with one Holverson as foreman, at a place called Old Superior, a station on the line of defendant's road. Holverson had power to employ men, and also to discharge them. The men were taken each morning on hand cars to the place where they were to work during the day, and when the work was finished were brought back.

The members of the gang themselves worked the hand cars, Holverson generally occupying a place on the front hand car and taking care of the brakes. He always went with the gang, superintended their work, even if taking no part in the actual manual labor, and came home with them at the end of the day's labor. When the accident occurred Holverson held his accustomed place on the front hand car, at the brakes, and Peterson was on the same car. While

going around a curve in the track Holverson thought he saw some object in front of him and applied the brakes suddenly, in consequence of which the car was abruptly stopped. He gave no warning of his intention, and the rear car was following so closely that it could not stop before running into the car ahead, the result of which was that the first car was thrown from the track, throwing the plaintiff Peterson off the car and injuring his leg by having the rear car run over it. Upon these facts the jury returned a verdict in favor of Peterson, and the case was taken by the railroad company to the United States circuit court of appeals for the eighth circuit upon a writ of error. Said court affirmed the judgment of the court below, and the railroad company then carried the case on writ of error to the United States Supreme Court, which rendered its decision April 13, 1896, reversing the judgments of the lower courts and ordering a new trial.

The opinion of said court was delivered by Mr. Justice Peckham, and the following is quoted therefrom:

"The sole question for our determination is whether Holverson occupied the position of fellow-servant with the plaintiff below. If he did, then this judgment is wrong and must be reversed.

"By the verdict of the jury, under the charge of the court, we must take the fact to be that Holverson was foreman of the extra gang for the defendant company, and that he had charge of and superintended the gang in the putting in of the ties and assisting in keeping in repair the portion of the road included within the 3 sections, and that he had the power to hire and discharge the hands in his gang, then amounting to 13 in number, and had exclusive charge of the direction and management of the gang in all matters connected with their employment; that the plaintiff below was one of the gang of hands so hired by Holverson, and was subject to the authority of Holverson in all matters relating to his duty as laborer. Upon these facts the courts below have held that the plaintiff and Holverson were not fellow-servants in such a sense as to preclude plaintiff recovering from the railroad company damages for the injuries he sustained through the negligence of Holverson, acting in the course of his employment as such foreman.

"In the course of the review of the judgment by the United States circuit court of appeals, the court held that the distinction applicable to the determination of the question of a coemployee was not 'whether the person has charge of an important department of the master's service, but whether his duties are exclusively those of supervision, direction, and control over a work undertaken by the master, and over subordinate employees engaged in such work, whose duty is to obey, and whether he has been vested by the common master with such power of supervision and management.' Continuing, the court said that 'the other view that has been taken is that whether a person is a vice principal is to be determined solely by the magnitude or importance of the work that may have been committed to his charge; and that view is open to the objection that it furnishes no practical or certain test by which to determine in a given case whether an employee has been vested with such departmental control or has been 'so lifted up in the grade and extent of his duties' as to constitute him the personal representative of the master. That this would frequently be a difficult and embarrassing question to decide, and that courts would differ widely in their views, if the doctrine of departmental control was adopted, is well illustrated by the case of *Borgman v. Railway Co.* (41 Fed., 667, 669). We are of the opinion, therefore, that the nature and character of the respective duties devolved upon and performed by persons in the same common employment, should, in each instance, determine whether they are or are not fellow-servants, and that such relation should not be deemed to exist between two employees, when the function of one is to exercise supervision and control over some work undertaken by the master which requires supervision, and over subordinate servants engaged in that work, and where the other is not vested by the master with any such power of direction or management.' (4 U. S. App., 574, 578; 2 C. C. A., 157; 51 Fed., 182.)

"The court thereupon affirmed the judgment.

"It seems quite plain that Holverson was not the 'chief' or 'superintendent' of a separate and distinct department or branch of the business of the company, as such term is used in those cases where a liability is placed upon a company for the negligence of such an officer. We also think that the ground of liability laid down by the courts below is untenable.

"The general rule is that those entering into the service of a common master become thereby engaged in a common service and are fellow-servants; and, *prima facie*, the common master is not liable for the negligence of one of his servants which has resulted in an injury to a fellow-servant. There are, however, some duties which a master owes, as such, to a servant entering his employment. He owes

the duty to provide such servant with a reasonably safe place to work in, having reference to the character of the employment in which the servant is engaged. He also owes the duty of providing reasonably safe tools, appliances, and machinery for the accomplishment of the work necessary to be done. He must exercise proper diligence in the employment of reasonably safe and competent men to perform their respective duties, and it has been held in many states that the master owes the further duty of adopting and promulgating safe and proper rules for the conduct of his business, including the government of the machinery and the running of trains on a railroad track.

"If the master be neglectful in any of these matters, it is a neglect of a duty which he personally owes to his employee, and if the employee suffer damage on account thereof, the master is liable.

"If, instead of personally performing these obligations, the master engages another to do them for him, he is liable for the neglect of that other, which in such case is not the neglect of a fellow-servant, no matter what his position as to other matters, but is the neglect of the master to do those things which it is the duty of the master to perform as such.

"In addition to the liability of the master for his neglect to perform these duties, there has been laid upon him by some courts a further liability for the negligence of one of his servants in charge of a separate department or branch of business, whereby another of his employees has been injured, even though the neglect was not of that character which the master owed, in his capacity as master, to the servant who was injured. In such case it has been held that the neglect of the superior officer or agent of the master was the neglect of the master, and was not that of the coemployee, and hence that the servant, who was a subordinate in the department of the officer, could recover against the common master for the injuries sustained by him under such circumstances. It has been already said that Holmerson sustained no such relation to the company in this case as would uphold a liability for his acts based upon the ground that he was a superintendent of a separate and distinct branch or department of the master's business.

"It is proper, therefore, to inquire what is meant to be included by the use of such a phrase.

"A leading case on this subject in this court is that of *Railway Co. v. Ross* (112 U. S., 377, 5 Sup. Ct., 184). In that case a railroad corporation was held responsible to a locomotive engineer in the employment of the company for damages received in a collision which was caused by the negligence of the conductor of the train drawn by the engine of which the plaintiff was engineer. This court held the action was maintainable on the ground that the conductor, upon the occasion in question, was an agent of the corporation, clothed with the control and management of a distinct department, in which his duty was entirely that of direction and superintendence, that he had the entire control and management of the train, and that he occupied a very different position from the brakemen, porters, and other subordinates employed on it, and that he was in fact, and should be treated as, a personal representative of the corporation, for whose negligence the corporation was responsible to subordinate servants. The engineer was permitted to recover on that theory. These facts give some indication of the meaning of the phrase.

"In the above case the instruction given by the court at the trial to which exception was taken was in these words: 'It is very clear, I think, that if the company sees fit to place one of its employees under the control and direction of another, that then the two are not fellow-servants engaged in the same common employment within the meaning of the rule of the law of which I am speaking.' That instruction, thus broadly given, was not, however, approved by this court in the *Ross* case. Such ground of liability—mere superiority in position and the power to give orders to subordinates—was denied. What was approved in that case, and the foundation upon which the approval was given, is clearly stated by Mr. Justice Brewer in the course of his opinion delivered in the case of *Railroad Co. v. Baugh* (149 U. S., 368, 13 Sup. Ct., 914, at page 380, 149 U. S., and page 914, 13 Sup. Ct., and the following pages). In the *Baugh* case it is also made plain that the master's responsibility for the negligence of a servant is not founded upon the fact that the servant guilty of neglect had control over, and a superior position to that occupied by, the servant who was injured by his negligence. The rule is that, in order to form an exception to the general law of nonliability, the person whose neglect caused the injury must be 'one who was clothed with the control and management of a distinct department, and not a mere separate piece of work in one of the branches of service in a department.' This distinction is a plain one, and not subject to any great embarrassment in determining the fact in any par-

ticular case. When the business of the master or employer is of such great and diversified extent that it naturally and necessarily separates itself into departments of service, the individuals placed by the master in charge of these separate branches and departments of service, and given entire and absolute control therein, may properly be considered, with respect to employees under them, vice principals and representatives of the master, as fully and as completely as if the entire business of the master were placed by him under one superintendent. Thus, Mr. Justice Brewer, in the *Baugh* case, illustrates the meaning of the phrase 'different branches of departments of service' by suggesting that 'between the law department of a railway corporation and the operating department there is a natural and distinct separation—one which makes the two departments like two independent kinds of business, in which the one employer and master is engaged. So, oftentimes, there is, in the affairs of such corporation what may be called a manufacturing or repair department, and another strictly operating department. These two departments are, in their relations to each other, as distinct and separate as though the work of each was carried on by a separate corporation. And from this natural separation flows the rule that he who is placed in charge of such separate branch of the service—who alone superintends and has the control of it—is, as to it, in the place of the master.'

"The subject is further elaborated in the case of *Howard v. Railroad Co.* (26 Fed., 837), in an opinion by Mr. Justice Brewer, then circuit judge of the eighth circuit. The view is stated very distinctly in the cases of *Borgman v. Railroad Co.* (41 Fed., 667), and *Woods v. Lindvall* (1 C. C. A., 37, 48 Fed., 62). This last case is much stronger for the plaintiff than the one at bar. The foreman in this case bore no resemblance, in the importance and scope of his authority, to that possessed by Murdock in the *Woods* case, *supra*. These cases which have been cited serve to illustrate what was in the minds of the courts when the various distinctions as to departments and separate branches of service were suggested. In the *Baugh* case the engineer and fireman of a locomotive engine running alone on the railroad, and without any train attached, were held to be fellow-servants of the company, so as to preclude the fireman from recovering from the company for injuries caused by the negligence of the engineer.

"The meaning of the expression 'departmental control' was again, and very lately, discussed in *Railroad Company v. Hamblly* (154 U. S., 349, 14 Sup. Ct. 983), where it was held, as stated in the headnote, that a common day laborer, in the employ of a railroad company, who, while working for the company under the orders and direction of a section boss or foreman, on a culvert on the line of the company's road, receives an injury through the neglect of a conductor and an engineer in moving a particular passenger train upon the company's road, is a fellow-servant of such engineer and of such conductor in such a sense as exempts the railroad company from liability for the injury so inflicted.

"The subject is again treated in *Railroad Co. v. Keegan* (160 U. S., 259; 16 Sup. Ct., 269; decided at this term), when the men engaged in the service of the railroad company were employed in uncoupling from the rear of trains cars which were to be sent elsewhere and in attaching other cars in their place; and they were held to be fellow-servants, although the force, consisting of 5 men, was under the orders of a boss who directed the men which cars to uncouple and what cars to couple, and the neglect was alleged to have been the neglect of the boss, by which the injury resulted to one of the men. This court held that they were fellow-servants, and the mere fact that one was under the orders of the other constituted no distinction, and that the general rule of nonliability applied.

"These last cases exclude, by their facts and reasoning, the case of a section foreman from the position of a superintendent of a separate and distinct department. They also prove that mere superiority of position is no ground for liability.

"This boss of a small gang of 10 or 15 men, engaged in making repairs upon the road wherever they might be necessary, over a distance of 3 sections, aiding and assisting the regular gang of workmen upon each section as occasion demanded, was not such a superintendent of a separate department, nor was he in control of such a distinct branch of the work of the master as would be necessary to render the master liable to a coemployee for his neglect. He was, in fact, as well as in law, a fellow-workman. He went with the gang to the place of the work in the morning, stayed there with them during the day, superintended their work, giving directions in regard to it, and returned home with them in the evening, acting as a part of the crew of the hand car upon which they rode. The mere fact, if it be a fact, that he did not actually handle a shovel or a pick is an unimportant matter. Where more than one man is engaged in doing any particular work, it becomes almost a necessity that one should be boss and the others subordinate, but both are, nevertheless, fellow-workmen.

"If, in approaching the line of separation between a fellow-workman and a superintendent of a particular and separate department, there may be embarrassment in determining the question, this case presents no such difficulty. It is clearly one of fellow-servants. The neglect for which the plaintiff has recovered in this case was the neglect of Holverson in not taking proper care at the time when he applied the brake to the front car. It was not a neglect of that character which would make the master responsible therefor, because it was not a neglect of a duty which the master owes, as master to his servant, when he enters his employment.

"The charge of the court to the jury in the matter complained of was erroneous, and the judgment must therefore be reversed and the case remanded, with directions to grant a new trial."

[From B. L. No. 8, January, 1897.]

HOUSTON AND T. C. RY. CO. v. KELLY, 35 Southwestern Reporter, page 878.—This case was brought before the court of civil appeals of Texas on appeal from the district court of Washington County, where a judgment had been rendered for the plaintiff, Addie E. Kelly. The original action was brought to recover damages for the death of one Frank Kelly, caused by a wreck on the Houston and Texas Central Railroad in January, 1893. The court of civil appeals rendered its decision April 30, 1896, sustaining the judgment of the lower court, and deciding, among points, that a servant is entitled to recover for an injury sustained by the joint negligence of the master and fellow-servants.

In its opinion, delivered by Judge Pleasants, the following language is used.

"The proposition submitted under the fourth and fifth assignments of error is that, 'if fast running contributed proximately to the accident, the train being operated at the time by fellow-servants of the deceased, the plaintiff could not recover.' This proposition is not correct. If the accident was caused partly by the fast running of the train, and partly by the defects in the rail and the car wheel, and such defects were the result of the negligence of the defendant, it will not be denied that the deceased, if without contributory negligence on his part, might have recovered; and yet the 'fast running of the train,' through the negligence of the fellow-servant of the deceased, 'contributed proximately to the accident.' If injury resulted to the servant from the joint negligence of the master and fellow-servants, the master is liable."

[From B. L. No. 7, November, 1896.]

NORTHERN PACIFIC R. R. CO. v. CHARLESS, 16 Supreme Court Reporter, page 848.—This was a suit brought against the Northern Pacific Railroad Company by one Charless as plaintiff, to recover damages for injuries received while in the employ of said company. The plaintiff recovered a judgment and the case was carried on appeal to the United States circuit court of appeals for the ninth circuit, which sustained the judgment of the lower court. The case was then brought on writ of error before the United States Supreme Court, which rendered its decision April 13, 1896, and reversed the judgment of the courts below. The opinion of said court, delivered by Mr. Justice Peckham, gives a full statement of the facts in the case, and the following is quoted therefrom:

"The plaintiff below was an ordinary day labor, employed under a section boss or foreman to keep a certain portion of the roadbed of the defendant in repair. The foreman had power to employ and discharge men and to superintend their work, and was himself a workman. He employed the plaintiff, who, with the rest of the men employed in the gang—some 4, 5, or 6—was carried to and from his work, daily, on a hand car worked by the men themselves.

"In August, 1886, on the 28th of the month, an accident occurred as the men were on their way to their work. They were using a hand car with what is alleged to have been a defective brake. The foreman had complained of it to the yardmaster a short time before, who had promised a better one. In the meantime, and as a temporary makeshift, the foreman had provided the car with a brake which consisted of a bit of wood, 4 by 4, fastened on the side of the car with a bolt, and the long arm acted as a lever and pressed the shorter portion of the timber against the wheel. In that way the car had been run for a day or two before the morning of the accident. On that day the plaintiff, with the rest of the men in the gang and the foreman, started on the hand car to go over a certain portion of the section to inspect the condition of the road. They were running the car very rapidly, under the direction and supervision of the foreman, and had arrived at a narrow cut in the road, around a curve, when they were suddenly confronted with a freight train coming through the cut in the opposite direction.

There had been no warning or signal of any kind given by any of the employees on the freight train of its approach, and the plaintiff below knew nothing of the fact that any freight train was expected. Efforts were made to stop the hand car, and, as the speed did not seem to be slackened in time, plaintiff became frightened and undertook to jump from the front end of the car, when he stumbled over some tools that were on the car and fell between the rails in front of it. As the hand car approached him he put his foot up against it in order to prevent its running over him, but the impetus of the car was too great, and it ran over and doubled him up and wrenched his spine, causing him great internal injuries. The other hands jumped off the car, removed it from the track, and took the plaintiff out of danger before the freight train passed by.

"The injuries of the plaintiff were of a very serious nature, and his legs became paralyzed and he was rendered a cripple for life. He commenced this action against the defendant below to recover damages on account of the negligence of the agents and servants of the defendant.

"The negligence consisted in—

"(1.) The defective brake on the car, which it is alleged was an appliance for the prosecution of the work on the defendant's road, and necessary to be used to enable the employees to perform their duties, and that, as such appliance, it was the duty of the defendant to see that it was reasonably safe and fit for the purpose intended.

"(2) The negligence of the foreman in charge of the gang, who directed the speed of the hand-car and ran it at a hazardous rate of speed when he knew that a train coming toward him was expected while the other members of the gang were ignorant of that fact.

"(3) The negligence of the train hands on the approaching train in giving no signals of their approach around the curve and through the cut, although they were near a public crossing, and some signals were necessary on that account.

"Upon the trial evidence was given tending to prove the above facts, and among other things the judge charged the jury as follows:

"I think that the case, when stripped of all the side issues and the incidental questions surrounding it, resolves itself into just this question for this jury to determine: Whether the injury to the plaintiff resulted directly from the negligence of the defendant in needlessly exposing him to the danger of being hurt by a collision between the hand car and the extra freight train at the place where it occurred, or whether the injury was a mere accident, which was the result of one of the ordinary hazards of the employment in which he was engaged, whether it was an ordinary risk of his employment, or whether an extraordinary danger caused by the negligence on the part of the defendant; whether that negligence was a negligence of the foreman in running the hand car too fast up to a point which he knew to be dangerous, and which he did not warn the other men working on the hand car of, so that it was impossible for them, without extreme hazard to their lives, to avoid a collision; or whether the negligence was on the part of the officers in charge of the freight train in approaching a curve in the cut, which obstructed the train from view, or passing a public crossing without giving warning by sounding the whistle or engine bell. If, in any of these respects, there was actual neglect on the part of defendant which placed the plaintiff in a situation of extraordinary danger—something clear beyond the ordinary risks of his employment—and his injury was not in any degree owing to his own negligence at the time, the defendant would be liable to damages."

"The defendant below excepted to each of the above propositions as laid down by the learned judge in his charge, and the jury rendered a verdict in favor of the plaintiff, which was affirmed by the circuit court of appeals for the ninth circuit (2 C. C. A., 380, 51 Fed., 562), and the defendant below sued out a writ of error from this court to review the judgment.

"Many of the facts surrounding the happening of this accident are similar in their nature to those existing in the case of *Railroad Co. v. Peterson*, just decided (16 Sup. Ct., 843). The employment of the plaintiff below, the nature of the work, and the powers of the section boss under whom he worked are substantially the same as those existing in the other case. We may refer to the general principles of the law of master and servant applicable to these facts which are set forth in the opinion of this court in that case and which we think govern the case at bar upon those facts.

"In regard to the particular allegations of negligence above set forth, it is not necessary, in the view we take of this case, to express any opinion whether the alleged defect in the brake on the hand car rendered it a defective appliance within the meaning of the law, rendering the master liable for a failure to provide a reasonably safe and proper appliance for the work to be done by his employees.

"There were two other propositions submitted to the jury by the learned judge, each of which was, as we think, of a material nature and also clearly erroneous.

"1. We think it was error to submit to the jury the question of the negligence of the employees on the extra freight train in failing to give the signals of its approach. This failure, assuming that it constituted negligence, was nothing more than the negligence of co-servants of the plaintiff below in performing the duty devolving upon them. The principle which covers the facts of this case was laid down in *Randall v. Railroad Co.* (109 U. S., 478, 3 Sup. Ct., 322), and that case has never been overruled or questioned. Among the latest expressions of opinion of this court in regard to views similar to those stated in the case in 109 U. S. and 3 Sup. Ct., *supra*, is the case of *Railroad Co. v. Hamblly* (151 U. S., 349, 14 Sup. Ct., 983). It seems to us that the *Randall* and *Hamblly* cases are conclusive and necessitate a reversal of this judgment. In the *Hamblly* case it was held that a common day laborer in the employ of a railroad company who, while working for the company, under the orders and direction of a section boss or foreman, on a culvert on the line of the company's road, received an injury through the negligence of a conductor and of an engineer in moving a particular passenger train upon the company's road, was a fellow-servant with such engineer and with such conductor, in such a sense as exempts the railroad company from liability for the injury so inflicted. We are unable to distinguish any difference in principle arising from the facts in these two cases.

"The question of the negligence of the hands upon the extra freight train should not have been submitted to the jury as constituting any right to a recovery against the corporation on the ground of such negligence.

"2. We also regard it as erroneous to have submitted to the jury the general question whether Kirk, the section foreman, was negligent in running his hand car at too high a speed just prior to the accident. Kirk and the plaintiff below were coemployees of the company, and the neglect of Kirk, if it existed, in driving his hand car too fast (assuming it was in proper condition), was not such negligence as would render the company responsible to Kirk's coemployee. It was not the neglect of any duty which the company, as master, was bound itself to perform. Thus we have held in the *Peterson* case and for the reasons there stated. While it may be assumed that the master would have been liable if a defective brake had been the cause of the accident, yet the defendant below is, under the charge of the judge, permitted to be made liable by proof of the speed of the hand car. If the jury found that Kirk, the foreman, knew it to be dangerous, and that the accident happened because of that speed, even though it would have happened if the brake had been the regular kind and in good order. The language of the court does not separate the question of general negligence in running a hand car which was in good order too fast from that which might be negligence with reference to running a hand car with a defective brake at the same rate of speed. For using in a negligent manner a defective appliance furnished by the master the latter might be liable if a coemployee were thereby and in consequence thereof injured. As the master furnished the defective appliance, it would be no answer to say that it was negligently used. But, on the other hand, the master would not be responsible for the negligent use of a proper appliance. From the language used by the court, the company might have been held liable if Kirk were running the hand car at a dangerous rate of speed, although the jury found the brake actually used to have been sufficient. A dangerous rate of speed was therefore held to be negligence. That neglect, we hold, the company was not responsible for.

"Upon the other question of the negligence of the employees on the freight train, the error in the charge is not rendered harmless by any explanation given by the learned judge. The difficulty remains incurable. The jury might have found from the evidence that this hand car, while going at the rate of speed stated, could have been stopped with the extemporized brake in time to prevent any danger of a collision, in case the proper signals had been given by the hands on the freight train, but that the accident resulted from their failure to give those signals, and that such failure was negligence on their part. The verdict may have been based upon such negligence. We hold the company was not liable for the negligence of the hands on the freight train in failing to give proper signals.

"The judgment entered upon the verdict of the jury must be reversed and the cause remanded, with instructions to grant a new trial."

[From B. L. No. 12, September, 1897.]

JACKSON v. NORFOLK AND WESTERN R. R. Co., 27 Southeastern Reporter, page 278.—Action was brought in the circuit court of Mercer County, W. Va., by Murray T. Jackson against the above-named railroad company to recover damages for injuries received while in the employ of said company as a brakeman.

The evidence showed that Jackson was on a freight train with one Gilbert as conductor; that a train was being backed so as to couple it to some cars; that Gilbert was standing on top of the rear car of the train that was backing, and an unsuccessful effort was made to couple the cars, and the train was drawn forward preparatory to a second attempt, and Gilbert waved the engineer to back up to the car; that Jackson, seeing this, attempted to jump back, and that in so doing his arm was caught between the bumpers and crushed, rendering its amputation necessary. This case involved the question whether Gilbert, the conductor, and Jackson, the brakeman, were fellow-servants so as to exempt the company from liability for the alleged negligent act of the conductor in improperly calling the train back when he did. A judgment was rendered by the circuit court for the plaintiff, thus deciding in effect that Gilbert and Jackson were not fellow-servants. The defendant railroad company carried the case on writ of error to the supreme court of appeals of the State, which court rendered its decision April 21, 1897, and reversed the judgment of the circuit court. The opinion of the supreme court of appeals was delivered by Judge Brannon, and the syllabus of the same prepared by the court reads as follows:

"1. The test whether a master is liable to one servant for the negligence of another servant is the character of the negligent act. If it be in the doing of an act incumbent on a master as a duty of the master to the servant, the master is liable; otherwise not.

"2. The master's liability to one servant for the negligence of another is not dependent on the grade of the servants nor on the fact that one has authority over the other, but on the character of the negligent act.

"3. A conductor is a fellow-servant with a brakeman and other servants on a train, not a vice-principal.

"4. All servants in the common service of the same master in conducting and carrying on the same general business in which the usual instrumentalities are employed are fellow-servants. A proper test of this rule is whether the negligence of the one is likely to occur and inflict injury on the other.

"5. If a vice-principal in the particular act in which his negligence occurs is not in the line of his duty, but performing an act in the line of one who would be a fellow-servant with the injured servant, the master is not liable for the negligence of the vice-principal, as he is, as to this act, a fellow-servant with the injured one."

[From B. L. No. 9, March, 1897.]

OREGON SHORT LINE AND UTAH NORTHERN RY. CO. *v.* FROST, 74 Federal Reporter, page 965.—Action was brought in the United States circuit court for the district of Montana by Hattie Frost, as administratrix of James Frost, deceased, against the above-named railroad company to recover damages for the death of the intestate. The plaintiff recovered a judgment and the defendant company brought the case on writ of error before the United States circuit court of appeals for the ninth circuit. Said court rendered its decision June 15, 1896, and reversed the judgment of the lower court. The evidence showed that Frost was an engineer in the employ of the railroad company on train No. 5; that on the day he was injured the train dispatcher at the superintendent's office at Pocatello telegraphed an order to the operator at Dillon that train No. 5 should wait there until 2.45 p. m. for train No. 32; that said operator received said order thirty-two minutes before train No. 5 was due there, but neglected to warn it on its arrival; that said train therefore went on and had gone but a short distance beyond Dillon when it came into collision with train No. 32, and that in said collision Frost was injured and died eight days thereafter from the effects of the same. The case hinged on the question as to whether the telegraph operator through whose negligence Frost was injured was the vice-principal of the railroad company, so that his negligence would be that of the company for which it would be responsible, or whether he was a fellow-servant of the injured man, for whose negligence the railroad company would not be responsible.

The opinion of the circuit court of appeals was delivered by Judge Gilbert, and in giving the reasons of the court for its decision he used the following language:

"The case presents the important question whether or not the local telegraph operator at the station, who receives and delivers the orders of the train dispatcher, is the fellow-servant of the employees of the railroad company in charge of the train. It is conceded that the train dispatcher, in giving notice of a change in the running of trains, acts for and in behalf of the railroad company. He is in that respect a vice-principal, not because of his attitude to other employees as their superior, nor because he has charge of a department, but because of the nature of the duty which he discharges. He is, for the time being, clothed with

the responsibility which rests upon the company to furnish its employees a safe place of operation. The ordinary running of the train is established by a fixed schedule, of which all operatives have notice, and by which their acts must be governed. When occasion arises to disturb the regular schedule, the duty rests upon the company to give timely notice to those who are to be affected thereby. Thus it is the office of the train dispatcher to do. But when he has given that information to a local operator, is that duty discharged, or does there rest upon the company the further obligation to see that all of its servants through whose hands that message goes on its way to the train employees shall deliver it as given, and that in case of any failure in the line of communication the company shall be liable for the resulting injury? After a careful consideration of the question and of the strong reasons that may be urged in support of either view of this proposition, it is our conclusion that the better doctrine is that the local telegraph operator is the fellow-servant of those who are in the control and management of the train. It is evident, and the court will take judicial notice of the fact, that a disturbance in the regular time schedule of trains is frequent and necessary in the operation of all railroads. It then becomes necessary to issue special orders for their direction. Conductors, engineers, and brakemen have knowledge of that fact, and they know when they enter into the employment of the railroad company that their notice of such orders must come through the local telegraph operator at the station, and that they incur the risk of accident through his negligence or mistake. The special orders issue, in the first instance, from the train dispatcher. It is obviously impossible for him to give personal notice to all who are to be governed thereby. The orders must, of necessity, be conveyed to some one in behalf of the others. The local telegraph operator, the conductor, the engineer, and the brakemen are all engaged in a common employment—that of moving the train. The operator, it is true, is subject to no personal risk from any change in the time card, but that fact is not a controlling one in deciding who are his fellow-servants. There must be some point where the responsibility of the company ceases. If it does not cease at the time when information is given to the operator, where shall it cease? Could it be said that a conductor who received from the operator a message from the train dispatcher, yet who failed to guide his action thereby, stands in the relation of vice-principal to the conductor, engineer, or brakeman of another train, who may be injured by his negligence, or that, if the operator should receive instructions from the train dispatcher to send out a flagman to signal an approaching train, the company is responsible for the negligence of such flagman in failing to carry out such instructions? It seems just in principle to hold that the company has discharged its duty when it has given information to one of its servants who is engaged in the common employment of the others that are to be affected thereby, and has instructed him to notify his coemployees, and that when the company has exercised due care in selecting such local operator, in the first instance, and has not been negligent in employing or retaining him in his office, it has discharged its duty, and that such operator stands in the attitude of a fellow-servant to the train men. It follows from these views that the judgment must be reversed, at the cost of the defendant in error, and the cause remanded for a new trial."

[From B. L. No. 9, March, 1897.]

TEXAS CENTRAL RY. CO. v. FRAZIER, 36 Southwestern Reporter, page 432.—This action was brought in the district court of Hamilton County, Tex., by Etta Frazier, for herself and minor child, against the railroad company above named, to recover damages for the death of her husband, J. W. Frazier, resulting from the wrecking of a train on which he was employed as brakeman and caused by the negligence of the engineer of said train. Judgment was given for the plaintiff, and the railroad company appealed the case to the court of civil appeals of Texas, which sustained the judgment of the district court and held that under the act of March 10, 1891 (fellow-servant act), the engineer of the train was a vice-principal of the railroad company and not a fellow-servant of the deceased brakeman, Frazier. (See case of Texas Central Ry. Co. v. Frazier, published on page 774 of the Bulletin of the Department of Labor, No. 7.)

Sections 1 and 2 of the act in question read as follows:

"SECTION 1. Be it enacted by the legislature of the State of Texas: That all persons engaged in the service of any railway corporations, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to direct any other employee in the performance of any duty of such employee, are vice-principals of such corporation and are not fellow-servants with such employee.

"SEC. 2. That all persons who are engaged in the common service of such railway corporations, and who while so engaged are working together at the same time and place to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other: *Provided*, That nothing herein contained shall be so construed as to make employees of such corporation, in the service of such corporation, fellow-servants with other employees of such corporation engaged in any other department of service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants."

From the decision of the court of civil appeals, above noted, the railroad company appealed the case to the supreme court of the State, which rendered its decision June 23, 1896, and reversed the judgment of the lower court. In the opinion of the supreme court, which was delivered by Judge Denman, the following language was used:

"Though it is earnestly disputed by plaintiff in error, let it be conceded, for the purposes of this opinion, that the evidence warranted the jury in believing that the engineer was guilty of negligence resulting in Frazier's death.

"The railroad company, as plaintiff in error, has brought the case to this court, assigning as error that the court of civil appeals erred in not sustaining its assignment in that court, to the effect that the court below erred in rendering judgment for plaintiff, because the verdict is without evidence in the record to support it; there being no evidence that the engineer was a vice-principal of the defendant company, as claimed by plaintiff. The question, stated in a different form, is, Were the engineer and Brakeman Frazier fellow-servants under the act of March 10, 1891, which was in force at the time of the accident? If they were, the judgment must be reversed.

"In *Railway Co. v. Warner* (35 S. W., 364), this court held that under the act of 1893 (which seems to be the same as the act of 1891, as far as this case is concerned), in order to constitute two persons fellow-servants the following distinguishing characteristics must be found concurring and common to them: (1) They must be engaged in the common service; (2) they must be in the same grade of employment; (3) they must be working at the same time and place, and (4) they must be working to a common purpose. We do not understand that any question is made as to the correctness of the construction placed upon the statute in that case, nor do we understand it to be denied that the first, third, and fourth of said characteristics are shown by the evidence to be concurring and common to the engineer and Frazier in the case before us; but defendant in error denies that they 'were in the same grade of employment,' for the reason that, under the Warner case, the test as to whether they were in the same grade of employment was decided to be whether one had authority over the other while engaged in the common service, and the evidence here shows that the engineer had authority over Frazier, in that he had the power, by signal, to direct him to apply the brakes. The purpose of the statute was to impute to the master the negligence of an employee upon whom he has conferred authority or power to influence the action or volition of another employee in the performance of his duties. Under the common-law rule, as settled in this State before the statute, the negligence of an employee would not have been imputed to the master unless he had the power to employ and discharge, it being assumed that such power was necessary to subject the will of the latter to that of the former. The statute, however, is based upon the theory that the authority or power in one employee to superintend, control, or command or direct another employee in the performance of his duties as effectually influences and subjects to the former the will of the latter as does the power to employ and discharge. But it was not the purpose of the statute to impute to the master the negligence of an employee upon whom he had conferred no such power, but had merely imposed the duty, in certain contingencies arising in the course of his employment, of giving a signal whereby another employee would know that the occasion had arisen for him to perform some duty imposed upon him by the rules governing his employment, leaving such employee free to perform such duty in his own way under such rules. In such a case there is no subjection of the will of one to that of the other.

"We are of the opinion that the signal given by the engineer for brakes was a mere notice to the brakeman, Frazier, that the occasion had arisen for him to perform a duty imposed upon him by the rules; that the fact that the engineer was intrusted by the company with the discretion of determining when the brakes should be applied, and to signal therefor, did not give him any 'authority of superintendence, control, or command,' or 'authority to direct' Frazier in the performance of his duties; that Frazier, in attempting to set brakes in the per-

formance of his duties, was governed and controlled by the direction and command of the rule, and not of the engineer, and that, therefore, under the statute, they were 'in the same grade of employment' and fellow-servants. It follows that the assignment of error was well taken, and that the judgments of the trial court and court of civil appeals must be reversed and the cause remanded."

[From B. L. No. 9, March, 1897.]

**BUCKALEW v. TENNESSEE COAL, IRON AND RAILROAD CO.**, 20 Southern Reporter, page 606.—Lonella Buckalew, administratrix of the estate of William H. Buckalew, deceased, brought suit in the city court of Birmingham, Ala., against the Tennessee Coal, Iron and Railroad Company to recover damages for the death of her intestate. The evidence showed that said William H. Buckalew was a convict sentenced by the criminal court of Jefferson County, Ala., for two years; that he had been leased or let to the defendant company by the proper authorities of said county; that he was put to work in the coal mines of said company at Pratt City, as such leased convict, and that while so at work he was instantly killed by a fall of slate or stone from the roof of said mine. The plaintiff claimed that the fall of slate or stone was caused by the negligence of the company's superintendent, and that the company was therefore liable in damages. A judgment was rendered for the defendant in the city court, and the plaintiff appealed the case to the supreme court of the State, which rendered its decision June 16, 1896, and reversed the judgment of the city court. Judge Wilkinson, of the city court, instructed the jury that the deceased, although a convict, was a fellow-servant of the superintendent of the mine, though whose negligence it was claimed that the accident was caused. The principal objection of the plaintiff to the judgment of the city court was directed at this instruction, and, in regard to the same, the supreme court, in its opinion, which was delivered by Judge Head, held as follows:

"It seems to have been supposed that some of these counts [in the plaintiff's declaration] were under the employer's liability act, or were governed by the rules regulating the liability of a master for the acts or omissions of fellow-servants. This we think a misconception of the law.

"A master's exemption from liability to a servant for negligence of a fellow-servant in a common employment has for its fundamental principle that by voluntarily entering the service the servant engages to take upon himself the natural and ordinary risks and perils incident to the performance of such service, which includes the risks of injuries arising from the wrongs and omissions of fellow-servants in the same employment. When he enters the service, it is presumed that he has observed and understands its character, and the character of the servants employed therein, and contracts with reference thereto. If incompetent or unfit servants are introduced or retained in the service of the master, he has the right, growing out of his contract, to demand of the master correction of the wrong, and, if not done, to quit the service. Thus he has the means of protecting himself against the dangers of unfit fellow-servants.

"There was under neither count a relation of master and servant between the defendant and the intestate. That relation always grows out of a contract between the parties, express or implied. Here, under the last three counts, the intestate was a prisoner in the custody of the defendant, as his keeper. By law, and the defendant's contract with the proper law officers, it was authorized to put him to labor in the mine, and owed him the duty of doing him no wilful harm and of exercising reasonable care for his personal safety. The intestate had made no contract with anyone. His servitude was involuntary. It was enforced. He had no right or power to refuse to enter upon the service, or to quit it, at any time, until his sentence expired. Whatever may have been the dangers of the service, howsoever incompetent, careless, or vicious may have been the defendant's agents or servants put to work with or over him, the convict had no voice, volition, or freedom of action in the matter whatever. He had entered into no contract, express or implied, to take the risks of the wrongful acts and omissions of the defendant's servants. He was fellow-servant with no one."

[From B. L. No. 9, March, 1897.]

**TERRE HAUTE AND INDIANAPOLIS RAILROAD COMPANY v. BECKER**, 45 North-eastern Reporter, page 96.—Action was brought in the circuit court of Cass County, Ind., by Mary A. Becker, administratrix, against the above-named railroad company, to recover damages for the death of her husband, Martin Becker, who was killed in a collision. Judgment was rendered for her, and the railroad company appealed the case to the supreme court of the State, which rendered its

decision November 10, 1890, and reversed the judgment of the circuit court. The opinion of the supreme court was delivered by Judge Jordan, and the following, which contains a clear statement of the facts in the case, is quoted therefrom:

"It will be seen that, among others, the following facts are disclosed by the special verdict: That on and before December 10, 1889 (being the day on which the fatal collision occurred), the company was operating and running daily, south bound, over its road, four regular trains—two passenger and two freight—and also a like number running north. The time of the arrival and departure of each of these trains at the respective stations along the road was fixed by the appellant, and printed in time schedules or time-tables, and these were issued and delivered to all of its servants then engaged in operating said trains. On the reverse side of these time-tables were printed rules adopted by appellant for the direction and government of all of its servants engaged in operating trains. That under these rules conductors and enginemen of all work and wild trains were required to keep the same out of the way and off of the time of all regular passenger and freight trains, and in no case to occupy the main track of the road within ten minutes of the time of any regular train. That by these rules the enginemen and conductors were equally responsible for keeping off of the time of other trains."

The court here says in effect that the conductor and engineman of a wild train did, on December 10, 1889, violate these rules and got on the main track in the time of a regular train, No. 60, on which Martin Becker was fireman, and thereby caused a collision in which Becker was killed, and then goes on to say as follows:

"That previous to this collision the appellant gave no notice to the deceased, nor to its servants in charge of said local No. 60, of the whereabouts of this work train on that morning, and that neither he nor they had any knowledge that said train on that day was working wild between Crawfordsville Junction and Rockville. The principal misistence of counsel for appellee in answer of the contention of counsel for appellant is that, under all the circumstances, negligence resulting in the death of the deceased servant must be imputed to the appellant, for the following reasons: First, in ordering the work train to work wild between Crawfordsville Junction and Rockville, over a part of its road which they insist, under the facts, is shown to be dangerous; second, failure to notify Becker and the servants in charge of the train upon which he was at work of the whereabouts of the wild train on the morning in question, previous to the accident; third, failure to adopt a rule requiring notice to be given to its regular trains of the whereabouts of wild trains. These facts, in connection with the negligence of the employees in charge of the work train, they contend, constitute the proximate cause of the fatal collision.

"It may be conceded, under certain circumstances, that a railroad company would be guilty of actionable negligence in ordering a train to work wild, in the absence of notice to its servants along its line of the fact, in the event the injury or death of the latter was due to the failure, in whole or in part, to give such notice. But in the case at bar, under the facts and circumstances as they are shown, we are of the opinion that it can not be affirmed, as a legal proposition, that the death of appellee's decedent was due to or resulted from any negligence of the appellant. The reasons for this conclusion, we think, are obvious. The time at which all the regular passenger or freight trains on appellant's road were due to arrive at and depart from each station had been fixed and published in printed schedules or time-tables, and these had been delivered to all of its servants engaged in operating its trains. It had also adopted and caused to be printed and delivered to such servants a series of rules and regulations for their guidance and control in conducting and running trains under their charge. One of these rules expressly required of and enjoined upon conductors or others of its employees in the charge of work and wild trains the duty to keep such trains out of the way of all regular passenger and freight trains, and under no event were they to occupy the main track within ten minutes of the time of any regular train, etc. On the morning of the accident in question the jury find, in effect, that the conductor and engineman in charge of the work train which had been ordered to work wild disregarded, or rather neglected to discharge, their required duty in failing to side-track their train at Waveland and there remain until the arrival and departure from station of the local freight upon which Becker at the time was serving as fireman; that notwithstanding their duty in that respect they 'recklessly,' 'carelessly,' and negligently left said station with their train before the arrival of local No. 60, and on the time of the latter, without taking any precaution to prevent the collision whereby Becker was killed.

"The conclusion that the death of appellee's decedent was wholly due to the negligence of the conductor and engineman in control of the work train, in leaving with their train the station as they did before the arrival of No. 60, and in running

on its time, can not be successfully controverted, and is the only reasonable and legitimate conclusion that can be deduced from the facts in the case. Appellee admits that the employees in charge of this work train were the fellow-servants of the deceased. Hence, under a well-settled rule, there can be no recovery, as against appellant, on account of his death, resulting, as it did, under the facts, from their negligence. It clearly appears, we think, from the finding of the jury, that the death of the servant in question must be attributed solely to the negligence of his fellow-servants, and under the facts this precludes a recovery.

"It can not be said that ordering the train in question to work wild, under the circumstances, was an act of negligence, and when in this connection we consider the rules of appellant relative to the duty required of those in control of wild trains, the law will not authorize us in holding that, in addition to these, it was also incumbent upon the company to notify Becker and the other servants in control of his train of the fact that the train in controversy was working wild, and at what point on the road it was, previous to the collision. This duty, under the facts, was not required of the appellant, and its omission to give the notice can not be said to render it guilty of negligence. It had the right to presume that its servants in charge of the work train would discharge their duty as provided by the rules, and would keep out of the way of all regular trains, and not run upon the time of any of the latter."

[From B. L. No. 13, November, 1897.]

PATTERSON *v* HOUSTON AND TEXAS CENTRAL R. R. Co., 40 Southwestern Reporter, page 112.—Action was brought in the district court of Travis County, Tex., by John Patterson against the above-named railroad company to recover damages for personal injuries received by him while in the employ of said company. The evidence showed that Patterson, a brakeman, stepped out from between two cars which he had uncoupled and walked along a track, looking, in accordance with his duty, to see that the rear end of the train with which he was connected was following the cars that he had uncoupled; that a switch engine came along and struck him on the back and hip, knocked him over, and ran over his foot, which had to be amputated, and that said accident was caused by the negligence of the employees running the switch engine in not notifying Patterson of its approach. A judgment was rendered by the district court in favor of the railroad company, and the plaintiff appealed the case to the court of civil appeals of the State, which rendered its decision February 17, 1897, and reversed the judgment of the district court.

The opinion of the court of civil appeals was delivered by Judge Key, and the following is quoted therefrom:

"Appellant brought this suit to recover damages for personal injuries caused by the alleged negligence of appellee's employees in handling a switch engine in its yards in the city of Austin. Among other defenses, the railroad company interposed that of fellow-servant, and the court, trying the case without a jury, held that the plaintiff was not entitled to recover, because, if there was any negligence shown, it was that of a fellow-servant. The ruling is the only question presented for decision.

"Articles 4560f and 4560g of the Revised Statutes of 1895 (sections 1 and 2 of chapter 91, acts of 1893) prescribe who are and who are not fellow-servants as among railway employees. Said articles were construed by the supreme court in the *Railway Company v Warner* (35 S. W., 364), where, among other things, it is said: 'The distinctive characteristics prescribed by the statute as essential to be found concurring and common to two or more employees in order to constitute them fellow-servants are: First, They must be "engaged in the common service." As here used "service" means the thing or work being performed for the employer at the time of the accident, and out of which it grew, and "common" means that which pertains equally to the employees sought to be held fellow-servants; and therefore, "common service" means the particular thing or work being performed for the employer, at the time of the accident, and out of which it grew, jointly, by the employees sought to be held fellow-servants. The members of a crew running a train, though each be in the performance of different acts in reference thereto, are all "engaged in the common service," for they are jointly performing the thing or work of managing the train for the employer; but they would not be "engaged in the common service" with the members of a crew running another train for the employer over the same road, for one crew would be jointly performing the thing or work of managing one train while the other would be jointly performing the thing or work of managing the other train.'

"The burden of proof (in this case) was on the defendant to show that the

plaintiff was a fellow-servant with the employees operating the switch engine and not on the plaintiff to show that he was not such fellow-servant; and we think the facts of this case fail to bring it within the first test prescribed in the Warner case. The evidence indicates that the train on which the plaintiff was a brakeman had been made up, and was about ready to leave the yard and start on its regular trip, and fails entirely to show that the switch engine by which the plaintiff was injured was at the time engaged in any service or performing any act in reference to the plaintiff's train. Therefore the members of the two crews were not shown to be engaged in a common service, and hence were not fellow-servants. The judgment is reversed, and the cause remanded."

[From B. L. No. 12, September, 1897.]

KANSAS CITY, FORT SCOTT AND MEMPHIS RY. CO. v. BECKER, 39 Southwestern Reporter, page 358.—Action was brought by William Becker against the above-named railway company in the circuit court of Craighead County, Ark., to recover damages for personal injuries sustained by him while in the employ of said company, and, as he alleged, due to the negligence of George Bennett, the engineer of the locomotive of which Becker was the fireman. A judgment was given for the plaintiff and the defendant company appealed the case to the supreme court of the State, which rendered its decision February 20, 1897, and reversed the judgment of the lower court.

The principal point of the decision is shown in the following, which is quoted from the opinion of the supreme court, as delivered by Judge Battle:

"And the court refused to instruct the jury, at the request of the defendant, as follows:

"(16) That, without proof of facts that would take Bennett and Becker out of the rule, they were in law fellow-servants; and the burden of proving they were in different departments, or that one had the superintendency or control of the other, or were of different grades, is on the plaintiff, Becker; and, unless he has so shown, the defendant would not be liable for the negligence of Bennett in failing to inspect the step at Memphis."

"(17) The court instructs the jury that if you find from the evidence that the engineer Bennett, who had charge of engine 30 on the trip on which Becker was injured, was provided with the necessary tools to tighten the step in case it got loose, and that it was his duty to so tighten it, and to examine the engine to see if it was safe, and failed to do so, then this neglect was that of a fellow-servant, for whose negligence the defendant would not be liable."

"The court erred in refusing instruction numbered 16, which was asked for by the defendant. Upon the plaintiff devolved the burden of proving his cause of action. The fireman and engineer were in the common service of the defendant, working together to a common purpose, in the same department, as shown by the evidence. The presumption is they were fellow-servants, and it devolved on the plaintiff to show that they were not, in order to make the defendant liable to him for the damages he suffered from the negligence of the engineer. This court can not take judicial notice of the supremacy or subordination of one to the other, if any exist."

"The instruction numbered 17, which was asked for by the defendant, does not accurately state the conditions upon which the defendant was or was not liable to a fireman for damages occasioned by the negligence of the engineer. If they were fellow-servants, it was not. The question is, Were they fellow-servants? The decision of this question involves to some extent the construction of the second section of an act entitled 'An act to define who are fellow-servants and who are not fellow-servants,' approved February 28, 1893, which provides that 'all persons who are engaged in the common service of such railway corporations, and who, while so engaged, are working together to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other: *Provided*, That nothing herein contained shall be so construed as to make employees of such corporation in the service of such corporation fellow-servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants."

"As the fireman and the engineer in the case before us were unquestionably engaged in the common service of the defendant, in the same department, and working together to a common purpose, they were fellow-servants, if they were of the same grade. The question then for us to decide is, What do the words 'of same grade' mean as used in the second section of the act of February 28, 1893? We are relieved of every difficulty in the decision of this question by the act itself."

Immediately following these words are the following: 'Neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees.' It seems to us the latter words can serve no purpose unless it be to explain the words 'of same grade,' which precede them. If this was not their purpose they were entirely useless and without a purpose, for the idea conveyed by them is already expressed in the words 'of same grade.' The words 'of same grade,' without qualification, may be of broader signification and difficult to explain. But we think that the words following were intended to, and do, explain what is meant by them. In that way we can only give to all these words some effect, as they were doubtless intended to have.

"If, therefore, neither the fireman nor the engineer had superintendence or control of the other, they were fellow-servants; otherwise they were not; and if fellow-servants the defendant is liable to neither for damages caused by the negligence of the other in the performance of his duties. For the errors indicated the judgment of the circuit court is reversed and the cause is remanded for a new trial."

[From B. L. No. 12, September, 1897.]

MISSOURI, KANSAS AND TEXAS RY. CO. OF TEXAS *v.* HINES, 40 Southwestern Reporter, page 152.—Action was brought in the district court of Galveston County, Tex., by Olive Hines against the above-named railroad company to recover damages for the death of her husband, an employee of said company. Judgment was rendered for the plaintiff, and the defendant company appealed the case to the court of civil appeals of Texas, which court rendered its decision March 21, 1897, and reversed the judgment of the lower court. An interesting point decided was that the plaintiff's husband, R. J. Hines, was not a fellow-servant of members of a bridge gang within the provisions of section 2 of "the fellow-servant act of Texas," chapter 91 of the acts of 1893, which reads in part as follows:

"SECTION 2. All persons who are engaged in the common service of such railway corporation, receiver, manager, or person in control thereof, and who, while so employed, are in the same grade of employment and are working together at the same time and place and to a common purpose, neither of such persons being intrusted by such corporation, receiver, manager, or person in control thereof, with any superintendence or control over their fellow-employees, or with the authority to direct any other employee in the performance of any duty of such employee, are fellow-servants with each other. \* \* \* Employees who do not come within the provisions of this section shall not be considered fellow-servants."

The opinion of the court of civil appeals was delivered by Chief Justice James, and the following, quoted therefrom, sufficiently states the facts in the case and the reasons for the decision above noted:

"Appellee is the widow of R. J. Hines, a conductor in appellant's service, who was killed on April 11, 1894, in the yards at Houston. The train on which he was conductor was used in connection with a bridge gang then engaged in driving piles for bridges and loading and unloading from the train material for bridges. The bridge outfit consisted of 8 men, under control of Foreman Frank McNeely. The crew of the train consisted of an engineer and 2 brakemen and a fireman, in charge of the conductor, Hines. The bridge gang had nothing to do with the operation of the train, and the trainmen had nothing to do with the service for which the bridge gang were employed. The latter had loaded the cars with pine piling of such length that they required 2 flat cars, and were brought thus to the yards at Houston and placed where they were to be unloaded. The bridge gang then proceeded to unload them; and it was necessary, in order to do this, to remove the stakes that had been placed along the entire length of the cars to keep the piles in place, and also to remove a brake which was in the way on the side of one of the flat cars. The injury to Hines occurred in this manner: One of the bridge men, named Ferguson, was about to knock off the brake with a big hammer, instead of taking it off in the usual and proper way. The course he was about to pursue was improper and injurious to the property, and Hines, who was present, stopped him and saw that he went about removing it in the proper manner, and stood there, instructing him how to do it. While this was going on the piles began to roll off the car, from some cause, throwing Ferguson to the ground, and one of them, striking Hines, injured him so that he died. The cause may have been the unstaking of the car, or the placing of a skid up against the car, or it may have resulted from the effort to remove the brake, or some or all of these causes combined. The answer denied that Hines at the time was acting in the scope of his duty; denied that there was negligence on the part of defendant; alleged that the injury was due to contributory negligence, and that if there was

negligence of defendant, causing the injury, it was the act of plaintiff's fellow-servants. The charge of the court was very brief, and the charges asked by the defendant, 53 in all, were refused.

"The forty-fifth and forty-sixth assignments [of error] proceed upon the idea that the question of fellow-servants should have been left to the jury on the evidence. There is also an assignment that the court should have directed a verdict for the defendant because they appeared to have been fellow-servants. The court, on the contrary, assumed that they were not, and, we think, correctly. The evidence in this record is that the men under McNeely constituted a bridge gang, and were engaged in bridge building. The train was used for the purpose of transporting the bridge men and material from one point to another, as their work demanded. The bridge gang lived in one of the cars. The conductor, Hines, had exclusive charge of the train while in transit, and he and his crew had nothing whatever to do with the loading and unloading of the cars or with the work of building bridges. McNeely and his men had nothing to do with the operation of the train, except so far as it was necessary to give the conductor notice of where he wanted the train, so that it would be properly placed for transporting the men and material. The evidence also shows that Hines, at the time that he was injured, was not engaged in the work then being done, namely, the unloading of the car. His duties were confined to the operation of the cars while in transit, but it was his duty, as conductor of that train, to prevent injury to the cars. When Ferguson was about to knock the brake off with the hammer it was his duty, as the evidence shows, to stop him, and to see that he did it without injury to the property, and that is what he was engaged in doing when injured. Hines had nothing to do with the work for which the bridge men were employed or engaged; neither had they anything to do with the work Hines had to perform. When the cars were placed in the yards where McNeely desired, the conductor's work was done and the work of the bridge gang began. He was not engaged in the work of unloading the cars. What he did was to arrest the destruction of the brake by one of the gang, and to see that while it was being removed it was not injured, which was in the line of his duty. We are of opinion, therefore, that they were not working together in the meaning of the fellow-servants act, and that the court, on the evidence as here developed, was correct in assuming that they were not fellow-servants."

[From B. L. No. 27, March, 1900.]

KANSAS CITY, FORT SCOTT AND MEMPHIS RAILROAD CO. v. BECKER, 53 Southwestern Reporter, page 406.—Action was brought by William Becker against the above-named railroad company for personal injuries sustained by him while in the employ of the defendant as a locomotive fireman. The evidence showed that he was injured by the turning of the step on the left-hand side of his engine as he jumped upon it in order to get on the engine cab, the engine being at the time in motion. A judgment in favor of the plaintiff, Becker, was rendered in the circuit court of Craighead County, Ark., and the defendant company appealed the case to the supreme court of the State, which rendered its decision June 17, 1899, and affirmed the decision of the lower court.

From the opinion of the supreme court, delivered by Judge Battle, the following is quoted:

"The maintenance of the steps in good repair and safe condition was intrusted to two employees of the defendant. It was the duty of the engineer, when his engine was on the road and away from Thayer, to examine and keep the steps in safe condition by means of the tap at the end of the rod, for which purpose he was provided with the necessary tools. It was also his duty, when he ran his engine into the roundhouse at Thayer, where the engines operated on the road between Thayer and Memphis, on their return from the latter place, were inspected and repaired, to report any defects in his engine which needed repairing, and blanks were furnished him for the purpose. At Thayer was a machinist named Johnson, whose duty it was to inspect the lower part of the locomotives, including the steps, when they came in, as a protection against any neglect of the engineer. Johnson also made repairs. The bad condition of engine No. 30, if attributed to the fault of anyone, was due to the negligence of one or both of these employees.

"The railroad of appellant is built and operated in part in this State. In regard to such railroads the constitution provides as follows: 'All railroads which are now or may hereafter be built and operated, either in whole or in part, in this State, shall be responsible for all damages to persons and property, under such regulations as may be prescribed by the general assembly.' (Article 17, sec. 12.)

The court here recited in full sections 6249 and 6250 of the Digest of Arkansas,

the law regulating the liability of railroad corporations for injuries of their employees, and then continued as follows:

"The effect of these statutes is to limit the risk assumed by an employee on account of the acts or omissions of persons in the service of the same employer to the neglect of those who are fellow-servants within the meaning of the statutes, and to impose upon the master the duty to protect him against the neglect of all other fellow-employees in the discharge of their duties, and to render the employer liable in damages for injuries suffered on account of the failure to discharge this duty.

"The appellant was and is subject to and governed by these statutes, and is liable to its employees in tort for injuries caused by the failure to discharge any duties growing out of them.

"At the request of the appellant, and with the consent of the appellee, the court instructed the jury that Bennett, the engineer, and appellee, the fireman (Becker), were fellow-servants at the time the injury occurred. Now, appellant's counsel says, 'If we admit \* \* \* that Bennett, the engineer, did not inspect this step at Memphis, and did not apply the usual test to ascertain its condition, and that he was negligent, it being admitted in this case by the record that Bennett and the plaintiff were fellow-servants, then we submit that there is no room for reasonable minds to differ on the proposition that Bennett's negligence was the direct and promoting cause of this injury, because but for his negligence (admitting that he was negligent, and admitting that the step was defective at Memphis) the injury could not have happened, and his negligence, if he was negligent, was not a contributing cause, but was the direct, immediate, last-moving, and approximate cause of the accident.' But this is not correct. The trial court told the jury that if they found that the step by which the appellee was injured was defective, that Johnson negligently failed to discover that it was in that condition, that his negligence contributed to the injury, and that he was not a fellow-servant of Becker, to return a verdict in favor of appellee. If such findings were true, Johnson's negligence was a proximate cause of the injury, for there is no evidence that he fastened the step when the engine was at Thayer the last time before the accident occurred. He testified that he did not. The failure of the engineer to fasten the step did not render the negligence of Johnson harmless or less effective, but left it free to work the injury it was lying in wait to inflict. The injury was probably the result of the concurring negligence of the two employees, and may not have occurred in the absence of either. It is no defense, however, for the appellant to prove that the negligence of the engineer contributed to it."

The court here stated in effect that the company complained because the lower court refused to instruct the jury that the plaintiff and Johnson, the machinist, were fellow-servants, and that therefore the company was not liable for the negligence of Johnson, and then continued as follows:

"Were Johnson and Becker fellow-servants? Under the statutes of this State four conditions must concur to constitute different employees of the same railroad company fellow-servants. First, they must be engaged in the common service of the railway company; second, while so engaged they must be working together to a common purpose; third, neither of them must be intrusted by the railway company with any superintendence or control over their fellow-employees; fourth, they must be engaged in the same department of service.

"Did the relations of Johnson and Becker conform to all these conditions? Johnson was an inspector and repairer of all appellant's engines at Thayer, about 50 or 60 in number, and Becker was a fireman on one of them. Johnson's duty was to inspect the engines in the roundhouse and make such repairs as he could in the way of screwing up bolts and nuts and putting in springs and other work. His (Becker's) chief duties were performed on his engine while on the road. Johnson was in the mechanical department and subject to the authority of the roundhouse foreman, and Becker, while on the road in the discharge of his duties, was in the transportation department and subject to the authority of the superintendent of the same. As they were not working together in the same department at the time the accident occurred, it follows that they were not fellow-servants at the time when Becker was injured, and that the instruction asked for by the appellant to the contrary effect was properly refused. Judgment affirmed."

[From B. L. No. 15, March, 1898.]

MOORE LIME CO. v. RICHARDSON'S ADMINISTRATRIX, 28 Southeastern Reporter, page 334.—In the circuit court of Botetourt County, Va., Richardson's administratrix recovered a judgment in an action for damages brought against the lime company above named for the death of Richardson, caused by injuries received while

he was in the employ of said company. The company appealed to the supreme court of appeals of the State, which rendered its decision November 18, 1897, and reversed the judgment of the circuit court. The evidence showed that Richardson was a member of a gang of men employed to wheel wood to the timbers, to move cars on the switch to the points where they were to be loaded, and to load them; that one Whitmer, a member of the gang, receiving the same pay and doing the same work as its other members, usually directed them when and where the cars were to be moved, and in doing this work it was the duty of the other members of the gang to obey him; that Richardson was injured while obeying Whitmer's orders, and as a result of said injury died soon after. It was claimed by the administratrix that Whitmer was negligent in not warning Richardson of the approach of a car which struck him, and that his negligence was that of a vice-principal, for which the lime company was responsible, and not that of a fellow-servant; also that the company was negligent in failing to adopt safe and proper rules for the conduct of its business.

Upon these points the supreme court of appeals, in its opinion delivered by Judge Buchanan, held as follows:

"The ground upon which it is claimed that Whitmer, who was a member of the same gang, doing the same work, and receiving the same pay as the plaintiff's intestate, was not a fellow-servant, is because he was exercising authority over the gang, or acting as leader or foreman in the work of moving the cars. That this sort of superiority did not make him a vice-principal is clear under the decisions of this court. In the case of *Machine Works v. Ford*, reported in 27 S. E., 509, the question was whether the boss or foreman of a gang of hands (of which he was a member) engaged in moving locomotive wheels about the yards of the locomotive works, which was under the management of a superintendent, was a fellow-servant or vice-principal. In that case it was held that such a boss or foreman was a fellow-servant, and that his negligence was one of the risks which the members of the gang assumed when they entered into the service. It was said in that case that, where the execution of work directed to be done by the master or his representative is intrusted to a gang of hands, it is necessary that one of them should be selected as leader, boss, or foreman, to see to the execution of the work. This kind of superiority of service is so essential and universal that every workman, in entering upon a contract of service, must contemplate its being made in a proper case. He, therefore, makes his contract of service in contemplation of the risk of injury from the negligence of a boss or foreman as well as from the negligence of another fellow-workman. The foreman or superior servant stands to him, in that respect, in the precise position of his other fellow-servants. The manner of performing each of the various duties rested necessarily upon the intelligence, care, and fidelity of the servants to whom (it) was intrusted. If, in the performance of it, the plaintiff was injured by reason of the negligent act of a fellow-servant, although that fellow-servant was the foreman or leader of his gang, it was one of the risks which he assumed. An employee does not assume all the risks incident to his employment, but only such as are ordinarily incident to the employment.

"It is not shown that there was anything in the nature of the work which made it necessary for the defendant to enact rules. Its failure to do so was not proof of negligence, unless it appeared from the nature of the work in which the servants were engaged (and it does not) that the master, in the exercise of reasonable care, should have foreseen and anticipated the necessity for such rules."

[From B. L. No. 17, July, 1898.]

**LITTLE ROCK AND MEMPHIS RAILROAD CO. v. BARRY**, 84 Federal Reporter, page 944.—This action was brought in the United States circuit court for the eastern district of Arkansas by G. F. Barry against the above-named railroad company to recover damages for personal injuries sustained while in the employ of said company. Judgment was rendered for the plaintiff, and the defendant company brought the case on writ of error before the United States circuit court of appeals for the eighth circuit. Said court rendered its decision January 31, 1898, and reversed the judgment of the lower court.

The opinion of the court was delivered by Circuit Judge Sanborn, and the following, quoted therefrom, shows the important facts in the case and the reasons for the decision:

"About 2 o'clock in the afternoon on October 26, 1890, engine No. 5 of the Little Rock and Memphis Railroad Company ran into the rear of a freight train on the railroad of that company, and G. F. Barry, the defendant in error, who was the fireman on this engine, leaped from it and was injured. He sued the company for damages, and alleged that he was injured by its negligence in employing an

incompetent conductor upon the train his engine drew, and in failing to give notice to its servants in charge of engine No. 5 of the whereabouts and movements of the freight train, and in failing to give notice to its servants in charge of the freight train of the whereabouts and movements of engine No. 5. The plaintiff in error, the railroad company, answered that its conductor was not incompetent, and that it was not its duty to give the conductor and engineer of either of the trains which collided notice of the movements or whereabouts of the other. Upon these two issues the testimony was conflicting, and the jury found for the defendant in error. These facts, however, were uncontradicted. The freight train was a regular train. It had left Hopefield at 3.50 a. m., was due at Edmondson at 5 a. m., but had been so delayed that it did not leave that station until 9.40 a. m., 4 hours and 40 minutes later than its schedule time, and while it was standing on the main track, on a curve in a deep cut outside the yard limits, about half a mile east of Forrest City, at about 2 o'clock in the afternoon, engine No. 5 crashed into the rear of it. The engineer in charge of this engine had passed this freight train at Edmondson at 9.30 that morning on his way east to Hopefield, and he knew it was late. When the superintendent of the company delivered the order, under which the train drawn by engine No. 5 was operated on this day, to its conductor, he told him to look out for this freight train, as it was still in the bottom between Edmondson and Forrest City, and the conductor repeated this warning to the engineer when he communicated the order to him before leaving Hopefield. In the early part of this day a military company, which arrived at Memphis too late for the regular passenger train, engaged of this railroad company an extra train to take it to Little Rock, and the engineer and fireman of engine No. 5 were directed to draw this train with their engine. The freight train was, as we have said, a regular train, and it was known as 'No. 5.'

"The rules of the company made this extra train inferior in grade to the regular freight train, and imposed upon its conductor and engineer the duty to keep out of the way of that freight train, which they knew was somewhere upon the single track in front of them. These rules also required the crew of the freight train, when it stopped and stood, as it did, for three-quarters of an hour before the accident occurred, on the curve, in a deep cut, one-half mile east of Forrest City, to immediately station and maintain a flagman 10 or 12 telegraph poles in the rear of its train, and to place torpedoes on the track, not less than 15 telegraph poles behind it, for the purpose of warning and stopping approaching trains which might follow it. These rules gave the employees of the company notice that it proposed to use its railroad for the passage of trains at any time it chose, and that they must protect themselves against their approach. The engineer of the extra train, however, did not keep his engine under control, so that he could stop it when he saw the freight train, but he drove it on with such speed that it was impossible for him to prevent the collision after he came in sight of the regular train; and the crew of the freight train failed to give warning to the approaching extra of the presence of their train either by torpedo or by flagman. In short, these fellow-servants of the defendant in error were guilty of gross negligence, without which it is highly improbable, if not impossible, that the accident could have occurred.

"One of the rules of the company, however, required all orders to be given in writing, where practicable; and counsel for the defendant in error insisted that the company was negligent because it did not insert in the written order to the men in control of the extra train a statement that the freight train was delayed east of Forrest City, and an admonition to beware of it, and because the train dispatcher did not stop the extra train at Edmondson, as it passed there, and notify its crew again that the freight had not reached Forrest City. In support of their view, three witnesses for the defendant in error, who had had experience in railroading, testified that in their opinion this course should have been pursued. On the other hand, it appeared by the evidence that this railroad was operated under the standard rules, which were prepared some years ago by experienced railroad men chosen for the purpose by the officers of various railroad companies, and that they had been subsequently so generally adopted, as the best in use, that, in 1888, 58,000 (and at the time of the trial many more) miles of railroad were governed and operated under them. Three witnesses of skill and experience in the operation of railroads, who were familiar with these rules and the practice of railroads under them, testified, in effect, that in their judgment, and in the judgment of those who had prepared and adopted them, they were the best and most conducive to safety of any rules in use in this country; that it is more conducive to the safety of the operation of railroads to require the men in charge of a train to look out for and protect themselves at all times against other trains and engines, without notice of their whereabouts and movements, than it is to

undertake to give them notice of these movements and whereabouts; and this for the reason that if men receive and come to expect notice of approaching trains, they will invariably relax their vigilance, and rely upon the notice, rather than upon their watchfulness, for their safety, and that in the long run they will be caught in danger more frequently, and more accidents will happen at times when it is impossible or impracticable to convey notice to them than would occur if they were spurred to constant watchfulness by the knowledge that a train was liable to come upon them at any time without notice. It does not seem unreasonable to suppose that men who are warned that other trains will pass over the railroad on which they are operating without notice to them, and that they must watch for and protect themselves against them at all times, would operate their trains with more care and fewer accidents than they would if an attempt were made to notify them of the whereabouts and movements of all trains, in view of the fact that the expectation of such notice might relax their vigilance, and that they would often be in locations where it would be impossible to give them the notices. If experience has proved this supposition to be in accordance with the fact, and has led to the adoption of rules which do not require, but discountenance, such notices, because the habit of giving them has been found to increase the number and danger of accidents, as the adoption of these standard rules by so many railroad companies and the testimony of the experienced witnesses who are operating railroads under them tend to show, it can not be said that it was the duty of the defendant to give these notices, nor that its failure to give them was negligence.

"The fact is not forgotten that the defendant in error produced 3 witnesses who testified that such notices should have been given. But in our opinion their testimony is insufficient, in face of the evidence of 3 witnesses of equal credibility who testified to the contrary, to so clearly establish the vice of the theory, and the unreasonableness of the rules and practice which companies operating more than 58,000 miles of railroad have adopted as the best and most conducive to safety, as to warrant a court in so declaring as a matter of law. Unless the rules they adopt are clearly shown to be palpably unreasonable or clearly insufficient, railroad companies ought not to be charged with negligence on account of their adoption and use. In our opinion, there was no such proof in this case. The defendant in error and the other servants of the company were familiar with these rules and the theory upon which they were based. By taking service under them without objection or protest they assumed the risks and dangers of the theory that every employee who operates trains must beware of other trains moving in the same direction, without notice of their whereabouts, and the risks and dangers of the system of rules which was based upon this theory.

"The railroad company had the right to presume that its servants on these trains would obey its rules and discharge these duties, and it had the right to act upon that assumption. It was its right to calculate the natural and probable result of its acts and omissions upon this supposition. Indeed, it could reckon upon no other, for it is alike impracticable and impossible to predicate and administer the rights and remedies of men on the theory that their associates and servants will either disregard their duties or violate the laws. Now, no one who reckoned on the faithful discharge of their duties by these employees could reasonably have anticipated this fatal collision as either a natural or probable consequence of the failure to give these notices. Nor could it have been the result of such failure, had not the unforeseen negligence of the engineer of the extra train and the gross and unexpected carelessness of the crew of the freight train intervened to interrupt the natural sequence of events, to turn aside their course, and to prevent the safe operation of these trains, which was the natural and probable result of the rules and the orders which the defendant gave. It was the gross negligence of these servants, which no one could anticipate, that constituted the intervening and proximate cause, without which this collision could never have been; and it is to this, and not to the failure to give the notices, in our opinion, that this accident must be attributed, under the maxim, '*Causa proxima non remota spectatur.*' The judgment below must be reversed and the cause remanded to the court below, with directions to grant a new trial; and it is so ordered."

[From B. L. No. 17, July, 1898.]

HUNTER v. KANSAS CITY AND M. RAILWAY AND BRIDGE CO., 85 Federal Reporter, page 379.—Action was brought in the United States circuit court for the western district of Tennessee by one Hunter against the above-named company, to recover damages for a personal injury incurred while in the employ of said company, and due, as alleged, to the negligence of one Robert Snowden. Hunter was one of four men, three colored laborers and one white mechanic,

Snowden, engaged in setting posts along the railroad track. They were all put on this work by one Green, "a boss" of the railroad. The posts were to be set on a certain height and distance from the rails, and it was Snowden's especial duty, by the use of a level and straightedge, to ascertain and designate the proper places to put the posts, and having done this all four of the men would proceed to set up the posts in the places he had designated. The plaintiff, at the time of the accident, was down in a post hole, hugging a post and directing its descent, when suddenly the men above turned the post loose, and in rapidly descending it pulled him down and wrenched his back. He alleged that it was Snowden's negligence that caused this to be done. A judgment was rendered for the defendant upon the instruction of the judge of the circuit court, and the plaintiff carried the case on writ of error to the United States circuit court of appeals for the sixth circuit, which rendered its decision February 8, 1898, and affirmed the judgment of the lower court.

From the opinion of the court of appeals, which was delivered by Circuit Judge Lurton, the following is quoted:

"The learned counsel for the plaintiff in error concede that at common law Hunter and Snowden were fellow-servants, but say that under the Arkansas statutes defining that relation he was a vice-principal. The Arkansas statute is as follows:

"All persons engaged in the service of any railway corporations, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to direct any other employee, in the performance of any duty of such employee, are vice-principals of such corporation, and are not fellow-servants with such employee.

"All persons who are engaged in the common service of such railway corporations, and who, while so engaged, are working together to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other: *Provided*, Nothing herein contained shall be so construed as to make employees of such corporation in the service of such corporation fellow-servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants" (Sand. & H. Dig., §§ 6248, 6249.)

"Such statutes do not encroach upon Federal authority, and constitute the law of the State which Federal courts are bound to administer in suits arising within the State.

"We have, under this evidence, the case of 3 men working together in the common purpose of setting a post in a hole prepared to receive it. That Snowden received larger pay than Hunter, or that in some respects his work was not the same as that done by his associates, does not determine that he was a vice principal. The determining question under this statute is whether he was intrusted by the corporation with the authority of superintendence, control, or command of those with whom he was associated in the service of the company, or with authority to direct these other employees in the performance of their duty to the common master. When, as in this case, it is shown that several persons are associated together and working together to a common purpose in the same department, they are presumed, under the second section of the Arkansas statute, to be fellow-servants, and the burden is upon him who claims that a different relation existed to establish that one was a vice principal.

"That Hunter should regard Snowden as a 'boss,' or that he assumed to have some sort of control over those associated with him, will not make him the representative of the corporation. The authority to control and direct others must be an authority 'intrusted by such corporation' to him. His authority may, of course, be implied from the very nature of the duties imposed upon him; but he is not a vice principal merely because his higher character, greater intelligence, superior race, or natural habit of command caused him to assume an authority not intrusted to him by the common master, or to be regarded and treated with a respect due to his personal qualities rather than to his delegated power of control by those associated with him.

"Snowden testified that he was not a 'boss,' and was given no authority to command or control his associates. To him was intrusted the use of the level and the gauge, for the purpose of aiding in the proper alignment and adjustment of the posts which were being set by the cooperation of all. His directions to deepen a hole, or to move a post to the right or to the left, or to lower or to raise it, were more in the nature of signals which a switch tender or brakeman might give to a

conductor or engineer to guide them in the movement of a train than of commands given in the exercise of the authority of a superior over an inferior.

"The particular duty of Snowden was to use his level and gauge and announce the result. If the hole was too deep or too shallow, or the post not plumb, the fact was thereby ascertained, and it became his duty and that of his associates to do what was necessary to bring it into proper relation by deepening or filling or by other movement of the post, indicated by the level and gauge. There was no sufficient evidence to overcome the presumption that the relation of fellow-servant existed under the construction placed upon the second section of the Arkansas act by the supreme court of that State [*Railway Co. v. Becker*, 63 Ark., 477; 39 S. W., 358], and the jury were properly instructed, on this ground, to find for the defendant."

[From B. L. No. 19, November, 1898.]

MISSOURI PACIFIC RAILWAY CO. *v.* LYONS, 75 Northwestern Reporter, page 31.—An action brought by Mary Lyons, administratrix of the estate of George Lyons, deceased, against the above-named railway company, to recover damages for the death of said Lyons caused by an accident while he was employed by the company, was heard in the district court of Douglas County, Nebr., and a judgment was rendered for the plaintiff. The defendant company carried the case on writ of error to the supreme court of the State, which rendered its decision April 21, 1898, and reversed the judgment of the lower court. The evidence showed that on June 11, 1893, two shifting engines and crews were at work in the yard of defendant company at Omaha, Nebr., that Lyons, a member of one of the crews, was injured by the negligence of a member or of members of the other crew, and died from the effects of said injury soon after it was received.

The opinion of the supreme court was announced by Judges Norval and Ragan, and the syllabus of the same, prepared by the court, reads as follows:

"1. Evidence examined, and held to sustain the jury's finding that the death of plaintiff's intestate was not caused by his negligence.

"2. When one enters the employment of another, agreeing to serve him for a stipulated salary or wage, he thereby assumes, in the absence of an express contract to the contrary, the ordinary perils incident to that service, and included in these is the liability to injury at the hands of a negligent fellow-servant.

"3. The general rule is that where a master is not guilty of negligence in the selection or retention of servants, or in furnishing them with suitable appliances for the performance of the work in which he employs them, he is not answerable to one of them for an injury caused by the negligence of a fellow-servant while both are engaged in the same work in the same department of the master's business.

"4. Where two switching crews are in the employ of the same railway company, subject to the control and direction of the same yard master, no member of either of said crews having any right of control or direction over any member of the other crew, both crews simultaneously engaged in switching the same cars from one part to another of the same switch yard, then the two crews and the members thereof are consociated in the same department of duty or line of employment, and each member of one crew is the fellow-servant of each member of the other crew."

[From B. L. No. 19, November, 1898.]

JENSON *v.* GREAT NORTHERN RAILWAY CO., 75 Northwestern Reporter, page 3.—This case was brought before the supreme court of Minnesota on an appeal from the district court of Ottertal County, where a judgment had been rendered in favor of the above-named railway company in a suit brought against it by one Christopher Jenson to recover damages for injuries sustained by him while in its employ. The plaintiff, Jenson, alleged that he was injured through the negligence of an incompetent servant. The supreme court rendered its decision May 3, 1898, and reversed the decision of the lower court.

The opinion was delivered by Chief Justice Start, and from the syllabus of the same, which was prepared by the court, the following is quoted:

"While a servant impliedly assumes the risk of negligence by his fellow-servants, yet he does not assume any risk on account of the negligence of the master, which is unknown to him; hence the fellow-servant rule has no application to a case where the master is negligent in employing or retaining in his service a careless and incompetent servant, who by his negligence injures his coservant, who has no notice of his character."

[From B. I. No. 28, May, 1900.]

*LINCK'S ADMINISTRATOR v. LOUISVILLE AND NASHVILLE RAILROAD CO.*, 54 Southwestern Reporter, page 181.—This was an action for damages for causing the death of Edward P. Linck, brought in the circuit court of Todd County, Ky. Linck was a conductor in the employ of the above-named railroad company, and at the time of the accident he was making a coupling of some cars in the train in place of the brakeman, who was temporarily and necessarily absent. The alleged negligence was that of the engineer of the train in backing the engine with great and unnecessary violence, so that the coupling link broke, and Linck was knocked down and run over by the backing train and killed. A judgment was rendered for the defendant company and the plaintiff appealed the case to the court of appeals of the State, which rendered its decision December 8, 1899, and reversed the decision of the lower court.

In the course of the opinion of the court, delivered by Judge White, the following language was used:

"Beginning with the case of *Railroad Co. v. Collins* (2 Duv., 118, this court, by a long and unbroken line of decisions, including *Railway Co. v. Palmer*, 98 Ky., 382; 33 S. W., 199, and *Edmonson v. Railway Co.* (19 S. W., 200, 118), has repeatedly held that where 2 servants of the same master are equal, and neither superior to the other, no recovery can be had, as against the master, by one servant for the negligence of the other. It has also been held that where 2 servants are in the same field of labor, but are not of the same rank, the master is not liable for an injury to the subordinate by the ordinary negligence of the superior, but is liable only in case of gross negligence of the superior. It is contended that if the rule laid down in the *Edmonson* case, and other cases to the same effect, were (was?) the law as to the cases there decided, it has no application to this, that by the adoption of section 241 of our present constitution the rule of law as to fellow-servants was changed. Section 241 of the constitution reads: 'Whenever the death of a person shall result from an injury inflicted by negligence or wrongful act, then, in every such case, damages may be recovered for such death from the corporation and persons so causing same.' There follows a provision as to who may prosecute an action to recover.

"It is insisted that by the use of the term, 'then, in every such case, damages may be recovered for such death from the corporation and persons so causing same,' it is meant to provide that a recovery may be had for a death resulting from the negligence of a fellow-servant, regardless of grade or degree of negligence. In considering this section, it may be well to consider the condition of the law as laid down by this court at the time of the adoption of the constitution. Under section 1 of chapter 57 of the general statutes, it had been held, as in the *Collins* case (2 Duv., 118), that damages were not recoverable by an employee of a railroad for an injury inflicted by the negligence of a fellow-servant. And a fellow-servant was held to be a servant of the same master, in the same field of labor, and of an equal grade with the one injured. It was also held that no recovery could be had for the ordinary negligence of a superior servant of the same master engaged in the same field of labor. Under section 3 of chapter 57 of the general statutes it had been held that no recovery could be had for death unless the deceased left a widow or child. The debates of the constitutional convention (pp. 5749-5752) show that it was intended to place in the organic law, and beyond the control of the legislature, that an action for damages resulting in death survived, and might be recovered by the personal representative, regardless of whether widow or children survived. It was intended to provide, also, that the right of action could be maintained against both the servant who was negligent and the company he represented. The framers of the constitution intended to so fix the law that the legislature could not release either the servant who was negligent or the company.

"It is true that, as the statute then stood, the changes made by the constitution amounted, as we see it, to but two things: It provided for a survival of the action, regardless of the fact whether decedent left a widow or child, and also provided for a recovery by a servant against his master for the ordinary negligence of a superior servant; whereas in the first there was no survival of the action without a widow or child, and in the second the negligence of the superior servant must have been gross. But, to be plain that this is the law as intended by the first legislature that assembled after the adoption of the constitution, and which contained many members of the convention, section 6 of the Kentucky statutes was enacted. It provides: 'Whenever the death of a person shall result from an injury inflicted by negligence or wrongful act, then in every such case damages may be recovered for such death from the person or persons, company or companies, corporation or corporations, their agents or servants, causing the

same, and when the act is willful or the negligence gross, punitive damages may be recovered, and the action to recover such damages shall be prosecuted by the personal representative of the deceased.'

"This statute clearly provides that where death is caused by negligence or wrongful act the cause of action survives; where the negligence is ordinary, compensatory damages may be recovered; where the negligence is gross, or the act willful, punitive damages may be recovered; that such action may be maintained against the immediate person guilty of the wrongful act or of the negligence, as well as against any person, company, or corporation represented by such person inflicting the injury. It is insisted in the case at bar that, under the constitution and the above statute, appellant has shown a right to recover. If this action was against the engineer whose alleged negligence caused the injury, counsel would be correct; but as to appellee company such is not the law, for the reason that, as between the defendant and the engineer, the engineer did not represent the company. If it be conceded that the engineer was the equal in service with decedent, then as to decedent the engineer could not represent the common principal. The fact that decedent at the time was performing the duties of brakeman did not change his character or position as conductor. Although the brakeman, if injured under the same circumstances, might have recovered of appellee, yet decedent can not, because as to him there was no agent of the company guilty, or charged to be guilty, of negligence."

[From B. L. No. 29, July, 1900.]

QUINN v. NEW YORK, NEW HAVEN AND HARTFORD RAILROAD CO., 55 North-eastern Reporter, page 891.—In a suit brought by Daniel Quinn against the above-named railroad company to recover damages for personal injuries a ruling in favor of the plaintiff, Quinn, was made in the superior court of Suffolk County, Mass., and upon this ruling the case was submitted to the supreme court of the State, judgment to be entered for the plaintiff if said court decided said ruling to be correct, and for the defendant if it did not sustain the ruling. The decision of the supreme court was rendered January 4, 1900, reversing the ruling, and judgment was accordingly entered for the defendant.

The opinion of the court was delivered by Chief Justice Holmes, and the syllabus of the same reads as follows:

"1. Plaintiff, while in defendant's employ as brakeman, was sitting on top of a fruit car when his head struck the cornice of a roof over a station platform. He knew that the car was larger than the ordinary cars; that this roof was not very far from the cars; that there was danger from it; and that he was then approaching it. In his application for employment he undertook, as soon as possible, to make a careful examination of all things near to the tracks, so that he might understand the dangers attending them. Held, that plaintiff had assumed the risk of the injury in question.

"2. An application for employment, by which the servant undertook to make a careful examination of all things near the tracks, so that he might understand the dangers attending them, is not contrary to Pub. St., c. 74, par. 3, which provides that no person or corporation can, by special contract with their employees, become exempt from its liabilities to them for the injuries suffered by them in their employment which result from the employer's own negligence, or that of any other person in its employ.

"3. It is not necessary to maintain a guard at a cornice of a roof over a station platform which is 1 foot 5 inches from the nearest line of the outside rail, since Pub. St., c. 112, par. 160, requires such guard only where some portion of such structure 'crosses' the railroad."

### III.—DECISIONS INTERPRETING AND DEFINING THE VICE-PRINCIPAL RULE.

[Abstract from report in B. L. No. 3, March, 1896.]

HATTIE FROST v. OREGON SHORT LINE AND UTAH NORTHERN RAILWAY COMPANY, to recover damages for the death of her husband, James W. Frost, an engineer, killed in a collision in Montana. The plaintiff recovered a verdict, and the railway company moved for a new trial, based on the refusal of the court to instruct the jury to bring in a verdict for the defendant because Frost's death was due to the negligence of a fellow-servant. The court had actually instructed the jury to the effect that the employee through whose negligence the collision

occurred was the representative of the company, and his acts and negligence were the acts and negligence of the company. The United States circuit court of Montana, South Dakota, denied the motion for a new trial on September 24, 1895 (69 Federal Reporter, page 936). The collision was due to the failure of the telegraph operator to give proper notice, as directed, of a change of time-table, and the court decided that the duty of establishing a time-table, giving proper notice of the same, and of any changes in the same is a duty of the master or principal which he can not delegate to another without being responsible for his negligence; and that the telegraph operator, though a fellow-servant, "must be considered as representing the company in the duty assigned him of giving notice of the temporary change of the time-table or in transmitting the notice, intrusted to him to deliver to the conductor of tram No. 5, of the change in the time-table. In doing this duty he was not a fellow-servant of those operating the road, but a personal representative of the company, for whose negligence the company was responsible."

[FROM B. L. No. 7, NOVEMBER, 1896.]

TEXAS CENTRAL RAILWAY CO. *v.* FRAZIER, 34 Southwestern Reporter, page 664.—Suit was brought in the district court of Hamilton County, Tex., by Etta Frazier, widow of J. W. Frazier, for herself and minor child, Freddie Frazier, against the Texas Central Railway Company, to recover damages for the death of her husband. From a judgment in her favor the railway company appealed the case to the court of civil appeals of the State, which rendered its decision March 4, 1896, and affirmed the judgment of the lower court. The opinion of said court was delivered by Judge Key, and the following, containing a statement of the facts in the case, is quoted therefrom:

"On the 15th of April, 1893, a freight train was wrecked on appellant's road near the town of Aquila, in Hill County, Tex., one result of which was the death of appellee's husband, J. W. Frazier, who was employed and serving as a brakeman on said train.

"That appellee was the wife of J. W. Frazier, that the minor, Freddie Frazier, was their only child; that the wreck occurred at the time and place alleged, and that J. W. Frazier was a brakeman on the train and received injuries in the wreck which caused his death in a few hours thereafter were clearly shown, and these facts are not disputed. But appellant's contention is that the testimony fails to show the alleged negligence of the engineer, and fails to show that said engineer, if negligent, was other than a fellow-servant of J. W. Frazier, for whose negligence appellant would not be responsible. It is also contended that the death of Frazier resulted from one of the ordinary risks of the service in which he was engaged, and, therefore, that appellant is not liable.

"As to the question of negligence on the part of the engineer, it may be that, if we were trying the case as jurors, we should reach a different conclusion, and return a different verdict; but, after a careful consideration of the statement of the facts, we can not say that the verdict is without evidence to support it. By the verdict under consideration, 12 men, presumably disinterested and honest, have decided that on the occasion in question the engineer did not exercise all the care that a person of ordinary prudence would have exercised, and that decision is not so clearly unsupported by testimony as to justify us in setting it aside. The act approved March 10, 1891, defining who are and who are not fellow-servants, declares 'that all persons engaged in the service of any railway corporations, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to direct any other employee, are vice-principals of such corporation, and not fellow-servants with such employee' (Laws 23d Leg., p. 25.) The evidence in this case shows that Neal, the engineer, had authority from appellant to direct the deceased, who was head brakeman, to put on the brake, and that it was the duty of the deceased to obey such direction. This made the engineer a vice-principal under the statute above cited, and the doctrine of fellow-servants does not apply.

"As to the question of Frazier's assumption of risk, it is sufficient to say that, while it is true that he assumed the risks ordinarily incident to his employment as brakeman, such assumption would not shield appellant from injuries resulting from its negligence; and, under the court's charge, the jury were not authorized to find for the plaintiff unless they found that the engineer was guilty of negligence in the respect charged, and that he was appellant's vice-principal."

[From B. L. No. 12, September, 1897.]

**GOWEN v. BUSH**, 76 Federal Reporter, page 349.—Action was brought by William N. Bush against Francis Gowen, sole receiver of the Choctaw Coal and Railway Company, in the United States court for the Indian Territory to recover damages for personal injuries sustained by reason of an explosion in a coal mine located at Hartshorne, in the Indian Territory, which was operated by Gowen in his capacity as receiver. Judgment was rendered for Bush, and the defendant appealed the case to the United States circuit court of appeals for the eighth circuit, which court rendered its decision October 5, 1896, and affirmed the judgment of the lower court.

The opinion of the circuit court of appeals was delivered by Circuit Judge Thayer, and the following is quoted therefrom:

"It is assigned as error, *inter alia*, that the trial court refused to give two instructions which were asked by the receiver, which instructions were to this effect: That 2 of the receiver's employees, to wit, John Murphy and James Scarratt, were fellow-servants of the plaintiff; and if the explosion was occasioned by the negligence of either of these men in failing to discover the presence of gas in portions of the mine other than the place where plaintiff was at work, then the defendant was not liable to the plaintiff for such neglect on the part of these men. A sufficient reason why neither of these instructions should have been given in the form in which they were asked is found in the fact that, in so far as the duty was devolved upon these men of going through the mine from time to time and inspecting it, and seeing whether it was free from gas, they were discharging a personal duty of the master which he owed to all the miners who were at work in the mine, and, while discharging such personal duty of the master, these men were not fellow-servants of the plaintiff, no matter what relation they may have occupied toward him when they were engaged in the performance of other and different duties. An obligation rests upon the master to exercise ordinary care in providing a reasonably safe place for the servant to work, and also to use ordinary diligence in keeping it thereafter in a reasonably safe condition. This is a personal duty of the master, which he can not devolve upon another in such a way as to relieve himself from liability in case the duty is not performed or is discharged in a negligent manner.

"It results from what has been said that we find no material error in the proceedings of the trial court, and the judgment of that court is accordingly affirmed."

[From B. L. No. 18, September, 1898.]

**WALKER ET AL. v. GILLETT**, 52 Pacific Reporter, page 442.—Action was brought in the district court of Johnson County, Kans., by Fred E. Gillett against Aldace F. Walker and another, sole receivers of the Atchison, Topeka and Santa Fe Railroad Company, to recover damages for injuries received while employed as a brakeman on said railroad. Judgment was rendered for the plaintiff, Gillett, and the defendants carried the case on writ of error to the supreme court of the State, which rendered its decision March 5, 1898, and affirmed the judgment of the lower court. The plaintiff's petition stated that the plaintiff was a brakeman in the employ of the defendants on a freight train under a conductor named Deitrick, who had full charge and control of the train, and that, owing to the negligence of said conductor, he received an injury resulting in the amputation of his left leg above the knee and the crippling of his right foot. The defendant's answer stated, among other things, that the injury happened in the Territory of Oklahoma, where the common law was in full force, and that the negligence, if any, was that of a fellow-servant (the conductor), for which, under the laws of Oklahoma, the defendants were not liable. Upon this point the opinion of the supreme court, which was delivered by Judge Allen, reads as follows:

"The question most discussed is whether the conductor and the plaintiff were fellow-servants within the meaning of the common-law rule obtaining in Oklahoma, which denies the plaintiff a right of recovery for an injury resulting from the negligence of a fellow-servant. Counsel for the plaintiffs in error [the receivers] contend that the test as to who are fellow-servants is merely whether they are engaged in the same line of service for the same master; that the only difference in the employment of the conductor and the plaintiff was that the scope of that of the former was greater than that of the latter, but that the master rests under no greater duty to properly perform the duties of the conductor than those of the brakeman. It must be conceded that the courts have indulged in much refinement of reasoning on the question of who are fellow-servants, and that the grounds on which many decisions have been based on either side of the question are not altogether satisfactory. The precise question in this case is whether the

master is liable to a brakeman for injuries occasioned by the negligence of the conductor of the train on which he was employed, where the conductor had full charge of the movements of the train and the brakeman was acting under his orders. In the case of a railway corporation there is no personal master. The stockholders and bondholders have the property interests, but no direct management of the property. Their interests are looked after by a board of directors, which, in turn, employs general officers of greater or less authority, who have the direct and personal supervision of the operation of the property. Where the general power to manage and command is given to one and the duty of the others is merely to execute and obey, he who directs stands in the place of the principal, and the principal must respond to those under him for his misconduct. This must be so, else it is impossible to see how at common law a railroad corporation can ever be responsible to any of its employees for the misconduct of any officer occupying a superior station in the same line of service; for all are servants, and the master is only an intangible corporate entity.

"Where the injured employee and the one whose negligence occasions the injury are engaged in different branches of corporate service, it seems to be now quite generally held that the common-law rule exempting the master from liability does not apply. It may be that a mere matter of difference in the grade of service of the employees is not controlling, but, where one is under the direct and personal supervision and control of the other, it does control.

"Whoever has full and unrestricted authority to direct and command is a vice-principal, and for his negligence the master must respond. The conductor being the representative of the receivers in the management of the train, they must respond in damages for his negligence. The judgment is affirmed."

[From B. L. No. 12, September, 1897.]

PEIRCE v. VAN DUSEN, 78 Federal Reporter, page 693.—This action was brought in the United States circuit court for the western division of the northern district of Ohio by Edward Van Dusen against R. B. F. Perce, the receiver of the Toledo, St. Louis and Kansas City Railroad Company, to recover damages for an injury incurred by the plaintiff while in the employ of said receiver. The plaintiff claimed that he was so seriously injured while in the discharge of his duty as a yard brakeman in the employ of the receiver that he entirely lost the use of his right hand. He alleged that he was entirely without fault in the matter, and that his injury was caused by the carelessness and negligence of one Bartley, a conductor employed by the receiver, under whose control and direction he was placed at the time he received the injury. Judgment was rendered for the plaintiff, and the receiver appealed the case to the United States circuit court of appeals for the sixth circuit, which court rendered its decision February 2, 1897, and sustained the judgment of the court below.

The opinion of the circuit court of appeals was delivered by Mr. Justice Harlan, and the following, quoted therefrom, sufficiently shows the questions raised in the case and the reasons for the decision.

"The principal question before us is whether the statute of Ohio passed April 2, 1890 (Laws Ohio, 1890, p. 149), is applicable to cases against the receiver of a railroad corporation, especially one acting under the orders of a Federal court.

"The first section of the act provides that—

"It shall be unlawful for any railroad or railway corporation or company owning and operating, or operating, or that may hereafter own or operate a railroad in whole or in part in this State, to \* \* \*.

"The third section, which is the one whose scope and meaning is involved in this action, provides that—

"In all actions against the railroad company for personal injury to or death resulting from personal injury of any person while in the employ of such company, arising from the negligence of such company or any of its officers or employees, it shall be held, in addition to the liability now existing by law, that every person in the employ of such company, actually having power or authority to direct or control any other employee of such company, is not the fellow-servant, but superior, of such other employee. Also, that every person in the employ of such company, having charge or control of employees in any separate branch or department, shall be held to be the superior and not the fellow-servant of employees in any other branch or department who have no power to direct or control in the branch or department in which they are employed."

"At the trial below it was contended on behalf of the plaintiff that the conductor and switchmen or yard brakemen, even when engaged together, at the same time and place, in operating the same train of cars, were not to be deemed

fellow-servants within the rule exempting an employer from liability to one servant for an injury caused by the negligence of a fellow-servant. The circuit court, held by Judge Hammond, without determining this question as one of general law, decided that the case was governed by the third section of the above act of April 2, 1890, and consequently that Bartley, the conductor, having power to direct and control the work in which Van Dusen was engaged, was the superior, not the fellow-servant, of Van Dusen, and was therefore the representative of the receiver.

"The contention of the receiver is that that act by its terms applies only to corporations owning or operating railroads in whole or in part in Ohio by their own officers, and that it can not properly be construed as applying to receivers operating railroads under the orders of a court of chancery.

"If the reasoning of the Georgia and Texas courts be applied to the Ohio statute, it can not be held to embrace employees acting under the receiver of a railroad corporation. But in our judgment the statute is applicable to actions against receivers of railroad corporations. To hold otherwise would be to subordinate the reason of the law altogether to its letter. While the intention of the legislature must be ascertained from the words used to express it, the manifest reason and the obvious purpose of the law should not be sacrificed to a literal interpretation of such words. If the Ohio statute is construed as applicable only to actions for personal injuries brought directly against railroad corporations, the result would be that in an action brought in one of the courts of Ohio the employees of a railroad corporation would be accorded rights that would be denied in another action of like kind, perhaps in the same court, to employees of the receiver of a railroad corporation under exactly similar circumstances. Could such a result have been contemplated by the legislature of Ohio? We think not. The avowed object of the statute was the protection and relief of railroad employees. To that end it declared that in the actions mentioned in it every person employed by the railroad company and invested with power or authority to direct or control other employees, should be deemed the superior, not the fellow-servant, of those under his direction and control. The legal effect, as well as the object, of this declaration was, in the cases specified, to make the negligence of the superior the negligence of the company. No violence is done to the ordinary meaning of the words of the statute if it be held that the legislature had in mind actions against receivers of railroad corporations, as well as actions directly against such corporations. The appointment of a receiver of a railroad does not change the title to the property nor work a dissolution of the corporation. Although the creature of the court, and acting under its orders, the receiver, for most purposes, stands in the place of the corporation, exercising its general powers, asserting its rights, controlling its property, carrying out the objects for which it was created, discharging the public duties resting upon it, and representing the interests as well of those who own the railroad as of those who have claims against the corporation or its property. The corporation remains in existence notwithstanding a provisional receivership established by an order of court; and for the purpose of effectuating the will of the State, as manifested by the act of 1890, an action against the receiver arising out of his management of the property may be regarded as one against the corporation 'in the hands of' or 'in the possession of' the receiver.

"The Ohio statute is not applicable to railroad corporations of Ohio engaged in the domestic commerce of this State. It is equally applicable to railroad corporations doing business in Ohio, and engaged in commerce among the states, although the statute, in its operation, may affect in some degree a subject over which Congress can exert full power. The states may do many things affecting commerce with foreign nations and among the several states until Congress covers the subject by national legislation. Undoubtedly, the whole subject of the liability of interstate railroad companies for the negligence of those in their service may be covered by national legislation enacted by Congress under its power to regulate commerce among the states. But as Congress has not dealt with that subject, it was competent for Ohio to declare that an employee of any railroad corporation doing business here, including those engaged in commerce among the states, shall be deemed, in respect to his acts within this State, the superior, not the fellow-servant, of other employees placed under his control. If the effect of the Ohio statute be, as undoubtedly it is, to impose upon such corporations, in particular circumstances, a liability for injuries received by some of its employees which would not otherwise rest upon them according to the principles of general law, the fact does not release the Federal court from its obligation to enforce the enactments of the State. Of the validity of such State legislation, we entertain no doubt.

"But it is contended that the Ohio statute is repugnant to the provision of the constitution of Ohio, declaring that 'all laws of a general nature shall have uniform operation throughout the State.' (Article 2, § 26.) The argument made in support of this view by the learned counsel for the receiver may be thus summarized:

"That the act imposes a liability for damages for the negligence of fellow-servants only as against a railroad company operating a railroad within Ohio; that it confers a right of action only upon employees of such railroad companies; that no other employer is subject to the liability, and no other employee is given the right; that the act selects from the general class of employers railroad companies operating railroads, and imposes upon them a special burden; that the act is special class legislation, not uniform throughout the State, and applies to no person or company engaged in any other occupation employing servants, although the occupation be equally hazardous. Consequently, the act is special in its operation and effect, is confined to particular corporations engaged in a specific business, does not cover the whole subject of the relations of master and servant, and is not, therefore, of a general nature and of uniform operation throughout the State within the meaning of the constitution of Ohio.

"We think it clear that the Ohio statute is not obnoxious to the constitutional provision requiring all laws of a general nature to have a uniform operation throughout the State. As it applies to all railroad corporations operating railroads within the State, it is, within the meaning of the State constitution, general in its nature; and as it applies to all of a given class of railroad employees, it operates uniformly throughout the State.

"Having considered all the matters presented by the record which in our judgment require consideration, and perceiving no error of law in the record, the judgment is affirmed."

[From B. L., No. 13, November, 1897]

CULPEPPER v. INTERNATIONAL AND GREAT NORTHERN R. R. CO., 40 Southwestern Reporter, page 386.—This case was brought before the supreme court of Texas on writ of error from the court of civil appeals of the State.

The supreme court rendered its decision April 26, 1897, and the following, quoted from the opinion of said court, which was delivered by Chief Justice Gaines, shows the facts in the case and reasons for the decision:

"This suit was brought by the plaintiff in error (Alice Culpepper) for the benefit of herself and her minor children against defendant in error (The International and Great Northern Railroad Company) to recover damages for injuries resulting in the death of J. J. Culpepper, her husband and the father of the children. She recovered a judgment in the trial court, but upon appeal that judgment was reversed, and the cause remanded by the court of civil appeals. The latter court held that the trial judge should have instructed a verdict for the defendant. It was alleged in the petition for writ of error that the decision of the court of civil appeals practically settled the case, and, such appearing to be the fact, the writ was granted, and the cause is now before us for disposition.

"When the accident occurred, which resulted in the death of Culpepper, he was the engineer running a freight train of the defendant company, which was immediately followed by another train, known as the 'second section.' For the purpose of working on a hot box on the engine, he stopped it over a cattle guard in a deep cut, near a curve in the track, and, while so working under the engine, the train was struck by the rear section, and injuries thereby inflicted which resulted in his death. The ground upon which a recovery was sought was that the conductor of the front train was negligent in not putting out a brakeman to signal the rear section. The collision occurred on the 5th day of November, 1892, while the act of March 10, 1891, in relation to fellow-servants of railroad companies, was in force. That act was repealed by that of May 4, 1893 (Laws, 1893, p. 121), but the court of civil appeals correctly held, as we think, that the repeal did not affect the question of liability in this case. They, however, held also that the evidence indisputably showed that under the rule established by the former statute the conductor and engineer were fellow-servants; and it was upon this ground that they determined that a verdict for the defendant should have been directed. In the latter ruling, we think they were in error.

"So much of the act of 1891 as applies to the question under consideration reads as follows:

"SECTION 1. That all persons engaged in the service of any railway corporation, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to

direct any other employee in the performance of any duty of such employee, are vice-principals of such corporation, and not fellow-servants with such employee.

"SEC. 2. That all persons who are engaged in the common service of such railway corporations, and who, while so engaged, are working together at the same time and place to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-servants, are fellow-servants with each other: *Provided*, That nothing herein contained shall be so construed as to make employees of such corporation, in the service of such corporation, fellow-servants with such other of such corporation engaged in any other department of service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants."

"The question shows that under the rules of the defendant company the conductor had general superintendence of the movements of the train and command of all the employees engaged in its operation; but it also tended to show that when the safety of the train became involved the engineer was no longer subject to the absolute control of the conductor, but was empowered to act upon his own judgment. The contention seems to be that whenever a risk became involved, and the engineer saw proper to stop his train in order to avoid it, for the reason that he was not then subject to the control of the conductor, they became fellow-servants, and so remained as long as that state of affairs continued to exist. But, as we have previously intimated, we are of the opinion that this position can not be maintained. Merely because, by reason of the engineer's superior technical knowledge and skill in operating the machinery, it was not deemed advisable to empower the conductor to direct the action of the engineer in certain contingencies, it does not follow that the latter was not under the general superintendence and control of the former. The exception emphasizes the rule. The first section of the act quoted, in defining who are to be deemed vice-principals, uses the language, 'intrusted \* \* \* with the superintendence, control, or command over other persons,' etc. The second, in declaring who are to be considered fellow-servants, excepts those who are 'intrusted \* \* \* with any superintendence, control, and command,' etc.; and, in our opinion, makes it manifest that the extent of the control is not to govern in determining the question.

"The mere fact that upon the happening of some contingency the engineer may act independently of the conductor does not, for the occasion, change the general relation of subordination existing between them. The conductor still has the general control, subject, for the time, to the engineer's power to act upon his own judgment during the emergency. As soon as the danger is obviated, the power of the conductor again comes into play. To hold that, because the conductor may temporarily be deprived of the power to control his subordinate, the rule of the statute is not to apply, would be, in our opinion, to confine its operation within limits which the legislature did not intend to prescribe. We conclude that the court of civil appeals was in error in holding that the trial court erred in its charge to the jury upon the question whether or not the conductor and engineer were fellow-servants."

[From B. L. No. 16, May, 1898.]

BALTIMORE AND OHIO SOUTHWESTERN RAILWAY COMPANY v. LITTLE, 48 North-eastern Reporter, page 863.—This action was brought in the circuit court of Pike County, Ind., by Mary F. Little, administratrix, to recover damages for the death of one John F. Little, a locomotive engineer in the employ of the above-named railway company. The death of Little was caused by a collision with a freight train which had been placed upon a siding where it was standing when the collision occurred. The head brakeman of the freight train had unlocked the switch to let his train go upon the siding and had then left the switch open, so that the train of which Little was engineer ran onto the same siding with the freight train instead of passing by on the main track, as was intended. It was upon the negligence of this head brakeman that the administratrix based her claim. The decision of the district court was in her favor, and the railway company appealed the case to the supreme court of the State, which rendered its decision December 17, 1897, and reversed the decision of the lower court.

The opinion of the supreme court, which was delivered by Judge Hackney, reads in part as follows:

"The limits of our inquiries have been narrowed somewhat by the following concessions of counsel for the appellee (Mary F. Little): 'At the very threshold of our argument we feel called upon to concede, which we do frankly, that our

cause would be untenable, under our Indiana decisions, but for the "Employers' Liability Act," March 4, 1893, and 'we concede again that we must ground our claim for an affirmation of the judgment on subdivisions numbered 3 and 4 of section 1 of that act.' This concession, which is undoubtedly correct, would, in the absence of the provisions of the act mentioned, defeat the appellee's recovery upon the rule that the head brakeman, whose negligence caused the collision and the death of Little, was a fellow-servant of Little as to the act negligently omitted. It remains, therefore, to determine whether the paragraph of complaint in question stated a cause of action, freed, by the act mentioned, from the fellow-servant rule.

"The third and fourth subdivisions of section 1 of the act of March 4, 1893 (Acts 1893, p. 294; Rev. Stat. 1894, sec. 7083), are as follows, our figures separating them into specifications of exemption from the fellow-servant rule: (1) 'Third. Where such injury resulted from the act or omission of any person done or made in obedience to any rule, regulation, or by-law of such corporation (any railroad or other corporation except municipal), or' (2) 'in obedience to the particular instructions given by any person delegated with the authority of the corporation in that behalf.' (3) 'Fourth. Where such injury was caused by the negligence of any person, in the service of such corporation, who has charge of any signal, telegraph office, switch yard, shop, roundhouse, locomotive engine or train upon a railway, or' (4) 'where such injury was caused by the negligence of any person, coemployee, or fellow-servant engaged in the same common service, in any of the several departments of service of any such corporation, the said person, coemployee, or fellow-servant at the time acting in the place and performing the duty of the corporation in that behalf, and the person so injured, obeying or conforming to the order of some superior at the time of such injury, having authority to direct, but nothing contained herein shall be construed to abridge the liability of the corporation under existing law.'

"The gist of the case of action alleged, as we have seen, was in the omission of duty, which duty was required by rule of the appellant corporation. The complaint did not allege that the omission by the brakeman was in obedience to a rule. It is plain, therefore, that the case does not fall within the first of the above specifications of the act. The appellee's construction of this specification is that if any duty is enjoined by rule, etc., upon a servant, and the duty omitted or neglected, the corporation is liable for resulting injury. If this was the proper construction of the specification, there would be little requirement for other provisions of the act than those of the third subdivision, since it would strike down the fellow-servant rule in its entirety wherever the act or omission is in the line of duty. It would make the corporation liable for the act or omission of a servant, whether negligent or not, and whether the duty negligently performed or negligently omitted may have been enjoined by the general rules, etc., of the corporation or is in obedience to particular instructions from one 'delegated with authority in that behalf.' Such was not the intention of the legislature. On the contrary, we think that there can be no doubt that it was intended by the third subdivision to make corporations liable where the servant does an act or omits action in obedience to the command of the corporation given by rule, regulation, or by-law, or through any person delegated with authority from the corporation to make the command. This construction not only arises from the unambiguous language of the subdivision, but is supported by the general character of the act and the provisions of subdivision fourth.

"The fourth subdivision relates to the negligence of servants, and not, as with the third subdivision, to acts or omissions done or made by order of the company or someone in command. The specification which we have numbered 3 describes a class of servants for whose negligence corporations are made liable, and they are servants most of whom, if not all, have heretofore been held not to perform a duty which the master owed to other servants in the same general line of the common service, and therefore fellow-servants. In other words, this specification but enlarged the class of vice principals as it had before existed. Does the negligent omission at the foundation of the cause of action here pleaded appear from the pleading to have been by any of the vice principals so described? The only allegation of the complaint is that the omitted duty was by a brakeman, and we find that brakemen are not named in the law among the vice principals therein so described. But, in order to support the complaint, counsel for the appellee insist that the legislature did not intend to use the phrase 'switch yard,' but intended to separate the two words with a comma. With this change of punctuation, they would add to the number of vice principals one in 'charge of any \* \* \* switch,' and then, from the duty to open and close the switch when he admitted his train to the side track, argue that the brakeman was in 'charge' of the switch

at the time he neglected to close it. This position is supported by the insistence that there is not, in railroading parlance, any such term as 'switch yard,' and that the lexicographers recognize no such term. In the statute the word 'yard' is employed in connection with and as descriptive of railway service, and, as said in *Harley v. Railroad Co.* (57 Fed., 144), 'the court may know, from its general knowledge of the methods and appliances of railroad companies, \* \* \* "the yard" consists of side tracks upon either side of the main track, and adjacent to some principal station or depot grounds, where cars are placed for deposit, and where arriving trains are separated and departing trains made up. It is the place where such switching is done as is essential to the proper placing of the cars either for deposit or for departure.' 'Railroad yard' and 'switch yard,' we have no doubt, are synonymous, and the latter term was used in the act under consideration as descriptive of the former. Accepting our construction of the third specification, there is no place for the contention of appellee's learned counsel that the temporary use of the switch by the brakeman placed him in 'charge' of it, within the meaning of the act. Judgment reversed."

[From B. L. No. 17, July, 1898.]

ST. LOUIS, IRON MOUNTAIN AND SOUTHERN RAILWAY CO. v. RICKMAN, 15 South-western Reporter, page 56.—This case was heard in the circuit court of Woodruff County, Ark., having been brought by S. R. Rickman against the above-named railway company to recover damages for injuries received while in its employ. Judgment was rendered for Rickman, and the company appealed the case to the supreme court of the State, which rendered its decision March 19, 1898, and affirmed the judgment of the lower court.

All the facts in the case are stated in the opinion of the supreme court, which was delivered by Chief Justice Bunn, and from which the following is quoted:

"Plaintiff was a section hand under the control of one McDougal as foreman. On the 28th of January, 1895, some time about or just after midnight, it being a cold, snowy, and dark night, McDougal with plaintiff and 3 other section hands and a citizen, after quitting work for the day, left Russell station on a hand car to go to their station house at Bald Knob, a short distance south of Russell, on the railroad. While at Russell they could see the headlight of an engine at Bald Knob, and a train was due to pass up about that time. It was suggested by one of the hands that they had better wait until the coming train should pass, but the foreman said, 'No; that the engine whose light was then in view was standing at Bald Knob on a side track.' And so, boarding the hand car, they started for Bald Knob. It pretty soon became evident that the train from Bald Knob was approaching, and another of the hands suggested that they had better stop and take off the hand car at the next crossing, which they were about then to arrive at. The foreman said, 'No, we will go to the next crossing and then get off.' But, before they reached the next crossing, the coming train had approached so near that the foreman ordered them to slow up and get off and take the hand car off, or words to that effect. This was all done hurriedly. The foreman stood a little way from the hand car, directing the hands to take it off quick. One of them fell, and plaintiff took his place in the effort to lift the car off. At this juncture the approaching engine struck the hand car, knocking it off, and broke the leg of plaintiff, who did not let go of the car in time to save himself as the others did.

"Under recent statutes (Sand. & H. Dig., §§ 6218, 6249), a foreman of a section gang is not a fellow-servant of the men belonging to the gang under him, for the reason that they are under his control and direction in the performance of their duties. There is no doubt in this case but that the foreman, in operating the hand car and controlling its movements, was acting in a very imprudent and hazardous manner, and was guilty, therefore, of negligence. The plea that the plaintiff was guilty of contributory negligence—all the defense left—is not established by the evidence. What the defendant [plaintiff?] did was manifestly done in obedience to the order of the foreman to get the car off quick. Plaintiff had a right to presume that the foreman, who was in a situation to devote his whole attention to the approaching train and the efforts of his men to get the hand car off the track, could better determine than he what was best to be done under the circumstances. We do not think the danger was so apparently imminent but that he could reasonably rely upon the direction of the foreman. He did so, and was injured. He should not be charged with contributory negligence under the circumstances. The negligence of the foreman, acting for the company, did not consist so much in what he did at the place of the accident as in running the hand car into a situation in which nice chances must necessarily have to be taken in order to extricate himself and others from peril, and by which the injury occurred. The judgment is affirmed."

[From B. L. No. 19, November, 1898.]

LOUISVILLE, NEW ALBANY AND CHICAGO RAILWAY CO. v. HECK, 50 Northeastern Reporter, page 988.—This action was brought by Abraham V. Heck, administrator of one Aaron Heck, deceased, against the above-named railway company, to recover damages for injuries resulting in the death of said deceased, incurred while he was in the employ of said company. The evidence showed that Aaron Heck was the fireman of a pile driver carried about on one of the cars of a work train; that said train was run into by another, an extra freight, and he was so injured that he died, and that the cause of the accident was due to the negligence of a train dispatcher in sending orders to the trains and not complying with some of the rules of the company. After a trial in the circuit court of Carroll County, Ind., a judgment was rendered for the plaintiff and the defendant company appealed to the supreme court of the State, which rendered its decision June 17, 1898, and affirmed the judgment of the lower court.

The opinion of the supreme court was delivered by Judge McCabe, and the following, quoted therefrom, shows the most interesting part of the decision.

"The system of rules adopted by a master for the conduct of a complicated business, such as operating a railroad, and when brought to the knowledge of the employee, form a part of the contract of hiring, and become binding on both master and servant. The violation thereof, to the injury of the servant by the master, is as much an act of negligence as if the servant violates them. Here one of the appellant's own regulations wisely provided that 'when an order has been given to work between designated points, no other extra must be authorized to run over that part of the track without provision for passing the work train.' But an order was given by the appellant to the extra freight, in violation of this provision, to run over the working limits designated in the order to the work train, without any provision for passing the work train. But it may be insisted that the appellant did not know, at the time the order to the work train was given in the morning, that the necessity of sending out the extra freight in the afternoon would arise. If that be so, then another provision of appellant's regulations provided for such a contingency, as follows: 'When the movement of an extra train over the working limits can not be anticipated by these or other orders to the work train, an order must be given to such extra to protect itself against the work train in the following form: (c) Extra 76 will protect itself against work train extra 95 between Lyons and Paris.' But it is not claimed or pretended that this order was complied with. On the contrary, it clearly appears that both of these regulations were violated in sending out the extra freight. Another regulation applicable to the conditions shown to exist by the verdict requires that 'when an extra receives orders to run over working limits, it must be advised that the work train is within those limits by adding to example "a" the words: "(g) Engine 292 is working as an extra between Berne and Tumm." A train receiving this order must run expecting to find the work train within the limits named.' This regulation was left totally uncomplied with, and was violated by the appellant in sending out the extra freight. These several violations of its own rules, established by appellant presumably for the security and safety of its employees, as well as the protection of its own property, was negligence on appellant's part, and was a proximate cause of, and without which, the collision and death resulting therefrom would not have occurred.

"The question still remains whether the negligent act of the train dispatcher in sending out the extra freight with a wrong order, and without a proper order, was the act of the superintendent. If the attempt here was to hold the superintendent personally liable for the negligence of the train dispatcher, we should have a very different question. But that is not the case. It is sought to hold the master liable, because by its rules it made the train dispatcher's act the act and order of its superintendent or vice-principal. By those rules it gave such act all the force, vigor, and effect, as to its employees, as if the train dispatcher's act was actually the act of its superintendent. Under such circumstances it would hardly seem consistent for the master to turn around after such act brings fatal consequences and say to the same employees that 'the acts of the train dispatcher were not in fact the acts of the superintendent, though my rules said they were.' But assuming, as appellant's learned counsel do, that the train dispatcher's acts were not those of the division superintendent, it does not follow, as they contend, that the negligence of the train dispatcher was the negligence of a fellow-servant with the decedent, thereby defeating a recovery. As was said in *Railway Co. v. Snyder* (140 Ind., at p. 653; 39 N. E. 914), 'Where the duty is one owing by the master, and he intrusts it to the performance of a servant or agent, the negligence of such servant or agent is the negligence of the master. As the master is charged

with the duty of providing safe and suitable appliances, if he intrusts such duty to an employee such employee becomes a vice-principal, and his negligence in such matter is the negligence of the master. The rule which absolves the master from liability on account of the negligence of a fellow-servant has no application.'

"If there are any duties devolving upon a railroad employee, servant, or agent, from the president down, more sacredly and imperatively due from employer to employees than others, we can think of none more imperative or more sacred than the duty to so order the running of trains in a complicated system of freight and passenger transportation both ways over a single-track railroad, as was the case here, with numerous extra trains, as that collisions between opposing trains, entailing such fearful loss of life and limb and property, may be avoided. No duty that the company can owe to its servants can be higher or more imperative than this; and this was the duty and power that the appellant had delegated to its train dispatcher to do and perform in the name of its superintendent. Whether the failure to properly discharge this duty was the negligence of the train dispatcher or superintendent can make no difference, because in either case it was a duty the master owed, and hence the failure and neglect was the master's failure and neglect, to the injury of its servant.

"We are safe in saying that the overwhelming weight of judicial opinion is that a train dispatcher, charged with the duties and clothed with the powers that the one now in question was, is not a fellow-servant with trainmen in the employ of the railroad company, but is a vice-principal, for whose negligence the company is liable. And that being in harmony with principles of law long established in this court, we are of opinion that the train dispatcher in this case being charged with the performance of duties the master owed to its other servants—its trainmen—he was not a fellow-servant with them, but acted for and in the place of the appellant company, and was a vice-principal. The judgment is affirmed."

[From B. L. No. 25, November, 1899.]

LOUISVILLE, NEW ALBANY AND CHICAGO RAILWAY CO. v. WAGNER, 53 North-eastern Reporter, page 927.—Action was brought by George Wagner against the above-named railway company to recover damages for personal injuries. In the circuit court of Clark County, Ind., a judgment was rendered in his favor, and the defendant company appealed the case to the supreme court of the State, which rendered its decision May 23, 1899, and sustained the judgment of the lower court.

The facts in the case are clearly set out in the opinion of the supreme court, which was delivered by Judge Hadley, and the following is quoted therefrom.

"The special verdict of the jury discloses the following facts: One Cunningham was the duly constituted foreman of a gang of 10 or 12 men, common laborers, of whom the appellee was one, all, including Cunningham, employees of appellant, and engaged in loading car trucks—composed of 4 wheels, axles, and gearing, and weighing about 2,500 pounds—upon a flat car for transportation. By the method pursued, which was the usual and ordinary way, the trucks were placed upon the rails occupied by the flat car to be loaded, about 50 feet distant. The 2 wooden skids, 15 feet long and of suitable to the purpose, were arranged by placing ends on top of the flat car and the other ends upon the rails toward the trucks. The 10 or 12 men, including appellee, were all subject to the orders of Cunningham, and were bound to conform and did conform to his orders. Ordinarily the men being placed about the truck—some to the sides and 3 to the rear, 2 outside and 1 between the skids—by their united effort, under the orders of Cunningham, would push the trucks along rapidly and, by the momentum attained, would be able to carry the truck halfway up the skids before stopping, and when a stop was made Cunningham, in addition to giving orders, would chock the trucks with a piece of timber. From the first stop to the top of the car movement was made by short stages. On the occasion of appellee's injury it had been raining and the skids were slightly wet. The men were directed to their places about the truck by Cunningham, appellee taking his place in the rear, between the skids, in conformity to Cunningham's order. The truck was put in motion and forced more than two-thirds of the way up the skids, where it stopped and began slipping back; whereupon, while appellee was exerting his strength in pushing at the truck, and without any notice of warning to appellee, Cunningham ordered the men to 'get out of the way and let her go.' The other men obeyed the order immediately, and the truck at once rushed back and down the skids, striking appellee in the breast, precipitating him backward to the track, his arm falling across the skid, where it was run over by the truck and crushed. Appellee had no warning or knowledge that said order would be given by Cunningham, and could not escape from between the skids or from the descending truck after it was given. The

other men could have held the truck until appellee could have escaped from between the skids if they had been requested or ordered by Cunningham so to do. Appellee and the said other men engaged with him in attempting to load said truck were at the time and place of appellee's injury bound to conform and were conforming to the orders of Cunningham in all things respecting the loading and letting go of said truck. Appellee was without fault. Appellant's demurrer to the complaint was overruled; also its motion for venire de novo, for judgment in its favor on the special verdict, and for a new trial. Error is assigned upon each ruling of the court, but the special verdict fully supports the averments of the complaint, and the only proposition discussed relates to the plaintiff's right to recover under the averments of his complaint and the verdict returned in support thereof.

"The discussion centers around the second subdivision of section 1, page 294, acts 1893 (see 7083, Burns's Rev. Stat., 1894; see 5206s, Horner's Rev. Stat., 1897), commonly known as the 'employers' liability act,' which is in these words: 'First. That every railroad or other corporation, except municipal, operating in this State, shall be liable in damages for personal injury suffered by an employee while in its service, the employee so injured being in the exercise of due care and diligence, in the following cases: \* \* \* Second. Where such injury resulted from the negligence of any person in the service of such corporation, to whose orders or direction the injured employee at the time of the injury was bound to conform and did conform.'

"The question we have here is not to be controlled by the general doctrine of fellow-servants or of assumed risks; hence the case cited by appellant upon these questions can not be accepted as authorities in the case at bar. The statute above set out is clear and free from ambiguity. We can not interpret it. We may only read it. The statute places the case upon a principle different from that in support of the covenant's rule and the assumption of the risk. The test here is three-fold: (1) Was the offending servant clothed by the employer with authority to give orders to the injured servant that the latter was bound to obey? (2) Did the injury result to the latter from the negligence of the former while conforming to an order of the former that the injured servant was at the time bound to obey? (3) Was the injured party at the time of injury in the exercise of due care and diligence? If these three things concur, appellee exhibits a good cause of action.

"These averments (of the complaint) are all established by the special findings of the jury. And the jury also finds that the other men might and would have held the truck long enough for the plaintiff to have safely escaped if they had been requested or ordered by Cunningham to do so.

"In this case the plaintiff was in a dangerous place in obedience to the orders of Cunningham, whom he was at the time bound to obey, and, without giving the plaintiff warning or a chance to escape, as he might have and ought to have done, Cunningham ordered the men to loose the truck. The men instantly obeyed, as they were bound to do, and thus precipitated the truck upon the plaintiff, crushing his arm. The order to loose the truck was the proximate cause of plaintiff's injury, and it was both directing the plaintiff into a dangerous situation, that he was thus bound to enter, and then ordering the truck turned loose upon him without warning, that constitutes the actionable wrong. The facts found bring this case within the spirit and letter of the statute. We find no error in the record. Judgment affirmed."

[From B. L. No. 27, March, 1900]

GALVESTON, HOUSTON AND SAN ANTONIO RAILWAY COMPANY v. ROBINETT, 54 Southwestern Reporter, page 263.—Action was brought in the district court of Bexar County, Tex., by D. C. Robinett against the above-named railroad company to recover damages for injuries incurred by him while in the employ of said company as a brakeman. He was injured in a collision of the train he was working on with another, through the negligence either of the superintendent of the road in issuing orders to the trains or of those immediately in charge of the trains. Besides showing the above, the testimony also showed that the plaintiff, Robinett, was not guilty of any negligence proximately contributing to his injury.

A judgment was rendered in his favor and the defendant company appealed to the court of civil appeals of the State, which rendered its decision November 29, 1899, and affirmed the judgment of the lower court. Judge Neill, in delivering the opinion of the court, spoke in part as follows:

"But, apart from the question of orders, the undisputed evidence shows that a vice principal of plaintiff caused the collision. Robinett was the brakeman, having no control over the train, and knowing nothing about the orders which controlled it. The conductor had absolute control over him, and ordered the train

out. It could make no difference, so far as Robinett was concerned, whether the collision was brought about by improper orders from the superintendent or by the negligence of those in immediate charge of the trains. None of these parties were his fellow-servants, and the company was liable to him for the negligence of any or all of them."

[From B. L. No. 27, March, 1900.]

NEW ENGLAND RAILROAD CO. *v.* CONROY, 20 Supreme Court Reporter, page 85.—This was an action against the above-named railroad corporation brought by one Conroy, a brakeman in its employ, to recover damages for personal injuries caused by the negligence of the conductor of one of its trains. It was brought before the Supreme Court of the United States upon a certificate from the United States circuit court of appeals for the first circuit for answer to questions as to whether a conductor was (1) a fellow-servant of a brakeman, or (2) whether he was a vice principal, for whose negligence his employer is responsible.

The decision of the Supreme Court was rendered December 4, 1899, to the effect that the conductor and brakeman aforesaid were fellow-servants. In the opinion of the Supreme Court, Mr. Justice Shiras, who delivered the same, laid down the common-law rule of fellow-servants or coemployees as interpreted by the court, and the following is quoted therefrom:

"There is a general rule of law, established by a great preponderance of judicial authority in the English and in the State and Federal Courts, that one who enters the service of another takes upon himself the ordinary risks of the negligent acts of his fellow-servants in the course of the employment. But there have been conflicting views expressed in the application of this rule in cases where the employer is a railroad company or other large organization, employing a number of servants engaged in distinct and separate departments of service; and our present inquiry is whether the relation between the conductor and the brakeman of a freight train is that of fellow-servants, within the rule, or whether the conductor is to be deemed a vice principal, representing the railroad company in such a sense that his negligence is that of the company, the common employer.

"Unless we are constrained to accept and follow the decision of this court in the case of *Chicago, M. and St. P. R. Co. v. Ross* (112 U. S., 377; 28 L. Ed., 787; 5 Sup. Ct. Rep., 184), we have no hesitation in holding, both upon principle and authority, that the employer is not liable for an injury to one employee occasioned by the negligence of another engaged in the same general undertaking; that it is not necessary that the servants should be engaged in the same operation or particular work; that it is enough to bring the case within the general rule of exemption if they are in the employment of the same master, engaged in the same common enterprise, both employed to perform duties tending to accomplish the same general purposes, or, in other words, if the services of each in his particular sphere or department are directed to the accomplishment of the same general end; and that, accordingly, in the present case, upon the facts stated, the conductor and the injured brakeman are to be considered fellow-servants within the rule."

At this point the court cited and quoted from several of the cases in which the above principles were enunciated, and then continued in the following language:

"Without following further the history of this subject in the courts of the several states, we may state that, generally, the doctrine there upheld is that of the cases herein previously cited, except in the courts of the States of Ohio, Kentucky, and perhaps others, in which the rule seems to obtain that while the master is not liable to his servant for any injury committed by a servant of equal degree in the same sphere of employment, unless some negligence is fixed on the master personally, yet that he is liable for the gross negligence of a servant superior in rank to the person injured, and is also liable for the ordinary negligence of a servant not engaged in the same department of service.

"Leaving the decisions of the State courts and coming to those of this court, we find the latter to be in substantial harmony with the current of authority in the State and English courts. From this statement the case of *Chicago, M. and St. P. R. Co. v. Ross* (112 U. S., 377; 28 L. Ed., 787; 5 Sup. Ct. Rep., 184) must perhaps be excepted, and to it we shall revert after an examination of our other cases."

The court here referred to and quoted from a number of leading cases decided by itself, and then continued as follows:

"Without attempting to deduce from these cases a rule applicable to all possible circumstances, we think that we are warranted by them in holding in the present case that, in the absence of evidence of special and unusual powers having been conferred upon the conductor of the freight train, he, the engineer, and the brake-

man must be deemed to have been fellow-servants within the meaning of the rule which exempts the railroad company, their common employer, from liability to one of them for injuries caused by the negligence of another. This conclusion is certainly sound unless we are constrained to hold otherwise by the decision in *Chicago, M. and St. P. R. Co. v. Ross* (112 U. S., 377; 28 L. Ed., 787; 5 Sup. Ct. Rep., 184), already referred to.

"In so far as the decision in the case of *Ross* is to be understood as laying it down, as a rule of law to govern in the trial of actions against railroad companies, that the conductor merely, from his position as such, is a vice principal, whose negligence is that of the company, it must be deemed to have been overruled, in effect if not in terms in the subsequent case of *Baltimore and Ohio R. Co. v. Baugh* (149 U. S., 368; 13 Sup. Ct. Rep., 911)."

At this point the court quoted quite largely from the opinion of the court in the *Baugh* case above, delivered by Mr. Justice Brown, and then continued as follows:

"Accordingly, the conclusion reached was that, although the party injured was a fireman, who was subject to the orders and control of the engineer, in the absence of any conductor, there was no liability on the company for negligence of the ad interim conductor.

"That this reasoning and conclusion were inconsistent with those in the *Ross* case is not only apparent on comparing them, but further appears in the dissenting opinion in the *Baugh* case of Mr. Justice Field, who was the author of the opinion in the case of *Ross*.

"To conclude, and not to subject ourselves to our own previous criticism of proceeding upon assumptions not founded on the evidence in the case, we shall content ourselves by saying that, upon the facts stated and certified to us by the judges of the circuit court of appeals, we can not, as a matter of law, based upon those facts and upon such common knowledge as we, as a court, can be supposed to possess, hold a conductor of a freight train to be a vice principal within any safe definition of that relation. Accordingly, we answer the first question put to us in the affirmative and the second question in the negative."

Mr. Justice Harlan delivered a dissenting opinion in language as follows.

"I concurred in the opinion and judgment of this court in *Chicago, M. and St. P. R. Co. v. Ross* (112 U. S., 377; 28 L. Ed., 787; 5 Sup. Ct. Rep., 184), and do not now perceive any sound reason why the principles announced in that case should not be sustained. In my judgment the conductor of a railroad train is the representative of the company in respect to its management; all the other employees on the train are his subordinates in matters involved in such management, and for injury received by any one of those subordinates during the management of the train, by reason of the negligence of the conductor, the railroad company should be held responsible. As the conductor commands the movements of the train, and has general control over the employees connected with its operation, the company represented by him ought to be held responsible for his negligence resulting in injury to other employees discharging their duties under his immediate orders. If in such case the conductor be not a vice principal, it is difficult to say who among the officers or agents of a corporation sued by one of its employees for personal injuries ought to be regarded as belonging to that class. Having these views, I am compelled to withhold my assent from the opinion and judgment in this case."

#### IV.—DECISIONS INTERPRETING SPECIFIED STATUTORY EXTENSION OF COMMON-LAW LIABILITY OR LIMITATION OF FELLOW-SERVANT RULE.

[Abstract from report in B. L. No. 3, March, 1896.]

**BUCKNER v. RICHMOND AND DANVILLE RAILROAD COMPANY ET AL.**, 18 Southern Reporter, page 449.—The supreme court of Mississippi decided, May 27, 1895, that section 193 of article 7 of the constitution of Mississippi, which says that "knowledge, by any employee injured, of the defective or unsafe character or condition of any machinery, ways, or appliances shall be no defense to an action for injury caused thereby, except as to conductors or engineers in charge of dangerous or unsafe cars or engines voluntarily operated by them;" that the effect of this is not to destroy the defense of contributory negligence, but to merely abrogate the previously existing rule that knowledge by the employee of the defective or unsafe character of the machinery or appliances shall not of itself bar a recovery. The constitution did not have the effect to free employees of railroad companies

from the exercise of ordinary caution and prudence; it merely made the fact of knowledge of defects no longer a defense in itself, but merely a fact or circumstance for consideration among others in order to determine the presence or absence of contributory negligence.

[Abstract of report in B. L. No. 2, January, 1896.]

**WILLIAM A. PERRY v. OLD COLONY RAILROAD COMPANY**, 41 *Northeastern Reporter*, page 289.—Suit for damages for injuries received while making repairs on a locomotive engine in a roundhouse. Suit was based upon the alleged negligence of the engineers claimed to have been in charge of the locomotive in blowing down the engine. The superior court of Suffolk County, Mass., gave Perry damages under chapter 270 of the acts of 1887 of Massachusetts, section 1 of which provides that where personal injury is caused to an employee who is himself in the exercise of due care and diligence at the time by reason of negligence of any person in the service of the employer who has the charge or control of any signal, switch, locomotive engine in train upon a railroad, the employee shall have the same right of compensation and remedies against the employer as if the employee had not been employee of nor in the service of the employer. The case was carried to the supreme judicial court of the State on exceptions taken by the railroad company and the exceptions were sustained by Judge Morton in a decision handed down September 14, 1895. The limitations of the Massachusetts statute are shown by this decision, which stated that an engine in a roundhouse was not upon a railroad track in the ordinary sense of that term and therefore the case was not within the purview of the statute.

[Abstract from report in B. L. No. 3, March, 1896.]

**CHARLES MITCHELL v. NORTHERN PACIFIC RAILROAD COMPANY**.—A suit to recover damages for injuries received in the performance of duty through the negligence of fellow-servants. United States circuit court, district of Minnesota, fifth division, decided, October 31, 1895, that under section 1, chapter 13, of the laws of 1887, of Minnesota, Mitchell was entitled to recover damages. Decision by Judge Nelson, reported in volume 70 of the *Federal Reporter*, page 15. The provisions of the statute of Minnesota, which modified the common-law rule, read as follows: "Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State." Mitchell was a car cleaner, injured in the performance of such duties inside a passenger coach on a sidetrack. Another coach, in charge of a switch crew composed of Mitchell's fellow-servants, collided with the coach in which Mitchell was working, thus causing the injury. The Minnesota statute had already been construed to apply not to all railway employees, but only to those exposed to and injured by the dangers peculiar to the use and operation of railroads. (See *Pearson v. Railroad Co.*, 49 N. W. 302; 47 Minn., 9, and cases cited.) Judge Nelson decided that Mitchell came within the terms of the Minnesota statute.

[From B. L. No. 7, November, 1896.]

**CRISWELL v. MONTANA CENT. RY. CO.**, 44 *Pacific Reporter*, page 525.—This case was originally brought in the district court of Cascade County, Mont., by Charles G. Criswell against the railroad company to recover damages for injuries received while in the company's employ. A verdict was rendered for the plaintiff and the defendant appealed the case to the supreme court of the State, which rendered its decision November 25, 1895, and affirmed the judgment of the lower court. Said decision was reported in 42 *Pacific Reporter*, page 767, and was published in part on page 433 of Bulletin No. 4 of the Department of Labor, issued in May, 1896. Subsequently the supreme court granted a rehearing in the case upon the question as to what effect section 11 of article 15 of the State constitution had upon the statute (section 697 of the Compiled Statutes of 1887) on which the former decision of the case hinged. Section 697 of the Compiled Statutes of 1887 reads as follows:

"That in every case the liability of the corporation to a servant or employee acting under the orders of his superior shall be the same in case of injury sustained by default or wrongful act of his superior, or to an employer not appointed or controlled by him, as if such servant or employee were a passenger."

The material part of section 11 of article 15 of the constitution of the State is as follows:

"And no company or corporation formed under the laws of any other country, state, or territory shall have, or be allowed to exercise, or enjoy, within this State any greater rights or privileges than those possessed or enjoyed by corporations of the same or similar character created under the laws of the State."

Upon this rehearing the supreme court rendered its decision April 13, 1896, reversing its former decision and declaring that section 697 was annulled by section 11 of article 15 of the constitution.

The opinion of said court was delivered by Judge Hunt, and in the course of the same he states, in effect, that section 697 of the Compiled Statutes is to be found first as section 20 of "An act to provide for the formation of railroad corporations in the Territory of Montana," passed over the governor's veto on May 7, 1873 (Laws Mont., 1873, ex. sess., p. 93 et seq.), and that an examination of the various sections of the act, taken in connection with its title above quoted, showed that the act applied to domestic railroad corporations only. The judge then continues, and the following is quoted therefrom:

"Holding, therefore, that section 697 applied to domestic railroad corporations only, what effect did the adoption of the constitution have upon that section? No comment is necessary to demonstrate that a rule of liability by which a domestic railroad company may suffer heavily for negligence of an employee, where another, but foreign, railroad corporation can not be made liable at all for like negligence, is the imposition of a burden upon the former and not upon the latter. Whether the legislature of the State may impose such different burdens is immaterial to the question under consideration. Without deciding that question, it may be here assumed they can. Still, our examination will not go beyond the point of ascertaining whether the constitution by section 11, article 15, *supra*, has annulled section 697, or whether it has extended it so that it has become applicable to all railroad companies, foreign and domestic.

"The learned counsel for the respondent argues that section 11 is self-executing. We agree with him in that contention, but not to the extent he would apply the doctrine of self-execution. The prohibition lays down a principle of protection to domestic corporations that at once, upon the adoption of the constitution and the admission of the State, became a sufficient rule by means of which the rights and privileges possessed by domestic companies were and are protected against legislative or other discriminations extending the possession or enjoyment of rights or privileges to foreign corporations greater than those already possessed or those that may be attempted to be granted by any future action. To this extent the provision was completely self-executing, and no legislation was required to give the prohibition full force and operation. (Cooley, Const. Lim., p. 99.)

"But we can not assent to respondent's position that the object of the constitutional provision was to establish uniformity with respect to the two classes of corporations by making laws that were applicable only to the domestic class at the time of the adoption of the constitution extend to the foreign class, in order to make an equal liability for all, or that the clause does establish uniformity by so operating upon territorial laws. As said, the inhibition at once, by itself, prevented the discriminations; but there is no affirmative language and no intent, by the words used, to extend to foreign companies the burdens, rights, and privileges imposed or granted by law to domestic corporations. In this respect legislation must be had to affect such corporations by force of law. By section 1 of the schedule of the constitution all laws enacted by the legislative assembly of the Territory and in force at the time the State was admitted into the Union, and not inconsistent with the constitution, should be and remain in full force as the laws of the State until altered or repealed, or until expired by their own limitation. This provision is likewise self-executing. By it rights were preserved. It operated of itself to keep in force a system of laws for the government of the State, unless such laws were inconsistent with the constitution. But as to any such repugnant statutes it operated as an effective repeal, for, when the constitution became the fundamental law, acts in conflict with it yielded, and when the question of a conflict is presented to the court, and the conflict clearly appears, the statute must be decided to be inoperative and void. (Cooley, Const. Lim., p. 58.) As the supreme court of Illinois has very recently said, by way of repetition of one of its earlier decisions:

"The understanding with all persons is that a law passed, either before or after the adoption of the constitution, which is repugnant to its provisions, must be held to be of no valid force, and precisely as if it had been repealed before the performance of the act." (Washington Home of Chicago v. City of Chicago, 157 Ill., 414; 41 N. E., 893.)

"From these views it follows that the prohibition clause against any discrimination against a domestic corporation is self-executing as a prohibition, but not as

an affirmative imposition upon or securement to foreign companies of the rights or privileges expressly only accorded by the State laws to domestic companies. It also follows that by section 697 a greater burden was put upon appellant than was placed upon a foreign company of a similar character. The statute, therefore, being inconsistent with the constitution, was annulled by the adoption of the constitution."

[Abstract from report in B. L. No. 1, May, 1896.]

**CRISWELL v. MONTANA CENTRAL RAILWAY COMPANY.** 42 Pacific Reporter, page 767.—The supreme court of Montana decided November 25, 1895, that a conductor and engineer of a train are the superiors of a brakeman, and that the railroad company is liable for injuries sustained by a brakeman when caused by the negligence of a conductor. The statutes of Montana, under which this decision was rendered, in section 697, page 817, of the Montana Compiled Statutes of 1887, provide—

"That in every case the liability of the corporation to a servant or employee acting under the orders of his superior shall be the same in case of injury sustained by default or wrongful act of his superior, or to an employee not appointed or controlled by him, as if such servant or employee were a passenger."

"The same provision is found in the Montana Codes and Statutes, Sanders Edition, 1895, Civil Code, section 905."

It was contended by the defendant's counsel that the railway corporation, under the common law, had performed its whole duty to the plaintiff as its employee when it had used ordinary and reasonable care in providing (1) safe machinery, (2) furnishing a safe place to work, and (3) competent fellow-servants to prosecute the common employment; and that the statute in question does not increase or change the defendant's liability at common law; that it does not change the common law in relation to fellow-servants, that it does not establish the superior-servant doctrine and enlarge the common-law liability of the defendant in any respect, and was not so intended by the legislature.

Chief Justice Pemberton, in delivering the opinion of the supreme court, quoted at considerable length from the opinion of the United States circuit court for the northern district of Iowa, in the case of *Ragsdale v. Railroad Company* (12 Fed., 383), and from the opinion of the United States circuit court of appeals, eighth circuit, in the case of *Railroad Company v. Mase* (63 Fed., 114), in both of which cases the interpretation of the statute in question was directly involved. In the course of the opinion in the *Ragsdale* case the court said, "Under this section the corporation is made liable to anyone of its employees who, without negligence on his part, is injured by the default or wrongful act of a superior, even though the latter has no control over the former;" and in the *Mase* case, "It goes without saying that the purpose of this statute was to extend the liability of railroad companies to their servants for the negligence of servants of a higher grade;" also, "The effect of the statute is to give a cause of action against the railroad company to every servant who is himself without fault, for the default or wrongful act of any superior servant, whether or not the latter appointed or exercised any control over the former before or at the time of the infliction of the injury."

After quoting from the cases above referred to, Chief Justice Pemberton said:

"We think from the interpretation given to the statute in question by the above authorities that it can not be doubted that the common-law rule contended for by the defendant was modified and changed thereby, and that such was the intention of that legislation. And it is no less plain that this statute establishes the principle that there is a difference in the grade of the employees engaged in a common employment, and gives a right of action to a servant, injured through the negligence of a superior employee or servant, against a master, when such injured servant is without fault or negligence on his part. In view of the extent to which the common-law rule has been carried, the enactment of such legislation is not surprising, nor are we prepared to reprobate the wisdom of the policy of establishing a legislative rule that relaxes the rigor of the common-law rule in such cases."

[Abstract from report in B. L. No. 1, May, 1896.]

**CARON v. BOSTON AND ALBANY RAILROAD COMPANY.**—The superior court of Hampden County, Mass., gave judgment for damages for death caused by negligence of a fellow-servant in charge of a train shifting over the track where Caron was at work when killed. The supreme court of the State sustained exceptions taken to this decision by the railroad company, November 26, 1895 (42 *Northeastern Reporter*, page 112). The action arose under chapter 270 of the acts of 1887 of Massachusetts, section 1 of which provides that—

"Where, after the passage of this act, personal injury is caused to an employee who is himself in the exercise of due care and diligence at the time, (1) by reason of any defect in the condition of the ways, works, or machinery connected with or used in the business of the employer, which arose from or had not been discovered or remedied, owing to the negligence of the employer or of any person in the service of the employer and intrusted by him with the duty of seeing that the ways, works, or machinery were in proper condition, or \* \* \* (3) by reason of the negligence of any person in the service of the employer who has the charge or control of any signal, switch, locomotive, engine, or train upon a railroad, the employee, or in case the injury results in death, the legal representative of such employee, shall have the same right of compensation and remedy against the employer as if the employee had not been an employee of nor in the service of the employer nor engaged in its work."

In this case death was caused by certain cars detached from an engine being shifted on a track where Caron was at work. The question arose as to whether these cars without a locomotive constituted a train, and also whether they were in charge of the brakeman who tried to stop them and was unsuccessful, or in charge and control of the conductor who was directing the shifting and was not guilty of negligence in his direction. A further question arose of whether this method of handling cars, without lights or signals or warning to persons on the track, was a careless one. The supreme court decided that the method adopted, even if it was a dangerous one, being the usual one, the plaintiff's intestate must be held to have taken the risk of it and that the train was in charge of the conductor ordering the switching, and there was no negligence on the part of a fellow-servant for which the State law gave relief.

[Abstract from report in B. L. No. 4, May, 1896.]

**SMITH v. THE CHICAGO, MILWAUKEE AND ST. PAUL RAILROAD COMPANY.**—The supreme court of Wisconsin decided, November 26, 1895, that under chapter 220 of the laws of 1893, of Wisconsin a railroad company is not liable for injuries to one of its car repairers, caused by a switchman negligently running a train into the stationary car in which the repairer was at work. The decision claimed that statutes in derogation of the common law must be strictly construed, and that the statute in question intended to give exemption from the common law rule only in cases where one was employed in the performance of duty while operating, running, riding upon, or switching passenger, freight, or other trains, engines, or cars. The plaintiff, not being engaged in this branch of railway service when injured, was held not to be entitled to the benefits of the statutory liability.

[Abstract from report in B. L. No. 4, May, 1896.]

**MIKKELSON v. WILLIAM H. TRUESDALE, RECEIVER MINNEAPOLIS AND ST. LOUIS RAILWAY COMPANY,** 65 Northwestern Reporter, page 260. Section 2701 of the General Statutes of 1891 of Minnesota, known as the "fellow-servant act," provides that—

"Every railroad corporation owning or operating a railroad in this State shall be liable for all damage sustained by an agent or servant thereof, by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State, and no contract, rule, or regulation between such corporation and any agent or servant shall impair or diminish such liability."

The supreme court of Minnesota decided, December 9, 1895, that Mikkelson, a wiper in the defendant's roundhouse, injured while assisting in coaling an engine, by its being negligently moved, as he claimed, by a coemployee, was injured by reason of exposure to the hazards peculiar to the operation of railroads. The decision also stated that a receiver comes within the provisions of the fellow-servant act, although the word "receiver" was not used in the statute.

[From B. L. No. 5, July, 1896.]

**LEIER v. MINNESOTA BELT LINE AND TRANSFER CO.,** 65 Northwestern Reporter, page 269.—In this case the allegations of the complaint of the plaintiff were to the effect that he had been employed in the defendant's stock yards, and that when a stock train arrived his duty was to step from a high platform up on top of the cars as they drew up opposite the platform and pull bundles of hay from the platform up on top of the cars; that the conductor of the train negligently ordered him to step from the platform up on the top of a passing car while it was

going at too great a speed to enable him to do so with safety, a fact which was unknown to him, and that, owing to the dangerous rate of speed of the car, he, while stepping upon it, was thrown to the ground and his arm run over by the wheels of a car.

From an order by the district court of Hennepin County, Minn., overruling the defendant's demurrer to Leier's complaint, appeal was taken to the supreme court of the State, which tribunal, on December 13, 1895, sustained the action of the district court, and decided that according to the complaint the plaintiff was injured by reason of exposure to hazards peculiar to the operations of railroads, and that the case was within the purview of section 2701 of the General Statutes of 1894 of Minnesota, making railroad companies liable to their servants for injuries caused by the negligence of their fellow-servants.

The opinion of the supreme court was delivered by Judge Mitchell, who, after summarizing the allegations of the complaint, said:

"We think the fair construction of these allegations is: First, that it was usual and customary for defendant's servants to do this work under the directions of the conductor, and, hence, that in giving such instructions the conductor was acting within the scope of his duty. Second, that the conductor knew, or, in the exercise of ordinary care, ought to have known, that the car was moving too fast for the plaintiff to step upon it without exposing himself to great danger of personal injury. If this was so, then the conductor was guilty of negligence in giving the order. It does not appear—certainly not conclusively—from the allegations of the complaint that defendant (plaintiff) was guilty of negligence in obeying the order. It must be remembered that contributory negligence is a matter of defense, and that a plaintiff is not required to negate it in his complaint. In doing the work which he was doing, in getting upon a moving car, plaintiff was exposed to an element of hazard or condition of danger which is peculiar to railroad business, and, as this element of danger caused or contributed to his injury, the statute (Gen. St., 1894, sec. 2701) applies, and the railway company would be liable if the injury was caused by the negligence of a fellow-servant."

[From B. L. No. 5, July 1896.]

CULVER v. ALABAMA R. R. CO., 18 Southern Reporter, page 827.—Section 2590 of the Code of Alabama provides that "when a personal injury is received by a servant or employee in the service or business of the master or employer, the master or employer is liable to answer in damages to such servant or employee as if he were a stranger, and not engaged in such service or employment, in the cases following:

"5. When such injury is caused by reason of the negligence of any person in the service of the master or employer, who has the charge or control of any signal, points, locomotive, engine, switch, car, or train upon a railway, or of any part of the track of a railway."

Under the above provision suit was brought against the Alabama Midland Railway Company by Levin L. Culver, administrator of Virgil Mowdy, deceased, to recover damages for injuries sustained by Mowdy, which resulted in his death, caused by the alleged negligence of an engineer in charge of a locomotive. Judgment was given by the circuit court of Dale County, Ala., for the railroad company; whereupon Culver appealed to the supreme court, which reversed the judgment of the circuit court and remanded the case, by decision rendered December 19, 1895.

In delivering the opinion of the supreme court, Judge Coleman said:

"The employer is liable for an injury inflicted upon an employee by the negligence of a coemployee when such negligence comes within the provisions of the employer's act (section 2590, Code of Alabama), and that without reference to the care and diligence used by the employer in the selection of his servants or employees. The employers' act in no wise relieves the employer from the duty of selecting with reasonable care his servant. The act imposes a further liability, and makes him responsible for injuries sustained by an employee in consequence of any neglect by the employer or his servants, specified in the act itself."

[From B. L. No. 8, January, 1897.]

BLOOMQUIST v. GREAT NORTHERN RY. CO., 67 Northwestern Reporter, page 804.—This was an action brought in the district court of Hennepin County, Minn., to recover damages for personal injuries suffered by the plaintiff while in the employment of the defendant, through the alleged negligence of a fellow servant. The plaintiff based his suit upon section 2701 of the General Statutes of 1894, which reads in part as follows:

"Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant thereof by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State, \* \* \*."

The defendant demurred to the plaintiff's complaint, and the district court issued an order sustaining said demurrer. From said order the plaintiff appealed to the supreme court of the State, which rendered its decision June 8, 1896, and reversed the order of the lower court. From the opinion of the supreme court, delivered by Judge Mitchell, the following, containing a statement of the facts in the case, is quoted.

"The question presented by the demurrer to the complaint was whether the facts alleged brought the case within the operation of general laws, 1887, chapter 13 (Gen. St. 1894, § 2701), making railway companies liable to their servants for damages caused by the negligence of a fellow servant. The allegations of the complaint were that plaintiff was employed by the defendant as one of a crew of section hands who were engaged in repairing the defendant's track; that while he with the rest of the crew were engaged in the performance of their duties, it became necessary for them to take up from the main track a heavy iron rail, in order to remove the old ties and replace them with new ones, and for that purpose it became necessary to lift and carry the rail, \* \* \* and in so doing it was necessary to use great and extraordinary haste, so as to accomplish the work of replacing the rail before the approach of a coming train, that while the rail was being thus moved and carried by the plaintiff and another section man, who were ordered by the section foreman to make haste, so that the track might be put in order so as to avert danger to a then approaching train, plaintiff's fellow-servant, who was engaged with him in carrying the rail, negligently and suddenly released his hold of the rail, and dropped the same, by reason whereof plaintiff suffered the injuries complained of.

"The language of the act is broad enough to include any injury sustained by any railway employee, in any capacity, through the negligence of any other employee of the railroad in the same or any other capacity.

"In order to sustain the law, we have, by judicial construction, limited its operation to those employees of railroads who are exposed to the peculiar dangers attending the operation of railroads, or what are, for brevity, called 'railroad dangers.' But, as the general language of the act has been thus limited for the sole purpose of sustaining its validity, we think it ought not to be limited further than is necessary for that purpose.

"We have held that the test is not whether the conditions are in some respects parallel to those to be found in some other kinds of business, or whether the appliances are, in some respects, similar to those used in some other kinds of business, but that if there is any substantial element of hazard or condition of danger which contributed to the injury, and which is peculiar to the railroad business, the statute applies.

"We think that under the allegations of the complaint it can be fairly said that the plaintiff's employment involved an element of hazard or condition of danger peculiar to the railroad business, and intimately connected with and growing out of the operation of the road, to wit, that he was engaged in repairing the track upon which trains were operated, and that, in view of that fact, the work had to be done with great and unusual haste, in order to avoid danger to trains that were or might be approaching. We therefore think that the complaint stated a cause of action, and that the demurrer ought to have been overruled. Order reversed."

[From B. L., No. 14, January, 1898.]

WRIGHT v. SOUTHERN RY. CO. ET AL., 80 Federal Reporter, page 260.—This action was brought in the United States circuit court for the western district of North Carolina by one Wright against the above-named railway company to recover damages for personal injuries incurred while in the employ of said company. The injuries he complained of were incurred some time prior to February 23, 1897, the date of the passage by the legislature of North Carolina of an act regarding the liability of railroad companies for injuries to their employees, which act reads as follows:

"SECTION 1. Any servant or employee of any railroad company operating in this State, who shall suffer injury to his person, or the personal representative of any such servant or employee who shall have suffered death in the course of his services or employment with said company by the negligence, carelessness, or incompetency of any other servant, employee, or agent of the company, or by any defect in the machinery, ways, or appliances of the company, shall be entitled to maintain an action against such company.

"SEC. 2. Any contract or agreement, expressed or implied, made by any employee of said company to waive the benefit of the aforesaid section shall be null and void.

"SEC. 3. This act shall be in force from and after its ratification."

The plaintiff, by his counsel, claimed that while his injury might have been caused by the negligence of a fellow-servant, which under the common law would have prevented him from recovering damages, yet this act changing the common law on that point should be construed to have a retroactive effect and should be held to apply and govern in his case. The United States circuit court rendered its decision April 30, 1897, and on this point it decided adversely to the plaintiff's contention.

In the opinion of said court, delivered by District Judge Dick, the following language was used in considering this point:

"The counsel of plaintiff, in their argument, called the attention of the court to the recent statute of this State changing and modifying the legal doctrines in regard to fellow-servants established in the Federal courts and some State courts by judicial decisions founded upon the general principles of the common law. They confidently insisted that, as such statute was manifestly remedial in its nature, and conformed in some degree to the law on the subject announced by the supreme court of this State, it should be construed to have a retroactive effect in this case, at least to the extent of carrying into application the principles of the common law as declared by the supreme court of the State as to the relations of fellow-servants.

"The statute may be expedient, just, and salutary in its objects and purposes, and it shows a manifest legislative intent to remedy what was regarded as existing evils arising from extra State judicial decisions; but, as the statute contains no express provision for retrospective operation, I must conclude to observe the general and sound rule for the construction of statutes, and give this State statute only prospective operation. I may well presume that, if the State legislature had intended to make this important statute retroactive, the purpose would have been clearly, directly, and positively expressed in the body of the statute. If the legislature, in express terms, had given this statute a retrospective operation, then questions of law as to its constitutionality would have been presented to the courts. I will not consider such questions further than to say that, in my opinion, a retrospective operation of the statute in this case would clearly and injuriously affect vested rights acquired by contract, and impose new liabilities which were not in existence and were not contemplated by the parties when they entered into the relation of master and servant for the operation of the railway. At the time this cause of action arose the nonresident corporation defendant was entitled by the laws of the United States to have its obligations, duties, and liabilities passed upon in a Federal court, and be determined by the principles of law declared and established by the Supreme Court of the United States."

[From B. L., No. 14, January, 1898.]

BOSTON AND MAINE R. R. CO. v. McDUFFEY ET AL., 79 Federal Reporter, page 931.—Action was brought in the United States circuit court for the district of Vermont by the widow and children of James B. McDuffey against the above-named railroad company for damages for the death of said McDuffey, who, while on his engine as a locomotive engineer in the employ of said company, was killed by collision with another train at Capleton, in the Dominion of Canada. A judgment was rendered for the plaintiffs, and the defendant company brought the case on a writ of error before the United States circuit court of appeals, second district, which rendered its decision April 8, 1897, and reversed the judgment of the lower court.

The points upon which the decision was made are of no particular interest, but in the course of the opinion, delivered by Circuit Judge Lacombe, one interesting point was decided in favor of the plaintiffs. The following, quoted from the opinion, shows the facts in the case and the point above referred to:

"The defendant, a Massachusetts corporation, operated a continuous line of railroad from White River Junction, in Vermont, to Sherbrooke, in the Province of Quebec. McDuffey was a citizen of Vermont, resident at Lyndonville, in that State, where he entered into the employment of defendant, at first as fireman, afterwards as engineer. For about three years he drove the engine on a freight train between points wholly in the State of Vermont. In July, 1892, he was, at his own request, employed to drive an engine drawing a passenger train between White River Junction, Lyndonville, and Sherbrooke. It was while thus employed that he met his death, on March 12, 1894. It was contended that defendant had failed to supply reasonably safe appliances, in that a water tank on the tender was

insecurely fastened, but the jury, to whom special questions were submitted, found against the plaintiffs on that issue. The jury further found that two of McDuffey's fellow-servants, viz. Robinson, the conductor of his tram, and Mower, the engineer of the colliding tram, were negligent, and that such negligence caused the catastrophe.

"The civil code of Lower Canada (article 1056) provides as follows:

"In all cases where the person injured by the commission of an offense, or a quasi offense, dies in consequence, without having obtained indemnity or satisfaction, his consort and his ascendant and descendant relations have a right, but only within a year after his death, to recover from the person who committed the offense, or quasi offense, \* \* \* all damages occasioned by such death."

"It is not disputed that Robinson and Mower were fellow-servants with McDuffey. Had this accident occurred in Vermont and McDuffey survived, the fact that the negligence which caused the collision was, as the jury has found, that of a fellow-servant, would have prevented recovery.

"The law of Canada was proved as a fact in the circuit court. Besides article 1056, already quoted, the following articles from the civil code were read.

"ART. 1053. Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect, or want of skill.

"ART. 1054. He is responsible not only for the damage caused by his own fault, but also for that caused by the fault of persons under his control, and by things under his care. \* \* \* Masters and employers are responsible for the damage caused by their servants and workmen in the performance of the work in which they are employed."

"The expert called for plaintiffs testified without contradiction that, as construed by the Canadian courts, these articles applied to corporations, and that, where an accident causing injury to a servant was the result of the negligence of a fellow-servant, the employer would nevertheless be liable in damages to the injured person, and, in the event of his death within the time prescribed, to the persons to whom article 1056 gave the right of recovery (wife, children, etc.)

"It is contended by plaintiff in error, however, that the law of Vermont is to be applied here, and that since it appears from the special verdict that the efficient cause of the accident was the negligence of a fellow-servant, plaintiffs can not recover. In other words, does the law of Canada or the law of Vermont determine the question of liability for the consequence of this accident?

"This is not an action to recover upon a contract, but for damages resulting from a tort committed elsewhere than in the State where the action is brought. The right of action accrued where the tort was committed, and it is to enforce such right of action that suit is brought. It is sufficient to refer to *Railroad Co. v. Babcock* (154 U. S., 190, 14 Sup. Ct., 978), citing, with approval, *Herreck v. Railroad Co.* (31 Minn., 11, 16 N. W., 413), as authority for the proposition that "in such cases the law of the place where the right was acquired or the liability was incurred will govern as to the right of action, while all that pertains merely to the remedy will be controlled by the law of the State where the action is brought. And we think the principle is the same whether the right of action be *ex contractu* or *ex delicto*."

"The question whether or not an injured servant shall have a right of action for damages against a negligent master, when such master's negligence has been committed through the instrumentality of another servant, is one which deals with the right of action itself, not with the remedy. In our opinion it makes no difference that the contract by which the relation of master and servant was established was made in Vermont. Conceding that it is to be assumed that, under such contract of employment, McDuffey assumed the risks incident to the negligence of his fellow-servants on so much of his run as lay within that State, where such negligence gives no right of recovery for resulting injuries or death, it does not follow that he agreed thereby to assume like risks when running his engine in Canada, where the statutes gave a right of recovery therefor."

[From B. L. No. 12, September, 1897.]

**CANON v. CHICAGO, MILWAUKEE AND ST. PAUL RY. CO.**, 70 Northwestern Reporter, page 755.—The plaintiff brought action against the above-named railroad company in the district court of Palo Alto County, Iowa, to recover damages for the death of her intestate, one Canon, caused, as alleged, by the negligence of said railroad company. Said Canon was a car inspector in the employ of the railroad company, and while between two cars inspecting the same he was killed as the result of other cars being kicked back upon the cars where he was employed, moving said cars 12 to 16 feet, throwing him down and running over him. After

the evidence had been heard in the district court the defendant company made a motion for a verdict in its favor, for the reason, among others, that the case did not come within the provisions of section 1307 of the Code of Iowa. The court sustained the motion, and a verdict was returned for the defendant, upon which judgment was entered. The plaintiff appealed the case to the supreme court of the State, which court rendered its decision April 10, 1897, holding that a car inspector required to go between and under cars is exposed to hazards peculiar to the operation of a railroad, within section 1307 of the Code, making railroad companies liable to their employees for the negligence of fellow-servants; and that recovery can be had for the death of an inspector killed by the negligent running of cars against the train under which he was working, and reversed the judgment of the district court.

The following is quoted from the opinion of the supreme court, which was delivered by Chief Justice Kinne:

"The controlling question in the case is whether the employment of plaintiff's intestate was such as to bring him within the provisions of Code, section 1307. That section provides that 'every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents, or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the willful wrongs, whether of commission or omission of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway, on or about which they shall be employed.' Counsel for appellee contend that, in view of the custom, as shown by the evidence in this case, the employment of plaintiff's intestate 'did not contemplate the hazards of moving cars or trains while he was engaged in the work of inspection,' and that, by permitting the cars to be taken from the train before he had finished inspecting the whole train, he thereby waived the safety which the custom and rules afforded, and thus placed himself within reach of hazards not contemplated by his employment, and therefore the protection of the statute is not available in his case. Stated in another way appellee's theory is that, under the custom of the company, cars were to be inspected when at rest and not moving, and, as his work was to be done under such conditions, he was not exposed to the dangers of moving cars.

"Clearly the duty of car inspector, which requires the employee to go under and between cars, exposes him to the hazards peculiar to the business of using and operating railroads. It matters not that it may be contemplated by the custom in force that cars shall remain absolutely at rest while such duty is being performed. He is, nevertheless, exposed to the perils and hazards which may result from a movement of the cars in violation of such custom. His injury in this case was caused by the operation of the road, by the movement of trains or cars thereon, and his work constantly exposed him to just such perils and dangers as are incident to the movement of cars. The claim that he, by permitting the yard master to take out the four cars, voluntarily went outside of his employment, and threw aside the protection that had been around him for his safety, is not well founded. The applicability of this section is not to be determined, as counsel seems to think, by the fact, if such it be, that the employment of Canon did not contemplate the hazards of moving trains or cars while he was engaged in his work. It is not a question of contemplation at all, but a question of whether in fact he was, while engaged in his work, exposed to the perils and hazards incident to the movement of cars or trains. That he was so exposed, no matter what the parties might have contemplated, is too plain to admit of argument. The court below erred in sustaining the motion to direct a verdict. Reversed."

[From B. L. No. 7, November, 1896.]

GULF, C. AND S. F. RY. CO. v. WARNER, 35 Southwestern Reporter, page 364.—This action was brought by Charles C. Warner against the Gulf, Colorado and Santa Fe Railway Company to recover damages for injuries received by the plaintiff while in the employ of said company. Judgment was given for the plaintiff in the lower court . . . and the defendant appealed to the court of civil appeals of Texas, and said court certified the case to the supreme court of the State, which rendered its decision April 27, 1896.

The opinion of the supreme court was delivered by Judge Denman, and contains a statement of the facts in the case and a clear and definite interpretation of the fellow-servants act of 1893 (chap. 91, acts of 1893), which repealed the fellow-servants act of 1891 (chap. 24, acts of 1891), and upon which the result of this action hinged.

Said opinion, practically in full, reads as follows:

"The court of civil appeals has certified to this court a question and explanatory statement, as follows:

"On the 7th day of October, 1893, appellee, an employee of appellant at that time, while engaged with his duties as switchman in the railroad yards of the appellant, in Cleburne, was injured by a car passing over and crushing his leg. The car that inflicted the injury was being pushed by a locomotive in charge of a switch engineer, who was an employee of appellant, and while switching was being done by a switch crew of which both appellee and the switch engineer were members. The switch crew consisted of a foreman, the engineer, the fireman, and switchmen. The foreman directed the switching, as it was his duty to do. The engineer had no authority or control over the switchmen. The switchmen were in the transportation department and the switch engineer in the mechanical department. The yard master employed and discharged the switchmen and the master mechanic employed and discharged the engineers. The duties of an engineer require skilled labor and the duties of a switchman do not.

"On motion: Was the switch engineer a fellow-servant of the switchman who was injured, under the provisions of the fellow-servants act of 1893?"

"The act referred to, as far as it affects the question certified, is as follows.

"AN ACT to define who are fellow-servants and who are not fellow-servants, and to prohibit contracts between employer and employees, based upon contingency of the injury or death of the employees, limiting the liability of the employer for damages.

"SECTION 1. *Be it enacted by the legislature of the State of Texas,* That all persons engaged in the service of any railroad corporation, foreign or domestic, doing business in this State, or in the service of a receiver, manager, or any person controlling or operating such corporation, who are intrusted by such corporation, receiver, or person in control thereof with the authority of superintendence, control, or command of other persons in the employment of such corporation, or receiver, manager, or person in control of such corporation, or with the authority to direct any other employee in the performance of the duty of such employee, are vice-principals of such corporation, receiver, manager, or person controlling the same, and are not fellow-servants of such employee.

"SEC. 2. That all persons who are engaged in the common service of such railroad corporation, receiver, manager, or person in control thereof, and who, while so employed, are in the same grade of employment and are working together at the same time and place, and to a common purpose, neither of such persons being intrusted by such corporation, receiver, manager, or person in control thereof with any superintendence or control over their fellow-employees, or with the authority to direct any other employee in the performance of any duty of such employee, are fellow-servants with each other: *Provided,* That nothing herein contained shall be so construed as to make employees of such corporation, receiver, manager, or person in control thereof fellow-servants with other employees engaged in any other department or service of such corporation, receiver, manager, or person in control thereof. Employees who do not come within the provisions of this section shall not be considered fellow-servants." (Gen. Laws, 1893, p. 120.)

"It will be observed that the caption of the act declares its purpose to be 'to define who are fellow-servants and who are not fellow-servants,' and that section 2 completely accomplishes such purpose by first defining who are fellow-servants, and then declaring that 'employees who do not come within the provisions of this section shall not be considered fellow-servants.' This section divides all employees into fellow-servants and nonfellow-servants, and gives the distinctive characteristics of the former, but not of the latter. The purpose of the statute was accomplished by limiting and definitely determining the employees who should thereafter be classed as fellow-servants, for whose negligence the employer should not be responsible to another fellow-servant; and it was unnecessary to deal further with such employees as did not come within this statutory definition of fellow-servants, for the employer would be responsible for their negligence whether they be termed agents, vice-principals, or otherwise.

"The distinctive characteristics prescribed by the statute as essential to be found concurring and common to two or more employees in order to constitute them fellow-servants are: First, they must be 'engaged in the common service.' As here used, 'service' means the thing or work being performed for the employer at the time of the accident, and out of which it grew, and 'common' means that which pertains equally to the employees sought to be held fellow-servants; and, therefore, 'common service' means the particular thing or work being performed

for the employer at the time of the accident, and out of which it grew, jointly, by the employees sought to be held fellow-servants.

"The members of a crew running a train, though each be in the performance of different acts in reference thereto, are all 'engaged in the common service,' for they are jointly performing the thing or work of managing the train for the employer; but they would not be 'engaged in the common service' with the members of a crew running another train for the employer over the same road, for one crew would be jointly performing the thing or work of managing one train, while the other would be jointly performing the thing or work of managing the other train. We therefore conclude that the engineer and switchman were 'engaged in the common service.'

"Second. They must be 'in the same grade of employment.' 'Grade' means the rank of relative positions occupied by the employees while 'engaged in the common service.' This definition, however, gives us no certain means of determining whether given employees are in the same or different grades, for it furnishes no test by which their respective ranks or relative positions 'in the common service' can be ascertained. In the absence of a statutory test, the grade would have depended upon the test which might have been adopted by the courts, such as authority one over the other, order of promotion, skill in the service, compensation received, etc. We are of the opinion that the legislature anticipated and settled this difficulty in the construction of the word 'grade' by the use of the clause 'neither of such persons being intrusted \* \* \* with any superintendence or control over their fellow-employees,' etc., as explanatory of what was meant by the clause 'in the same grade,' thus adopting the most natural test of grade in the construction of the statute, authority one over the other while 'engaged in the common service.' Probably the most serious difficulty in arriving at the conclusion that one clause was intended as merely explanatory of the other is the fact that the explanatory clause does not immediately follow the one it explains; but this objection is removed when we consider that in the original section, as enacted in 1891, the qualifying clause immediately follows the words 'same grade,' and was evidently intended to explain their meaning. Since the engineer had no authority or control over the switchman, and vice versa, while 'engaged in the common service,' we conclude that they were 'in the same grade of employment.'

"Third. They must be 'working together at the same time and place.' While 'at' indicates nearness in time and place, it does not demand an exact coincidence as to either, but only that it shall be sufficiently so to afford the employees a reasonable opportunity of observing the conduct of each other, with a view of guarding themselves against injury therefrom. We are of the opinion that the engineer and switchman were working together at the same time and place at the time of the accident.

"Fourth. They must be working 'to a common purpose.' By this is meant that the acts required of each in the performance of his duties at the time of the accident must be in the furtherance of 'the common service.' We are of the opinion that the engineer in managing the engine and the switchman in performing his duties, both having in view the switching of the cars, were working to a 'common purpose.' When these 4 distinguishing characteristics are found concurring and common to 2 or more employees they must be held fellow-servants under the statute; otherwise, not.

"It is urged that the proviso adds, as another distinguishing characteristic, that they must be in the same department. A proviso may be inserted for the purpose either of adding something to, or of insuring a certain construction of, the preceding language of the statute. This proviso bears upon its face unmistakable evidence of having been inserted for the latter purpose. It says: 'Provided, Nothing herein contained shall be so construed as to make employees \* \* \* fellow-servants with other employees engaged in any other department or service' . . . , and to complete the idea we may add the words 'than the common service' above specified. The words 'department or service,' as here used, merely means a subdivision of business, as running a train, clearing away a wreck, repairing a track, etc., and if employees are, at the time of the accident, engaged in the same subdivision of business, they are also 'engaged in the common service,' as we have hereinbefore construed that term. In other words, the proviso was merely intended to insure the strict construction above given by us to the words 'engaged in the common service.' In so far as section 1 of the act bears upon the question of 'who are fellow-servants and who are not fellow-servants,' we can not see that it adds anything to section 2. It merely selects a certain class of employees who are nonfellow-servants under the terms of section 2 and declares they are vice-principals. It results that we must answer the question certified in the affirmative."

[From B. L. No. 14, January, 1898.]

MISSOURI, KANSAS AND TEXAS RY. CO. v. HANNIG, 41 Southwestern Reporter, page 196.—Action was brought in the district court of Clay County, Tex., by William Hannig against the above-named railway company to recover damages for injuries received while in the employ of said company as a section hand. Hannig recovered a verdict and the railway company appealed the case to the court of civil appeals of the State, which rendered its decision May 12, 1897, and affirmed the judgment of the lower court.

The title of chapter 91, acts of 1893 (twenty-third legislature), page 120, reads as follows:

"An act to define who are fellow-servants and who are not fellow-servants, and to prohibit contracts between employer and employees based upon the contingency of the injury or death of the employees, limiting the liability of the employer for damages."

The first and second sections of the act define who are and who are not fellow-servants, and the third section reads as follows:

"SEC. 3. No contract made between the employer and employee, based upon the contingency of death or injury of the employee, limiting the liability of the employer under this act or fixing damages to be recovered, shall be valid and binding."

This case depended upon the above-mentioned act, and one of the assignments of error made by the railway company in its appeal was that the act should have been declared unconstitutional under the provisions of section 35 of Article III of the Constitution of Texas, which reads as follows:

"SEC. 35. No bill (except general appropriation bills, which may embrace the various subjects and accounts for and on account of which moneys are appropriated) shall contain more than one subject, which shall be expressed in its title. But if any subject shall be embraced in an act which shall not be expressed in the title, such act shall be void only as to so much thereof as shall not be so expressed."

The court of civil appeals in affirming the decision of the lower court overruled the point made as above and used the following language concerning it in its opinion, which was delivered by Chief Justice Tarlton:

"The act of the twenty-third legislature (p. 120), known as the 'fellow-servants act,' is not unconstitutional on the ground that it embraces more than one subject, both being expressed in the title. The prohibition referred to in the caption [title] and covered by the third section of the act does not constitute a different subject, but is merely auxiliary to the main purpose of the act authorizing a recovery by employees when injured by the master's negligence. In other words, the prohibition referred to in the title and in section 3 of the act is but one phase of the subject expressed in the title."

[From B. L. No. 16, May, 1898.]

KEATLEY v. ILLINOIS CENTRAL R. R. CO., 72 Northwestern Reporter, page 545.—This action was brought in the district court of Dubuque County, Iowa, by the administrator of Robert Keatley, deceased, to recover damages for his death from the railroad company above named. Robert Keatley was a member of a "stone gang" employed by the company in building a retaining wall near one end of an iron bridge which was being built at the same time by an "iron gang" employed by the company. Trains were allowed to run over this bridge, although not fully completed, and the foreman of the "iron gang" had control over the speed of the trains, and signaled them at what speed to go upon and over the bridge. At the time of the accident a freight train came upon the bridge, and the engine and ten cars passed over it. The next two cars were derailed, but passed over the bridge on the ties, and as they came opposite a derrick platform, where the deceased was engaged, one of them rolled off the trestle and, falling on said platform, killed the deceased. The bridge went down with the remainder of the train. It was alleged by the plaintiff that this accident was caused by the negligence of the foreman of the "iron gang" in allowing the train to go upon the bridge at too great a rate of speed. A judgment was rendered for the plaintiff, and the defendant company appealed the case to the supreme court of the State, which rendered its decision October 18, 1897, and affirmed the judgment of the lower court.

From the opinion of the court, which was delivered by Chief Justice Kiane, the following, showing the main points of the decision, is quoted.

"This is the second appeal in this case. The opinion in the former hearing will

be found in 63 N. W., 560. Much is said in argument by the appellant to the effect that this boy, Robert Keatley, and his stone gang and the iron gang were fellow-servants, and that, in the absence of the statute (sec. 1307 of the Code of 1873), there could be no liability under the established facts. It is then insisted that the facts do not bring the case within the provisions of the statute. Appellant's contention is that the negligence of the foreman of the iron gang was not the negligence of one engaged in the operation of the road, within the meaning of the statute, and that decedent was not injured by reason of the negligent operation of the road. On the former appeal this language was used in the opinion: 'Applying the facts attending the employment of the deceased to the statute, we think that if he was not out of the line of his duty in standing on the derrick platform, and the employees of the defendant negligently ran the train at a dangerous rate of speed, upon an unfinished and insecure and unsafe bridge, by reason of which the cars left the track and caused the death of the deceased, he was within the statute, and a right of action accrued.' Counsel now insists that plaintiff can not recover unless it appears that the injury complained of was caused by or through the negligence of the employees who were running or operating the train, and, as the trial court instructed the jury that said employees were not negligent, there can be no recovery under the statute. The language of the former opinion is to be construed with reference to what was said before the court and the issues as then made. It was then said that no charge of negligence on the part of employees for failing to put out a flag or other sign to stop the train was made in the petition. The case is now before us on allegations of negligence not made before; and, in view of this situation, there is nothing in the former opinion justifying the claim counsel now makes for it as applicable to the facts now before us. The statute of 1873 (Code, sec. 1307) is as follows: 'Every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents, or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the wilful wrongs, whether of commission or omission, of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway on or about which they shall be employed, and no contract which restricts such liability shall be legal or binding.'

"On the former appeal we held that the employment of the decedent placed him within the protection of this statute. (*Keatley v. Railroad Co.*, supra.) Upon the record now before us, the facts touching his employment are the same as they appeared upon the former trial. We discover no reason for not adhering to our former holding in that respect.

"In determining whether the accident resulted from the negligent operation of the train, it is not necessary, as counsel argue, that such negligence must be the act or failure to act of employees who are actually on the train. A train may be controlled by those upon it, or it may be controlled by one not on it, by signals given to those operating the train. It can make no difference, as to the right of recovery, whether the negligence, if any, which resulted in causing the accident was the act or failure to act of one of the trainmen, or of some other man in the defendant's employ, and who was charged with the duty of controlling the movements of the train by flag signal or otherwise. The foreman of the iron gang had control over the speed of trains across this bridge, and if he failed to signal the engineer of the train, and as a result it moved across the bridge at a dangerous rate of speed, thereby killing the decedent, the negligence was that of one charged with responsibility with respect to the movement of the train. Suppose this foreman of the iron gang had signaled the engineer to go slow across the bridge, and the engineer disobeyed the signal, would anyone question the liability of the company if such disobedience resulted in Keatley's death? Surely not. There can be no doubt, then, of liability when another employee (foreman of the iron gang), who is charged with a duty with reference to the moving train, fails to perform it, and as a result a man is killed. (*Pierce v. Railway Co.*, 73 Iowa, 140; 34 N. W., 783; *Doyle v. Railway Co.*, 77 Iowa, 608; 42 N. W., 535.) Counsel is in error when he says: 'In the case at bar there was no negligence in the operation of the railroad by any one engaged in its operation.' The foreman of the iron gang, while not an operative upon the train, engaged in the physical labor of controlling its movements, was at the bridge, furnished with a slow flag, charged with the control of the operation of the train over that uncompleted structure, and to that extent it was his duty to control the operation of the train, by giving the proper signal to slow up the train in case the condition of the bridge required it. If he neglected that duty, he neglected a duty touching the operation of the road, because, so far as the duty enjoined upon him to signal the train was concerned, he was as much engaged in operating the road, within the meaning of the statute, as the engineer on the train."

[From R. L. No. 12, September, 1897.]

**EAN v. CHICAGO, MILWAUKEE AND ST. PAUL RY. CO.**, 69 Northwestern Reporter, page 997.—Sut was brought in the superior court of Milwaukee County, Wis., by Alice Ean, executrix of George Ean, deceased, against the railway company above named, to recover damages for the death of the said George Ean, alleged to have been caused by the negligence of the employees of said company while he was in its employ. The plaintiff's complaint stated in substance that when the accident occurred the deceased was at work in the company's freight house as a freight handler. He was ordered to help move a car, and went between the cars, uncoupled the one to be moved, and, with the aid of one of his associates, commenced pushing it to its destination, when, without any warning of any kind, an engine with cars attached came along and struck the string of cars from which he had just uncoupled the car to be pushed away and forced said cars upon and over him, crushing his arm and leg and side, causing injury from which he died 5 days thereafter. The defendant company demurred to the complaint, alleging that the facts above stated did not constitute a cause of action, and the superior court sustained said demurrer, dismissed the complaint, and entered judgment for the defendant. The plaintiff then appealed the case to the supreme court of the State, which rendered its decision January 12, 1897, and affirmed the decision of the lower court. Said decision was made, however, upon a technicality, based upon the form of the plaintiff's complaint, and in the course of the same the supreme court decided that two particular statutes, the applicability of which to the case was denied by the superior court, did apply.

Chapter 220, acts of 1893, one of the statutes above referred to, in so far as it applies to this case, is quoted below:

SECTION 1. Every railroad or railway company operating any railroad or railway the line of which shall be in whole or in part within this State shall be liable for all damages sustained within this State by any employee of such company, without contributory negligence on his part; \* \* \* second, or while any such employee is so engaged in operating, running, riding upon, or switching passenger or freight or other trains, engines, or cars, and while engaged in the performance or his duty as such employee, and which such injury shall have been caused by the carelessness or negligence of any other employee, officer, or agent of such company in the discharge of, or for failure to discharge, his duties as such."

The opinion of the supreme court was delivered by Judge Marshall, and in the part of the same which is given below the other statute, above referred to, is quoted. The following is quoted from said opinion:

"It does not appear upon what ground the learned judge of the superior court sustained the demurrer, but from the briefs of counsel we assume that his decision was based upon the ground, among others, that the deceased was not an employee entitled to the benefits of chapter 220, laws of 1893. That act received consideration in *Smith v. Railway Co.*, 91 Wis., 503; 65 N. W., 183 (see Bulletin of the Department of Labor, No. 4, p. 436), and no reason appears to change in any way the conclusion there reached. It was there said, in effect, in regard to that part of the act applicable to this question, that 'the legislative idea plainly was to give a right of action to employees engaged in operating and moving trains, engines, and cars while actually so engaged, and the words used to express such idea are too plain to leave room for resort to the rules for judicial construction to determine their meaning.' The test in any case is, Was the person injured employed in one of the branches of the railway service covered by the act at the time of the injury? If so, he is entitled to its benefits, whether such service was the principal kind of work to be performed by him under his contract of employment or a mere incident to his general duties. As in a case where an employee is injured by the negligence of another whose general employment is that of a vice-principal, and such other is temporarily doing the work of an employee, the right of the injured party is governed by the nature of the service in which such other is engaged at the time of such injury; so here, whether the deceased, had he lived, would have been entitled to the benefits of the act in question depends wholly upon whether he was doing the kind of service specified in the act at the time of the injury. If he was, whether such service required him to assist in running the car a distance of three car lengths or a greater distance, or whether by the power of a locomotive or by some other means, makes no difference. While actually engaged in moving the car he was within the extraordinary perils which the act was designed to protect employees against. The conclusion of the trial court to the contrary can not be sustained.

"It was further held that even if the deceased would have been entitled to recover of the defendant had he lived, section 4255, Revised Statutes, has no application to such a case, hence no cause of action is stated in the complaint in favor of

the plaintiff. Clearly the right of action in favor of the deceased was lost by his death, and as there is no statute giving a right of action to the personal representatives, except section 4255, Revised Statutes, unless that applies the complaint is fatally defective. Such section is as follows. "Whenever the death of a person shall be caused by a wrongful act, neglect, or default, and the act, neglect, or default is such as would, if death had not ensued, have entitled the party injured to maintain an action and recover damages in respect thereof, then and in every such case the person who, or the corporation which, would have been liable if death had not ensued shall be liable to an action for damages, notwithstanding the death of the person injured," etc. It will be observed that the statute says that "in every such case the person who, or the corporation which, would have been liable if death had not ensued shall be liable to an action for damages, notwithstanding the death of the person injured." To be sure, the rule of strict construction should apply, as the act is in derogation of common law, if the language is open to construction; but in our judgment it is not. There is nothing either in the terms or the spirit of the act from which the court can say the legislative idea was to confine its effect to right of action in favor of injured persons as the law existed on the subject at the time section 4255 was passed. On the contrary, it is too plain to be open to serious discussion that the legislative intent was to give a right of action to the personal representatives of a deceased person in all cases where such person would be entitled to recover damages for his injury if death had not ensued. While it is the duty of the courts to resolve reasonable doubts in favor of the restrictive effect of an act that is in derogation of the common law, it would be going beyond judicial functions to put restrictive words into a law by judicial construction. We hold that section 4255 applies to this case, and that the ruling of the trial court to the contrary can not be sustained."

[From B. L. No. 13, November, 1897.]

ANDREWS v. CHICAGO, MILWAUKEE AND ST. PAUL RY. CO., 71 Northwestern Reporter, page 372.—This action was brought in the circuit court of Iowa County, Wis., under chapter 220, laws of 1893, by James Andrews, an employee of the above-named railroad company, to recover damages for an injury sustained by him, while in the line of his duty, in consequence of the alleged negligence of the foreman of the day switching crew, one Roach, by reason of which the plaintiff's left hand was crushed and it became necessary to amputate his arm above the wrist. The complaint charged, as the cause of the injury, negligence on the part of the plaintiff's fellow-servants, and in particular of Roach, for failing to follow the rules and custom governing switching in the yard, and that such negligence was the proximate cause of the plaintiff's injury, and asserted that the plaintiff was free from contributory negligence. Judgment was rendered for the plaintiff, and the railroad company appealed the case to the supreme court of the State, which rendered its decision May 21, 1897, and reversed the judgment of the lower court.

Chapter 220, Laws of 1893, above referred to, in so far as it relates to this decision, reads as follows:

"SECTION 1. Every railroad or railway company operating any railroad or railway the line of which shall be in whole or in part within this State shall be liable for all damages sustained within this State by any employee of such company without contributory negligence on his part; \* \* \* and which injury shall have been caused by the carelessness or negligence of any other employee, officer, or agent of such company in the discharge of, or for failure to discharge, his duties as such."

The defendant had asked that the following questions be severally submitted to the jury as a part of the special verdict, but they were rejected, namely: (5) "Ought a man of ordinary intelligence and prudence, engaged in the business then followed by said Roach, to have reasonably expected, under the attending circumstances, that such violations of said custom at the time and place in question would result in a bodily injury of some kind to the plaintiff?" (7) "At the time the plaintiff was injured had it, for a great many years, been the uniform custom of all helpers in switching crews in the defendant's yard at Madison, who have gone between cars to couple them, to come out again immediately, if they failed to make the coupling the first time, and look for coming cars?"

The opinion of the supreme court was delivered by Judge Pinney, and the following is quoted therefrom:

"The question presented by the special verdict is whether it is fairly and substantially found by it that the negligence of Roach, the foreman of the switching crew, imputable to the defendant, was the proximate cause of the plaintiff's injury. Unless this appears from the verdict no judgment could be given on it, and a new

trial would become necessary. It is found that the plaintiff's hand was crushed \* \* \* by reason of, and as the direct consequence of, the negligence of Roach; that is to say, that the plaintiff's injury was the natural consequence of the negligence of Roach, the foreman, and without the intervention of any independent agency or cause for which the defendant was not responsible. Was it necessary that it should also appear from the verdict not only that the plaintiff's injury was the direct but the probable result as well of the defendant's negligence? The real test of the defendant's liability for the plaintiff's injury is whether the negligence of its foreman was the proximate cause of the accident. The negligence is not the proximate cause of the accident unless, under all circumstances, the accident might have been reasonably foreseen by a man of ordinary intelligence and prudence. It is not enough to prove that the accident was the natural consequence of the negligence. It must also have been the probable consequence. (Block v. Railway Co., 89 Wis., 378; 61 N. W., 1101.) This subject underwent a careful consideration in *Atkinson v. Transportation Co.* (60 Wis., 141, 150-155; 18 N. W., 764.) It was there held that generally, in order to warrant a finding that negligence, or an act not amounting to wanton wrong, is the proximate cause of the injury, it must appear that the injury was the natural and probable consequence of the negligence or wrongful act, and that it ought to have been foreseen in the light of the attending circumstances."

Here the court quotes to practically the same effect as the above from other cases, and then continues as follows:

"These remarks are strictly applicable to the present case, and show that the fifth question the defendant asked to have submitted to the jury was improperly refused.

"The evidence of six of the defendant's witnesses was such as to properly require the defendant's seventh question to be submitted to the jury. It related entirely to the custom and duty of helpers, and had a material bearing upon the question whether the plaintiff, in the course he pursued in remaining between the cars, endeavoring a second time to couple them on turning the link when they were coming together again, was guilty of negligence which materially contributed to his injury. We think the defendant was entitled to an answer to this question, and that it was error to refuse to submit it.

"There is nothing in chapter 230, Laws, 1893, which to our minds indicates that it was intended to exclude from a case within its provisions all question as to the assumption of the risks or perils naturally and usually incident to the plaintiff's employment as a railway operative. It was not the design of the act to make the railroad company an insurer against injuries thus received by the plaintiff. There is no question in the case as to the assumption by the plaintiff of any unusual or extraordinary risk.

"The contention that under chapter 230, Laws of 1893, contributory negligence on the part of the plaintiff was required to be pleaded as a defense, is not maintainable. The defense of contributory negligence arises out of the facts and circumstances of the alleged injury. Before the statute it was not necessary that it should be pleaded. It was not within the plan or purpose of the statute to make any change in the law of pleading. The statute relates only to questions of liability. The defense of contributory negligence would be sustained to an action under this statute had it been silent on the subject. The mere fact that the words 'without contributory negligence on his part' are in the act, when the courts would have supplied them if omitted, can not operate either to change the rule of pleading or evidence. The judgment of the circuit court is reversed, and the cause is remanded for further proceedings according to law."

[From B. L. No. 18, September, 1898.]

PITTSBURG, CINCINNATI, CHICAGO AND ST. LOUIS RAILWAY CO. v. MONTGOMERY, 49 *Northeastern Reporter*, page 582.—Action was brought in the circuit court of Cass County, Ind., by William J. Montgomery against the above-named railroad company to recover damages for personal injuries due to the negligence of said company and sustained by him while in its employ. A judgment was rendered for Montgomery, and the defendant company appealed the case to the supreme court of the State, which rendered its decision February 19, 1898, and affirmed the judgment of the lower court.

The opinion of the supreme court was delivered by Judge McCabe, and the facts in the case and the reasons for the decision are sufficiently shown in the following quotation therefrom:

"The only objection urged to the complaint is that it shows that the plaintiff [Montgomery] was a freight brakeman in the defendant's [above-named railroad company] service on its railroad, and that it was the negligence of the engineer

of the train on which he was serving that caused his injury, and that, under the fellow-servant rule, there was no liability. The injury occurred on July 1, 1893, after the act approved March 4, 1893, took effect, touching the liability of railroads, commonly called the 'Employers' liability act.' Acts 1893, p 294; Rev. St., 1894, §§ 7083-7087 (Horner's Rev. St., 1897, §§ 5206-5206v).

"Appellant's [above-named railroad company] learned counsel contend that it is settled law that the employer is not liable to an employee for injuries caused by the negligence of a coemployee in the same general service, unless the employer was guilty of some negligence in employing the servant with knowledge of his negligent habits or incompetency, or retained him after knowledge of such negligence or lack of skill. There is no showing of any such negligence on the part of the appellant, as employer, in the complaint. Appellee [Montgomery] concedes this to be the common-law rule, and that it prevailed in this State prior to the enactment above mentioned. Indeed, it is conceded by the appellee that his complaint depends upon that act for its sufficiency in its facts to constitute a cause of action, and is founded thereon.

"It is first contended by the appellant that the act does not change the common-law rule, and it would seem to follow, if that is true, that the complaint is clearly bad. The first section provides: 'That every railroad or other corporation, except municipal, operating in this State, shall be liable in damages for personal injury suffered by any employee while in its service, the employee so injured being in the exercise of due care and diligence, in the following cases.' Then follow four subdivisions, specifying the cases in which liability is to attach, the fourth of which, and the one on which this action is founded, reads thus: 'Where such injury was caused by the negligence of any person in the service of such corporation who has charge of any signal, telegraph office, switch yard, shop, roundhouse, locomotive engine, or train upon a railway, or where such injury was caused by the negligence of any person, coemployee, or fellow-servant engaged in the same common service in any of the several departments of the service of any such corporation, the said person, coemployee, or fellow-servant, at the time acting in the place and performing the duty of the corporation in that behalf, and the person so injured, obeying or conforming to the order of some superior at the time of such injury, having authority to direct; but nothing herein shall be construed to abridge the liability of the corporation under existing laws.' Appellant's learned counsel say: 'The complaint lacks two allegations to make it good under this provision, (1) That the engineer at the time was acting in the place and performing the duty of the corporation in that behalf; and (2) that appellee was obeying or conforming to the order of some superior at the time of such injury, having authority to direct. It was not alleged that the engineer was acting in the place or performing the duty of the master, or that appellee was acting in obedience to a superior,' etc.

"This language, together with other parts of appellant's brief, indicates that appellant's learned counsel construe the language of the statute above quoted as conveying the meaning that the right to recover against an employer for the negligence of a coemployee or fellow-servant rests upon the condition that such negligent coemployee was at the time acting in the place and performing the duty that the master or employer owed to his or its servants or employees generally, and yet they do not say so in so many words. The majority of the court are of the opinion that the decision of that question is not necessary to the decision of this case. They hold that the only part of the fourth subdivision of said section which is necessary to be considered in determining the sufficiency of the complaint is the following: 'Where such injury was caused by the negligence of any person in the service of such corporation who has charge of any \* \* \* locomotive engine upon a railway, \* \* \* and the person so injured obeying or conforming to the order of some superior at the time of such injury having authority to direct; and that hence it was not necessary that the complaint should state that the alleged negligent engineer, at the time he committed the alleged negligent injury, as provided in such concluding clause, was acting in the place and performing the duty of the corporation in that behalf, while the writer hereof is of the opinion that the whole of the fourth subdivision must stand together, and that the words quoted from the concluding clause qualify the liability created in the first clause or clauses. But the duty of the corporation therein mentioned, in the opinion of the writer, means, not the duty it owes to its servants, but the duty it owes to the public in carrying on its business; and the words, 'acting in the place of such corporation,' with the other words quoted, were used to convey the idea that, in order that the liability mentioned should exist, the negligent person, coemployee, or fellow-servant must be acting as such employee, in the line of his duty, at the time of his negligence. The writer is of opinion that the complaint is good under

this construction; and the holding of the court is that, in order to make the complaint good under the first part of the subdivision quoted, as to the point in question, it is only required that it state that the engineer, while in the service of appellant, in charge of a locomotive engine, negligently injured the appellee, both being at the time acting in the line of duty as employees of the appellant. That being so, the averments of the complaint, showing, as they do, that at Hartford City, Ind., the freight train upon which appellee was brakeman stopped to switch out loaded cars; that the conductor of said train, acting in the service of appellant, the authority and position of said conductor making it appellee's duty to obey his orders in respect to said train and switching, ordered appellee to go between said cars to make couplings, and while so engaged the engineer in charge of said train, also in appellant's service and in the line of his duty, without signal, carelessly, negligently, and recklessly reversed said engine and applied full steam, whereupon said cars were driven and jammed together with terrific force without notice to appellee, whereby appellee's entire right hand was caught between the bumpers and mashed off without any fault on his part, make the complaint sufficient, under the statute, as to the objection thereto urged.

"The next contention against the sufficiency of the complaint is that the act is unconstitutional, that being confessedly the foundation of the action. It is first contended that it violates section 19 of article 4 of the State constitution, which provides that 'every act shall embrace but one subject and matters properly connected therewith, which subject shall be expressed in the title.' It is contended that the subject is not expressed in the title, in that the title is 'An act regulating liability of railroads and other corporations except municipal,' while the provisions of the act itself are, as claimed by appellant, to create a liability which up to that time had no existence. The precise question here involved was decided adversely to appellant's contention on a statute similar to our own, under a constitution an exact copy of our own in this respect, in *McAnnich v. Railroad Co.* (20 Iowa, 338). We feel content to follow that case without extending this opinion by repeating its reasoning, and accordingly hold that the subject is sufficiently expressed in the title.

"It is next contended that the act violates section 23 of article 1 of the constitution, providing that 'the general assembly shall not grant to any citizen or class of citizens privileges or immunities which upon the same terms shall not equally belong to all citizens.' Railroad corporations are persons and citizens within the meaning of this provision of our bill of rights and the equality clause of the fourteenth amendment to the Constitution of the United States. The inequality complained of is that corporations, except municipal, are made liable for damages caused to one of their servants by the negligence of a coemployee or fellow-servant without any negligence on the part of the employer, while other employers are left free from such liability to their employees. Appellant also contends that the act violates the equality clause of the fourteenth amendment of the Constitution of the United States, demanding for every person the equal protection of the laws. The same provision, quoted from the bill of rights in the constitution of this State, is found word for word in the bill of rights of the constitution of Iowa. The supreme court of that State, in upholding the employers' liability act of that State, held that the provision mentioned in the bill of rights in the constitution of that State was in effect the same as the equality clause of the fourteenth amendment to the Federal Constitution, and that the employers' liability act did not violate either constitution in respect of equality of laws or equality of rights, secured by each of said provisions, in *Bucklew v. Railway Co.* (64 Iowa, 611, 21 N. W., 103). That decision rests largely on two decisions made upon the subject of the constitutionality of the employers' liability act of Kansas and that of Iowa in the Supreme Court of the United States. Mackey had recovered a judgment for \$12,000 damages, against the Missouri Pacific Railway Company, for injuries caused by a coemployee of that company, which, on appeal, was affirmed by the supreme court of Kansas. From that judgment the company appealed to the Supreme Court of the United States, on the ground that the Kansas statute violated the fourteenth amendment to the Constitution of the United States. But that court affirmed the judgment, holding that the act in no way infringed that amendment. (*Railroad Co. v. Mackey*, 127 U. S., 205, 8 Sup. Ct., 1161.) Mr. Justice Field, speaking for the court, there said: '\* \* \* The company calls the attention of the court to the rule of law exempting from liability an employer for injuries to employees caused by the negligence or incompetency of a fellow-servant, which prevailed in Kansas and in several other States previous to the act of 1874, unless he had employed such negligent or incompetent servant without reasonable inquiry as to his qualifications, or had retained him after knowledge of his negligence or incompetency. The rule of law is conceded where the person injured and

the one by whose negligence or incompetency the injury is caused are fellow-servants in the same common employment, and acting under the same immediate direction. \* \* \* Assuming that this rule would apply to the case presented but for the law of Kansas of 1874, the contention of the company \* \* \* is that the law imposes upon railroad companies a liability not previously existing, in the enforcement of which their property may be taken, and thus authorizes in such cases the taking of property without due process of law, in violation of the fourteenth amendment. The supposed hardship and injustice consist in imputing liability to the company, where no personal wrong or negligence is chargeable to it or its directors. But the same hardship and injustice, if there be any, exist when the company, without any wrong or negligence on its part, is charged for injuries to passengers. \* \* \* The utmost care on its part will not relieve it from liability, if the passenger injured be himself free from contributory negligence. The law of 1874 extends this doctrine, and fixes a like liability upon railroad companies, where injuries are subsequently suffered by employees, though it may be by the negligence or incompetency of a fellow-servant in the same general employment and acting under the same immediate direction. That its passage is within the competency of the legislature we have no doubt. The objection that the law of 1874 deprives the railroad companies of the equal protection of the laws is even less tenable than the one considered. It seems to rest upon the theory that legislation which is special in its character is necessarily within the constitutional inhibition; but nothing can be further from the fact. The greater part of all legislation is special, either in the objects sought to be attained by it or in the extent of its application. Laws for the improvement of municipalities, the opening and widening of particular streets, the introduction of water and gas, and other arrangements for the safety and convenience of their inhabitants, and laws for the irrigation and drainage of particular lands, for the construction of levees, and the bridging of navigable rivers, are instances of this kind. \* \* \* Such legislation is not obnoxious to the last clause of the fourteenth amendment, if all persons subject to it are treated alike under similar circumstances and conditions in respect both of the privileges conferred and liabilities imposed. \* \* \* But the hazardous character of the business of operating a railway would seem to call for special legislation with respect to railroad corporations, having for its object the protection of their employees, as well as the safety of the public. A like decision was made by the same court upholding the employers' liability law of Iowa, which has been in force in that State ever since 1862. Some 10 or 12 of the states of the Union have such acts on their statute books, and none of them have ever been held unconstitutional.

It is also urged, as an objection to the validity of the act, that it exempts municipal corporations from its operation. But no reason has been suggested why municipal corporations should be classed with railroad corporations. We have many statutes applying to railroad corporations that do not apply to municipal corporations. There is no necessary similarity between them. Nor is the business of municipal corporations so peculiarly hazardous to their employees as to call for such special legislation as is called for in case of railroad corporations to protect their employees. We therefore conclude that the act does not violate the constitution, either Federal or State. [This decision goes on to discuss the question whether membership in the voluntary relief department released the railroad company from liability; that part of the decision is quoted later. See page 1108.]

"Judgment is affirmed."

[From B. L. No. 19, November, 1898.]

**AKESON v. CHICAGO, BURLINGTON AND QUINCY RAILROAD CO.**, 75 Northwestern Reporter, page 676.—Action was brought by one Akeson against the above-named railroad company to recover damages for personal injuries sustained while he was in the employ of said company. After a hearing in the district court of Montgomery County, Iowa, a judgment was rendered for the plaintiff and the railroad company appealed the case to the supreme court of the State, which rendered its decision May 26, 1898, and affirmed the judgment of the lower court.

The following, quoted from the opinion of the supreme court, delivered by Judge Ladd, shows the more important points of the decision and the facts in the case:

"For about two and one-half years before the month of August, A. D. 1892, when the accident in question occurred, the plaintiff had worked for the defendant in its coal house at Red Oak. His duties required him to shovel coal from the cars into the chutes, to break the coal, and wet it for use, and to assist in filling the tenders of locomotive engines with coal. In the month referred to the coal house was rebuilt, and, while that was being done, tenders were supplied with coal from cars which

were placed on the coach track next to the main line. The sides of the coal cars were about 4 feet high, and when a tender was to be loaded it was run onto the main line track, opposite the coal car. A bridge was made by placing together two planks (each of which was about 10 feet in length, 1 foot in width, and 2 inches in thickness) in such manner that one end of each plank rested on top of the coal car, and the other on top of the tender. The bridge thus made was nearly level, and was used by the plaintiff and a coemployee in passing from the car, with a box which was provided with handles at each end, and was filled with coal, and in returning with the empty box after its contents had been dumped into the tender. On the day of the accident a locomotive engine in charge of an engineer and fireman was run up to the coal car for coal, and a bridge was made, and the tender filled by the plaintiff and his coemployee, Forshay, in the manner described. When that work was finished Forshay remained on the tender, as he frequently did, for the purpose of riding on it to the water tank, to get water for the engine, while the plaintiff returned over the bridge to the coal car. As he was about to step from the bridge to the car, Forshay picked up a plank and shoved it into the car. The plaintiff claims that the plank caught one of his feet and made him fall or jump into the car in such a manner as to cause a double hernia, and the evidence tends to sustain that claim. The verdict and judgment in his favor were for the sum of \$1,500.

"The liability of the defendant depends upon the meaning and application of section 2071 of the Code (section 1307, Code of 1873), which is as follows: 'Every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the willful wrongs, whether of commission or omission, of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway on or about which they shall be employed and no contract which restricts such liability shall be legal or binding.'

"The evidence tends to show that the accident was occasioned by the negligence of Forshay. It is said, however, that this was in no manner connected with the use and operation of the railway.

"The court, in order to uphold the constitutionality of the law in *Deppes v. Railroad Co.* (36 Iowa, 52), limited the term 'employees' to those engaged in operating the railroad, saying, through Cole, J.: 'The manifest purpose of the statute was to give its benefits to employees engaged in the hazardous business of operating railroads. When thus limited it is constitutional; when extended further, it becomes unconstitutional.' That the employment at the time of the injury must have exposed the complainant to the hazards of railroading, without reference to what he may be required to do at other times, is no longer questioned.

"The peculiarity of the railroad business, which distinguishes it from any other, is the movement of vehicles or machinery of great weight on the track by steam or other power, and the dangers incident to such movement are those the statute was intended to guard against. If, then, the injury is received by an employee whose work exposes him to the hazards of moving trains, cars, engines, or machinery on the track, and is caused by the negligence of a coemployee in the actual movement thereof, or in any manner directly connected therewith, the statute applies, and recovery may be had. Beyond this the statute affords no protection. The purpose of the law makers was evidently not to make men, because employed by railroad companies, favorites of the law, but to afford protection owing to the peculiar hazards of their situation. That the plaintiff's employment exposed him to the peculiar dangers of railroading admits of no doubt. The important question is whether the negligence of Forshay, causing the injury, was so immediately connected with and merited to the movement of the engine and tender as to come within the statute. We think it was. The engine had been detached from an incoming freight train, and was moved opposite the coal car, for the purpose of filling the tender with coal to be used as fuel, and this done by running two planks from the tender to the coal car. Over these the coal was carried in boxes, and when this work was done these were necessarily taken from the tender to enable the engine to move from the main track. In doing this, Forshay picked up and pushed one of the planks just as the plaintiff was about to step on the coal car, and to save himself the latter was compelled, in order to avoid this plank, to jump sideways among some boxes below. The very purpose of removing the plank was to enable the engine to move, and if in doing this Forshay was negligent, such negligence was so closely connected with the movement as to come within the terms of the statute. Indeed it is difficult to conceive of a case where negligence not in the actual movement of an engine is more directly connected therewith."

[From B. L. No. 21, March, 1899.]

FLORIDA CENTRAL AND PENINSULA RAILROAD CO. v. MOONEY, 24 Southern Reporter, page 148.—A suit brought by one John W. Mooney against the above-named railroad company to recover damages for personal injuries incurred by him while in the employ of said company, was heard in the circuit court of Levy County, Fla., and a judgment was rendered in favor of the plaintiff, Mooney. The defendant carried the case upon writ of error to the supreme court of the State, which rendered its decision June 13, 1898, and reversed the decision of the lower court. The facts as to the incurrence of the injury are not essential to an understanding of the points of the decision. The decision hinged upon the construction of chapter 4071, laws of Florida of 1891, the first 3 sections of which read as follows:

"SECTION 1. A railroad company shall be liable for any damage done to persons, stock, or other property by the running of the locomotives or cars or other machinery of such company, or for damage done by any person in the employment and service of such company, unless the company shall make it appear that their agents have exercised all ordinary and reasonable care and diligence, the presumption in all cases being against the company.

"SEC. 2. No person shall recover damages from a railroad company for injury to himself or his property where the same is done by his consent or is caused by his own negligence. If the complainant and the agents of the company are both at fault the former may recover, but the damages shall be diminished or increased by the jury in proportion to the amount of default attributable to him.

"SEC. 3. If any person is injured by a railroad company by the running of the locomotives or cars or other machinery of such company, he being at the time of such injury an employee of the company, and the damage was caused by negligence of another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to a recovery. No contract which restricts such liability shall be legal or binding."

Said chapter was held by the supreme court of Florida, in the case of *Duval v. Hunt* (15 Southern Reporter, p. 879), to have been adopted from a statute of the State of Georgia.

The opinion of the supreme court in this case was delivered by Judge Carter, and from the syllabus of the same, which was prepared by the court, the following is quoted:

"2. To entitle an employee to recover damages from his employer for personal injuries caused by the negligence of another employee, under the provisions of chapter 4071, acts of 1891, the plaintiff must himself have been free from fault, as the provisions of section 2 of that act, relating to the apportionment of damages, have no application to such cases (cases where both the employer and employee were negligent).

"3. In an action by an employee under the provisions of chapter 4071, acts of 1891, to recover damages from his employer for injuries alleged to have been inflicted by the negligence of another employee in performing some act in the defendant's service, in the performance of which plaintiff as a coemployee was participating, the plaintiff must show either that he was free from fault himself, or that there was negligence on the part of his coemployee. Upon proof that plaintiff was free from fault, the statutory presumption arises that the servants of the defendant were at fault; and it thereupon devolves upon the defendant to make it appear to the contrary.

"4. If the act resulting in injury to plaintiff, an employee, was one being performed by other employees in the defendant's business, but in the performance of which plaintiff was not participating, then the presumption of negligence on the part of the agents of the defendant, and that plaintiff was free from fault, arises under the statute (chapter 4071, acts of 1891) to the same extent as if plaintiff was not an employee; and it devolves upon the defendant to relieve itself either by showing that plaintiff was at fault, or that its servants were not negligent.

"5. Where a statute is adopted from a sister state, any known and settled construction placed thereon by the courts of that state prior to its adoption, not inharmonious with the policy and spirit of the general legislation of the adopting state on the subject, will prevail in construing the statute in the latter state.

"6. A servant in the performance of his duties is bound to exercise ordinary care for his own safety, or that degree of care which prudent persons usually exercise under similar circumstances; and if he is injured by failure to exercise such care his master is not liable.

"7. If, in the performance of his duties, the servant has no instructions to pursue a particular method, and two or more methods are open to him, he can not

be said to have been negligent if he in good faith adopts that method which is more hazardous than another, if the one adopted be one which reasonable and prudent persons would adopt under like circumstances.

"8. Shifting cars by means of the 'kicking back' process is not necessarily at all times an act of negligence per se, even though there may be a safer method of shifting them.

"9. In actions for negligence, where there is no evidence tending to show negligence of so gross and flagrant a character as to evince a reckless disregard of human life, or of the safety of those exposed to its dangerous effects, or that entire want of care which would raise the presumption of a conscious indifference to consequences, or to show wantonness and recklessness, or reckless indifference to the rights of others equivalent to an intentional violation of them, exemplary damages can not be awarded."

[From B. L. No. 22, May, 1899.]

*BENSON v. CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY CO.*, 77 Northwestern Reporter, page 798.—This suit was brought under chapter 230, acts of Wisconsin of 1893, the employers' liability act, to recover damages sustained by the plaintiff, Andrew Benson, while in the employ of the above-named railroad company. The plaintiff was injured while propelling a hand car over the defendant's road, and the defendant demurred to the plaintiff's complaint in the district court of Hennepin County, Minn., where the case was heard, on the ground that hand cars were not included in the words 'or other cars,' contained in the statute above referred to. The court sustained this demurrer, and the plaintiff appealed the case to the supreme court of the State. Said court rendered its decision January 5, 1899, and reversed the decision of the lower court.

The opinion was delivered by Judge Mitchell, and the syllabus of the same, which was prepared by the court, reads as follows:

"Laws Wis., 1893, c. 230, provides that 'every railroad or railway company operating any railroad \* \* \* within this State shall be liable for damages sustained within the State, by an employee of such company without negligence on his part \* \* \* while such employee is so engaged in operating, running, riding upon, or switching passenger or freight or other trains, engines, or cars and while engaged in the performance of his duty as such employee, and which such injury shall have been caused by the carelessness or negligence of any other employee, officer, or agent of such company.' Held, that the words 'or other \* \* \* cars' include hand cars."

[From B. L. No. 23, July, 1899.]

*MISSOURI, KANSAS AND TEXAS RAILWAY CO. v. MEDARIS*, 55 Pacific Reporter, page 875.—In the district court of Labette County, Kans., one C. F. Medaris recovered a judgment against the above-named railway company in a suit brought by him for damages for personal injuries sustained by him while employed by said company in setting curbing around its office building and depot in Parsons. The evidence showed that a curbstone had been left standing unsupported on the edge of a ditch, where the plaintiff was setting curbstones, through the negligence of some of his coemployees, and that it fell on his leg, causing a permanent injury. Upon the rendition of judgment in favor of the plaintiff the defendant company carried the case on writ of error to the supreme court of the State, which rendered its decision January 7, 1899, and reversed the judgment of the lower court.

In the opinion of the said court, delivered by Judge Johnston, the following language was used:

"The question we are called upon to determine is whether Medaris is within the protection of the statute which makes railway companies liable for damages to coemployees caused by the negligence of fellow-servants. (Laws 1874, c. 93, sec. 1; Gen. St. 1889, par. 1251.) From the facts, it appears that there was no common-law liability for the injury sustained, but, if any exists, it arises under the 'fellow-servant act' referred to. Whether Medaris is entitled to the benefit of this law depends upon the character of the work in which he was engaged, and not on the mere fact that he was an employee of a railroad company.

"In *Union Trust Co. v. Thomason* (25 Kans. 1), the statute was held to apply only to those engaged in the hazardous business of operating railroads. In *Railway Co. v. Haley* (25 Kans., 53) the act was again construed, and it was remarked that it 'embraces only those persons more or less exposed to the hazards of the business of railroading.' We have had a number of border cases in which the interpretation referred to has been pushed to the uttermost limit, but they have

all been cases where the injury occurred in connection with the use and operation of the railroad."

At this point the court cited and quoted from a number of cases, and then continued as follows:

"In each of these cases it will be observed that the injured person held to be entitled to the benefit of the act was engaged in services connected with the use and operation of a railroad. Here, however, the service which Medaris was performing did not expose him to the hazards peculiar to the business of using and operating a railroad. He was not at work on a railroad, and his injury was not caused by the operation of a railroad or the use of any railroad appliance. It is true there were railroad tracks near to the place where he was at work, but no train was passing or near to the place where Medaris was at work at the time the injury was inflicted. It is true, also, that he was at work for a railroad company, and upon the land of a railroad company; but it does not entitle him to the benefits of the act. He can only recover by showing that the service in which he was engaged exposed him to the peculiar perils incident to the operation of a railroad. As the jury specially found, the work in which he was engaged involved no more risk or hazard than it would if the same work was being done for an individual at the same time and place. The benefits of the act can no more be claimed by him than they could by the carpenter who laid the floor in the office building, or nailed the shingles on its roof. No stronger claim could be made for him than could for a person injured while hauling the rock from the quarry to the place where the curbing was to be set. Judgment reversed."

[From B. L. No. 22, May, 1899.]

CHICAGO AND EASTERN ILLINOIS RAILROAD CO. *v.* ROUSE, 52 Northeastern Reporter, page 951.—Action was brought by R. A. Rouse, administrator of George W. Brewer, deceased, against the above-named company to recover damages for the death of his intestate, who was killed in a railway collision while in the employ of said company. Judgment was rendered in favor of the plaintiff Rouse, and on an appeal to the appellate court of the third district of Illinois said judgment was affirmed. The defendant company then appealed to the supreme court of Illinois, which rendered its decision February 17, 1899, and affirmed the judgments of the lower courts.

The opinion of the supreme court was delivered by Judge Boggs, and reads, in part, as follows:

"George W. Brewer, deceased, appellee's intestate, during his lifetime and at the time of his death, was a resident of Vermilion County, in this State. The appellant, a corporation organized under the laws of this State, was engaged in operating its trains over its own lines and leased lines of railway in the States of Illinois and Indiana. Said intestate was employed as fireman on one of appellant's locomotive engines, and while engaged in the discharge of his duty in that capacity on an engine drawing a passenger train along the line of appellant's road in the State of Indiana was killed by a collision between the said engine and train upon which he was employed and another engine, drawing a freight train, controlled and operated by other servants of the appellant company upon its said line of road in the State of Indiana. This was an action on the case, commenced in the circuit court of Vermilion County, Ill., by the appellee, administrator of said Brewer, to recover damages for the benefit of those entitled to receive distribution of the personal effects of the said deceased.

"The declaration, in some of the counts, charged that the collision was occasioned by the negligence of the conductor of the freight train, and, in other counts, that the trains collided because of the negligence of the engineer of the freight train, and counted and predicated the right of recovery upon an alleged liability created by the statute of such State of Indiana in such cases, and set forth the statute of such State, and such statute was produced in evidence. Section 7083 of the Indiana statute (Burns' Rev. St. 1894, sec. 7083) provides that where the death of an employee of any railroad company or other corporation is caused by the negligence of any person in the employ or service of such corporation who has charge of any locomotive engine or train of cars upon any railroad, or by the negligence of any fellow-servant engaged in the same common service in any of the several departments of such corporation, while the employee so killed is obeying or conforming to the orders of some superior having authority to direct at the time of such death, the railway company or other corporation operating such locomotive engine or train shall be liable to respond to the personal representatives of such deceased in damages in a sum not exceeding \$10,000, to be distributed to the widow and children, if any, or next of kin, of the deceased,

in the same manner as personal property of the deceased. A plea of not guilty was filed, and the cause was submitted to and heard by a jury, who returned a verdict in favor of the appellee administrator in the sum of \$5,000. The judgment was affirmed by the judgment of the appellate court for the third district on appeal, and the appellant company has prosecuted a further appeal to this court.

"The effect of the statute of Indiana is to abrogate the doctrine which, it seems to be conceded, would otherwise be applicable to the facts of this case—that the appellant company, as employer, is not to be held liable for an injury, fatal or otherwise, to an employee which was occasioned by the negligence of a fellow-servant of such employee. The principal question arising is whether this statute will be applied and the doctrine thereof enforced in an action instituted and maintained in the courts of the State, or whether the law as it exists in this State will govern and control. Actions not penal, but for pecuniary damages for torts or civil injuries to the person or property, are transitory, and, if actionable where committed, in general may be maintained in any jurisdiction in which the defendant can be legally served with process. We think it well settled that, without regard to the rule which may obtain as to a cause of action which accrued under the laws of a separate and distinct nation, a right of action which has accrued under the statute of a sister State of the Union will be enforced by the courts of another state of the Union, unless against good morals, natural justice, or the general interests of the citizens of the state in which the action is brought.

"It is argued by counsel for appellant that an action can not be maintained in this cause in our courts, for the reason, as alleged, that the laws of the two states are materially variant, it being, as counsel insist, against natural justice and the established public policy of this State to hold an employer liable for injuries inflicted upon an employee by a fellow-servant. This position finds support in the opinion rendered by the supreme court of Wisconsin in *Anderson v. Railway Co.*, 37 Wis., 321, and also in expressions employed in opinions rendered in cases in the courts of England. But such is not the prevailing doctrine in the courts of this country.

"The supreme court of the State of Indiana has declared the statute in question to be constitutional and valid. (See *Pittsburg, Cincinnati, Chicago and St. Louis Ry. Co. v. Montgomery*, 49 *Northwestern Reporter*, page 582, and *Department of Labor Bulletin No. 18*, page 723.) The right of action accrued and became complete in that State. In this State the doctrine of respondent superior does not apply to a case where an employee is injured or killed by the neglect of a fellow-servant, but the doctrine of respondent superior is, in general, recognized in the jurisprudence of this State, and we perceive no ground warranting us to declare the enforcement of the doctrine as enlarged or extended by the Indiana statute must be regarded as so repugnant to good morals or natural justice or so prejudicial to the best interests of our people that we should shut the doors of our courts against a suitor who seeks to enforce a right of action which arose under the statute of the sister State. The judgment of the appellate court is affirmed."

[From B. L. No. 23, July, 1899.]

**HANCOCK v. NORFOLK AND WESTERN RAILWAY CO.**, 32 *Southeastern Reporter*, page 679.—This action was brought by Whit Hancock against the above-named railway company to recover damages for injuries received while in its employ. After a hearing in the superior court of Durham County, N. C., a judgment was rendered in favor of Hancock the plaintiff, and the defendant company appealed the case to the supreme court of the State, which rendered its decision March 21, 1899, and sustained the judgment of the lower court.

The facts of the case are sufficiently stated and the reasons for the decision clearly shown in the opinion of the supreme court, which was delivered by Judge Clark. From said opinion the following is quoted:

"The decision of this case depends upon chapter 56, *Priv. Laws, 1897*, 'An act to prescribe the liabilities of railroads in certain cases.' This statute, commonly known as the 'Fellow-servant act,' was ratified on the 23d day of February, 1897, and provides:

"SECTION 1. That any servant or employee of any railroad company operating in this State who shall suffer injury to his person, or the personal representative of any such servant or employee who shall have suffered death in the course of his services or employment with said company by the negligence, carelessness, or incompetency of any other servant, employee, or agent of the company, or by any defect in the machinery, ways, or appliances of the company, shall be entitled to maintain an action against such company.

"SEC. 2. That any contract or agreement, express or implied, made by any

employee of said company to waive the benefit of the aforesaid section shall be null and void.'

"The plaintiff was injured in the service of the defendant since the ratification of this act. The defendant contends that the injury was caused by the negligence of a fellow-servant of the plaintiff, to wit, a brakeman on the passenger train, in leaving the switch open, whereby the hand car was derailed. Its counsel cites, *inter alia*, *Ponton v. Railroad Co.* (51 N. C., 245); *Pleasants v. Railroad Co.* (121 N. C., 492; 28 S. E., 267), and *Wright v. Railroad Co.* (122 N. C., 852; 29 S. E., 100), which sustain the contention that if the injury was thus caused the action could not have been maintained at common law. The defendant excepts as to above statute, which the judge held confers a right of action in such case, because: '(1). It is a private act, and, as such, under section 264 of the Code of North Carolina, it should have been pleaded (2). Whether this act is public or private, it is unconstitutional and void when applied, in a case like this, to fellow-servants of a 'railroad company operating in this State,' upon the ground that it undertakes to confer upon servants and employees of such companies separate and exclusive privileges from the rest of the community engaged in similar private employment, which are denied even to servants and employees of railroad construction companies and of street railroad and railroad bridge companies, and partnerships operating lumber and mining railroads, since its provisions are confined strictly to railroad companies,' and therefore violates article 1, section 7, of the constitution of the State.

"As to the first ground of exception, the act is so plainly and clearly a public statute that it is a mystery why it was placed among the private acts. But by whom and for what purpose this was done is immaterial. Whether a statute is private or public depends upon its contents, and not upon the conduct or judgment of the person who directs the compilation in which it shall be published. Indeed, part of an act may be public and part thereof a private act. Being a public statute, the fact that it was printed among the private acts did not make it incumbent upon the plaintiff to plead it.

"We see no ground for the defendant's contention that the act in question violates article 1, section 7, of the North Carolina constitution, by 'conferring exclusive privileges upon any set of men.' The law exempting a master from liability to a servant for the negligence of a fellow-servant is by judicial construction and of comparatively recent origin. Its extent has been differently outlined in different states by judicial construction, and in several states it has been restricted by legislative enactment so as not to extend to employees of railroad companies, as has now been done in this State. As the original ground of the decision was that a servant knew the character for care of his fellow-servant and entered into service with a view to that risk, the courts themselves might logically have long since modified the ruling not to extend to an employment like that of railroads, embracing many thousands of employees and exposing its servants to peculiar risks. The fellow-servant act now in question applies to a well-defined class, and operates equally as to all within that class. Indeed, any act incorporating a company confers special privileges upon the stockholders, but not exclusive privileges, within the meaning of the constitution. We fail to see in this act any conferring of 'exclusive privileges,' within the language or intent of the constitutional provision in question; and similar fellow-servant acts, almost in totidem verbis, in other states have been held by the Federal Supreme Court to be not in conflict with the 'equal protection' clause of the fourteenth amendment."

[From B. L. No. 23, July, 1899.]

KINCADE V. CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY CO., 78 Northwestern Reporter, page 698.—Action was brought against the above-named company by one Kincade to recover damages for personal injuries incurred by him while in its employ. In the district court of Appanoose County, Iowa, a judgment was rendered for the defendant company, and the plaintiff, Kincade, appealed the case to the supreme court of the State, which rendered its decision April 6, 1899, and affirmed the judgment of the lower court.

The opinion of the supreme court, delivered by Judge Waterman, sufficiently shows the facts in the case, and the following language was used therein:

"Plaintiff was in the employ of defendant company as a section hand. At the time of his injury he was returning from work in company with 9 other employees on a hand car. Plaintiff stood on the front of the car, facing the rear. He had hold of the lever, and was aiding in propelling the car. Two of his companions engaged in a political discussion. One of them (McCoy) was standing on the right of the plaintiff. The other (Howard) was on his left. The discussion culminated in McCoy striking Howard. The latter, in attempting to avoid the blow,

pushed against plaintiff, throwing him to the ground in such a manner that the car passed over him and inflicted the injuries for which he sues.

"Section 1307 of the Code of 1873 (section 2071, Code of 1897) is as follows: 'Every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the willful wrongs, whether of commission or omission, of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway on or about which they shall be employed.'

"The question presented is, was the negligent act of McCoy of such a character as that the company is liable therefor under the section quoted? It is a familiar rule that a master is not liable to a third person for the torts of a servant unless the latter at the time is acting within the scope of his employment. We take this to be also the test of responsibility under section 1307. The master is not liable to an employee for an injury done by a coemployee when howsoever not have been liable to a third person injured by a like act. It is not always easy to determine when an act done is within the scope of the servant's employment. The distinction, however, is always preserved. The rule seems to be that the master is liable, whether the act of the servant be willful or negligent, if it is done or attempted in the master's interest; but when the line of duty is wholly departed from, and the act is done for the servant's own purpose, though it may be done while the servant is pursuing the master's business, the latter will not be liable.

"There is, however, no claim in the case at bar that the blow struck by McCoy was an act done within the scope of his duty. It was clearly not. The contention of the plaintiff is that because he was in the performance of his duty at the time of the injury the defendant is liable. But it is by the act of McCoy, and not by the conduct of the plaintiff, that defendant's responsibility is to be fixed. If McCoy was not defendant's agent in doing this act there can be no liability here. That he was not acting for his employer, but sought to serve some independent purpose of his own, seems too clear for discussion. As we have said, it is practically conceded by appellant.

"The district court did not err in taking the case from the jury and rendering judgment in defendant's favor. Affirmed."

[From B. L. No. 27, March, 1900.]

BENSON v. CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RY. CO., 80 Northwestern Reporter, page 1050.—This action was brought in the district court of Hennepin County, Minn., by Andrew Benson, to recover damages from the above-named railway company for injuries incurred while in its employ. His right to such damages depended upon the construction of a section of chapter 220 of the acts of Wisconsin of 1893, which reads as follows.

"Every railroad or railway company operating any railroad or railway the line of which shall be in whole or in part within this State shall be liable for all damages sustained within this State by an employee of such company, without contributory negligence on his part, first, when such injury is caused by any defect in any locomotive, engine, car, rail, track, machinery, or appliance required by said company to be used by its employees in and about the business of such employment, when such defect could have been discovered by such company by reasonable and proper care, tests, or inspection, and proof of such defect shall be presumptive evidence of knowledge thereof on the part of such company; second, or while any such employee is so engaged in operating, running, riding upon, or switching passenger or freight or other trains, engines, or cars, and while engaged in the performance of his duty as such employee, and which such injury shall have been caused by the carelessness or negligence of any other employee, officer, or agent of such company in the discharge of, or for failure to discharge, his duties as such."

The district court rendered a judgment for the defendant company after a hearing, and Benson appealed the case to the supreme court of Minnesota, which rendered its decision December 11, 1899, and affirmed the decision of the lower court.

The opinion of the supreme court was delivered by Judge Brown, and the syllabus of the same, which clearly states the facts in the case, reads as follows:

"Defendant was engaged in repairing its track at a point in the State of Wisconsin, and employed a large number of men in and about such work, including plaintiff. Boarding cars were kept and maintained at or near the work, at which such employees were boarded and lodged. As the work progressed the men became farther removed from the boarding cars, and at their request and for

their convenience defendant furnished them hand cars on which to transport themselves to and from their work. Defendant did not manage the boarding cars, nor operate nor have control of the hand cars. Such hand cars were operated exclusively by the men, and they had full charge and control thereof. A collision occurred between two of such hand cars while the men were transporting themselves thereon to the boarding cars for their dinner, and plaintiff was injured. The collision was caused by the negligence of the employees in charge of one of such cars, and plaintiff was free from fault. Held, that the employees were not, within the purpose and meaning of chapter 220, Laws of Wisconsin, 1893, at the time of such collision and injury, engaged in the discharge of their duties under their employment, and defendant is not liable."

[From B 4 — so 29, July, 1900.]

TULLIS *v.* LAKE ERIE AND WESTERN RAILROAD COMPANY, 20 Supreme Court Reporter, page 136.—Action was brought by Hosea B. Tullis against the above-named railroad company to recover damages for an injury suffered while in the employ of said company. In an inferior United States court a judgment was rendered in favor of the defendant company and the plaintiff, Tullis, appealed the case to the United States circuit court of appeals for the seventh circuit. The case turned upon the validity of an act approved March 1, 1893, and now included in sections 7083 to 7087 of Burns' Annotated Statutes of Indiana, revision of 1894, which changed the common-law rule as to fellow-servants as regards railroad companies and rendered them liable for injuries of employees caused by the negligence of fellow-servants in certain specified cases. After a hearing the court of appeals decided that material error was committed at the hearing in the lower court, for which its judgment should be reversed if the sections above referred to were constitutional and valid, but that if said sections were invalid the judgment should be affirmed. Upon the question as to the constitutionality of these sections the court of appeals certified the case to the Supreme Court of the United States, which rendered its decision December 11, 1899, and affirmed their constitutionality.

The opinion of the court was delivered by Chief Justice Fuller, and the following is quoted therefrom.

"The contention is that the act referred to is in conflict with the fourteenth amendment (to the Constitution of the United States) because it denies the equal protection of the laws to the corporations to which it is applicable.

"In *Pittsburg, Cincinnati, Chicago and St. Louis Railroad Company v. Montgomery* (152 Ind., 1; 49 N. E., 582) the statute in question was held valid as to railroad companies, and it was also held that objection to its validity could not be made by such companies on the ground that it embraced all corporations except municipal, and that there were some corporations whose business would not bring them within the reason of the classification. In announcing the latter conclusion the court ruled in effect that the act was capable of severance; that its relation to railroad corporations was not essentially and inseparably connected in substance with its relation to other corporations; and that, therefore, whether it was constitutional or not as to other corporations, it might be sustained as to railroad corporations.

"Considering this statute as applying to railroad corporations only, we think it can not be regarded as in conflict with the fourteenth amendment."

The court at this point referred to several decisions declaring similar statutes of several states to be valid, and then continued in part as follows:

"By reason of the particular phraseology of the act under consideration it is earnestly contended that the decisions sustaining the validity of the statutes of Kansas, Iowa, and Ohio are not in point, and that this statute of Indiana classified railroad companies arbitrarily by name and not with regard to the nature of the business in which they were engaged; but the supreme court of the State in the case cited has held otherwise as to the proper interpretation of the act, and has treated it as practically the same as the statutes of the State referred to.

"As remarked in *Missouri, K. and T. R. Co. v. McCann* (174 U. S., 580, 586; 43 L. ed., 1093, 1096, 19 Sup. Ct. Rep., 755), the contention calls on this court to disregard the interpretation given to a state statute by the court of last resort of the state, and, by an adverse construction, to decide that the state law is repugnant to the Constitution of the United States. 'But the elementary rule is that this court accepts the interpretation of a statute of a state affixed to it by the court of last resort thereof.'

"This being an action brought by Tullis to recover damages for an injury suffered while in the employment of the railroad company, caused by the negligent act of a fellow-servant, for which the company was alleged to be responsible by

force of the act, we answer the question propounded that the statute as construed and applied by the supreme court of Indiana is not invalid and does not violate the fourteenth amendment to the Constitution of the United States."

[From R. I. No. 31 November, 1900.]

*FENWICK v. ILLINOIS CENTRAL RY. CO.*, 100 Federal Reporter, page 247.—This case came before the United States circuit court of appeals for the fifth circuit upon a writ of error, directed to the United States circuit court for the southern district of Mississippi, a judgment having been rendered therein in favor of the defendant railway company, which had been sued by one Fenwick to recover damages for personal injuries incurred by him while in its employ. The decision of the court of appeals was rendered February 28, 1900, and affirmed the judgment of the circuit court.

The facts in the case are sufficiently shown in the opinion of the court of appeals, which was delivered by Circuit Judge Shelby, and from the same the following is quoted:

"Joseph Fenwick, the plaintiff, was injured while in the employment of the defendant. He alleged that the injury was caused by the negligence of Frank Puckett, who was also a servant of the defendant. Puckett, Hughes, Fredericks, and the plaintiff constituted the switch crew in defendant's yard at McComb City, Miss. Sullivan was the yard master, and, on the night that the injury occurred, Frank Puckett was acting as foreman of the switch crew. In the absence of statutes or constitutional provisions controlling the case, it is conceded that the plaintiff could not recover, because the employer would not be responsible to the plaintiff for an injury caused by the negligence of a fellow-servant. The plaintiff's contention is that the defendant is made liable by section 193 of the constitution of Mississippi adopted in 1890, which provision is also embraced in a statute, (Ann. Code, Miss. 1892, § 3559.) The part of the section relied on is as follows: 'Every employee of a railroad corporation shall have the same rights and remedies for an injury suffered by him from the act or omission of the corporation or its employees as are allowed by law to other persons not employees, where the injury results from the negligence of a superior agent or officer, or of a person having the right to control or direct the services of the party injured.'

"It was clearly not the intention of the makers of the constitution or the legislature to entirely abrogate the common law relating to negligence of fellow-servants. It is only modified. The rule is only changed when the injury results from the negligence of a 'superior agent or officer,' or of 'a person having the right to control or direct the services of the party injured.' In the case of *Evans v. Railway Co.* (70 Miss., 527; 12 South., 581) a brakeman was injured by the alleged negligence of an engineer, and the cited constitutional provision was relied on by the plaintiff. In the course of the opinion the court said:

"The constitutional provision has reference to a superior agent or officer, of the sort well known as such, and any other person in the company's service, by whatever name, who may be intrusted with the right to control and direct the services of others according to his discretion and judgment—one to whom is committed the direction or control of others, for the accomplishment of some end dependent on his independent orders, born of the occasion, spring from him as director, and not consisting of the mere execution of routine duties in pursuance of fixed rules by various employees, each charged with certain parts in the general performance. It may be that under some circumstances the engineer may be the superior of the brakeman, in the meaning of the constitution, but in the operation of the train in accordance with rules one is no more superior than the other, and they are not within the rule established by the constitution. To hold that they are would, by interpretation, so enlarge the constitutional provision as to sweep away entirely the rule as to fellow-servants as existing before, in the face of the incontrovertible fact that the purpose of the framers of the constitution was not to abrogate, but to modify to a certain extent, carefully expressed in section 193."

"This construction of the statute in question seems to us decisive of this case. The business of the switch crew was to distribute the cars on the various tracks in order to make up the trains. One of the crew was called the 'foreman.' On the night in question, and for that occasion, the yard master, Sullivan, had appointed Puckett foreman. Puckett had the switch list, or written memorandum by which the crew switched the cars. This is furnished the crew by the yard master. There are five tracks in the yard, including the 'lead' on which the cars were to be switched. On certain tracks designated cars were to be placed, and the men were engaged in that work. We do not find in the evidence that

Puckett was employed to direct the services of the plaintiff according to his discretion and judgment. The crew were engaged in the performance of mere routine duties. The plaintiff and Puckett were of the same rank in the service; neither employed or could discharge the other; they received the same pay, and neither was superior to the other in the sense that the one could exercise a discretion and judgment in controlling the actions of the other.

"Under other circumstances a foreman of a crew might be an agent of the defendant, for whose negligence the defendant would be liable for injury to an employee. The name or title of the officer or agent is immaterial. We decide only that on the facts disclosed by the record the foreman did not, in reference to the services in which he and the plaintiff were engaged when the injury occurred, bear such relation to him as to make the employer responsible under the statute for his alleged negligence. We think that the circuit court correctly directed a verdict for the defendant. The judgment of the circuit court is affirmed."

#### V.—DECISIONS ON POWER TO CONTRACT FOR RELEASE OF LIABILITY.

[From B. L. No. 5, July, 1896.]

OTIS v. PENNSYLVANIA CO., 71 Federal Reporter, page 136.—In this case the United States circuit court, district of Indiana, decided, on January 3, 1896, that where a railroad relief association, composed of associated companies and their employees, is in charge of the companies, who guarantee the obligations, supply the facilities for the business, pay the operating expenses, take charge of and are responsible for the funds, make up deficits in the benefit fund, and supply surgical attendance for injuries received in their service, an employee's agreement, in his voluntary application for membership, that acceptance of benefits from the association for an injury shall release the railroad company from any claim for damages therefor is not invalid as being against the public policy or for want of consideration or mutuality.

The opinion of the court, delivered by District Judge Baker, is as follows:

"This is an action by the plaintiff, Eugene V. Otis, for the recovery of damages from the defendant, the Pennsylvania Company, for injuries received by him through the negligence of the defendant in employing and retaining in its service a careless and drunken engineer, with full knowledge of his habits, by whose carelessness the plaintiff sustained serious and permanent injuries without fault on his part. The defendant has answered in 2 paragraphs. The first is a general denial. The second sets up matter in confession and avoidance. To this paragraph of answer the plaintiff has interposed a demurrer, and the question for decision is, Does this paragraph of answer set up facts sufficient to constitute a defense? The gist of this paragraph of answer is the payment to and acceptance by the plaintiff of benefits to the amount of \$660 from the relief fund of the defendant's 'voluntary relief department' on account of the injuries for which the action is brought, in full payment and satisfaction thereof.

"It is alleged in the paragraph under consideration that the plaintiff was a member of the relief department mentioned, which is composed of the different corporations forming the lines of the Pennsylvania Company west of Pittsburg, to which such of their employees as voluntarily become members contribute monthly certain agreed amounts. This department has for its object the relief of such employees as become members thereof in cases of sickness or disability from accident, and the relief of their families in case of death, by payment to them of definite amounts out of a fund 'formed by voluntary contributions from employees, contributions, when necessary to make up any deficit, by the several companies, respectively, and income or profit derived from investments of the moneys of the fund, and such gifts as may be made for the use of the fund.' The associated companies have general charge of the department, guarantee the full amount of the obligations assumed by them, and for this purpose annually pay into the funds of the department the sum of \$30,000 in conformity with established regulations, furnish the necessary facilities for conducting the business of the department, and pay all the operating expenses thereof, amounting annually to the sum of \$25,000. The associated companies have charge of the funds and are responsible for their management and safe-keeping. Employees of the Pennsylvania Company are not required to become members of the relief department, but are at liberty to do so if admitted on their voluntary application, and may continue their membership by the payment of certain monthly dues, the amount of which depends upon the respective classes to which they may be admitted, and the benefits to which they may become entitled are determined by the class to which they belong. A disabled member is also entitled to surgical attendance at the company's expense, if

injured while in its employ. The plaintiff agreed in his application for membership:

"That the acceptance of benefits from the said relief fund for injury or death shall operate as a release of all claim for damages against said company arising from such injury or death which may be made by or through me, and that I or my legal representatives will execute such further instrument as may be necessary formally to evidence such acquittance."

"Each company to the contract also agreed, in behalf of itself and employees, to appropriate its ratable proportion of the joint expense of administration and management and the entire outlay necessary to make up deficits for benefits to its employees. It is further alleged that the member was a member of the relief department when injured, and that there was paid to him by the defendant, through such department, on account of the injuries so received, and in accordance with his application therefor, and in accordance with the certificate of membership so issued to him, and the rules and regulations of the relief department, the sum of \$660, being at the rate of \$60 per month for 11 months, which he accepted and received as the benefits due to him from the said relief department under his said application and certificate and the rules and regulations of said relief department.

"It is strenuously insisted by the learned counsel for the plaintiff that the contract is void because it is repugnant to sound public policy and is an attempt by the defendant to exempt itself by contract from the consequences of its own negligence, and because the agreement that the payment and acceptance of the benefits should operate to release the company from responsibility for its wrongful act is without consideration for the reason that the plaintiff, by the payment of his monthly dues, became entitled as a matter of legal right to receive the stipulated benefits as fully as he was entitled to the payment of his monthly wages.

"As a general proposition, it is unquestionably true that a railroad company can not relieve itself from responsibility to an employee for an injury resulting from its own negligence by any contract entered into for that purpose before the happening of the injury, and if the contract under consideration is of that character it must be held to be invalid. But upon careful examination it will be seen that it contains no stipulation that the plaintiff should not be at liberty to bring an action for damages in case he sustained an injury through the negligence of the defendant. He still has as perfect a right to sue for his injury as though the contract had never been entered into. Before the contract was entered into his right of action for an injury resulting from the defendant's negligence was limited to a suit against it for the recovery of damages therefor. By the contract he was given an election either to receive the benefits stipulated for or to waive his right to the benefits and to pursue his remedy by law. He voluntarily agreed that when an injury happened to him he would then determine whether he would accept the benefits secured by the contract or waive them and retain his right of action for damages. He knew if he accepted the benefits secured to him by contract that it would operate to release his right to the other remedy. After the injury happened two alternative modes were presented to him for obtaining compensation for such injury. With full opportunity to determine which alternative was preferable, he deliberately chose to accept the stipulated benefits. There was nothing illegal or immoral in requiring him to do so. And it is not perceived why the court should relieve him from his election in order to enable him now to pursue his remedy by an action at law, and thus practically to obtain double compensation for his injury. Nor does the fact that the fund was in part formed by his contributions to it alter the case. The defendant also contributed largely to the fund under its agreement to make up deficits, to furnish surgical aid and attendance, to pay expenses of administration and management, and to be responsible for the safe-keeping of the funds of the relief department. It had a large pecuniary interest in the very money which the plaintiff received. We are not concerned with the question whether the plaintiff might not have secured a larger sum of money if he had prosecuted his legal remedy for the recovery of damages for his injury. After the injury the plaintiff was at liberty to compromise his right of action with the defendant for any valuable consideration, however small; and if he chose to accept a less amount than that which he might have recovered by action, such settlement, if fairly entered into, constitutes a full accord and satisfaction from which the court can not, and ought not to, relieve him.

"The question of the validity of such a contract as that relied upon in the paragraph of answer under consideration is a new one in this court, but it has been considered by a number of reputable courts in other jurisdictions, and with a single exception, so far as I am advised, it has been uniformly held that such a contract is not invalid for repugnancy to sound public policy, or for want of consideration, or for want of mutuality. In the views expressed in these cases I entirely concur."

[From B. L. No. 6, September, 1896.]

SHAVER v. PENNSYLVANIA CO., 71 Federal Reporter, page 931.—This case was tried in the United States circuit court for the northern district of Ohio, and the decision of said court was given January 28, 1896. The opinion was delivered by District Judge Ricks and contains a full statement of the facts in the case. The following language is quoted therefrom:

"This suit was originally instituted in the court of common pleas for Lucas County, and by due proceedings had was removed by defendant, which is a non-resident corporation, to this court. The plaintiff sues to recover for damages because of certain negligence of the defendant and its agents in failing to have properly filled the space between the ties at a certain junction or cross over in said county, by reason of which plaintiff's foot was caught while undertaking to uncouple cars. There are certain other acts of negligence charged in the petition which it is not necessary here to consider. Plaintiff claims permanent injury, and damages in the sum of \$25,000.

"To this petition the defendant filed an answer, which, after denying the negligent acts charged in the petition, set up, as a third defense, that said plaintiff, at the time he received the injuries complained of, was a member of the voluntary relief department of the Pennsylvania lines west of Pittsburg; that said voluntary relief department is an organization formed for the purpose of establishing and managing a fund, known as a 'relief fund,' for the payment of definite amounts to employees contributing to the fund who, under the regulations, are entitled thereto when they are disabled by accident or sickness, and, in the event of their death, to their relatives or other beneficiaries specified in the application for insurance; that said relief fund is formed from voluntary contributions of the employees of the road; from contributions given by said defendant, the Pennsylvania Company, when necessary to make up any deficit; from income or profits derived from investments or profits of the moneys of the fund, and such gifts and legacies as may be made for the use of the fund. The regulations governing said voluntary relief department require that those who participate in the benefits of the relief fund must be employees in the service of the Pennsylvania Company and be known as members of the relief fund. Defendant, further answering, says that no employee of the company is required to become a member of said relief fund; that the same is purely voluntary; that anyone who has become a member may withdraw at any time, upon proper notice; that contributions from such members cease by so withdrawing. The defendant further says that participation in the benefits of such relief fund is based upon the application of the beneficiaries, that on the 3d day of January, 1894, the plaintiff in this case, being in the employ of the defendant company, applied for membership, and in said application agreed to be bound by the regulations of the said fund. Defendant further says that the application for membership was approved and accepted at the office of the superintendent of the relief department, and that thereupon said plaintiff became a member of said relief fund. Defendant further says that when said plaintiff received the injuries complained of he thereupon became entitled to the benefits growing out of his membership in said relief fund by reason of the injury so received while in said service; that said plaintiff thereupon immediately applied to said department for such benefits and received monthly payments therefrom, amounting in all to the sum of \$399, until the commencement of this action, on the 25th day of May, 1895.

"Defendant says that the plaintiff, in his application for membership, expressly agreed that, should he bring suit against either of the companies now associated in the administration of the relief department for damages on account of injury or death, payments of benefits from the relief fund on account of the same shall not be made until such suit is discontinued, or, if prosecuted to judgment or compromise, any payment of judgment or amount of compromise shall preclude any claim upon the relief fund for such injury or death. Defendant says that, the plaintiff having commenced suit against the defendant, payments to the plaintiff for the benefits accruing under said contract were suspended; and defendant says that by virtue of the agreement aforesaid, and the acceptance by the plaintiff of the benefits from said relief fund on account of said injuries, the said defendant thereupon became discharged from any and all liability to the plaintiff on account of said injuries. The plaintiff has demurred to this answer. He contends, first, that the contract set up in the answer is invalid; and, next, that it is in violation of an act of the legislature of Ohio passed in 1890, in 87 Ohio Laws, page 149.

"There are two questions to be determined upon the demurrer thus interposed. The first question is whether this contract between the plaintiff and defendant is a valid one. The case, as presented to the court, rests entirely upon the pleadings. No evidence is before me, and the allegations of the defendant's answer are

to be accepted as true by the plaintiff having demurred thereto. It therefore becomes important to emphasize the facts thus admitted. They are that the plaintiff voluntarily became a member of this relief department, with full knowledge of its rules and regulations. The answer further distinctly avers, and the demurrer admits it, that, by his application in writing to become a member of such relief department the plaintiff agreed that the acceptance by him of benefits from the relief fund for injury or death should operate as a release of all claims for damages against said defendant arising from such injury or death. It will be observed that it is the acceptance of benefits from this relief fund which, by the agreement, releases the railroad company from a claim for damages. If the employee injured does not accept such benefits, but chooses to sue for damages, his right of action is unimpaired and in no respect waived. This is the case as presented by the pleadings and admitted facts. It is not the question of whether a railroad company, by contract with its employees, can exempt itself from suits for personal injuries caused by its negligence. That, as a general rule, can not be done. This case does not present that question, neither does it present an issue of fact as to whether this contract for insurance is a voluntary one or not. If the pleadings and evidence in a case should show that an employee entered into such a contract, ignorant of its terms, or when under restraint or duress or compulsion, the court would then be authorized, and it would be its duty, to inquire into that fact and relieve against any wrong of that nature. But, as before stated, no such question is now in any way presented. The pleadings do not even suggest such an issue. The sole question is whether, under the admitted facts already stated, this contract is valid. There are decisions of the supreme courts of the States of Iowa, Maryland, Pennsylvania, and of state courts in Ohio, and of the circuit courts of the United States in Ohio and Maryland, holding such contracts legal and binding. Under this plan, employees of railroads are afforded protection by a species of insurance. This sort of protection is not available to them in ordinary insurance companies, except at such high cost as to make it substantially unobtainable. Members sick or injured are entitled to benefits, regardless of what causes their temporary disabilities. They will thus receive benefits in cases where no claim against the railroad company could be made. They could receive benefits also in cases where the injury was the result of their own contributory negligence, or of that of fellow-servants in the same department of service, in both of which cases, as a rule, no right of action would arise against their employer. Now, if employees desire to enjoy the benefits of such contracts, they should have the right to make them. They are capable of deciding for themselves whether they want to contract for protection. It is not within the powers of a legislature to assume that this class of men need paternal legislation, and that therefore they will protect them by depriving them of the power to contract as other men may."

At this point in its opinion the court cites and quotes from the following cases: *Johnson v. Railroad Co.* (163 Pa. St. Reports, p. 127, and 29 Atlantic Reporter, p. 851); *Donald v. Railroad Co.* (61 Northwestern Reporter, p. 971); *Fuller v. Association* (67 Md. Reports, p. 433, and 10 Atlantic Reporter, p. 237); *Owens v. Railway Co.* (35 Federal Reporter, p. 715), and *Martin v. Railroad Co.* (41 Federal Reporter, p. 125). The opinion then continues as follows:

"In view of these authorities and of the reasons given in support of the conclusions reached, I feel justified in holding the contract in this case valid and binding upon the plaintiff.

"The next question to be determined is whether the act of 1890 of Ohio (87 Ohio Laws, p. 119) is constitutional. The latter part of the first section of said act reads as follows:

"And no railroad company, insurance company, or association of other persons shall demand, expect, require, or enter into any contract, agreement, or stipulation with any other person about to enter or in the employment of any railroad company whereby such person stipulates or agrees to surrender or waive any right to damages against any railroad company thereafter arising from personal injury or death, or whereby he agrees to surrender or waive, in case he asserts the same, any other right whatsoever, and all such stipulations or agreements shall be void."

"This act has been declared unconstitutional in the case of *Cox v. Railway Company* (33 Ohio Law J.), April 22, 1895, in a well-considered opinion by Judge Dilatash, of the Warren County court of common pleas; and the court reaches that conclusion because said act violates section 1, article 1, of the bill of rights, as interfering with the rights of private contract. That provision of the bill of rights is as follows:

"All men are by nature free and independent, and have certain inalienable rights, among which are those of enjoying and defending life and liberty, acquir-

ing, possessing, and defending property, and seeking and obtaining happiness and safety.'

"Article 2, section 26, of the constitution of Ohio provides:

"All laws of a general nature shall have uniform operation throughout the State."

"The act under consideration, while it is general in its nature, applies only to railroad companies and their employees, and is not therefore general in its application, and does not operate uniformly on all classes of citizens. Under this statute railroad companies are prohibited from making contracts which other corporations in the State are allowed to make.

"Article 1, section 10, of the Constitution of the United States prohibits any State from passing any law impairing the obligation of contracts.

"Article 8, section 16, of the bill of rights of the State of Ohio prohibits making any law impairing the obligation of contracts.

"Article 2 of the Northwestern Territorial Government (1787) provides as follows:

"In the just preservation of rights and property, it is understood and declared that no law ought ever to be made or have force in said Territory that shall in any manner interfere with or affect private contracts or engagements bona fide without fraud, previously made."

"This extract from the ordinance of 1787 shows how jealously the right of personal liberty in the making of private contracts was regarded, and how carefully any restriction of said right was restrained.

"The act under consideration is certainly one which impairs the rights of a large number of the citizens of Ohio to exercise a privilege which is dear to all persons, namely, that of making contracts concerning their own labor and the fruits thereof, and, so far as it relates to such contracts already made, impairs their validity. The act seems to assume that a large class of the citizens of the State, namely, those employed by railroad corporations, are incapable of making contracts for their own labor.

"As hereinbefore stated, this contract shows on its face not only that no unfair advantage is taken of these employees, but that the contract, in its broadest and fullest sense, is a beneficent one, intended for their protection and assistance. If in some cases it proves unsatisfactory to the employee insured, that is in itself no evidence that the contract is of an unconscionable nature or unfair in its provisions. Neither is it a sufficient pretext to assume that all such contracts need the supervision of the legislative body, or that so large a class of citizens should be restricted in their right of personal liberty.

"The Ohio statute, in denying to the employees of a railroad corporation the right to make their own contracts concerning their own labor, is depriving them of 'liberty' and of the right to exercise the privileges of manhood 'without due process of law.' Being directed solely to employees of railroads, it is class legislation of the most vicious character. Laws must be not only uniform in their application throughout the territory over which the legislative jurisdiction extends, but they must apply to all classes of citizens alike. There can not be one law for railroad employees, another law for employees in factories, and another law for employees on a farm or the highways. Class legislation is dangerous. Statutes intended to favor one class often become oppressive, tyrannical, and prescriptive to other classes never intended to be affected thereby; so that the framers of our constitution, learning from experience, wisely provided that laws should be general in their nature and uniform throughout the State.

"For the reasons stated, I am of the opinion, first, that the contract set out in the defendant's answer is a valid contract; and, second, that the act of the legislature of Ohio which declares it to be void and invalid is unconstitutional. The demurrer to the answer is, therefore, overruled."

[From B. L. No. 9, March, 1897.]

CHESAPEAKE AND OHIO RY. CO. v. MOSBY, 24 Southeastern Reporter, page 916.—Edgar W. Mosby, who was a conductor of a freight train on the Chesapeake and Ohio Railroad, and while thus engaged was seriously injured in a collision, brought an action for damages against the railroad company. Pending said action he instituted a suit in the chancery court of Richmond, Va., to set aside a release of all claim for damages given by him to the railroad company on the ground that at the time he executed the release he was mentally incompetent. The chancellor, after hearing the case, granted the relief asked and set the release aside. From this action the railroad company appealed to the supreme court of appeals of the State, which rendered its decision April 16, 1896, and reversed the decree of the chancellor.

The opinion of said court was delivered by Judge Harrison, and in the course of the same he used the following language:

"The law presumes that there is in everyone capacity to contract, and accordingly where exemption from liability to fulfill an engagement is claimed by reason of the want of such capacity, this fact must be strictly established on the part of him who claims the exemption. Moreover, it is only in certain prescribed cases that this protection can be claimed, and therefore weakness of mind, short of insanity or immaturity of reason in one who has attained full age, or the mere absence of experience or skill upon the subject of the particular contract, affords per se no ground for relief at law or in equity." (1 Chit. Cont., 186.) The same author from whom this general rule has been quoted states its qualification thus: 'Although weakness of intellect, short of insanity, in one of the contracting parties is no ground per se for invalidating a contract, it may have the effect, if additional facts betraying an intention to overreach can be proved' (2 Chit. Cont., p. 1050.)

"This rule with its qualification is substantially adopted by this court in *Greer v. Greers*, 9 Grat., 330. It was there said that, although the person may labor under no legal incapacity to do a valid act or make a contract, yet, if the whole transaction taken together, with all the facts, mental weakness being one of them, showed that consent, the very essence of the act, was wanting, it would be void. Where a legal capacity is shown to exist that the party had sufficient understanding to clearly comprehend, that he consented freely to the special matter about which he was engaged, and no fraud or undue influence is shown to have been used to bring about the result, the validity of the act can not be impeached, however unreasonable or imprudent it may seem to others. It is not the propriety or impropriety of the act, but the capacity to do the act freely that must control the judgment of the court.

"These general principles are entirely applicable and are all that need be invoked in considering the case before us.

"The plaintiff was very seriously injured in a collision between 2 trains on the road of the defendant, he being conductor on one of said trains. It satisfactorily appears from the evidence that about 2 months after the accident the plaintiff went to the office of the superintendent of the defendant company and agreed upon a settlement of his claim for damages against the company. About 2 months after this agreement was made the plaintiff went to the office of the superintendent and collected \$300 on account of this settlement and gave a receipt therefor, which fully describes the accident and admits that his injuries were received under circumstances exonerating the company from responsibility. On the 22d of September, 1891, the plaintiff again went to the office of the superintendent and collected the remaining \$150 due under the agreement, and gave a final voucher therefor, which is a more elaborate paper than the first, reciting that the injuries were received under circumstances completely exonerating the company from liability, and that the amount was received in full compromise, satisfaction, and discharge of all his claims or causes of action, and particularly of all claims or causes of action arising out of personal injuries received by him in the accident as to which the settlement had been made.

"The plaintiff admits the genuineness of his signature to both these papers, but says that he has no recollection of signing any but the last one for \$150, and further insists that both papers should be declared null and void, because at the time of their execution he was mentally incompetent, and that the defendant took advantage of his incapacity to procure them.

"The evidence wholly fails to sustain this contention, on the contrary, it shows that the plaintiff had an intelligent comprehension of his rights in the premises. The first receipt was given 4 months and the other 6 months after the accident, when the plaintiff had been going about for months.

"The plaintiff insists that the consideration for the settlement made by him was totally inadequate, and that this circumstance is sufficient to justify the court in releasing him from the contract he has made.

"If the plaintiff was at the time he signed the release competent to appreciate and understand its nature and effect—and we have seen that he was—and no unfair methods were used to induce him to sign it, then it makes no difference whether the settlement was, on his part, wise or unwise. So far as this transaction is disclosed by the record, it is absolutely free from the suspicion of fraud, advantage, or undue influence on the part of the defendant. There is nothing in the record upon which to base the contention that the consideration was inadequate. For aught that appears to the contrary it may have been a wise contract for the plaintiff to make. There is no evidence showing that the company was under any liability to the plaintiff, and none can be inferred, for in a suit by an

employee against a railroad company the mere proof of the accident raises no presumption of negligence against the company.

"The law favors the compromise and settlement of disputed claims. It is to the interest of all that there should be an end of litigation; and a settlement deliberately sought, as this was by the plaintiff, ought not to be set aside except upon the most satisfactory evidence.

"For the foregoing reasons the decree complained of must be reversed and set aside, and this court will enter such decree as the court below ought to have entered."

[From B. L. No. 18 September 1898.]

PHARES *v.* LAKE SHORE AND MICHIGAN SOUTHERN RAILWAY CO., 50 North-eastern Reporter, page 306.—This action, brought by William H. Phares against the above-named railway company, was heard in the circuit court of Elkhart County, Ind., and a judgment was rendered in favor of the company and the plaintiff's right to damages was denied. Phares appealed the case to the appellate court of the State, which rendered its decision April 26, 1898, and affirmed the judgment of the lower court.

The facts of the case are sufficiently stated in the opinion of the appellate court, which was delivered by Judge Black, and reads in part as follows:

"The court rendered judgment for the defendant upon a special verdict in an action brought by the appellant against the appellee. The controlling facts of the lengthy special verdict were as follows: The railroad company had two classes of freight brakemen, one called 'regular' freight brakemen and the other 'extra' freight brakemen. The appellant entered the service of the appellee on the 6th day of September, 1892, and during all the time of his service was an extra freight brakeman. He suffered a personal injury while in such service on the 29th of October, 1892. On the 25th of March, 1893, the appellant signed a writing, referred to in the special verdict as a proposition, and as a written option, and as an offer of compromise, as follows:

"Elkhart, Indiana, March 25th, 1893. For and in consideration of the sum of one dollar to me in hand this day paid by the Lake Shore and Michigan Southern Railway Company, I hereby stipulate and agree to and with the same company that I will accept from it the sum of three hundred dollars, and, further, that I am to remain in the service of said company as brakeman as long as I want to, providing my work shall prove satisfactory to said company, as full settlement and satisfaction of all claims and demands of every kind, nature, and description which I have or may be entitled to have against said company by reason of personal injuries sustained by me while a freight brakeman of said company at or near Dune Park station, in the State of Indiana, on the 29th day of October, 1892; and in consideration thereof to execute and deliver to said company a full, perfect, and complete release and satisfaction, provided the same is paid to me within forty-five days from the date hereof. W. H. Phares [Seal] Witnesses: C. A. Theis, C. C. Needham."

"Elkhart, Indiana, March 25th, 1893. I, the aforesaid W. H. Phares, do hereby acknowledge receipt from the Lake Shore and Michigan Southern Railway Company, by the hands of C. C. Needham, its agent, the said sum of one dollar mentioned in the above agreement. W. H. Phares. Witnesses: C. A. Theis, C. C. Needham."

"On the 10th day of May, 1893, the appellant signed a writing as follows:

"Form No. 1284. Whereas on the 29th day of October, A. D. 1892, the undersigned, while in the employ of the Lake Shore and Michigan Southern Railway Company as freight brakeman, received certain injuries as follows, to wit: While uncoupling engine had his left hand caught between pan and end sill of car C. L. & W., 3718, one finger amputated, and another bruised, while in the discharge of his duties, at or near Dune Park Station, in the State of Indiana; and whereas I, the said William H. Phares, believe that my said injuries are the result of the negligence of said railway company, its officers, agents, and employees; and whereas the said railway company denies any and all negligence on the part of itself, its officers, agents, and employees, and denies any and all liability to me for damages for the injuries so as aforesaid by me sustained, but by reason of an offer of compromise made by me the said L. S. and M. S. Ry. Co., for the purpose of avoiding litigation, to receive and accept the sum of three hundred dollars in full accord and satisfaction for all claims for damages which I may or might have for the injuries aforesaid, have paid to me the sum of three hundred dollars, and agree to reemploy me as a freight brakeman for such time only as may be satisfactory to said company. Now, therefore, in consideration of the premises, and the payment to me of the aforesaid sum of three hundred dollars, the receipt

whereof I do hereby acknowledge, I do hereby release and forever discharge the said Lake Shore and Michigan Southern Railway Company and all other parties in interest of and from all actions, suits, claims, and demands for or on account of or arising from the injuries so as aforesaid received, and every and all results hereafter arising therefrom. Witness my hand and seal, at Elkhart, Indiana, this 10th day of May, A. D. 1893. William H. Phares. [Seal.] Signed, sealed, and delivered in presence of C. C. Needham, J. W. Gamard.

"Lake Shore and Michigan Southern Railway Company to William H. Phares, Dr. Issued April 28, 1893, 7/10 A. B. Newell, Chicago, Ill. For settlement in full of all claims and demands to date, especially for personal injuries sustained at Dime Park, Indiana, October 29th, 1892, as per attached form G. S. 1281, \$300 00.

"Received, Elkhart, May 10th, 1893, of the Lake Shore and Michigan Southern Ry. Co., three hundred dollars, in full of the above account \$300.00. William H. Phares.

"Correct. W. H. Cahniff, gen. supt

"Audited. C. P. Leland, auditor

"Approved. P. P. Wright, ass't gen'l manager "

"On the 25th of March, 1893, and during the whole of that month, and on the 10th day of May, 1893, and during the whole of that month, the appellant was employed by the appellee as an extra freight brakeman, and from the time of his first employment down to the 26th of June, 1894, whenever he was called upon to do work, he was put upon the appellee's pay roll of extra freight brakemen, and he received pay as such. At the date last mentioned the appellee put in force a seniority list of all brakemen, whereby those in the appellee's service for the shortest time were put upon the list of extra freight brakemen, and the youngest of the extra freight brakemen in the service, to the number of 10, were temporarily laid off until business should revive. From that date to the commencement of this action the appellant's name was kept upon the list of the extra freight brakemen who were so laid off to be called into service as extra freight brakemen, according to their seniority of service, whenever business should revive so as to give them active employment.

"While the proposition for compromise given by the appellant to the claim agent on the 25th of March, 1893, contained a stipulation on the part of the appellant that 'I am to remain in the service of said company as brakeman as long as I want to, providing my work shall prove satisfactory to said company,' the written instrument containing the release sent by the appellee through the claim agent in response to the appellant's proposition, and containing a reference thereto, to be signed by the appellant, and by him signed, bearing date May 10, 1893, did not contain such a stipulation or provision, but, instead of it, provided that the appellee agreed 'to reemploy me as a freight brakeman for such time only as may be satisfactory to said company.' The claim agent agreed with the appellant that the contract releasing the appellee should contain such a provision concerning the employment of the appellant as that contained in the appellant's proposition; but when the release came from the general officers to the claim agent, to be signed by the appellant, and the money consideration was paid, and the release was finally executed, it did not correspond with appellant's proposition and the claim agent's promise. There is no finding of any mistake or of fraud or fraudulent conduct, no indication that the appellant did not know the contents of the papers which he signed, dated the 10th of May, 1893, which is the date throughout the verdict referred to as the time of the acceptance of the offer of compromise by the appellee, and as the date of the settlement between the parties. The contents of this instrument of release clearly indicated to the appellant that his proposition was not accepted as to all its stipulations by the appellee, and that it would settle upon different terms as set forth in the form of release sent by the general officers. As to the final agreement of settlement, there can be no doubt that it was contained in the paper dated the 10th of May, 1893. So far as it differed from the written proposition of the appellant or the oral promise of the claim agent, the appellant must be deemed to have consented to such variance when, without fraud or imposition, which can not be presumed, he accepted the money and attached his signature. No ground for the reformation of the contract appears, if such had been the purpose of the action. The appellant was paid a specified sum for his services rendered after the compromise. They were all rendered in the capacity of an extra freight brakeman. It does not appear that this sum was not full payment for the services actually rendered. If he had been employed as a regular freight brakeman, he would have earned a larger sum. But the appellant had been employed only as an extra freight brakeman up to the time of his injury, and he served and was paid in that capacity after the compromise. The contract to

reemploy him as a freight brakeman is properly construed by considering the nature of his previous employment, and by looking to the manner in which the parties freely treated the contract, and acted upon it, the appellant serving as an extra and accepting pay as such. The judgment is affirmed."

[From B. L. No. 12, September, 1897.]

PITTSBURG, CINCINNATI, CHICAGO, AND ST. LOUIS RY. Co. v. COX, 45 North-eastern Reporter, page 641.—Suit was brought in the court of common pleas of Warren County, Ohio, by Charles C. Cox against the above-named railway company to recover damages for personal injuries received while in the employ of said company and due, as alleged, to negligence on its part. The evidence in the case showed the following facts: That the above-named railroad company, with two others, had each formed relief departments, and had associated themselves together under one common organization, known as the "Voluntary Relief Department of the Pennsylvania Lines West of Pittsburg;" that the object of said department was the establishment and management of a fund known as the "relief fund" for the payment of definite sums to employees contributing to the same when they should be disabled by accident or sickness, etc.; that said fund was formed by voluntary contributions by employees, and appropriations when necessary to make up any deficiency by the several railway companies; that the application signed by an employee desiring to become a member of said relief department contained the following stipulations: "And I agree that the acceptance of benefits from said relief fund for injury or death shall operate as a release of all claims for damages against said company [being his employer company], arising from such injury or death, which could be made by or through me, and that I, or my legal representatives, will execute such further instrument as may be necessary formally to evidence such acquittance;" that the plaintiff, Cox, was a member of said relief department, and that after he was injured he received benefits from the relief fund. This latter fact, together with the stipulation above quoted in his application for membership, was set up as a defense by the railway company as defendant, and a judgment was rendered for said defendant. The plaintiff appealed the case to the circuit court of Warren County, and as a result of the hearing the judgment of the court of common pleas was reversed. The defendant then carried the case on writ of error to the supreme court of the State, which court rendered its decision December 15, 1896, reversed the judgment of the circuit court, and affirmed that of the court of common pleas.

The opinion of the supreme court was delivered by Judge Spear, and the following is quoted therefrom:

"The ruling of the common pleas on the demurrer is assailed on the ground that the contract set up is invalid, because (1) it is prohibited by the act of April 2, 1890 (87 Ohio Laws, 149), 'for the protection and relief of railroad employees,' etc.; (2) because it is against public policy; (3) for want of mutuality; and (4) for want of consideration moving from the company to Cox for the agreement to release claims for damages. In support of the second defense it is insisted that the act of April 2, 1890, as to the clauses referred to, is unconstitutional, because it strikes down the voluntary right to contract, that the contract is not, in fact, against public policy, whether declared so by the statute or not, and that the mutual beneficial stipulations and averments of fact abundantly show both mutuality and consideration.

"1. It would be a needless waste of effort to discuss the constitutional question propounded, unless, upon an examination of the contract and the statute, it shall be found that such a contract is among those forbidden. First, therefore, we give attention to that inquiry. The part of the statute to which attention is directed is the following: 'And no railroad company, insurance society, or other person shall demand, accept, require, or enter into any contract, agreement, stipulation with any person about to enter or in the employ of any railroad company whereby such person stipulates or agrees to surrender or waive any right to damages against any railroad company thereafter arising for personal injury or death, or whereby he agrees to surrender or waive, in case he asserts the same, any other right whatsoever.' To what sort of a contract does this language apply? It is to be assumed that the legislature intended to confine its action in forbidding the making of contracts upon subjects in themselves lawful, by persons sui juris, to such contracts as are inimical to the State—that is, against public policy—for the right to contract is one not given by legislation, but inherent, necessarily involved in the ownership of property, and as a primary prerogative of freedom, and we should not construe the words of an act so as to restrain this right where the conflict with public policy is not clear, unless the language will bear no other construction. As to the first clause, perhaps it is sufficient to say that it clearly

appears the contract does not come within the terms of the inhibition, for the reason that the employee does not therein agree to waive a right to damages thereafter arising for personal injury or death. He simply agrees that he will elect, after the injury is incurred, which form of recompense he will demand. In what essential does the second clause differ from the first? It is the same in effect as though it should be worded 'or whereby, in case he asserts his right to sue the company for personal injury or death, he agrees to surrender or waive any other right whatsoever.' He may not stipulate that in case he sues the company for damages for personal injuries he will surrender any other right. What here is meant by the term 'right'? Does it mean any fanciful claim which an ingenious person may invent or does it mean a tangible legal right, one resting on contract or in tort, which would be recognized and enforced by law? Common sense would say, it seems to us, that it means the latter. This leads to an inquiry as to the character of the right which is secured to an employee who becomes a member of the 'voluntary relief department' and entitled to the benefits of the 'relief fund.' If the contract be valid, it gives to the member a right, in case of disability on account of hurt or sickness, to receive certain payments from the relief fund so long as the disability continues; but, as a condition of the exercise of this right, and as a modification of it, the member must disclaim any right to sue the company in whose employ he is for damages arising from the injury; that is, the right to the benefits is not, by the terms of the contract, an absolute right. It is, at best, a contingent right; and, if this be so, then it is not, unless the stipulation is to be overthrown as against public policy, a legal right, after the party has elected to sue the company, which the law recognizes and will enforce, for the law will not enforce as an ultimate right a claim which rests upon a condition which is repudiated by the party making the claim. Perhaps the point would be clearer if the party had, without accepting benefits, recovered against the company and then sought to recover also the benefits against the fund. No one could possibly suppose in such case that his right to recover was absolute or could in any aspect have a legal existence or become the subject of a waiver if the party's own contract is to be observed. This for the reason that he has no other right to surrender or waive, because the moment he asserts the right to sue the company, the other, which is but a right to choose, by the very terms of the contract which gave it existence, disappears. And if the right is not an absolute one in the one case, how can it be in the other? Putting the conclusion in a sentence, the second inhibition is not essentially different from the first, it is but an extension of it. That applies only to waiver of a right to damages arising from personal injuries or death. This extends to all rights whatsoever. But in any case the law contemplates a legal right. Taking the statute as a whole, the contract inhibited is a contract which, by its terms, waives the right of action on the part of the employee, while the contract in question does not seek to waive a right of action, but expressly reserves it, and only gives to his election of remedies, made after the injury, the effect of a waiver of the other remedy. To deny such a right would be to deny the right to settle controversies. The law favors the exercise of this right; it does not disapprove it. We think the contract set up in the answer is not fairly within the inhibitory terms of the act when reasonably construed, and this conclusion makes it unnecessary to consider the question of the unconstitutionality of the statute.

"2 Is the contract itself against public policy? To be so it must in some manner contravene public right or the public welfare. It must be shown to have a mischievous tendency as regards the public. And this should clearly appear. The ground urged is that it tends to make the company less careful in the operation of its road. In other words, it encourages negligence. And if it be of that character, then it would contravene public policy and be void, in that it would have a tendency to induce the employment of men less prudent and careful, which would tend to endanger the property and lives of travelers as well as of its employees. But this claim arises, we think, from a misconception of the contract in assuming that by the contract the employee releases some future right of action against the company. On a previous page we have undertaken to show that such is not the case; that there is no waiver of any cause of action which the employee may become entitled to, and that it is not the signing of the contract, but the acceptance of benefits after the accident, that constitutes the release. When that occurs he is not stipulating for the future; he is but settling for the past. He accepts compensation for injury already received. If he is injured and the company is not liable (a condition which follows in much the larger proportion of the accidents to employees on railroads), he may accept the benefits; if the company is liable, he may decline benefits and sue. How can this injuriously affect the public? We fail to perceive how the contract in question contravenes any interest of the public.

"3. Nor is the contract void for want of mutuality, nor for lack of consideration. Moved thereto by the stipulations of the employee members, the company assumes the obligation to take charge in part of the administration of the association, to pay all the operating expenses, to take care of its funds, pay interest thereon and be responsible for their safe-keeping, and to make appropriations to supply any deficiencies. The promises are both concurrent and obligatory on both. Both promise and both pay in consideration of promises and payment by the other, and the fact that third persons are interested does not impair the force of the obligation. If these stipulations do not supply consideration, it would be difficult to frame such as would; and, there being express assent to the terms of the contract by both parties, the element of mutuality is not wanting.

"Our conclusion is that the contract set up is not interdicted by the statute, and that it is neither against public policy nor void for want of mutuality or consideration. Judgment of the circuit court reversed and that of the common pleas affirmed."

[From B. L. No. 13, November, 1897.]

CHICAGO, BURLINGTON AND QUINCY R. R. Co. v. CURTIS, 71 Northwestern Reporter, page 42.—Action was brought in the district court of Jefferson County, Neb., by William H. Curtis against the above-named railroad company to recover damages for injuries received while in its employ. Judgment was rendered for the railroad company, and the plaintiff, Curtis, brought the case on writ of error before the supreme court of the State, which rendered its decision May 5, 1897, and affirmed the judgment of the lower court. The evidence showed that the plaintiff, while attempting to couple two freight cars belonging to another railroad company, had his right hand crushed between the deadwoods and so bruised that amputation was necessary and was performed; that he was a member of the Burlington Voluntary Relief Department; that in joining said department he had signed a contract which contained the following language: "I also agree that, in consideration of the amounts paid and to be paid by said company for the maintenance of the relief department, the acceptance of benefits from the said relief fund for injury or death shall operate as a release and satisfaction of all claims for damages against said company arising from such injury or death which would be made by me or my legal representatives;" that after his injury the plaintiff applied for and received benefits, and that at various times the railroad company had contributed to the relief fund when it fell short of the amount necessary to satisfy claims. The plaintiff claimed negligence on the part of the company in the equipment of its cars, and that the contract he had signed in joining the relief department was of no effect and could not bind him.

The opinion of the supreme court was delivered by Judge Harrison, and from the syllabus of the same, which was prepared by the court, the following is quoted:

"1. It is one of the duties of a railroad company as a common carrier to receive, and transport over its line of road, cars of other companies, if the gauge of the road is suitable, and the cars are not defective or out of repair, or of such unusual and peculiar construction as to be unreasonably hazardous or dangerous to work with or handle.

"2. That a car belonging to a road other than the one on which a brakeman is employed is equipped with double deadwoods or buffers is a fact which is open, apparent, and obvious to any person attempting to couple the car; hence, any risk attendant on such coupling is of the hazards incident to the duty, and assumed by the employee; and this is true notwithstanding the cars in general use on the road on which the brakeman is employed are equipped differently, or with single deadwoods.

"4. The contract signed by an employee of the railroad company on becoming a member of what was known as the 'Burlington Voluntary Relief Department,' to the effect that if he should be injured, and receive moneys from the relief fund of said relief department on account thereof, the acceptance of such moneys would operate as a release of such employee's claim against said railroad company for damages because of such injury, construed, and held (1) that such contract of an employee did not lack consideration to support it; (2) that the promise made by the employee to the relief department for the benefit of the railroad company was available to the latter as a cause of action or defense; (3) that such contract was not contrary to public policy; (4) that the effect of such contract was not to enable the railroad company to exonerate itself by contract from liability for the negligence of itself or servants; (5) that the employee did not waive his right of action against the railroad company in case he should be injured by its negligence by the execution of the contract; (6) that it is not the execution of the contract

that estops the injured employee, but his acceptance of moneys from the relief department on account of his injury after his cause of action against the railroad on account thereof arises."

[From B. L. No. 13, November, 1897.]

**MISSOURI, KANSAS AND TEXAS RY. CO. v. RAINS**, 40 Southwestern Reporter, page 635.—Action was brought in the district court of Grayson County, Tex., by J. R. Rains against the above-named railway company to recover damages for injuries received while in its employ. A judgment was rendered for the plaintiff, and the defendant company appealed the case to the court of civil appeals of the State, which rendered its decision May 12, 1897, and affirmed the decision of the lower court.

But one point decided is of special interest, and the following, quoted from the opinion of the court of civil appeals, delivered by Chief Justice Fisher, shows the same:

"It appears from the facts that, as a result of his injuries, the plaintiff will receive on an accident policy the sum of \$130. It is contended by appellant that the court erred in refusing to instruct the jury to the effect that they could consider this sum in mitigation of the damages which the plaintiff may be entitled to. There was no error in this ruling. The rule upon the subject, which is sustained by the weight of authority in this country and in England, is to the effect that a payment upon a policy of insurance can neither be considered as a defense or in mitigation of an action for damages against a wrongdoer. We find no error in the record. Judgment affirmed."

[From B. L. No. 13, March, 1898.]

**ECKMAN v. CHICAGO, BURLINGTON AND QUINCY R. R. CO.**, 18 Northeastern Reporter, page 496.—This was an action brought in the superior court of Cook County, Ill., by Charles H. Eckman, against the above-named railroad company, for damages for injuries sustained while in the service of said company. The evidence showed that on August 29, 1891, while a freight train was standing on the main track, Eckman was directed by a foreman to crawl under the engine and tighten up a valve, and while so under the engine another train ran into the rear end of the freight train, thereby forcing the engine forward, and dragging him quite a distance, breaking his leg and ankle, etc. The railroad company relied upon the fact that Eckman was a member of the Burlington Voluntary Relief Department, and that he had received the benefits provided by that department, as a complete defense.

The Burlington Relief Department was organized June 1, 1889, and its object was declared to be "establishment and management of a fund, to be known as the 'relief fund,' for the payment of definite amounts to employees contributing thereto, who are to be known as 'members of the relief fund,' when, under the regulations, they are entitled to such payment by reason of accident or sickness, or, in the event of their death, to the relatives or other beneficiaries designated by them." This fund consisted of voluntary contributions from the employees, income derived from investments and from interest paid by the company, and appropriations by the company when necessary to make up deficiencies. The railroad company has general charge of the department, guaranteed the fulfillment of its obligations, paid interest at 4 per cent per annum on monthly balances in its hands, supplied all the necessary facilities for conducting the business of the department and paid all its operating expenses. There was also an advisory committee, having general supervision of the department, which consisted of the general manager of the railroad as chairman, 6 members selected by the employees of the different divisions of the railroad company, and 6 members selected by the board of directors of the company, the chairman having no vote except in case of a tie. The company agreed to pay any deficiency in the amount required to meet the claims on the fund. No employee was required to become a member of the relief fund, and any member could withdraw altogether at the end of any month. The members were divided into different classes, depending upon the amount of their contributions. Each member contributed monthly a specified sum, according to the class to which he belonged, which was deducted from his wages and placed to the credit of the relief fund. All the employees of the company who passed a satisfactory medical examination were eligible for membership. If a contributing member was under disability, whether such disability arose from an injury received while at work or from sickness, he was entitled to be paid from the fund a certain sum per day, varying according to the contribution which

he was making. In case of his death the beneficiary designated by him was entitled to be paid a specified sum, as designated in the membership contract. The regulations also provided a form of application, which was used by Eckman, in which he agreed to be bound by the regulations of the relief department to the effect that a certain specified portion of his wages should be applied as a voluntary contribution for the purpose of securing the benefits provided; that the application, on approval by the superintendent of the relief department, should make him a member of the relief fund, and constitute a contract between him and the company; that his leaving the employment of, or discharge by, the company should terminate the contract, except as to benefits accrued and as to death benefits. Said application also appointed the beneficiaries in case of death, and contained the following agreement: "I also agree that, in consideration of the amounts paid and to be paid by said company for the maintenance of said relief department, and of the guaranty by said company of the payment of said benefits, the acceptance by me of benefits for injury shall operate as a release and satisfaction of all claims against said company and all other companies associated therewith in the administration of their relief departments for damages arising from or growing out of said injury." The regulations provided further that, should a member or his legal representative bring suit against the company for damages on account of injury or death of such member, payment of benefits on account of the same should not be made until such suit was discontinued; and that, if the suit should proceed to judgment or be compromised, all claims on the relief fund for benefits on account of such injury or death should be thereby precluded. The company, since the organization of the relief department, had from time to time paid in large sums on account of the insufficiency of the contributions of members to meet claims on the benefit fund, had paid operating expenses, and had given office rent and the services of officials and clerks free. The contributions of the members had never been applied to any other purposes than the payment of benefits. No part of it had ever been used for the payment of expenses.

Eckman made application for membership in the Burlington Voluntary Relief Department July 18, 1890, which application was approved August 4, 1890. It provided that \$2.10 should be deducted from his wages monthly for the purpose of securing the benefits provided for a member of the second class, with twice additional death benefits of the first class. These benefits, as shown by the book of regulations, were, for disability by reason of accident, \$1 for each day of a period not to exceed 52 weeks, with 50 cents a day thereafter during the continuance of the disability. Any bills for surgical attendance were to be paid by the relief department. The two additional death benefits of the first class were \$250 each, which, with the \$500 belonging to the second class, made the total death benefit \$1,000, to which his beneficiary would have been entitled in case of death. Eckman received \$215 for benefits, being the amount he was entitled to under the regulations. There was also paid on his account for nurses, medicine, and surgical attendance the sum of \$121.90. The receipt of these amounts as benefits due him from the relief fund was not disputed.

Upon the above state of facts judgment was rendered for the railroad company, and Eckman appealed the case to the appellate court for the first district of the State, which affirmed the judgment of the superior court. He then appealed the case to the supreme court of Illinois, which rendered its decision November 8, 1897, and affirmed the decisions of the lower courts.

From the opinion of the supreme court, which was delivered by Judge Carter, the following is quoted.

"The real controversy in this case is not whether the injury to the appellant complained of was caused by the negligence of the appellee company, but whether the receipt by the appellant of the benefits provided by the company under its contract with the appellant through its relief department, mentioned in the record as the Burlington Voluntary Relief Department, after the happening of the injury, constituted a sufficient defense to the action. It was not disputed that after the happening of the injury appellant received through this department of the company in installments, from time to time, the aggregate sum of \$245 as such benefits on account of the injury and under his contract of membership, and that there was also disbursed by said department for appellant for nurses, medicine, and surgical attendance the sum of \$121.90. But it is contended, in the first place, by appellant, that the company could not, by a contract in advance, exempt itself from liability to its employees for its gross negligence; that such a contract would be contrary to public policy and void. The correctness of this position is undoubted, and it is not disputed on the part of the appellee; but its contention is that the contract here in question is not of that character; that, on the contrary, it merely provided for an accord and satisfaction after the injury had been received, and at the election of the injured employee; and that after the injury

in this case there was such accord and satisfaction, and that the same is a complete bar to a recovery in this suit. Contracts of this character have been the subject of judicial investigation in many cases in different states, and it has been almost uniformly held, where the question has arisen as in this case, that they are not void as being against a sound public policy.

"In every case of injury the injured party has the right to compromise the damages for any valuable consideration, no matter how small; and, if he chooses to accept a smaller amount than he might have been able to secure at the hands of a jury, such settlement is nevertheless a full accord and satisfaction, and a bar to the prosecution of any suit for damages for such injuries. Here is an agreement made between the railroad company and the appellant that the acceptance of the benefits should release the railroad company from responding in damages as the result of an action at law. It is not this agreement alone that constitutes the release, but the acceptance of the benefits therein stipulated, well knowing that the acceptance of such benefits will have the effect of a release. That the appellant knew what the effect of the acceptance of the benefits was is not disputed. He was furnished with a handbook which plainly stated that an injured member may either accept the benefits of the fund or rely upon the issue of a suit; that he can not do both. The agreement is not against public policy, as it merely puts the employee to his election, after an injury has been sustained by him, either to take the benefits of the relief fund, to which the appellee has materially contributed, or to sue for damages in a court of law.

"Appellant's next contention is that the appellee has no right to go into the insurance business, and that the whole relief-department scheme is both illegal under the insurance laws of this State and ultra vires of a railroad corporation.

"That such relief department is not an insurance company has been held in *Donald v. Railway Co.* (61 N. W. 971) and *Johnson v. Railroad Co.* (29 Atl. 854). The latter part of section 31 of chapter 32 of the Revised Statutes of Illinois of 1881, as amended in 1883, provides that 'associations and societies which are intended to benefit the widows, orphans, heirs, and devisees of deceased members thereof, and members who have received a permanent disability, and where no annual dues or premiums are required, and where the members shall receive no money as profit or otherwise, except for permanent disability, shall not be deemed insurance companies.' While sick benefits, such as are usually paid by secret and fraternal societies, are not mentioned in express terms in the section quoted, we think they may be fairly construed to be within the spirit of the same. In fact, no mention of the payment of sick benefits occurs in any of our insurance statutes until the statute of 1893 on fraternal beneficiary societies. The business done by the relief department was not prohibited by the statutes relating to insurance companies in force at its organization, nor at the time of the injury to appellant; but whether the contract, where it had not been performed by the payment and receipt of the money, or whether the organization of the relief department would or [would] not be held to be ultra vires the corporation, is a question not necessary to the decision of this case. Appellant can not invoke that defense against appellee after having received the benefits secured to him by his contract. It is a general rule that a corporation can not avail itself of the defense of ultra vires where a contract, not immoral in itself, nor forbidden by any statute, has been in good faith fully performed by the other party and the corporation has had the full benefit of its performance. And this rule applies with equal force to the other party setting up that the contract was ultra vires the corporation. The appellee paid as it agreed to do, and the appellant has accepted such payment, and the contract has been fully executed. It is therefore immaterial to inquire whether the contract or the organization of the relief department was ultra vires the corporation or not. That question does not properly arise in this case."

A dissenting opinion was delivered by Judge Magruder, which reads as follows:

"It is not lawful for a railroad company to engage in the insurance business. A corporation can only exercise such powers as are expressly granted to it, or such implied powers as may be necessary to carry out or effectuate its express powers. A railroad company is authorized by its charter to carry freight and passengers. It is a common carrier and nothing else. The insurance of its employees is not one of its implied powers. If it be true that a railroad company can insure its employees because they need insurance, then it can go into the tailoring or clothing business because its employees need clothes, or operate a farm to raise cattle and hogs and poultry and wheat and corn because its employees need food. Such an extension of the implied powers of a railroad company as is thus indicated would lead eventually to an absorption by the railroad companies of all the employments and all the business of the country. Monopolies created by the gradual reaching out of railroads into the various departments of business in no way connected with the original purposes of their organization are dangerous to the liberties of the people."

[From B. L. No. 18, September, 1898.]

PITTSBURG, C. C. AND ST. LOUIS RY. CO. v. MONTGOMERY. 49 *Northeastern Reporter*, page 582.—Action was brought in the circuit court of Cass County, Ind., by William J. Montgomery, against the above-named railroad company, to recover damages for personal injuries due to the negligence of the said company and sustained by him while in its employ. A judgment was rendered for Montgomery, and the defendant company appealed the case to the supreme court of the State, which rendered its decision February 19, 1898, and affirmed the judgment of the lower court. The opinion of the supreme court was delivered by Judge McCabe, from which the following quotation is taken:

“It is contended that the circuit court erred in sustaining the plaintiff’s demurrer to the second paragraph of the defendant’s answer. It sets up that on the 8th day of March, 1893, and prior to the defendant’s injury, he became a member of the volunteer relief department of the Pennsylvania lines west of Pittsburg, and was such member at the time he was injured, and so continued long after his said injury; that the management of said department is under the charge of said lines west of Pittsburg; that said fund is made up of stated contributions from said lines and the employees thereon, and said lines guarantee the fulfillment of all the obligations of said department, and make up and pay all deficiencies in the amounts necessary to pay all benefits to its members. In becoming a member of said relief department, he agreed to be bound by its rules and regulations, among which were that each member, on complying with its rules, was entitled to receive stipulated benefits on account of disability incurred by injury received to such member in the service of the company. This agreement is all set forth in the appellee’s written application for membership and signed by him, and among the stipulations contained therein is the following, namely: ‘And I agree that the acceptance of benefits from the said relief fund for injury or death shall operate as a release of all claims for damages against said company arising from injury or death which could be made by or through me, and that I, or my legal representatives, will execute such further instrument as may be necessary formally to evidence such acquittance.’ And it is further averred that after receiving the injury complained of, while disabled thereby, he accepted benefits from said relief department to the amount of \$385. But it is contended by the appellee that by the fifth section of the act we have been considering the contract set up in this answer as a bar is made void. The contract set up is shown therein to have been entered into after the act took effect and became a law. The section reads thus, ‘All contracts made by railroads or other corporations with their employees, or rules or regulations adopted by any corporation, releasing or relieving it from liability to any employee having a right of action under the provisions of this act are hereby declared null and void.’ The balance of the section makes the whole act apply to future injuries, and not to past. The validity of this section is assailed on the grounds that it violates the bill of rights and the fourteenth amendment of the Federal Constitution. What we have said as to the validity of the other parts of the act, under these constitutional provisions, is applicable to this section, and hence it must be held not to infringe them.

“Assuming that it [the fifth section] is valid, and makes contracts releasing or relieving corporations from liability under the act absolutely void, appellant’s learned counsel contend that there is nothing in the agreement set forth in the second paragraph of the answer relieving or releasing the company from liability for negligence, or from any liability whatever. They say appellee elected to accept benefits from the relief fund, and, having done so, he can not maintain this action for damages. That is the essence of his agreement.’ Appellant’s counsel further say in one of their briefs that ‘the payment and acceptance of benefits under the terms of the contract in this relief fund is simply a compromise and settlement of the claim of the injured employee against the company.’ Let us suppose that the above statement is true. It is certainly the strongest and best statement that can be made of appellant’s position. What is it that makes the acceptance of benefit from the relief fund a compromise and settlement of appellee’s claim? Only one answer can be made to this question, and that is that the antecedent contract alone makes it such. There is no allegation in the answer that in accepting the benefits appellee made any agreement or compromise whatever, and there is no claim that he did. He simply accepted that which he had a legal and moral right to demand. His own contributions helped to create the fund, and his injury brought him within the rules and regulations entitling him to the benefits. So, even if it was a compromise and settlement, it was such wholly before the injury occurred, and, that being so, it amounts to nothing more than an attempt to secure a release of future liability under the act, call it by whatsoever

name we may. But such acceptance is not, in any proper or legal sense, a compromise and settlement of liability under the act. The language of the contract is:

"And I agree that the acceptance of benefits from said relief fund shall operate as a release of all claims for damages against said company arising from such injury or death, etc. So, by the express terms of the contract, it is a release, and not a compromise and settlement. The acceptance of benefits shall operate as a release. But what makes it so? If the antecedent contract was abrogated, the acceptance of benefits would have no effect whatever upon the question of appellant's liability under the act, because he had a legal and moral right, as before remarked, to demand and receive such benefits. So, if the release takes place, it is not by virtue of the acceptance, but it is by the force, vigor, and effect of the antecedent contract. It breathes that effect into the acceptance.

"Appellant's learned counsel contend that an exact copy of this contract was held valid in the following cases, *Johnson v. Railroad Co.* (163 Pa. St., 127; 29 Atl., 854); *Ringle v. Railroad Co.* (161 Pa. St., 329; 30 Atl., 192); *Locase v. Pennsylvania Co.* (10 Ind. App., 47; 37 N. E., 423), *Donald v. Railway Co.* (93 Iowa, 284, 61 N. W., 971). The first three cases just cited were decided in states not having employers' liability acts forbidding contracts of this kind in force at the time the injury sued for occurred. And they proceeded upon the sole ground that the contract did not violate public policy, and therefore they were upheld. Without either approving or disapproving of the rule laid down by the Pennsylvania supreme court and our own appellate court, yet the United States circuit court for the district of Colorado decided the question the other way in a strong and able opinion in *Miller v. Railway Co.* (65 Fed., 305); and we think there is a marked distinction in the rule where a contract is charged with violating public policy and where it contravenes a positive statutory prohibition, and especially where the statute provides that the inhibited contract shall be null and void. As was said in *Brooks v. Cooper* (50 N. J. Eq., 561, 26 Atl., 978): "Where there is no statutory prohibition, the law will not readily pronounce an agreement invalid on the ground of policy or convenience; but as, on the contrary, inclined to leave men free to regulate their affairs as they think proper \* \* \* Now, the intention of the contract was to contravene the statute, and this intention is revealed in the contract. This renders the contract vicious and unenforceable." As we have before said, the contract in question is a release of appellant's liability under the act upon a certain condition. That it is a conditional release of such liability, dependent upon the happening of the condition, namely, the acceptance of said benefits by appellee, there can be no doubt. If that condition happens, as it did, appellant's liability under the act is released by virtue of the antecedent contract, if it is enforced. If it is enforced, it must be so done in violation of the statute which makes all such contracts null and void. That certainly more than tends to obstruct both the letter and spirit of the statute.

"If we were even mistaken in construing this contract as a conditional one, so as to bring it within the condemnation of the statute in question, it unquestionably falls within the principle laid down by Wharton, thus: 'The prohibition of a statute cannot be evaded by putting a contract in a shape which, while nominally not inconsistent with the statute, virtually contravenes its provisions. \* \* \* If a contract conflicts with the general policy and spirit of a statute governing it, it will not be enforced, although there may be no literal conflict.'

"We are therefore of opinion that the contract set up in the second paragraph of the answer is in contravention of the statute, and hence, by force thereof, the contract so set up is null and void; and, that being so, said answer was bad, and the circuit court did not err in sustaining the demurrer thereto for want of sufficient facts. The judgment is affirmed." [Other sections of this decision covered questions relating to the statutory limitation of the fellow-servant rule, and are therefore quoted under that heading. (See page 1081.)]

[From B. L. No. 20, January, 1899.]

CARPENTER ET AL. v. CHICAGO AND EASTERN ILLINOIS RAILROAD CO., 51 North-eastern Reporter, page 493.—Action was brought by Mary E. Carpenter and others, the widow and children of one Emanuel Carpenter, deceased, against the above-named railroad company and the American Casualty Insurance and Security Company upon a contract of accident insurance. The case was heard in the circuit court of Clay County, Ind., and the railroad company separately demurred to the complaint as not stating facts sufficient to constitute a cause of action against it. Said demurrer was sustained by the circuit court, and the plaintiffs appealed to the appellate court of the State, which rendered its decision October 27, 1898, and sustained the action of the circuit court.

The facts in the case are set out in the opinion of the appellate court, which was delivered by Chief Justice Henley, and the following is quoted therefrom:

"The complaint is upon a written contract, and is in one paragraph. It alleges the death of Emanuel Carpenter, the settlement of his estate without administration, and that appellants are his heirs and only heirs at law. It alleges that a certain contract was executed by all of the parties to this action, and makes the said contract a part of the complaint. This contract is in the following words: 'This is to certify that Emanuel Carpenter, Sec. 25, Coal Bluff, is insured by the American Casualty Insurance and Security Co., of Baltimore, Md., against accident resulting in bodily injury or death. By the terms of the policy the above-named person, so long as he remains an employee of the Chicago and Eastern Illinois Railroad Co., will receive through the paymaster of that railroad company, in case of accident, however and whenever happening, between the date hereof and the first day of May, 1893, the following benefits. (1st) For accidental injury not resulting in death, one-half of his usual wages during disablement, if not more than fifty (50) weeks; also, doctor bills. (2d) For accidental injury resulting in his death, his legal representatives will receive one-half of his usual wages for one year, and doctor bills and funeral expenses. The above benefits will not accrue to said person except for accidents sustained while he is in the employ of the Chicago and Eastern Illinois Railroad Co., and only between this date and the first day of May, 1893. No benefits will accrue hereunder for any accident occurring as the result of a riot or other violation of law. This certificate is issued in accordance with the policy of insurance issued by the American Casualty Insurance and Security Co. to the Chicago and Eastern Illinois Railroad Co. for the benefit of its employees. Dated at Chicago, Ill., this 1st day of July, 1892. (Signed) American Casualty Insurance and Security Co., W. E. Midgley, president. Chicago and Eastern Illinois R. R. Co., by Charles H. Rockwell, gen'l supt.' It is further alleged that a certain policy of insurance written by appellee's codefendant was taken out by appellee for the benefit of its employees, and that the premium paid for said policy was collected from said employees by appellee retaining a stated amount out of the monthly wages of each insured employee; that appellant's decedent was one of appellee's employees, and that appellee retained out of his monthly wages the sum of \$2 per month which went into the treasury of appellee, to pay for said insurance, that appellant's decedent was accidentally injured in the employ of appellee, and in the line of his said employment, and that said accidental injury occurred during the term of said insurance, and that from said injury he was wholly disabled, and lingered a long time, and finally died as a result thereof; that the wages, doctor bills, and other moneys which said contract and policy of insurance provided should be paid on the happening of the events related in the complaint have never been paid. Judgment for \$400 is demanded.

"Does the complaint state facts sufficient to create a liability upon the part of the appellee? We are unable to find in the complaint any averment charging appellee with a breach of any contract declared upon, or the breach of any duty owing to appellants or their decedent. It is not charged that the moneys, or any part thereof, which appellee deducted from decedent's wages was not applied to the payment of premiums due from him to appellee's codefendant, neither is it charged that appellee received and retained any moneys from the said insurance company which were due appellants under the policy taken out for the benefit of Emanuel Carpenter, deceased. It seems clear to us that this action can not be maintained against appellee. There was no contract of insurance between appellee and Emanuel Carpenter. The contract of insurance was entered into between appellee and its codefendant, and was for the benefit of said Emanuel Carpenter; he accepted its terms, and paid to appellee the amounts necessary to insure him the benefits; he was the third party for whose benefit the contract was made, and under the well-settled rules of law, as announced by the decisions of our supreme court, he, or his heirs in case of his death, could enforce the contract against the insurance company if his injury was such a one as would bring him within the provisions of the policy. We find no error in the record. Judgment affirmed."

[From B. L. No. 22, May, 1899.]

JOHNSON v. CHARLESTON AND SAVANNAH RAILWAY CO., 32 Southeastern Reporter, page 2.—This suit was brought by Willis Johnson against the above-named railway company to recover damages for injuries incurred by him while in its employ. The case was heard in the common pleas circuit court of Charleston County, S. C., and a judgment was there rendered for the defendant company. The plaintiff then appealed the case to the supreme court of the State, which

rendered its decision January 16, 1899, and affirmed the decision of the lower court. Upon the questions at issue the supreme court was evenly divided, and in such cases, under the constitution of the State, the judgment appealed from stood affirmed.

Justice Pope delivered an opinion in which he stated it to be his opinion that the judgment of the lower court ought to have been reversed, and from said opinion the following is taken.

"This action for damages came on for trial before his honor Judge R. C. Watts. The hearing was confined to an oral demurrer to the second affirmative defense set up in the answer, which demurrer was overruled, and from the order of Judge Watts overruling the same an appeal is now presented to this court."

Justice Pope here sets out the pleadings in full, the essential points of which are in substance as follows. In his "complaint" the plaintiff alleged that at the time of the accident he was in the employ of the company as a fireman, actively engaged at work on a tram; that it became his duty to stand on a platform on which wood was piled, and from said platform to load the tender with fuel; and after having supplied the tender with wood, at a signal that the engine was about to move, he endeavored to step onto the engine; that owing to the broken and unsound condition of the platform it broke under his weight and forcibly precipitated him under the engine, that by reason of the said fall he was seriously injured, that the condition of the platform was the result of the carelessness and negligence of the railroad company, etc. In its "answer" to this complaint the defendant company denies most of its allegations, and sets up by way of a second affirmative defense, the first being of no importance here, that at the time of the accident the plaintiff was a member of the Plant System relief and hospital department; that said department was an organization formed by the defendant and other railroad companies for the purpose of establishing and managing a fund for the payment of definite amounts to employees contributing thereto, who are entitled thereto under the regulations, when they are disabled by accident or sickness, and to their families in the event of death, that the fund was formed from contributions from the employees and the Plant System, from income derived from investments, and from appropriations from the Plant System when necessary to make up a deficit; that prior to his accident the plaintiff had applied for membership, and in said application agreed to be bound by all the regulations of the relief and hospital department; that in said application he further agreed that, in consideration of the contributions of the railroad companies to the fund and of the guaranty by them of the payment of the benefits, the acceptance of benefits from the said department for injury or death should operate as a release of all claims against said companies, and each of them, on account of said injury or death; that when the plaintiff was injured he became entitled to the benefits coming out of his membership in said department, that he immediately applied for such benefits, and received such as he was entitled to as a member of said department, that in accordance with the regulations of said department he also received free medical and surgical attendance from the surgeons of the company, and care and treatment in said company's hospitals free of charge; that the plaintiff duly accepted for the benefits paid him, and in consideration of such payment to him he duly released and forever discharged the defendant company and all companies belonging to the Plant System from all claims for damages arising from his injuries, and that said release, etc., was duly signed and sealed and delivered by the plaintiff to the said relief and hospital department.

To the above the plaintiff interposed his "demurrer" and moved that the answer be dismissed on the ground that it did not state facts sufficient to constitute a defense as to the contract alleged therein, to the effect that in consideration of the benefits received from the relief and hospital department the plaintiff should release the defendant from all claims for damages by reason of accidental injury or death, was contrary to law and against public policy, and could not, therefore, be pleaded as a defense. Justice Pope continues as follows:

"This demurrer was overruled, and his honor said: 'There is no question in my mind that a contract of that kind, whereby a railroad company attempts to relieve itself of any liability on account of negligence, is contrary to public policy; and, where the party enters into the contract beforehand, he would not be estopped from bringing his action for damages against the railroad company.' It seems, in this case, that the plaintiff had entered into that agreement relieving the railroad company before he was injured. After he was injured he was put to his election as to whether he would sue the railroad company or go ahead and carry out the contract and receive the benefits of that contract. It seems to me that the decision in the case of *Price v. Railroad Co.* (33 S. C., 556; 12 S. E., 414) would control this case, and I think the plaintiff is now estopped from bringing his action

against the railroad company, having elected to receive the benefits under that contract, and from suing the railroad company here for damages, and I overrule the demurrer.' Counsel for the plaintiff excepted to the ruling, and gave notice of intention to appeal. Exceptions. (1) Because his honor erred in holding that the said second affirmative defense set up in the answer contained allegations of fact sufficient to constitute a defense. (2) Because his honor erred in not holding that a contract whereby a railroad corporation seeks immunity from damages caused by the negligence of itself or its servants is null and void, under the constitution of the State. (3) Because his honor erred in not holding that such a contract is null and void, because it is against public policy. (4) Because his honor erred in holding that such a contract may properly be pleaded as a defense in an action brought by an employee against a railroad company for damages caused by said company or its servants. (5) Because his honor erred in holding that, even if such a contract were void, the receiving of money or other consideration thereunder was such an act as would bar recovery of damages.

"It is apparent from the text of Judge Watts's decision that he held that the contract entered into by and between the plaintiff and the defendant, as a member of the Plant System, was void, as against public policy; and from this decision of Judge Watts there is no appeal, and hence it is the law of this case. However, the circuit judge, as he thought, under the decision of this court in the case of *Price v. Railroad Company* (34 S. C., 556; 12 S. E., 413), held that the subsequent receipt of Johnson to the defendant company would estop Johnson from bringing this action. We do not think the case of *Price v. Railroad Company* is decisive of this case.

"It seems to us that, when analyzed, the proposition of the defendant railway company is, as to either or both of these matters: First, a party can contract to relieve a railway company from the negligence of such railway company, or, second, a party, not being able to contract with a railroad company as against its negligence, yet, by the acceptance of a benefit under such contract, may be estopped thereby from suing the railway company for its negligence. As to the first position, we say unhesitatingly that our decisions uniformly hold that we can not make a valid contract to free a railway company for its negligence. But, apart from our decisions, the new constitution of this State, adopted in the year 1895, in article 9, section 15, provides, 'Every employee of every railroad corporation shall have the same rights and remedies for any injury suffered by him from the acts or omissions of said corporation or its employees as are allowed by law to other persons not employees, when the injury results from the negligence of a superior agent or officer or of a person having a right to control or direct the services of a party injured, and also when the injury results from the negligence of a fellow-servant engaged in another department of labor from that of the party injured, or of a fellow-servant on another train of cars, or even engaged about a different piece of work. \* \* \* Any contract or agreement, expressed or implied, made by any employee to waive the benefit of this section shall be null and void; and this section shall not be construed to deprive any employee of a corporation or his legal or personal representative of any remedy or right that he now has by the law of the land.' One of the results of this provision of the constitution is that the employees of a railway corporation are placed upon the same plane with all other persons in any case of injury which results from negligence of such railway company. This being so, no contract by which an employee binds himself to forego an action by reason of negligence as against a railway company is valid. It is not only against public policy, but it is forbidden by the constitution. Now, as to the second point. It seems to us that the language in the last part of section 15, article 9, of our constitution forbids any agreement by an employee to waive the benefits of this section. But, if this were not so, still, as the original contract to release the railway from the liability for its negligence was void, any attempt by this employee to ratify such void contract is a nullity. It is needless to prolong this discussion or to cite the numerous authorities bearing on this matter. 28 Am. and Eng. Enc. Law, 478, puts the doctrine thus: 'A void act, as defined in the latter cases, and by approved authorities, is one which is entirely null, not binding on either party, and not susceptible of ratification.' We will not undertake to comment upon the plans of the Plant System as to the protective association. My opinion is, the judgment of this court should be that the judgment of the circuit court should be reversed; but, inasmuch as the justices are evenly divided in opinion, under our constitution the judgment of the circuit court stands affirmed."

Chief Justice McIver delivered an opinion in favor of affirming the judgment of the lower court, and the following is quoted therefrom:

"The sole question presented for the decision of the circuit judge was whether

the demurrer to the second affirmative defense, based upon the ground that the facts stated therein were not sufficient to constitute a defense, should be sustained; and, he having held that the demurrer could not be sustained, the question presented for the decision of this court is whether such ruling was erroneous in one or more of the several particulars pointed out by the exceptions. According to a strict practice, the only question necessary for this court to consider is whether the second and fifth exceptions can be sustained.

"The second exception presents the question whether there is any provision in the present constitution declaring that 'a contract whereby a railroad corporation seeks immunity from damages caused by the negligence of itself or its servants is null and void.' The only provision which is relied upon is that contained in section 15 of article 9 of the present constitution (set out in full in the opinion of Mr. Justice Pope, ante). It seems to me very obvious that the main purpose of this provision of the constitution was to make material, and, as I think, wise and proper, changes in the long-established rule whereby an employer, when sued for damages for injuries sustained by one of his employees, could exempt himself from liability by showing that the injuries complained of by the employee resulted from the negligence of one of his fellow-servants, and to settle finally the doctrine (as to which there has been some conflict of authority) that the fact that an employee (except a conductor or engineer in charge of dangerous or unsafe cars or engines voluntarily operated by him) knew that the machinery or other appliance by which he was injured was defective or unsafe would constitute no defense to an action for damages brought by such employee, and finally to declare that any contract or agreement, either expressed or implied by which an employee undertakes to waive the benefits of this section shall be null and void.

"The affirmative defense here set up is not based upon any contract or agreement to waive any of the benefits secured by the section of the constitution above analyzed. The constitutional provision now under consideration does not even purport to declare that a railroad corporation can not, by contract, exempt itself from liabilities for damages sustained by reason of its own negligence or that of its servants or agents, for the very obvious reason that such a declaration would have been wholly unnecessary, as that was the law at the time of the adoption of the constitution, well settled by authority, and fully sustained by sound reason, and undisputed by anyone. The sole object of the constitutional provision was to confer upon the employees of railroad corporations certain benefits therein specifically stated, which they either had not previously enjoyed or their right to which was a matter of question; and to secure to such employees the full enjoyment of such benefits it was further provided that any contract to waive any of such benefits shall be null and void. I am, therefore, unable to perceive that section 15 of article 9 of the present constitution has any application to this case, and hence I think the second exception should be overruled.

"Proceeding, then, to the consideration of the fifth exception: This exception, as it seems to me, is based upon the assumption that the contract or arrangement set out in the second affirmative defense is void because against public policy. Whether this assumption is well founded is an important and interesting inquiry, of novel impression in this State at least.

"If it be assumed that the circuit judge did consider the contract or arrangements set out in the affirmative defense void as against public policy, and gave as his reason for the judgment which he pronounced that notwithstanding such contract was void, yet the plaintiff, by accepting its benefits after the injury was sustained, had estopped himself from bringing this action, I do not think this court would be thereby precluded from considering and determining the two questions: (1) Whether the contract or arrangements set up as a bar to the action was in fact contrary to public policy, and therefore void; (2) if so, whether the acceptance of the benefits of such contract or arrangements after the injury was sustained estopped the plaintiff from bringing this action.

"In the outset I desire to say (what would seem to be needless but for the fact that it appears to have been thought necessary to expend much time and labor upon the point) that I do not suppose anyone doubts that a contract whereby a railroad corporation, or any other common carrier, undertakes to secure immunity from liability for damages for injuries resulting from the negligence of the carrier, or any of his servants or agents, is contrary to public policy, and therefore void. But the question here is whether the contract or arrangement set up in the affirmative defense is a contract for immunity from damages. I do not think it can be so regarded, for, on the contrary, the very terms of the contract necessarily assume that the defendant is liable, and the whole scope and effect of the contract are to fix the measure of such liability and the manner in which liability shall be satisfied."

The chief justice at this point describes the plan of the relief and hospital department of the Plant System and the contract which plaintiff entered into when he joined it, as set out prior hereto in the opinion of Justice Pope, and then continues as follows:

"By entering into this contract, evidenced by his becoming a member of the relief and hospital department, the plaintiff did not waive or release any right of action which he might thereafter have against the defendant company, but his contract was that if, after receiving any injury at the hands of the company, he accepted any benefits which he would be entitled to claim by virtue of his membership of such department, such acceptance should operate as a release of any right of action which he might otherwise have against the company. So that by the terms of the arrangement the plaintiff, after he sustained the injury, had his election either to accept the benefits which, as a member of the relief and hospital department, he would be entitled to claim, or to decline to receive such benefits. If he accepted, he was then bound to release the company; but if he declined, he was not bound to release the company, but retain his right of action, just as if he had never become a member of the relief and hospital department. It may be said that this seems to be a one-sided arrangement, as the plaintiff, if he declined to accept the benefits, would lose the amount which he had contributed to the relief and hospital department fund. But when it is considered that by the terms of the arrangements the plaintiff would be entitled to the benefits of the fund, and to medical or surgical services and to care and treatment in the hospital, free of any charges therefor, even if his disability arose from sickness from natural causes, or from injuries for which the railroad company could not be held responsible, this seeming one-sidedness disappears. Furthermore, inasmuch as the plaintiff had the right of election, after the injury was sustained, either to sue for damages or to claim the benefits of the relief and hospital department, he could, if the injury was slight, accept the benefits of the relief and hospital department as satisfactory compensation for the injury; but if the injury was serious, calling for greater compensation than would be afforded by the benefits which he might claim, he could exercise his right to sue for damages; so that it seems to me that the arrangement, properly understood, would be favorable rather than detrimental to the interests of the employee. But, however this may be, such an arrangement certainly can not be regarded as a contract whereby the carrier undertook to secure immunity from liability for injuries sustained by his employee resulting from his own negligence or that of his servants or agents.

"But even if the contract in question could be regarded as contrary to public policy, and therefore void, then, in the eye of the law, the case stands as if no such contract had ever been executed. If the contract was an absolute nullity, then it is as though no such contract was ever made. If so, then the allegation distinctly made in the second affirmative defense, that the plaintiff, after sustaining the injury complained of, for valuable consideration under his hand and seal, released the defendant company from all liability for such injury, was certainly sufficient to constitute a defense to the action, and for that reason, if no other, the demurrer was properly overruled.

"It is contended, however, that the release relied on as a bar to the action is but a part of the contract claimed to be void because contrary to public policy, and hence must fall with it. In the first place, I do not think any part of the contract is contrary to public policy; but conceding, for the sake of argument, that it is, in the second place, I do not think the act of giving the release entered into or formed any part of the contract. The terms of the contract, as set out in the second affirmative defense, are that the plaintiff agreed that, in consideration of the contributions of the said companies comprising the Plant System to the relief and hospital department, and of the guaranty by them of the payment of the benefits aforesaid, the acceptance of the benefits from the said relief and hospital department for injury or death shall operate as a release of all claims against said companies, and each of them, for damages by reason of such injury or death." I am unable to discover anything in the contract which contemplates or requires any formal release such as is alleged to have been executed by the plaintiff. On the contrary, if, as we have seen by the terms of the contract, the acceptance were to "operate as a release," there would and could be no necessity for the execution of a formal release. Hence, when the plaintiff did, as alleged, execute a formal release, he was not acting in pursuance of the contract, or carrying out any of its terms, but it was his own voluntary act, independent of the alleged void contract, which must operate as a bar to the action.

"It was claimed by counsel for appellant, in his argument, that under the rules and regulations of the defendant company the plaintiff was required, when he entered the service of such company, to become a member of the said relief and

hospital department; but, as that fact does not appear in the 'case' as prepared for argument here, it can not, under the well-settled rule, be considered. But I may say that, under my view of the case, such fact, even if it did appear, would make no difference. As I understand it, every person who enters the employment of another agrees, either expressly or impliedly, to conform to the regulations of the employer for the control and management of his employees, and if he is not willing to conform to such regulations, he is at perfect liberty to decline entering the service of such employer. So, here, when the plaintiff entered the service of the defendant company, he did so voluntarily, as he was under no compulsion to do so, and might have entered the service of some other company which had no such rules and regulations, or might have engaged in some other employment; but when he entered the service of the defendant company, he, like all other employees, signified his willingness to conform to its regulations, and he therefore can not properly be said to have been compelled to enter into the contract or arrangements in question.

"It seems to me, therefore, that, under any view that may properly be taken of this case, there was no error in the judgment overruling the demurrer, and hence such judgment should be affirmed."

[From B. L. No. 22, May, 1899.]

*TEXAS MIDLAND R. R. v. SULLIVAN*, 18 Southwestern Reporter, page 598.—David H. Sullivan, having been injured while in the employ of the above-named railroad, applied, upon his partial recovery, for reemployment by said railroad. As a prerequisite of such employment he was required to execute a release of all claims for damages on account of his injuries, which he did. After being employed by the railroad for a short time he was discharged on account of a collision between a car and an engine, which was claimed to be due to his fault. He then brought suit against the railroad to recover damages for his injuries and the railroad set up the release as a defense. In the district court of Kaufman County, Tex., where the cause was heard, a judgment was rendered in favor of the plaintiff, Sullivan, and the defendant railroad appealed the case to the court of civil appeals of the State, which rendered its decision December 24, 1898, and reversed the judgment of the lower court.

From the opinion of the court of civil appeals, delivered by Judge Stephens, the following is quoted:

"It is insisted \* \* \* that \* \* \* the release was without consideration. The only consideration recited therein was one dollar, which was neither paid nor expected to be paid; but the real consideration was shown by parole to be the reemployment of appellant as brakeman in the service of the company. This he voluntarily sought, after a partial recovery from his injuries, and to obtain it executed the release in question, that being required of him as a condition precedent to such reemployment, according to the usage of railroad companies in such cases, with which he was familiar. It \* \* \* appears that the contract was for an indefinite time and the employment of short duration, but by executing the release appellee acquired the right to fix a reasonable time, and if he failed to do so he has no one to blame but himself. The general rule that, where the term of service is left indefinite, either party may put an end to it at will, and without a cause, does not apply. That rule obtains where mutuality of promise is the sole consideration. Here the execution of the release was an independent consideration, giving appellee the right to fix the duration of the employment, and thus prevent an arbitrary discharge by appellant. We could not, without dissenting from the views so clearly and forcefully stated by Judge Stayton in the Scott case (*Railroad Co. v. Scott*, 10 S. W. 99; 72 Tex., 70), which we are by no means inclined to do, hold that there was no consideration for this release."

[From B. L. No. 23, July, 1899.]

*PITTSBURG, CINCINNATI, CHICAGO AND ST. LOUIS RAILWAY CO. v. MOORE*, 53 Northeastern Reporter, page 290.—In the circuit court of Miami County, Ind., Anna B. Moore, administratrix of the estate of Henry E. Moore, deceased, obtained a judgment in a suit brought by her against the above-named railway company to recover damages for the death of her husband, alleged to have been caused by the negligence of the company while he was in its employ. The negligence complained of was the negligence of the engineer of a train in not obeying a city ordinance regulating the rate of speed of trains in passing through the city and providing for sounding the whistle, ringing the bell, etc. The defendant company appealed the case to the supreme court of the State, which rendered its decision March 30, 1899, and reversed the judgment of the lower court.

The following, quoted from the opinion of the supreme court, which was delivered by Judge Hadley, gives the decision and the reason therefor:

"Appellee concedes that the complaint is grounded upon the first branch of the fourth clause of what is known as the 'coemployees' liability act' (sec. 7083, Burns's Rev. Stat., 1894), which reads as follows: 'Where such injury was caused by the negligence of any person in the service of such corporation who has charge of any locomotive engine or train upon a railway.'

"While we apply the rule that a servant must look out for his own safety and heed, at his peril, all open and ordinary dangers, we must also give force to the correlative rule, equally well established, that the servant himself, observing due care, has a right to believe, and to rely upon his belief, that the master has done his duty in the promotion of safety; and in this instance the deceased had a right to believe that appellant would obey the city ordinance which forbade the running of trains through the city at a greater rate of speed than 6 miles an hour, and that required all backing trains or reversed engines with tenders in front after night to carry a light in front and to sound the whistle and ring the bell. A disregard of the ordinance, under section 7083, *supra*, will extend to the engineer in the employ of appellant and in charge and management of its locomotive and train, and if said ordinance was disobeyed by said engineer, as averred, the jury would have the right to impute such disobedience as negligence. It will not do to say, as appellant contends, that the deceased, being in the service of the company and familiar with the needs of the service in running trains backward and forward through the yards and sometimes at a great rate of speed, was not entitled to the protection afforded by the ordinance. The power of a city to pass such an ordinance is conferred as a police power for the protection of the public, and all the public, and because the deceased happened to be in the service of the company within the inhibited territory presents no reason for depriving him of its protection. It follows, therefore, that the jury had the right to find, if the evidence warranted, that obedience to the city ordinances was a duty owing by appellant to the deceased, and its violation was not an assumed risk, but negligence of appellant.

"The next question arises upon the sustaining of the demurrer to the second paragraph of the answer. This answer is pleaded to the whole complaint. It counts upon a contract of membership held by the deceased in an organization known as 'Voluntary Relief Department of the Pennsylvania Lines West of Pittsburgh,' of which appellant was one, 'that said department and its funds were managed by said lines without expense to the fund, and that they guaranteed the payment of all its obligations and made up all deficiencies in the fund to meet the payment of all benefits due its members,' that said relief department had a set of rules and regulations by which it and its members were governed, and to which all persons assented and agreed to be bound by when they became members thereof, a copy of which was filed with and made a part of said answer. That the decedent on the 7th day of October, 1893, made application and became a member on the terms of the regulations by which said department was operated, and continued such member until his death; that his application, made over his own signature, contained this express stipulation and agreement, to wit: 'And I agree that the acceptance of benefits from the said relief fund, for injury or death, shall operate as a release of all claims for damages against said company, arising from such injury or death, which could be made by or through me, and that I or my legal representatives will execute such further instrument as may be necessary formally to evidence such acquittance.'" The book of regulations (a part of the contract) contained the following further provision, to wit: 'Should a member or his legal representatives bring suit against either of the companies now associated in administering the relief department, or that may hereafter be associated, for damages on account of injury or death of such member, payment of benefits from the relief fund on account of the same shall not be made until such suit is discontinued. If prosecuted to judgment or compromise, any payment of judgment or amount in compromise shall preclude any claim upon the relief fund for such injury or death.' The answer further alleges that the appellee, Anna B. Moore, his then wife, was made his beneficiary in said fund, and, in event of his death, should receive the death benefit therein provided for, which was \$500, and that after his death she did receive from said fund, as such death benefit, said sum of \$500, and executed and delivered to the appellant her instrument in writing releasing it from all further liability. The question arises, Did the acceptance by the plaintiff of the death benefit from said relief department release her claim against appellant for the wrongful death of her husband, or does her act come under the protecting provisions of section 5, act of 1893 (Acts of 1893, p. 294, c. 130; Burns's Rev. Stat., 1894, sec. 7087)? The language of the statute is,

'All contracts made by railroads with \* \* \* their employees, or rules, or regulations adopted by any corporation, releasing or relieving it from liability to any employee having a right of action under the provisions of this act, are hereby declared null and void.' Appellant insists that the contract set out in said second answer does not come within the provisions of the statute, while the contrary is maintained by the appellee. It will be noted that the inhibition of the statute is against the making of any contract exonerating a railroad company from a future liability to an employee. The statute attempts only to forbid such contracts as release the company from liability to an action under the provisions of the act, and the act provides and seeks to regulate no rights of action except such as spring from the negligence of the company or its employees. The only purpose of the statute, therefore, is to prohibit the making of contracts relieving a railroad from liability for future negligence of itself and certain of its employees. Is the contract pleaded such a one? It shows that a number of railroads constitute the Relief Department of the Pennsylvania Lines West of Pittsburg, of which appellant was one; that the associated roads assume control and administration of the department without cost to the fund, that they contribute largely to the fund, that they guarantee that the benefits stipulated for with employees shall be paid in full; that membership therein is voluntary; that the employee is entitled to his benefits, if disabled from any cause—from sickness, from accident, from his own fault as well as from the fault of the company. If disabled without fault of the company, the living or death benefit may be drawn from the fund without question. If by the fault of the company, he may, after injury, elect whether he will accept the benefits from the fund or pursue his remedy at law against the company. And that, when he signs the contract, the only obligation assumed is that, if injured by the fault of the company, he will not seek double compensation by pursuing both the relief fund and the company. It further shows, in effect, that when disability comes, and all the facts and conditions are known to him, he is at perfect liberty to then choose between the relief fund and the treasury of the company—whether he will accept the sure and immediate benefits from the fund or take his chances in the courts against the company—and that an adoption of one course shall be held to be an abandonment of the other. This is the essence of the contract pleaded. It bears no resemblance to an absolute contract for the release of the company from liability under the provisions of the statute.

"The contract forbidden by the statute is one relieving the company from liability for the future negligence of itself and employees. The contract pleaded does not provide that the company shall be relieved from liability. It expressly recognizes that enforceable liability may arise, and only stipulates that if the employee shall prosecute a suit against the company to final judgment he shall thereby forfeit his right to the relief fund, and if he accepts compensation from the relief fund he shall thereby forfeit his right of action against the company. It is nothing more nor less than a contract for a choice between sources of compensation where but a single one existed, and it is the final choice—the acceptance of one against the other—that gives validity to the transaction.

"The right to contract upon the subjects, of themselves lawful, by persons *suo jure* is beyond legislative control so long as the right is exercised without injury to the public. The right to contract is inherent, and is inseparably connected with the right to own and control property, and 'is a primary prerogative of freedom.' (2 Whart. Cont., sec. 1061.) Therefore, in construing the act in question, it must be assumed that the legislature intended to prohibit only such contracts as injuriously affected the public, and can it be said that a contract providing that in the future, when an injury may be suffered, the injured party shall then be free to choose which of two remedies will be most useful to him and most to be preferred is against public policy? We do not see why, and are constrained to hold that the contract pleaded in the second answer is not within the inhibition of section 7087, *supra*, and that the same may be pleaded as a defense.

"The deceased at the time of his death had not elected whether he would accept compensation from the relief fund or seek his damages by action at law against the appellant. Subsequent to his death the plaintiff, as widow, and who was named in the contract as the sole beneficiary of the death benefit, accepted the stipulated amount—\$500—in full satisfaction, and executed to appellant a release from further liability. Appellant contends that, since the widow was the sole beneficiary named in the contract with the relief department, her acceptance of the full sum extinguished all further claim against the company. We can not assent to this proposition. Before death came to Moore he had a cause of action against appellant that he had not released. Upon his death the law conferred a

right of action upon his representative for the use of his next of kin—for the use of his child as well as for the use of his widow—and no act of the latter, without the lawful consent of the child, will deprive the child of its benefit. The widow could only release what she was entitled to. The answer avers that after the death of her husband, and after she has become a beneficiary in a right of action against the company, without fraud she agreed with appellant and accepted the \$500 death benefit in full satisfaction of her claim growing out of the death of her husband, and there is perceived no sufficient reason why she should not be bound by it. But her release in no way affected the rights of the child, and for the use of the child's estate, in her representative capacity, the plaintiff has the right to maintain this action."

[From B. L. No. 23, July, 1899.]

PITTSBURGH, CINCINNATI, CHICAGO AND ST. LOUIS RAILWAY CO. *v.* HOSEA, 53 Northeastern Reporter, page 419.—Action was brought by Nora Hosea, administratrix of the estate of Charles Hosea, deceased, against the above-named company, to recover damages for the death of said deceased, her husband, caused by injuries incurred while he was in the employ of the company. She asked damages both for herself and for her minor child. It appeared from the evidence that the deceased had been a member of the "voluntary relief department" of the railroad; that he was entitled, upon being injured, to receive benefits from the fund of said department, when disabled while in the service of the railroad, from sickness, accident, etc., and that in case of his death a gross sum was to be paid to a beneficiary named by him in his application for membership, that said application contained the following stipulation: "And I agree that the acceptance of benefits from said relief fund for injury or death shall operate as a release of all claims for damages against said company arising from such injury or death which could be made by or through me, and that I or my legal representatives will execute such written instrument as may be necessary formally to evidence such acquittance," that upon his death the amount agreed upon, \$1,000, was paid his wife, Nora Hosea, the beneficiary named in his application. Section 5 of the act of March 4, 1893 (section 7087 of the Annotated Statutes of Indiana of 1894), provides that all contracts made by railroads or other corporations with their employees, or rules or regulations adopted by any corporation, releasing or relieving it from liability to any employee having a right of action under the provisions of section 1 of said act (7083, Ann. Stats. of Ind. of 1894) are to be deemed null and void. The plaintiff, Nora Hosea, claimed that under this section the stipulation contained in the application for membership of the deceased, and quoted above, was null and void. The defendant company claimed, on the other hand, that said stipulation was valid and that the acceptance of benefits by her upon the death of her husband was not only a bar to her personal claim for damages, but also a bar to her claim for damages for her minor child. In the circuit court for Clark County, Ind., where the case was heard, a judgment was rendered in her favor for her claim for damages for her minor child, and her own claim was adjudged to have been barred by her acceptance of the \$1,000 benefit. The railroad company appealed the case to the supreme court of the State, which rendered its decision April 7, 1899, and affirmed the judgment of the circuit court.

The following is taken from the opinion of the supreme court, which was delivered by Judge Hadley:

"Appellant propounds the following as the questions presented by this appeal: (1) Constitutionality of the corporation employers' liability act of March 4, 1893 (sections 7083 to 7087, inclusive, of the Ann. Stats. of Ind. of 1894), and especially the fifth section (sec. 7087). (2) Whether contracts of the kind in this case are within the meaning of section 5; and, if so, whether the section is violative of the obligation of the contract in this case, entered into before the act. (3) Whether acceptance of benefits by the death beneficiary of a deceased employee, member of appellant's voluntary relief department, bars an action on death."

"The first question propounded (as to the constitutionality of the employers' liability act) has been decided adversely to appellant's contention in the case of *Railway Co. v. Montgomery*, 152 Ind. 1; 49 N. E. 583 (Department of Labor Bulletin No. 18, page 723). The question had full consideration in that case, and we are not content with the conclusion there arrived at.

"The first branch of the second proposition, namely, 'whether contracts of the kind in this case are within the meaning of section 5' of the act of March 4, 1893 (sec. 7087, Ann. Stats. of Ind. of 1894), has also recently received consideration by this court in the case of *Railway Co. v. Moore* (decided March 30, 1899), 53 N. E. 290 (see page 589, ante). The contract reviewed in the *Moore* case is identical in terms with the contract pleaded in the second paragraph of answer

in this case (the stipulation quoted above contained the application of the deceased for membership in the voluntary relief department), and in the former we held that the contract was not one to release or relieve the railroad company from future liability, but a contract that in the event of injury, the injured party would then, after the injury, elect between two sources of compensation, and that his election of one would preclude his rights to the other; and hence the contract was one not forbidden by section 5 of said act (section 7087), and must be considered and its validity determined in the same manner as if the act of 1893 had not been adopted. We adhere to the views expressed in the Moore case, and it would therefore be a needless waste of effort to consider the constitutional question presented upon the fifth section of said act."

The court here discussed the appellant's third proposition, and after going into the same at length, concluded as follows:

"The widow, as beneficiary, accepted the death benefit of \$1,000 and released appellant from liability. But her release in no way affected the right of decedent's child. She could release only what she was entitled to. (Railway Co. v. Moore, *supra*.) Finding no available error in the record, the judgment should be affirmed."

[From B. L. No. 25, November, 1899.]

BECK v. PENNSYLVANIA RAILROAD CO., 43 Atlantic Reporter, page 908 — An action brought by Henry Beck against the above-named railroad company, for the recovery of damages for injury incurred by him while in the employ of said company, was heard in the court of errors and appeals of the State of New Jersey and a judgment was rendered in his favor. The defendant company carried the case on writ of error before the supreme court of the State, which rendered its decision June 19, 1899, and reversed the judgment of the lower court. In the lower court the defendant company proved that it and some of its employees had established a relief fund, under regulations requiring the members to contribute certain sums out of their wages, and requiring the company to take charge of the fund, to manage it at its own expense, and out of it to make payment of certain specified benefits to sick or injured members, or, in case of the death of a member, to a beneficiary named by him, and, in case the fund was insufficient to make such payments, to supply the deficiency, that plaintiff had become a member, and in his application had agreed that the acceptance of benefits from the fund for injury or death should operate as a release of all claims for damages against the company arising from such injury or death, and that, after the injury for which the action was brought, plaintiff accepted such benefits. The trial judge, on motion in behalf of the plaintiff, overruled and excluded this evidence. In its decision the supreme court held that action of the judge was error, because the transaction created a contract between the company and its employee which was not against public policy, nor lacking in mutuality or consideration, nor beyond the power of the company to make, and because it was not an insurance contract within the meaning of the State insurance law.

The opinion of the supreme court was delivered by Chief Justice Magie, and in the course of the same he used the following clear and instructive language:

"The learned trial judge held the contract between the parties to this action to be opposed to public policy, because he construed it to be a contract by the employee to relieve the employer of its liability to answer for injuries occasioned by its neglect of duty to the employee, and a stipulation on the part of the employee not to hold the employer liable in any event for such injuries. If such is the true construction of the contract, I should not hesitate to assent to the view that it was invalid, for the law will not tolerate a contract between parties by which one agrees that the other may commit a tort to his injury with impunity and without liability to answer for damages. Such a contract would be opposed to public policy. But, in my judgment, such is not the correct construction of the contract now under consideration. I think it plainly apparent that the employee, or his representative, is not debarr'd by this contract from maintaining such an action (for damages for injuries), but there is an option afforded thereby either to seek redress by action or to accept the benefits stipulated for from the fund. The exclusion of the right of action can only arise by the acceptance of the employee of the optional rights to benefits. I can perceive no reason why such a contract may not be made, and find in it no opposition to the policy of the law.

"What has been said respecting the contract in question disposes also of the objection that it was without consideration or lacking in mutuality. Each of the contracting parties became bound to the other. The contract of each was a legal and sufficient consideration for the contract of each other, and thereby each was mutually bound.

"But it is further contended that this contract on the part of the company is *ultra vires*. I will assume that the company was created to build, maintain, and operate a railroad in the State of Pennsylvania, and obtained corporate powers sufficient to enable it to carry out that purpose. We know that it has acquired power in our own State to lease and operate railroads in extension of its system. Upon such assumption and knowledge, we must recognize that it has either express or implied power to engage the services of many men, and contract with them as to the compensation they shall receive for their services. Each of such employees is engaged in an employment which subjects him to the hazard of injury and the danger of death. Each is possessed of the liberty to contract with the employer respecting his compensation. A contract by which an employee permits such an employer to create a fund in part out of his wages, supplemented by a contribution by the employer, when necessary, out of which relief for sick and injured employees is provided, and by which the employer undertakes to manage the fund and furnish the agreed-on relief, is, in my judgment, within the implied powers of the employer if a corporation. On the part of the employer such a scheme may be deemed likely to increase the efficiency of the force it employs, and on the part of the employee it may tend to relieve from anxiety as to support if injured by any of the many dangers to which he is daily and hourly exposed. As incidental to the contract of employment and compensation, therefore, it is not *ultra vires*.

"One question remains to be considered, and that is whether the contract which has been found to have been made between the parties is one prohibited by the provisions of our legislation on the subject of insurance. The contention of defendant in error is that by our laws no contract to indemnify any person against loss by casualty to property or health or life can be made by any corporation except one incorporated for that purpose under our laws, or a corporation of a foreign state formed for that purpose, which has complied with our laws and obtained authority to transact its business in this State. If it be conceded that this contention properly exhibits the scope of our laws on this subject, I do not think it effective in respect to the contract now under consideration, because, in my judgment, such a contract is not one of insurance within the meaning of these laws. The purpose of the legislation appealed to is to regulate the business of insurance of various kinds by corporations who propose to do such business, and who hold themselves out as ready to contract for insurance with any person who applies and agrees to the terms on which they offer to insure. If it be conceded that such business is a proper subject of legislative regulation, it is obvious that such regulations are not to be extended beyond the business intended to be regulated. The scheme of the relief department of this company does not contemplate a business of that sort. Such an association (a railway relief association) creates its own fund by voluntary action, and distributes it by an agreed-upon plan; and the contract is not of insurance, but of beneficial relief.

"None of the objections to the contract being found to affect its validity, it results that it was erroneous to overrule the evidence of its existence, and its performance on the part of the company, and of the acceptance by Beck of benefits thereunder. Under that evidence the defense of the company was perfect, unless it was met by counter evidence denying the existence of the contract or the acceptance of the benefits by Beck. The judgment must, therefore, be reversed."

[From B. L. No. 28, May, 1900.]

*JOSSEY v. GEORGIA SOUTHERN AND FLORIDA RY. CO.*, 34 Southeastern Reporter, page 664.—R. M. Jossey brought suit against the above-named railway company, in which he sought to rescind a contract signed by him releasing such company from liability for a personal injury sustained by him and to recover damages from the defendant for such injury. In the superior court of Dooley County, Ga., where the suit was heard, a judgment was rendered in favor of the defendant company, and the plaintiff took the case upon a writ of error before the supreme court of the State, which rendered its decision December 8, 1899, and sustained the action of the lower court.

The opinion of the court was delivered by Judge Fish, and the syllabus of the same, which was prepared by the court, reads as follows:

"One who signs a contract which recites that, in consideration of a stated sum paid him by a railroad company, he releases it from all liability for a personal injury, which he contends was caused by its negligence, will be estopped from claiming that the release is not binding upon him because he thought, when he signed the contract, that it related only to the time he lost in consequence of the injury and did not cover damages caused thereby, when it appears that no fraud of any kind was practiced upon him, and that, having ample opportunity and capacity to read and understand the contract before he signed it, he negligently failed to do so."

[From B. L. No. 29, July, 1900.]

**PETTY v. BRUNSWICK AND WESTERN RAILWAY CO.**, 35 Southeastern Reporter, page 82.—In the city court of Brunswick, Ga., in a suit brought by Alfred Petty, as plaintiff, against the above-named railway company to recover damages for personal injuries incurred by the plaintiff while in the employ of the company, a judgment was rendered in favor of the defendant company, and the plaintiff carried the case upon a writ of error to the supreme court of the State. Said court rendered its decision January 30, 1900, and affirmed the judgment of the lower court.

In the opinion of the court, which was delivered by Presiding Judge Lumpkin, certain principles of interest were laid down, which are given in the syllabus of the decision, prepared by the court, in the following language:

"1. A contract between an employee and his master, or another acting in the latter's interest, by the terms of which the employee, when physically injured, whether as a result of his own negligence or not, or when sick, is to receive pecuniary and other valuable benefits, and which stipulates that his voluntary acceptance of any of such benefits in case of injury is to operate as a release of the master from all liability on account thereof, is not contrary to public policy.

"2. That such a contract secured to the employee substantial benefits, and that the master contributed to the fund for the payment thereof, constituted a valuable consideration as to the employee; and this is true though he himself made a small monthly contribution to that fund. A contract of this kind is not wanting in mutuality.

"6. The acceptance by an injured employee of any benefit under a contract of the kind indicated in the first of the preceding notes is an election on his part to look exclusively to that source for compensation on account of the injury and amounts to a complete accord and satisfaction of his claim for damages against his master therefrom arising."

[From B. L. No. 27, March, 1900.]

**POTTER v. DETROIT, GRAND HAVEN AND MILWAUKEE RY. CO.**, 81 Northwestern Reporter, page 80.—In the circuit court of Shiawassee County, Mich., Frank A. Potter recovered a judgment in a suit brought by him against the above-named railway company for damages for injuries incurred by him while in its employ. The company then appealed the case to the supreme court of the State, which rendered its decision December 12, 1899, and affirmed the judgment of the lower court.

In the opinion of the supreme court, delivered by Judge Montgomery, the following, showing an interesting point decided in the case, appears:

"Some time after plaintiff received his injuries, and on October 31, 1892, he signed a release, reciting that he had received certain injuries, as follows: 'At Milwaukee Junction, while riding on a ladder of car, was knocked off by a post standing a little west of the road crossing, cutting my head and bruising my shoulder;' and, after reciting that the company denied liability, for the purpose of determining and ending the question of liability and to avoid litigation, in consideration of reemployment by the company, the release proceeds: 'I do hereby waive and relinquish all claims that I may have against the said company for damages for the aforesaid injuries, and do hereby release the said company of and from all claims as aforesaid.' The recited consideration for this release is 'the reemployment by said company for such time only as may be satisfactory to the said company.' The testimony shows that at the time when the release was signed the plaintiff was already again in the defendant's employ. No change as to the terms of employment was made, nor was the defendant company bound to retain him in its employ for any length of time whatever. There was no consideration for the release. We discover no material error. The judgment should be affirmed."

[From B. L. No. 30, September, 1900.]

**LEVISTER v. SOUTHERN RAILWAY CO.**, 35 Southeastern Reporter, page 207.—Action was brought by A. H. Levister against the above-named railway company to recover damages for injuries incurred by him while in its employ. At a hearing in the common pleas circuit court of Richland County, S. C., the defendant company set up as a second defense to the suit the following:

"That after the time of the alleged injury and before the commencement of this action the defendant delivered to the plaintiff and the plaintiff received from the defendant the sum of \$210 in full release, satisfaction, and discharge of all claims for damages resulting from the injury alleged in the said complaint."

In his reply to said defense the plaintiff used the following language:

"Admits that plaintiff did sign and deliver to the defendant a certain paper, purporting to be a release, to the effect stated in said second defense of the answer, but alleges with reference thereto that the same was fraudulently procured from him by the defendant, in that he was given to understand by said company that if he would sign the paper the defendant would pay him his regular salary of \$35 per month for six months, and would give him employment out of which he might earn a living, whereas the said company never intended to give him such employment, and has failed and refused to do so, although requested to do so by this plaintiff, in consequence whereof the said paper purporting to be a release was wholly void."

To this reply the defendant demurred upon three grounds, the second of which reads as follows:

"Because the said reply does not contain or state any facts showing that the plaintiff has rescinded said release and has returned or offered to return to the defendant the consideration thereof before the commencement of this action."

Upon this ground the demurrer was sustained by the circuit judge, and the plaintiff appealed the case to the supreme court of the State, which rendered its decision March 7, 1900, and sustained the action of the lower court.

Chief Justice McVey delivered the opinion of the supreme court, and the following is quoted therefrom:

"We proceed, then, to the consideration of what we also regard as the only substantial question raised by the appeal, and that is whether a person who has sustained injuries by reason of the alleged negligence of a railroad company, and and has afterwards, in consideration for the sum of money paid to him, executed a release of all claims against such company for damages sustained by such injuries, can maintain an action for damages without first returning or offering to return the money so received, even though he alleges that such release was obtained by fraud. It seems that, upon the plainest principles of justice and fair dealing, there can be but one answer to this question, and that in the negative. To allow a person, after executing a release of all claims against another in consideration of a sum of money paid to him, to repudiate obligations which he assumed by executing the release, and at the same time reap the benefits which he received by executing the release, which would be a fraud, would be asking a court to release him from a fraud which he claims was practiced upon him by another, and at the same time committing a fraud upon such other person, for certainly it would be a fraud to obtain money paid to him in consideration that he would do something which he now claims he is not bound to do and will not do, for certainly, on the theory on which he proceeds, the money which he retains is not his money, but belongs to the person against whom he is asking relief.

"If, in such a case, the plaintiff conceives that the release, the execution of which he admits, was obtained by fraud, and for that reason seeks to avoid it, his first step is to return the money he received in consideration of executing the release; for he can not be permitted to retain the benefits which he has received under a contract, and at the same time escape the obligations which such contract imposed upon him. Upon principle, therefore, we think it clear that there was no error on the part of the circuit judge in sustaining the demurrer on the second ground."

## B.—EMPLOYERS' LIABILITY LAWS.

The text of the following laws has been taken from the Seventeenth Annual Report of the Bureau of Labor Statistics of New York, 1899 corrected and amended to include the laws of 1900. The text of these laws may also be found, with much illuminating comment upon them, in an article by Mr. Stephen D. Fessenden, entitled "Present status of employers' liability in the United States," Labor Bulletin No. 31, November, 1900.

### ALABAMA

ACT OF FEBRUARY 12 1885

[From Code of 1886, Part III, Title 1.]

SEC. 2590. *Liability of master or employer to servant or employee for injuries.*—When a personal injury is received by a servant or employee in the service or business of the master or employer, the master or employer is liable to answer in damages to such servant or employee, as if he were a stranger, and not engaged in such service or employment, in the cases following.

1. When the injury is caused by reason of any defect in the condition of the ways, works, machinery, or plant connected with, or used in the business of the master or employer.

2. When the injury is caused by reason of the negligence of any person in the service or employment of the master or employer, who has any superintendence intrusted to him, whilst in the exercise of such superintendence.

3. When such injury is caused by reason of the negligence of any person in the service or employment of the master or employer, to whose orders or directions the servant or employee, at the time of the injury, was bound to conform, and did conform, if such injuries resulted from his having so conformed.

4. When such injury is caused by reason of the act or omission of any person in the service or employment of the master or employer, done or made in obedience to the rules and regulations and by-laws of the master or employer, or in obedience to particular instructions given by any person delegated with the authority of the master or employer in that behalf.

5. When such injury is caused by reason of the negligence of any person in the service or employment of the master or employer, who has the charge or control of any signal, points, locomotive, engine, switch, car, or train upon a railway, or of any part of the track of a railway.

But the master or employer is not liable under this section, if the servant or employee knew of the defect or negligence causing the injury, and failed in a reasonable time to give information thereof to the master or employer, or to some person superior to himself engaged in the service or employment of the master or employer, unless he was aware that the master or employer, or such superior, already knew of such defect or negligence; nor is the master or employer liable under subdivision 1, unless the defect therein mentioned arose from, or had not been discovered or remedied owing to the negligence of the master or employer, or of some person in the service of the master or employer, and intrusted by him with the duty of seeing that the ways, works, machinery, or plant, were in proper condition.

SEC. 2591. *Personal representative may sue, if injury results in death.*—If such injury results in the death of the servant or employee, his personal representative is entitled to maintain an action therefor, and the damages recovered are not subject to the payment of debts or liabilities, but shall be distributed according to the statute of distributions.

SEC. 2592. *Damages exempt.*—Damages recovered by the servant or employee, of and from the master or employer, are not subject to the payment of debts, or any legal liabilities incurred by him.

## ARKANSAS

[Digest of 1894, Chapter 130.]

SEC. 6248. *Fellow servants; railroad companies.*—All persons engaged in the service of any railway corporations, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to direct any other employee, in the performance of any duty of such employee, are vice-principals of such corporation, and are not fellow servants with such employee.

SEC. 6249. All persons who are engaged in the common service of such railway corporations, and who, while so engaged, are working together to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow employees, are fellow servants with each other: *Provided*, Nothing herein contained shall be so construed as to make employees of such corporation in the service of such corporation fellow servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow servants.

SEC. 6250. No contract made between the employer and employee based upon the contingency of the injury or death of the employee limiting the liability of the employer under this act, or fixing damages to be recovered, shall be valid and binding.

## CALIFORNIA

[Civil Code of California, 1885, p. 345.]

SEC. 1969. *When employer must indemnify employee.*—An employer must indemnify his employee, except as provided in the next section, for all that he necessarily expends or loses in direct consequence of the discharge of his duties as such, or of his obedience to the directions of his employer, even though unlawful, unless the employee at the time of obeying such directions believed them to be lawful.

SEC. 1970. *When not.*—An employer is not bound to indemnify his employee for losses suffered by the latter in consequence of the ordinary risk of the business in which he is employed, nor in consequence of the negligence of another person employed by the same employer in the same general business, unless he has neglected to use ordinary care in the selection of the culpable employee.

SEC. 1971. *Employer to indemnify for his own negligence.*—An employer must in all cases indemnify his employee for losses caused by the former's want of ordinary care.

## COLORADO

ARTICLE XV, SECTION 15, OF THE CONSTITUTION

*Contracting out*

It shall be unlawful for any person, company, or corporation to require of its servants or employees, as a condition of their employment or otherwise, any contract or agreement whereby such person, company, or corporation shall be released or discharged from liability or responsibility on account of personal injuries received by such servants or employees while in the service of such person, company, or corporation, by reason of the negligence of such person, company, or corporation, or the agents or employees thereof, and such contracts shall be absolutely null and void.

ACTS OF 1893, CHAPTER 77

*Liability of employer for injuries of employees*

SEC. 1. Where, after the passage of this act, personal injury is caused to an employee, who is himself in the exercise of due care and diligence at the time, (1) by reason of any defect in the condition of the ways, works, or machinery connected with or used in the business of the employer, which arose from or had not been discovered or remedied owing to the negligence of the employer, or of any person in the service of the employer, and intrusted by him with the duty of seeing that the ways, works, and machinery were in proper condition; or (2) by reason of the negligence of any person in the service of the employer, entrusted with or exercising superintendence, whose sole or principal duty is that of superintendence; (3) by reason of the negligence of any person in the service of the employer who has the charge or control of any switch, signal, locomotive engine,

or train upon a railroad, the employee, or in case the injury results in death the parties entitled by law to sue and recover for any such damages shall have the same right of compensation and remedy against the employer as, if the employee had not been an employee of or in the service of the employer or engaged in his or its works.

SEC. 2. The amount of compensation recoverable under this act, in case of a personal injury resulting solely from the negligence of a coemployee, shall not exceed the sum of five thousand dollars. No action for the recovery of compensation for injury or death under this act shall be maintained unless written notice of the time, place, and cause of the injury is given to the employer within sixty days, and the action is commenced within two years from the occurrence of the accident causing the injury or death. But no notice given under the provisions of this section shall be deemed invalid or insufficient solely by reason of any inaccuracy in stating the time, place, or cause of injury: *Provided*, It is shown that there was no intention to mislead, and that the party entitled to notice was not in fact misled thereby.

SEC. 3. Whenever an employee enters into a contract, either written or verbal, with an independent contractor to do part of such employer's work, or whenever such contractor enters into a contract with a subcontractor to do all or a part of the work comprised in such contract or contracts with the employer, such contract or subcontract shall not bar the liability of the employer for injuries to the employees of such contractor or subcontractor, by reason of any defect in the condition of the ways, works, machinery, or plant, if they are the property of the employer or furnished by him, and if such defect arose or had not been discovered or remedied through the negligence of the employer or of some person intrusted by him with the duty of seeing that they were in proper condition.

SEC. 4. An employee or those entitled by law to sue and recover, under the provisions of this act, shall not be entitled under this act to any right of compensation or remedy against his employer in any case where such employee knew of the defect or negligence which caused the injury, and failed within a reasonable time to give or cause to be given information thereof to the employer, or to some person superior to himself in the service of his employer, who had intrusted to him some general superintendence.

SEC. 5. If the injury sustained by the employee is clearly the result of the negligence, carelessness, or misconduct of a coemployee, the coemployee shall be equally liable, under the provisions of this act, with the employer, and may be made a party defendant in all actions brought to recover damages for such injury. Upon the final of such action, the court may submit to and require the jury to find a special verdict upon the question as to whether the employer or his vice-principal was or was not guilty of negligence proximately causing the injury complained of, or whether such injury resulted solely from the negligence of the coemployee; and in case the jury by their special verdict find that the injury was solely the result of the negligence of the employer or vice-principal, then and in that case the jury shall assess the full amount of plaintiff's damages against the employer, and the suit shall be dismissed as against the employee, but in case the jury by their special verdict find that the injury resulted solely from the negligence of the coemployee, the jury may assess damages both against the employer and employee.

#### FLORIDA

##### *Liability of railroad companies for injuries to employees*

The act of June 7, 1887, which was quite similar to the Georgia statute, has been superseded by the following law, approved May 4, 1891:

[Revised Statutes of 1892, Appendix, page 1008.]

SEC. 3. If any person is injured by a railroad company by the running of the locomotives, or cars, or other machinery of such company, he being at the time of such injury an employee of the company, and the damage was caused by negligence of another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to a recovery. No contract which restricts such liability shall be legal or binding.

#### GEORGIA

Act of 1885

[Code of 1895.]

SEC. 2297. *Liability of railroad companies as carriers.*—Railroad companies are common carriers, and liable as such. As such companies necessarily have many employees who can not possibly control those who should exercise care and dili-

gence in the running of trains, such companies shall be liable to such employees as to passengers for injuries arising from the want of such care and diligence.

SEC. 2323. *Injury by coemployee.*—If the person injured is himself an employee of the company, and the damage was caused by another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery [of damages].

NO. 224 OF THE ACTS OF 1895

SECTION 1. The liability of receivers, trustees, assignees, and other like officers operating railroads in this State, or partially in this State, for injuries and damages to persons in their employ, caused by the negligence of coemployees, shall be the same as the liability now fixed by the law governing the operation of railroad corporations in this State for like injuries and damages, and a lien is hereby created on the gross income of any such railroad while in the hands of any such receiver, trustee, assignee, or other person, in favor of such injured employees, superior to all other liens against defendant under the laws of this State.

SEC. 2. Suits may be brought against either of such officers in the same county, and service may be perfected by serving them or their agents in the same manner as if the suit had been brought against the corporation whose property or franchise is being operated by them, and all such suits may be brought without first having obtained leave to sue from any court.

INDIANA

*Liability of corporations for injuries of employees*

[Annotated Statutes of 1891, Chapter 81.]

SECTION 7083. Every railroad or other corporation, except municipal, operating in this State, shall be liable for damages for personal injury suffered by an employee while in its service, the employee so injured being in the exercise of due care and diligence, in the following cases:

First. When such injury is suffered by reason of any defect in the condition of ways, works, plant, tools, and machinery connected with or in use in the business of such corporation, when such defect was the result of negligence on the part of the corporation, or some person entrusted by it with the duty of keeping such way, works, plant, tools, or machinery in proper condition.

Second. Where such injury resulted from the negligence of any person in the service of such corporation, to whose order or direction the injured employee at the time of the injury was bound to conform, and did conform.

Third. Where such injury resulted from the act or omission of any person done or made in obedience to any rule, regulation, or by-law of such corporation, or in obedience to the particular instructions given by any person delegated with the authority of the corporation in that behalf.

Fourth. Where such injury was caused by the negligence of any person in the service of such corporation who has charge of any signal, telegraph office, switch yard, shop, roundhouse, locomotive engine, or train upon a railway, or where such injury was caused by the negligence of any person, coemployee, or fellow servant engaged in the same common service in any of the several departments of the service of any such corporation, the said person, coemployee, or fellow servant, at the time acting in the place and performing the duty of the corporation in that behalf, and the person so injured, obeying, or conforming to the order of some superior at the time of such injury, having authority to direct; but nothing herein shall be construed to abridge the liability of the corporation under existing laws.

SEC. 7085. The damages recoverable under this act shall be commensurate with the injury sustained unless death results from such injury, when, in such case, the action shall survive and be governed in all respects by the law now in force as to such actions: *Provided*, That where any such person recovers a judgment against a railroad or other corporation, and such corporation takes an appeal, and, pending such appeal, the injured person dies, and the judgment rendered in the court below be thereafter reversed, the right of action of such person shall survive to his legal representative.

SEC. 7086. In case any railroad corporation which owns or operates a line extending into or through the State of Indiana and into or through another or other states, and a person in the employ of such corporation, a citizen of this State, shall be injured, as provided in this act, in any other state where such railroad is owned or operated, and a suit for such injury shall be brought in any of the courts of this State, it shall not be competent for such corporation to plead or

prove the decisions or statutes of the state where such person shall have been injured as a defense to the action brought in this State.

SEC. 7087. All contracts made by railroads or other corporations with their employees, or rules or regulations adopted by any corporation releasing or relieving it from liability to any employee having a right of action under the provisions of this act, are hereby declared null and void. The provisions of this act, however, shall not apply to any injuries sustained before it takes effect, nor shall it affect in any manner any suit or legal proceedings pending at the time it takes effect.

## IOWA

## ACT OF 1862

*Liability of railroad companies for injuries to employees*

[McClain's Annotated Statutes of 1880, Title X, Chapter 5, Section 1307.]

Every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents, or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the wilful wrongs, whether of commission or of omission of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway, on or about which they shall be employed, and no contract which restricts such liability shall be legal or binding.

## ACTS OF 1898, CHAPTER 19

*Conflicting act out*

SECTION 1. Section number two thousand and seventy-one of the code [shall] be amended by adding at the end thereof the following:

"Nor shall any contract of insurance, relief, benefit, or indemnity in case of injury or death, entered into prior to the injury, between the person so injured and such corporation, or any other person or association acting for such corporation, nor shall the acceptance of any such insurance, relief, benefit, or indemnity by the person injured, his widow, heirs, or legal representatives after the injury, from such corporation, person, or association, constitute any bar or defense to any cause of action brought under the provisions of this section, but nothing contained herein shall be construed to prevent or invalidate any settlement for damages between the parties subsequent to injuries received."

Approved March 8, 1898.

## KANSAS

## LAWS OF 1871, CHAPTER 93, SECTION 1

*Liability of railroad companies for injuries to employees*

[General Statutes of 1889, Chapter 23, Paragraph 12d.]

Every railroad company organized or doing business in this State shall be liable for all damages done to any employee of such company in consequence of any negligence of its agents, or by any mismanagement of its engineers, or other employees, to any person sustaining such damage.

## MASSACHUSETTS

## LAWS OF 1887, CHAPTER 270

*Liability of employer for injuries to employees*

SECTION 1. (As amended by chapter 260, acts of 1892, and by chapter 359, acts of 1893, and by chapter 499, acts of 1894.) Where, after the passage of this act, personal injury is caused to an employee, who is himself in the exercise of due care and diligence at the time: (1) By reason of any defect in the condition of the ways, works, or machinery connected with or used in the business of the employer, which arose from or had not been discovered or remedied owing to the negligence of the employer or of any person in the service of the employer and entrusted by him with the duty of seeing that the ways, works, or machinery were in proper condition; or (2) by reason of the negligence of any person in the

service of the employer, entrusted with and exercising superintendence, whose sole or principal duty is that of superintendence, or, in the absence of such superintendence, of any person acting as superintendent with the authority or consent of such employer; or (3) by reason of the negligence of any person in the service of the employer who has the charge or control of any signal, switch, locomotive engine, or train upon a railroad; the employee, or in case the injury results in death the legal representatives of such employee, shall have the same right of compensation and remedies against the employer as if the employee had not been an employee of nor in the service of the employer, nor engaged in its work. And in case such death is not instantaneous, or is preceded by conscious suffering, said legal representatives may in the action brought under this section, except as hereinafter provided, also recover damages for such death. The total damages awarded hereunder, both for said death and for said injury, shall not exceed five thousand dollars, and shall be apportioned by the jury between the legal representatives and the persons, if any, entitled under the succeeding section of this act, to bring action for instantaneous death. If there are no such persons then no damages for such death shall be recovered, and the damages, so far as the same are awarded for said death, shall be assessed with reference to the degree of culpability of the employer hereon, or the person for whose negligence he is made liable. A car in use by or in the possession of a railroad company shall be considered a part of the ways, works, or machinery of the company using or having the same in possession, within the meaning of this act, whether such car is owned by it or by some other company or person.

SEC. 2. Where an employee is instantly killed or dies without conscious suffering, as the result of the negligence of the employer, or of the negligence of any person for whose negligence the employer is liable under the provisions of this act, the widow of the deceased, or, in case there is no widow, the next of kin, provided that such next of kin were at the time of the death of such employee dependent upon the wages of such employee for support, may maintain an action for damages therefor and may recover in the same manner, to the same extent, as if the death of the deceased had not been instantaneous, or as if the deceased had consciously suffered.

SEC. 3. (As amended by chapter 155, acts of 1888; by chapter 260, acts of 1892, and by chapter 446 of the act of 1900.) Except in actions brought by the personal representatives under section one of this act to recover damages for both the injury and death of an employee, the amount of compensation receivable under this act in cases of personal injury shall not exceed the sum of four thousand dollars. In case of death which follows instantaneously or without conscious suffering, compensation in lieu thereof may be recovered in not less than five hundred and not more than five thousand dollars, to be assessed with reference to the degree of culpability of the employer hereon, or the person for whose negligence he is made liable; and no action for the recovery of compensation for injury or death under this act shall be maintained unless notice of the time, place, and cause of the injury is given to the employer within sixty days, and the action is commenced within one year, from the occurrence of the accident causing the injury or death. The notice required by this section shall be in writing, signed by the person injured or by someone in his behalf; but if from physical or mental incapacity it is impossible for the person injured to give the notice within the time provided in said section, he may give the same within ten days after such incapacity is removed, and in case of his death without having given the notice and without having been for ten days at any time after his injury of sufficient capacity to give the notice, his executor or administrator may give such notice within sixty days after his appointment. But no notice given under the provisions of this section shall be deemed to be invalid or insufficient solely by reason of any inaccuracy in stating the time, place, or cause of the injury: *Provided*, It is shown that there was no intention to mislead, and that the party entitled to notice was not in fact misled thereby.

SEC. 4. Whenever an employer enters into a contract, either written or verbal, with an independent contractor to do part of such employer's work, or whenever such contractor enters into a contract with a subcontractor to do all or any part of the work comprised in such contractor's contract with the employer, such contract or subcontract shall not bar the liability of the employer for injuries to the employees of such contractor or subcontractor, by reason of any defect in the condition of the ways, works, machinery or plant, if they are the property of the employer, or furnished by him, and if such defect arose or had not been discovered or remedied through the negligence of the employer or some person entrusted by him with the duty of seeing that they were in proper condition.

SEC. 5. An employee or his legal representatives shall not be entitled under

this act to any right of compensation or remedy against his employer in any case where such employee knew of the defect or negligence which caused the injury, and failed within a reasonable time to give, or cause to be given, information thereof to the employer or some person superior to himself in the service of the employer, who had entrusted to him some general superintendence.

SEC. 6. Any employer who shall have contributed to an insurance fund created and maintained for the mutual purpose of indemnifying an employee for personal injuries for which compensation may be recovered under this act, or to any relief society formed under chapter two hundred and forty-four of the acts of the year eighteen hundred and eighty-two, as authorized by chapter one hundred and twenty-five of the acts of the year eighteen hundred and eighty-six, may prove, in mitigation of the damages recoverable by an employee under this act, such proportion of the pecuniary benefit which has been received by such employee from any such fund or society on account of such contribution of said employer, as the contribution of such employer to such fund or society bears to the whole contribution thereof.

SEC. 7. This act shall not apply to injuries caused to domestic servants, or farm laborers, by other fellow-employees.

#### CHAPTER 191, LAWS OF 1897

SEC. 1. One or more cars in motion, whether attached to an engine or not, shall constitute a train within the meaning of clause three of section one of chapter two hundred and seventy of the acts of the year eighteen hundred and eighty-seven and acts in addition thereto or in amendment thereof.

SEC. 2. Any person who, as a part of his duty for the time being, physically controls or directs the movements of a signal, switch, or train shall be deemed to be a person in charge or control of a signal, switch, or train within the meaning of clause three of section one of chapter two hundred and seventy of the acts of the year eighteen hundred and eighty-seven and acts in addition thereto or in amendment thereof.

Approved June 10, 1897.

#### ACT OF 1891

No person or corporation shall, by special contract with persons in his or its employ, exempt himself or itself from any liability which he or it might otherwise be under to such persons for injuries suffered by them in their employment, and which result from the employer's own negligence or from the negligence of other persons in his or its employ.

#### MINNESOTA

#### ACT OF 1891

[General Statutes of 1891, Chapter 31, Section 2701.]

Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant thereof, by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State, and no contract, rule, or regulation between such corporation and any agent or servant shall impair or diminish such liability: *Provided*, That nothing in this act shall be so construed as to render any railroad company liable for damages sustained by any employee, agent, or servant while engaged in the construction of a new road, or any part thereof, not open to public travel or use.

#### ACTS OF 1895, CHAPTER 121

#### *Verdicts in suits based on negligence of fellow servants*

In any action where a verdict is hereafter rendered awarding damages on account of the negligence of a coemployee or coemployees, fellow-servant or fellow-servants of the injured party, the court, upon request of either party, made before the case is submitted to the jury, shall direct the jury to name and it shall be their duty to name in their verdict such coemployee or coemployees, fellow-servant or fellow-servants, if the evidence shall disclose their name or names, and if the evidence

<sup>1</sup> Chap. 206, Laws of 1885, as amended by chap. 59, Laws of 1887, made railroad corporations liable for injuries to engineers or firemen as a result of their being obliged to work more than 18 hours in any one day.

does not disclose the name or names then such coemployee or coemployees, fellow-servant or fellow-servants shall be designated by words of description, having reference to class of service, nature of employment, or otherwise, so as to identify them as far as possible under the evidence.

*Provided further,* That this act shall not apply to cases where the name or description of such person or persons is not disclosed by the evidence.

## MISSISSIPPI

## CONSTITUTION, ARTICLE 7

*Liability of railroad companies for injuries of employees*

SEC. 193. Every employee of any railroad corporation shall have the same rights and remedies for any injuries suffered by him from the act or omission of said corporation or its employees as are allowed by law to other persons not employees, where the injury results from the negligence of a superior agent or officer, or of a person having the right to control or direct the services of the party injured, and also when the injury results from the negligence of a fellow-servant engaged in another department of labor from that of the party injured, or of a fellow-servant on another train of cars, or one engaged about a different piece of work. Knowledge by any employee injured of the defect or unsafe character or condition of any machinery, ways, or appliances shall be no defense to an action for injury caused thereby, except as to conductors or engineers in charge of dangerous or unsafe cars or engines voluntarily operated by them. Where death ensues from any injury to employees, the legal or personal representatives of the person injured shall have the same right and remedies as are allowed by law to such representatives of other persons. Any contract or agreement, express or implied, made by any employee to waive the benefit of this section, shall be null and void; and this section shall not be construed to deprive any employee of a corporation or his legal or personal representative of any right or remedy that he now has by the law of the land. The legislature may extend the remedies herein provided for to any other class of employees.

*All corporations.*

By chapter 66 of the Acts of 1898, the Mississippi legislature extended the remedies of the foregoing section of the Constitution, with slight modifications, to all corporations.

## MISSOURI

## ACT OF 1897

*Fellow-servants—Railroads*

[Page 96.]

SEC. 1. Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant thereof while engaged in the work of operating such railroad by reason of the negligence of any other agent or servant thereof: *Provided,* That it may be shown in defense that the person injured was guilty of negligence contributing as a proximate cause to produce the injury.

SEC. 2. All persons engaged in the service of any such railroad corporation doing business in this State, who are entrusted by such corporation with the authority of superintendence, control, or command of other persons in the employ or service of such corporation, or with the authority to direct any other servant in the performance of any duty of such servant, or with the duty of inspection, or other duty owing by the master to the servant, are vice-principals of such corporation and are not fellow-servants with such employees.

SEC. 3. Any persons who are engaged in the common service of such railroad corporation, and who while so engaged are working together at the same time and place to a common purpose of same grade, neither of such persons being entrusted by such corporation with any superintendence or control over their fellow-employees, are fellow-servants with each other: *Provided,* That nothing herein contained shall be so construed as to make any agent or servant of such corporation in the service of such corporation a fellow-servant with any other

<sup>1</sup>The Revised Code of 1880, section 1054, made railroad companies liable for the "neglect or mismanagement of any of their agents, engineers, or clerks."

agent or servant of such corporation engaged in any other department or service of such corporation.

SEC. 4. No contract made between any railroad corporation and any of its agents or servants, based upon the contingency of the injury or death of any agent or servant, limiting the liability of such railroad corporation for any damages under the provisions of this act shall be valid or binding, but all such contracts or agreements shall be null and void.

Approved February 9, 1897.

#### MONTANA.

##### *Liability of railroad companies for the injuries of employees*

[Codes and Statutes—Sanders's Edition, 1895, Division I, section 965.]

That in every case the liability of the [railroad] corporation to a servant or employee acting under the orders of his superior, shall be the same in case of injury sustained by default or wrongful act of his superior, or to an employee not appointed or controlled by him, as if such servant or employee were a passenger.<sup>1</sup>

#### NEW MEXICO

##### ACTS OF 1893 CHAPTER 28

##### *Liability of railroad companies for injuries of employees*

SEC. 1. Every corporation operating a railway in this Territory shall be liable in a sum sufficient to compensate such employee for all damages sustained by any employee of such corporation, the person injured or damaged being without fault on his or her part, occurring or sustained in consequence of any mismanagement, carelessness, neglect, default, or wrongful act of any agent or employee of such corporation, while in the exercise of their several duties, when such mismanagement, carelessness, neglect, default, or wrongful act of such employee or agent could have been avoided by such corporation through the exercise of reasonable care or diligence in the selection of competent employees, or agents, or by not overworking said employees or requiring or allowing them to work an unusual or unreasonable number of hours, and any contract restricting such liability shall be deemed to be contrary to the public policy of this Territory and therefore void.

SEC. 2. It shall be unlawful for any such corporation knowingly and willfully to use or operate any car or locomotive that is defective, or any car or locomotive upon which the machinery or attachments thereto belonging are in any manner defective, or shops or machinery and attachments thereof which are in any manner defective, which defects might have been previously ascertained by ordinary care and diligence by said corporation.

If the employee of any such corporation shall receive any injury by reason of such defect in any car or locomotive or machinery or attachments thereto belonging, or shops or machinery and attachments thereof, owned and operated, or being run and operated by such corporation, through no fault of his own, such corporation shall be liable for such injury, and upon proof of the same in an action brought by such employee or his legal representatives, in any court of proper jurisdiction, against such railroad corporation for damages on account of such injury so received, shall be entitled to recover against such corporation any sum commensurate with the injuries sustained. Provided, That it shall be the duty of all the employees of railroad corporations to promptly report all defects coming to their knowledge in any such car or locomotive or shops or machinery and attachments thereof to the proper officer or agent of such corporation, and after such report the doctrine of contributory negligence shall not apply to such employee.

SEC. 3. Whenever the death of an employee shall be caused under circumstances from which a cause of action would have accrued under the provisions of the two preceding sections, if death had not ensued, an action therefor shall be brought in the manner provided by section 2310 of the Compiled Laws of New Mexico, as amended by chapter XLIX of the Session Laws of 1891 of New Mexico, and any sum recovered therein shall be subject to all the provisions of said section 2310 as so amended.

<sup>1</sup> "The foregoing provision was enacted as part of a general act providing for the formation of railroads in the Territory of Montana, and was passed with considerable difficulty over the Governor's veto. Cf. Laws, etc., of the Territory of Montana, 1873 (extra), 104 and 105, note."—Rep. Mass. Bureau of Labor Statistics, 1888, p. 39.

## NORTH CAROLINA.

Act of 1897

*Fellow-servant act—Railroad companies*

SEC. 1. Any servant or employee of any railroad company operating in this State who shall suffer injury to his person, or the personal representative of any such servant or employee who shall have suffered death in the course of his services or employment with said company by the negligence, carelessness, or incompetency of any other servant, employee, or agent of the company, or by any defect in the machinery, ways or appliances of the company, shall be entitled to maintain an action against such company.

SEC. 2. Any contract or agreement, expressed or implied, made by any employee of said company to waive the benefit of the aforesaid section shall be null and void.

SEC. 3. This act shall be in force from and after its ratification.

Ratified February 23, 1897.

NORTH DAKOTA<sup>1</sup>

LAWS OF 1899, CHAPTER 129

*Liability of railroads*

SEC. 1. Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant thereof while engaged in switching or in the operation of trains by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part when sustained within this State, and no contract, rule, or regulation between such corporation and any agent or servant shall impair or diminish such liability. In actions brought under the provisions of this act, if the jury find for the plaintiff they shall specify in their verdict the name or names of the employee or employees guilty of the negligent act complained of.

*Provided*, That nothing in this act shall be so construed as to render any railroad company liable for damages sustained by any employee, agent, or servant while engaged in the construction of a new road, or any part thereof, not open to public travel or use.

SEC. 2. All acts or parts of acts inconsistent with this act are hereby repealed.

SEC. 3. Whereas an emergency exists in that there is no law in this State fixing the liability of railroad companies or corporations owning and operating a railroad for injuries caused to employees thereof by the negligent acts of other employees thereof, therefore this act shall take effect and be in force from and after its passage and approval.

Approved, March 6, 1899.

## OHIO

Act of April 2, 1890

*Liability of railroad companies for injuries of employees, etc*

[Page 149, Acts of 1890]

SEC. 1. It shall be unlawful for any railroad or railway corporation or company owning and operating, or operating \* \* \* a railroad in whole or in part in this State, to adopt or promulgate any rule or regulation for the government of its servants or employees, or make or enter into any contract or agreement with any person engaged in or about to engage in its service, in which, or by the terms of which, such employee in any manner, directly or indirectly, promises or agrees to hold such corporation or company harmless, on account of any injury he may receive by reason of any accident to, breakage, defect, or insufficiency in the cars or machinery and attachments thereto belonging, upon any cars so owned and operated, or being run and operated by such corporation, or company being defective, and any such rule, regulation, contract, or agreement shall be of no effect. It shall be unlawful for any corporation to compel or require, directly or indirectly, an employee to join any company association whatsoever, or to withhold any part of an employee's wages or his salary for the payment of dues or assessments in any society or organization whatsoever, or demand or require either as a condition precedent to securing employment or being employed, and

<sup>1</sup> North Dakota had also copied the California law (see above) on employer's liability—Revised Codes of 1895, Civil Code, chapter 50, sections 4095-4097

said railroad or railway company shall not discharge any employee because he refuses or neglects to become a member of any society or organization. And if any employee is discharged he may, at any time within ten days after receiving notice of his discharge, demand the reason of said discharge, and said railway or railroad company thereupon shall furnish said reason to said discharged employee in writing. And no railroad company, insurance society, or association, or other person shall demand, accept, require, or enter into any contract, agreement, stipulation with any person about to enter, or in the employ of any railroad company whereby such person stipulates or agrees to surrender or waive any right to damages against any railroad company, thereafter arising for personal injury or death, or whereby he agrees to surrender or waive in case he asserts the same, any other right whatsoever, and all such stipulations and agreements shall be void, and every corporation, association or person violating, or aiding, or abetting in the violation of this section, shall for each offense forfeit and pay to the person wronged or deprived of his rights hereunder the sum not less than fifty dollars nor more than five hundred dollars to be recovered in civil action.

SEC. 2. It shall be unlawful for any such corporation to knowingly or negligently use or operate any car or locomotive that is defective, or any car or locomotive upon which the machinery or attachments thereto belonging are in any manner defective. If the employee of any such corporation shall receive any injury by reason of any defect in any car or locomotive, or the machinery or attachments thereto belonging, owned and operated, or being run and operated by such corporation, such corporation shall be deemed to have had knowledge of such defect before and at the time such injury is so sustained, and when the fact of such defect shall be made to appear in the trial of any action in the courts of this State, brought by such employee, or his legal representatives, against any railroad corporation for damages, on account of such injuries so received, the same shall be prima facie evidence of negligence on the part of such corporation.

SEC. 3 In all actions against the railroad company for personal injury to, or death, resulting from personal injury, of any person, while in the employ of such company, arising from the negligence of such company, or any of its officers or employees, it shall be held in addition to the liability now existing by law, that every person in the employ of such company, actually having power or authority to direct or control any other employee of such company, is not the fellow-servant, but superior of such other employee, also that every person in the employ of such company, having charge or control of employees in any separate branch or department, shall be held to be the superior and not fellow-servant of employees in any other branch or department who have no power to direct or control in the branch or department in which they are employed

## RHODE ISLAND

[Public Statutes of 1882 Chapter 204, Section 15.]

If the life of any person, being a passenger in any stage coach or other conveyance, when used by common carriers, or the life of any person, whether a passenger or not, in the care of proprietors of, or common carriers by means of, railroad or steamboats, or the life of any person crossing upon a public highway with reasonable care, shall be lost by reason of negligence or carelessness of such common carriers, proprietor or proprietors, or by the unfitness or negligence or carelessness of their servants or agents, in this State, such common carriers, proprietor or proprietors, shall be liable to damages for injury caused by the loss of life of such person, to be recovered by action of the case, for the benefit of the husband or widow and next of kin of the deceased person, one-half thereof to go to the husband or widow and one-half thereof to the children of the deceased.

## SOUTH CAROLINA

## CONSTITUTION

Article IX, section 15, of the new Constitution, contains identically the same provisions as Article VII, section 103, of the Mississippi Constitution, reproduced above.

## TEXAS

ACTS OF 1897 (SPECIAL SESSION), CHAPTER 6

*Liability of railroad companies for injuries of employees*

SEC. 1. Every person, receiver, or corporation operating a railroad or street railway, the line of which shall be situated in whole or in part in this State, shall be liable for all damages sustained by any servant or employee thereof while

engaged in the work of operating the cars, locomotives, or trains of such person, receiver, or corporation, by reason of the negligence of any other servant or employee of such person, receiver, or corporation, and the fact that such servants or employees were fellow-servants with each other shall not impair or destroy such liability.

SEC. 2. All persons engaged in the service of any person, receiver, or corporation, controlling or operating a railroad or street railway, the line of which shall be situated in whole or in part in this State, who are intrusted by such person, receiver, or corporation with the authority of superintendence, control or command of other servants or employees of such person, receiver, or corporation, or with the authority to direct any other employee in the performance of any duty of such employee, are vice-principals of such person, receiver, or corporation, and not fellow-servants with their coemployees.

SEC. 3. All persons who are engaged in the common service of such person, receiver, or corporation, controlling or operating a railroad or street railway, and who while so employed are in the same grade of employment and are doing the same character of work or service, and are working together at the same time and place and at the same piece of work and to a common purpose, are fellow-servants with each other. Employees who do not come within the provisions of this section shall not be considered fellow-servants.

SEC. 4. No contract made between the employer and employee, based upon the contingency of death or injury of the employee, and limiting the liability of the employer under this act, or fixing damages to be recovered, shall be valid or binding.

SEC. 5. Nothing in this act shall be held to impair or diminish the defense of contributory negligence when the injury of the servant or employee is caused proximately by his own contributory negligence.

SEC. 6. The short duration of the special session of the legislature, and the fact that the existing fellow-servant law<sup>1</sup> is inadequate to accomplish its purposes, and the fact that a large portion of our citizens have no adequate remedy for personal injuries sustained, create an emergency, and an imperative public necessity exists, that the constitutional rule requiring bills to be read on three several days be, and the same is hereby suspended, and that this act take effect and be in force from and after its passage, and it is so enacted.

Approved June 18, 1897.

[NOTE.—The foregoing act passed the Senate by a vote of yeas 20, nays 5; and passed the House by a vote of yeas 61, nays 10.]

#### WISCONSIN.

#### ACTS OF 1893, CHAPTER 220

#### *Liability of railroad companies for injuries to employees*

SEC. 1. Every railroad or railway company operating any railroad or railway, the line of which shall be in whole or in part within this State, shall be liable for all damages sustained within this State by any employee of such company, without contributory negligence on his part; first, when such injury is caused by any defect in any locomotive, engine, car, rail, track, machinery, or appliance required by said company to be used by its employees in and about the business of such employment, when such defect could have been discovered by such company by reasonable and proper care, tests, or inspection, and proof of such defect shall be presumptive evidence of knowledge thereof on the part of such company; second, or while any such employee is so engaged in operating, running, riding upon, or switching, passenger or freight or other trains, engines, or cars, and while engaged in the performance of his duty as such employee, and which such injury shall have been caused by the carelessness or negligence of any other employee, officer, or agent of such company in the discharge of, or for failure to discharge, his duties as such.

SEC. 3. No action or cause of action not existing shall be affected by this act.

SEC. 4. No contract, receipt, rule, or regulation between any employee and a railroad company, shall exempt such corporation from the full liability imposed by this act.

<sup>1</sup>The earlier law, approved March 10, 1891, was the same as the present Arkansas law (see above.)

<sup>2</sup>The act of March 1, 1875 (Revised Statutes of 1878, Section 1816), abrogating the fellow-servant doctrine in general terms, was repealed in 1880 (chapter 232).

## WYOMING

An act approved December 7, 1869, provided that "any person in the employment of any railroad company \* \* \* who may be injured by any locomotive, car, or other rolling stock of said company, or by other property of said company, shall have his action for damages against said company the same as if he were not in the employ of said company, and no agreement to the contrary shall be admitted as testimony in behalf of said company;" and similar rights were guaranteed the heirs of a workman who died as a result of such injuries. But this act was not contained in the Revised Statutes of 1887, and it was expressly provided that all acts omitted from that revision were to be regarded as repealed.

The Constitution of Wyoming contains the following prohibition of "contracting out: "

## CONSTITUTION, ARTICLE 10 - "CORPORATIONS."

SEC. 4. No law shall be enacted limiting the amount of damages to be recovered for causing the injury or death of any person. Any contract or agreement with any employee waiving any right to recover damages for causing the death or injury of any employee shall be void.
